U.S. Congress

Appendix

World Health: A New Dimension to the American Revolution

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. HILL. Mr. President, on April 17, 1959, I had the privilege of speaking at the symposium held on the occasion of the opening of new laboratory facilities at the Wistar Institute in Philadelphia, Pa. I spoke on "World Health: A New Dimension to the American Revolution," and I ask unanimous consent to have my remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY U.S. SENATOR LISTER HILL AT THE OPENING OF NEW LABORATORY FACILITIES AT THE WISTAR INSTITUTE, PHILADELPHIA, PA., APRIL 17, 1959

It is indeed a privilege for me to speak today at the dedication of the magnificent new Wistar Institute—an institute so deeply rooted in the history of American medicine, located here in Philadelphia in the very cradle of American medicine.

The founding of the Pennsylvania Hospital in 1751, the establishment at that hospital in 1763 of the first public medical library in the Colonies, and 2 years later, in 1765, the coming into being of America's first medical school, the medical department of the College of Philadelphia, are but a few of the evidences of the great efforts made to lift the level of medical practice in the Colonies.

Caspar Wistar, who was born in 1761, reflected during his entire lifetime the excitement and enthusiasm of an active participant in the birth of medicine on a new continent. After the battle of Germantown in 1777, many of the wounded were brought to the Wistar home for care. That early exposure to the suffering of his fellow man led Wistar, a devout Quaker, to choose medicine as a career. He apprenticed himself at the early age of 16 to Dr. John Redman, who had studied medicine at Leyden. In 1779, he enrolled at the medical department of the College of Philadelphia, where he received instruction from such distinguished physicians as Benjamin Rush, John Morgan, and William Shippen, Jr.

Upon completion of his studies in Philadelphia, he went abroad for 3 years to complete his medical education. He did most of his work at the medical school of the University of Edinburgh, from which he received his doctorate in medicine. It was the common practice in those days for American students to go abroad and tap the accumulated wisdom of European medicine. The extent of that practice is revealed in one simple statistic—in the period from 1765 to 1779, 112 Americans received doctorates in medicine from the University of Edinburgh alone.

In 1787 Wistar returned to Philadelphia and began the practice of medicine. It was a most challenging time for a disciple of the art of healing. Diseases, some of which we have conquered and many of which we have forgotten, continually threatened the existence of most Philadelphians. Hearty infants, who survived the threats of nutritional deficiencies, infections, and diarrhea, were later exposed to measles, diphtheria, and scarlet fever. Tuberculosis, the dread white plague, was the greatest killer of that time. Swamps, insanitary drinking water, and flies spawned malaria, dysentery, yellow and typhoid fever. Yellow fever was an annual threat to the 50,000 inhabitants of Philadephia. During the most terrible epidemic of 1793, Caspar Wistar was one of the heroic doctors who remained in the city and cared for scores of stricken patients.

The teaching of medicine also had its hazards. Following the European tradition, the faculty members of the Medical College of Pennsylvania taught anatomy by providing the students with bodies to dissect. That this was a fairly controversial practice is indicated by the fact that Dr. William Shippen, Wistar's predecessor as professor of anatomy at the medical school, several times barely escaped with his life. On one occasion, his house was attacked by mobs, and on another his carriage was showered with stones and a musket ball passed through the center of it.

Despite all these hazards, Wistar valiantly carried on and made enormous contributions to the medical and cultural life of Philadelphia and of America. As a professor of anatomy, he considered the anatomical specimens at the university inadequate, so he acquired, over the years, a large collection of models in wood and in wax. These very models later became the basic collection of the Wistar Institute of Anatomy and Biology. In 1811 Wistar published his famous two-volume "System of Anatomy," the first anatomical text to appear in this country and long the principal anatomical textbook in use in the United States. Anatomists recognize Caspar Wistar as the first to discover and describe the pyramidal protuberances of the ethmoid bone, which are still called "Wistar's pyramids."

Like most prominent physicians of his day, Wistar played an active part in the cultural life of our young Nation. He succeeded his friend, Thomas Jefferson, as president of the American Philosophical Society which had been founded by Benjamin Franklin in 1743. I am happy to note that, unlike most of his Federalist friends, he was a Democrat. At one time he was offered the Democratic nomination to Congress which he was forced to decline because of the heavy demands of his medical and teaching duties. His home was the weekly scene of gatherings of scientists and literary figures from here and abroad. After his death and for more than a century the famous Wistar parties continued.

The life and times of Caspar Wistar bring home to us the enormous debt we owe in medicine, and particularly in medical research, to the peoples of the world. Throughout the latter part of the 18th century, and for practically all of the 19th century, American medical practice was almost totally dependent upon the medical teaching and research resources of Europe. In Colonial times and in the first decades of the Republic, our medical men sat at the feet of their British and Scotch colleagues. During the four decades preceding the Civil War, French medicine was in a period of ascendancy; for the remainder of the 19th century it was the German medical school and the German medical research institutes which received the bulk of American pilgrims.

As well you know, medical research requires a considerable degree of maturity and a toleration of philosophical speculation. In the formative decades of this great Republic, the gigantic task of building a new nation developed in us a practical turn of mind which had little appreciation of contemplative research. In 1837 Gerhard, returning to Philadelphia from his studies in Paris, was able to announce for the first time the important diagnostic distinction between typhoid fever and typhus. This vital discovery made little impression in an America concerned only with practical cures.

Although individual physicans in America made valuable contributions in research, primarily in new techniques in surgery, in 1876 John Billings, in a single chapter in his "A Century of American Medicine," was able to describe the total achievements of American medical research. We had developed no tradition of Government support of medical research similar to that which existed in Germany and in France. Private support of medical research was practically nonexistent, and it is interesting to note that the Wistar Institute, formally opened on May 31st, 1894, was the first anatomical research institute to be established in America.

The opening of the Institute was made possible by the generous gift of $125,000 by Gen. Isaac J. Wistar, the grand nephew of Caspar Wistar. General Wistar is one of the most fabulous figures in American history—farm worker, dry goods store clerk, digger of gold in California and later in Colorado, trader and trapper in Indian country and Indian fighter, transporter of salmon, fish oil, and lumber on the West Coast, seaman, Philadelphia lawyer, successful president of large canal companies, traveller in distant lands, distinguished and wounded general in the Union Army during the Civil War and, above all, a leader of men, the master of his fate, the captain of his soul.

In outlining our debt to world medicine and world medical research, we could go back to Hippocrates and then cite the names and contributions of scores of medical researchers down through the centuries. For purposes of illustration, however, I would like to cite a disease which was very common in the South during my boyhood, pellagra. This disease, which we now know to be due to a nutritional deficiency, had a high and debilitating incidence. Furthermore, the mental breakdown which accompanied its more severe manifestations filled the wards of many a Southern mental hospital with its victims.

For the understanding which led to the conquest of this disease, we have to go back to 1554 when Johannes Lange published his famous treatise on nutritional anemias. Interestingly enough, he prescribed marriage as a means of curing young girls afflicted with such anemias—probably a sound prescription today. In 1735, Gaspar Casál, known as the Spanish Hippocrates, wrote the first clear description of pellagra. He applied the name "mal de la rosa" to the condition because of the reddish hue characteristic of the skin of pellagrous individuals. From Casál, a long chain of further research efforts culminated in 1920 in the epic discovery by the American, Joseph

Goldberger, that pellagra was due to a deficiency of niacin in the diet.

Here at the Wistar Institute, where one of your main lines of inquiry is the study of the proliferating cell as it affects the cancer process, I know you are deeply conscious of the debt you owe to cancer investigators who have labored for many centuries in all parts of the world. Cancer was frequently referred to in the ancient medical writings of Egypt and India, and more than 4,000 years ago the surgical removal of tumors was widely practiced by Indian physicians. In the Western world, it was Hippocrates who first delineated the distinction between benign and malignant tumors. A century ago, in his famous "Cellular Pathology," Rudolph Virchow outlined the methods by which cancer could be diagnosed by microscopic tissue examination. In 1895 the German physicist, William Roentgen, discovered the X-ray, and 3 years later Pierre and Marie Curie isolated radium. All of these and many subsequent discoveries not only advanced the treatment of cancer but they provided an invaluable set of tools for fundamental medical research on the nature of the malignant cell.

In a very real sense, you are now discharging your debt to these discoverers of the past. The research laboratory which we dedicate here today is shining evidence of the union of our National Government, private medicine and private enterprise in a joint effort to foster medical research on a level not hitherto reached in the entire history of mankind. Matching funds for this laboratory have come from the Federal Government under the authorization of the Health Research Facilities Act of 1956, which I was privileged to author and which proclaimed the intent of the American people to help support through their Government the construction of research laboratories in all parts of the country.

Yours is truly an international staff. The Director of the Institute, Dr. Hilary Koprowski, came to the United States from Poland that he might further his studies in cellular biology. His able coworkers on the staff include scientists from Belgium, Canada, England, France, Germany, Italy, India, Sweden, Australia, and the United States. It is particularly significant that one of the first fruits of this collaboration is the present mass vaccination with an oral vaccine against poliomyelitis of the people of the Belgian Congo.

Over the past few years many of us in the Congress have been concerned with the role America should play in lifting the health standards of the peoples of the world. In this second half of the 20th century America holds an increasingly solid position as the medical fountainhead of the world. Reversing the trend of the 18th and 19th centuries, the trek is now westward across the Atlantic to keep abreast of the latest developments in the art and science of medicine.

But in a world which modern communication and transportation make smaller each day, we become increasingly aware of the plight of our fellow men in many parts of the world. At the turn of the century the great physician, Sir William Osler, wrote, "Humanity has but three great enemies: fever, famine, and war; of these, by far the greatest, by far the most terrible, is fever." His words still ring true. We are aware of the fact that an underprivileged two-thirds of the human race is constantly afflicted by the ravages of disease. Millions of these people suffer from the age-old scourges of malaria, tuberculosis, and the various intestinal infections. In many countries of the world a third of the babies die during the first year of life, and life expectancy falls 30 and 40 years short of the Biblical 3 score and 10.

At present we are engaged in an effort to stem the spread of Communist imperialism, which is competing with us for the uncommitted peoples of the world. Communism finds a ready breeding place in the ill health and poverty of the submerged peoples of the world. Communist forces of militant medicine are on the march. We have reports that Russia is sending about 2,000 doctors a year to do medical missionary work in these underdeveloped areas.

Yet we who once fired the shot "heard round the world," and gave a new dimension to personal liberty in the founding of a republic which guaranteed life, liberty, and the pursuit of happiness to all of its citizens, have been slow to meet this challenge.

In the closing days of the 85th Congress, I introduced a bill which would provide the mechanism through which this country would join with all the countries of the world in a united medical research offensive against the major killers and cripplers of mankind. The bill would create a National Institute of International Medical Research as part of the National Institutes of Health. The Institute would be charged with the support of worthy medical research projects submitted by competent investigators from any part of the world. It would also support the training of specialized research personnel here and abroad, and it would encourage and support the rapid international exchange of research knowledge concerning disease and disability.

In introducing this bill on the Senate floor, I pointed out that the unfinished tasks facing medical research are truly staggering in nature. For example, cancer, that most ancient enemy of man, is rising in its incidence in 33 countries of the world. What more priceless bounty could be given to the suffering peoples of the world than a cure for this universal disease?

In the current session of the Congress, 58 Senators joined me in the reintroduction of this legislation. During the last week in February of this year, hearings were held on this International Medical Research Act, and I think it is fair to state that it received unprecedented and overwhelming support from doctors, scientists, voluntary health organizations, and civic leaders.

Testifying on behalf of the American Medical Association, its president, Dr. Gunnar Gundersen, told our Senate committee of "a growing recognition that medicine with its resources and influence fully mobilized can perhaps do more for world peace than the billions of dollars being poured into armaments." Mr. John T. Connor, the president of one of the largest pharmaceutical companies in America, told the committee that "the International Medical Research Act stirs the imagination with its opportunities for a new breakthrough in international relations as well as in medical research."

Your own Dr. I. S. Ravdin, the distinguished surgeon who is currently serving as vice president for Medical Development of the University of Pennsylvania, told us that "we who have gained so much from the research of our own scientists and those from other countries, where good research has been done and is being done, must realize that the more quickly we can assist those less fortunate to begin to achieve what we have so fortunately achieved, the more quickly universal understanding will be won in our troubled world."

In essence, the Health for Peace Act is a 20th century enunciation of the ideals and aspirations which so influenced Caspar Wistar and his contemporaries in the early days of our Republic. In simple terms, it states our belief that disease is a universal threat to the family of man, and that we must unite our medical research efforts to wipe out this threat. It accepts the fact that no nation has a monopoly on medical research and that our own self-interest dictates a maximum effort toward the rapid pooling of the fruits of such research.

When this legislation has passed the Congress, and the National Institute for International Medical Research has come into being, I know that you here at the Wistar Institute will play a significant role in making medical research truly universal. Your contributions are precious today, but when they can be transmitted to the entire family of man they will become priceless.

So much has Caspar Wistar taught us, so much did he leave us in his example of dedicated service. Above all I should say he gave to us his impregnable and motivating philosophy in his own words—words spoken as he lay dying—

"I wish well to all mankind."

Loyalty Day, May 1, 1959

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. BOLAND. Mr. Speaker, May 1 has been set aside for the national observance of Loyalty Day in our Nation. Inspired by the Veterans of Foreign Wars, enacted into law by the Congress, given Presidential approval, it is an appropriate time to ask ourselves: What constitutes loyalty to America? Who is the truly loyal American citizen?

I believe loyalty is found in the American citizen who loves and reveres the Constitution and, because he loves it, obeys it—not just in precept but in practice.

Loyalty is found in the citizen who despises the demagog and any base attempts to place one class of people against another class. He is unwilling that any shall profit at the expense, or suffer at the hands, of any other class.

Loyalty is found in the citizen who prizes individual liberty. He remembers that there was such a man as Patrick Henry. He knows that all the powers of government have been conferred and exist to protect the liberties of all citizens. He refuses to exalt the powers of government at the expense of any citizen's freedom.

Loyalty is found in the citizen who recognies that ours is a government of laws—that the law must be independent and fearless. But in the words of our 26th President, Theodore Roosevelt, the loyal citizen knows that "No man is above the law and no man is below it; nor do we ask any man's permission when we require him to obey it."

Loyalty is found in the citizen who loves his fellow man—who wrongs no man—who believes in the nobility of hard work—who is frugal, honest, industrious and sincere. He believes that human dignity and worth are of supreme importance to the American way of life.

Loyalty is found in the citizen who desires to take an active part in the workings of our democracy. He recognizes that citizenship and responsibility are as one.

Loyalty is found in the citizen who knows that the future can be bright and secure only if we continue to apply the

knowledge of the past to the opportunities of the future.

The observance of Loyalty Day is a serious obligation. It is a time to evaluate our citizenship. It is a time to remind ourselves that "Loyalty is the holiest good in the human heart."

World Peace and Law Day U.S.A.

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address of Charles S. Rhyne, Esq., past president of the American Bar Association, which Mr. Rhyne is delivering at the Lamar School of Law, Emory University, Atlanta, Ga., today, entitled "World Peace and Law Day U.S.A."

I commend to my colleagues and other readers of the RECORD this extremely constructive and farsighted speech by one of our country's outstanding lawyers. The adoption of Mr. Rhyne's proposals to strengthen the World Court, to hold international conferences of lawyers, and to encourage all nations to recognize a World Law Day and eventually a World Law Year would advance materially the date on which the rule of law would replace the rule of terror in international relations. The American Bar Association and the entire legal profession in the United States have reason to be proud of Charles Rhyne's championship of this all-important cause.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD PEACE AND LAW DAY U.S.A.

(Address by Charles S. Rhyne, past president, American Bar Association, chairman, American Bar Association Committee on World Peace Through Law, Washington, D.C., at Law Day U.S.A. exercises, Lamar School of Law, Emory University, Atlanta, Ga., May 1, 1959)

About 8 hours ago and some 5,000 miles from Atlanta a massive mobilization of Communist armed might went on display in Red Square in Moscow. This display of capacity to create terror is the Kremlin's most precious possession. The Communist masters want the whole world to see it. Today, across the length and breadth of America from the northern tip of Alaska to the southern tip of Florida a massive mobilization also is on display. In ceremonies conducted in city halls, schoolhouses, colleges, courthouses, and other places, over radio, on television, through newspaper stories, editorials, and in magazine articles the masters of America—our people—are holding up our most precious possession for the whole world to see; i.e., the rule of law.

What a contrast these May Days offer in the showcase of the spotlight of world public opinion.

Force, fear, and terror—embodied in communism versus freedom and individual liberty—embodied in the rule of law.

Smythe Gambrell and I spent 2 weeks in Russia last summer. An American newspaperman in Moscow gave me the best definition of the rule of law and communism I have yet encountered. He said: "When you are awakened by a voice at your door in the black of night and turn over and go back to sleep knowing it is the milkman, or the paper boy, then you are living under the rule of law, not communism."

Make no mistake about it, millions of peoples in other lands know of Law Day—U.S.A. To them it is one of the most meaningful and timely events ever to occur. This is true because the message it conveys is the dedication of Americans to the highest ideals and moral principles ever espoused by any nation since the dawn of civilization. Those are the ideals and principles known as the rule of law.

We live in a day when the eyes of the world are focused constantly upon America and all we do and say. In these days of almost instantaneous communications between all parts of the globe all people know what is going on in America day by day. Recent reports emanating from our country emphasize our ever-growing capacity to destroy mankind—our miraculous scientific and technical achievements. Law Day, and the ultimate thrust of the program it encompasses, gives a different report and an emphasis to our desire for peace and our leadership in searching for a method to achieve that desire. Law Day emphasizes our law buildup to create a peaceful world rather than our nuclear or missile buildup to act as our shield against Communist aggression.

In this context I wish to state what I hope will be the major message of Law Day to peoples in foreign lands. That message is this: We have and will retain, because we must, for their security and ours, leadership in destructive capacity but we are at the same time working to create a new system to replace force as the controlling factor in the fate of the world.

I wish I had the word power to describe this proposed new system adequately. Seemingly the public is largely unaware that it has been proposed and is being slowly and carefully, but nonetheless surely, brought into existence. We need, and do not yet have, a Paul Revere to carry a lantern to light the way in the minds of the people. We need, and do not yet have, a Patrick Henry to capsule the idea into a simple phrase all men will grasp. The significance of the ever-growing idea that law must and can replace weapons as a dispute-deciding mechanism must somehow be brought home to every American and every person on earth. What the rule of law—if used—can do for the world community must be realized by all men. They must be made to understand that of all the concepts developed by man since the dawn of history only the rule of law has the capacity to harness the miraculous discoveries of our era for man's benefit rather than his death. They must comprehend that ours is a program whereby nations will try their disputes out in courts rather than shoot them out by guns or bombs or by any other weapons they may have.

We live in the age of the people's will. The ever-rising educational trend and fast communications and transportation make this so. What happens anywhere affects people everywhere. What the people want strongly enough they will have. If civilization is to survive mankind must therefore be made to want the rule of law to prevail internationally so strongly that all peoples will rise up and demand and get that rule. All other ideas have failed to achieve and maintain world peace. But on the record of what it has done within nations the rule of law can create order and stability in the world community if it is given a chance to operate there.

A new world has been born in this century. If it is to be a lawful world thoughtful men must make it so. It will not just happen. Creation of that lawful world is the task the legal profession has set for itself. Our first step: Creation in the public opinion of the people of America of the potential of law in the world community. Law Day U.S.A. is one of our major instruments whereby that purpose can be accomplished.

Let us look at the record so far. What are the results of Law Day U.S.A. of last year? What can be expected from Law Day this year?

On May 1, 1958, in his Law Day message President Eisenhower said:

"The world no longer has a choice between force and law; if civilization is to survive, it must choose the rule of law."

In his state of the Union message to the Congress in January 1959 he said:

"All peoples are sorely tired of the fear, destruction, and the waste of war. As never before, the world knows the human and material costs of war and seeks to replace force with a genuine rule of law among nations."

In his broadcast on Berlin the President referred to the rule of law as a replacement for the rule of terror and said:

"Indeed, this is the peace policy which we are striving to carry out throughout the world. In that policy is found the world's best hope for peace."

In his Gettysburg College speech the President said:

"Another fact, basic to the entire problem of peace and security, is that America and her friends do not want war. They seek to substitute the rule of law for the rule of force."

Not only President Eisenhower but other leaders of his administration have urged the same idea.

Secretary of State Dulles in his last address before his unfortunate illness, said to the New York State Bar Association:

"In the swift flow of daily events it is easy to lose track of the broad strategy of our foreign policy. We seek peace, of course, but we seek it in what seems to us the only dependable way—the substitution of justice and law for force.

"This is a relatively recent concept and even today many do not accept it."

Vice President NIXON, in an outstanding address in which he proposed the writing into future agreements with Russia that the World Court would make binding decisions on all disputes over interpretations there of, said:

"I am now convinced, and in this I reflect the steadfast purpose of the President, and the wholehearted support of the Secretary of State and the Attorney General, that the time has now come to take the initiative in the direction of establishment of the rule of law in the world to replace the rule of force."

There is seemingly agreement that a drastic change in the trend of world events and drastic changes in our peace machinery are essential to avoid catastrophe. Sir Winston Churchill has characterized the existing situation as "not peace but a truce maintained by mutual terror."

Many leaders of our country have given their support to the idea of the rule of law as the machinery which offers the greatest potential. Senators COOPER, JAVITS, HRUSKA, HUMPHREY, KEFAUVER, WILEY, and many others have given their endorsement to the rule of law as a substitute for the rule of terror. Henry R. Luce and other great men of America are forceful espousers of this idea. There is in fact an ever rising tide of support at home and abroad. Prime Minister Nehru, Chancellor Adenaeur, Chief Justice Tanaka of Japan, and many of the other great men in other countries of the world have likewise endorsed the rule of law in the world community.

Duke University has created a World Rule of Law Center. Arthur Larson resigned as an aid to President Eisenhower to head that center. At Harvard, Columbia, Yale, Northwestern, Southern Methodist, Virginia, and many other law schools tremendous programs are underway to search out ways and means whereby law can best serve mankind internationally.

More than 100 State and local bar association committees have been created to focus upon the problems in this massive effort of lawyers to contribute their manpower and brainpower to a gigantic assault upon the unsolved problems and unsupplied needs in this field.

The impact of our more than 20,000 Law Day U.S.A. programs last year was felt in nearly every nation on earth. In July last year the International Bar Association, as a direct result of our experience, adopted the idea of a law day in principle for consideration by all their members. In Rome last September, judges from all over the world at the International Judges Conference spoke enthusiastically of Law Day U.S.A. to Federal Circuit Judge Warren E. Burger, our representative at that conference of 1,200 judges. In New Delhi this January lawyers from 52 nations, at a meeting of the International Commission of Jurists, often referred to what a great event Law Day U.S.A. was in discussing the legal proeedures and institutions required to achieve and maintain the rule of law within nations.

From far off Australia, Burma, India, and Japan, from next door neighbors Canada and Mexico, and from many other nations in Latin America, Asia, Africa, and Europe, have come inquiries about, and commendation for, Law Day U.S.A. The lawyers of many other nations are even now planning a law day of their own. The Inter-American Bar Association has urged its members to have law days. The International Bar Association has also approved in principle the idea of a law day for the world, with all nations—at least those of the free world—celebrating such a day on the same date.

A World Law Year similar to the International Geophysical Year should be considered as a next step. When we reflect upon the tremendous impetus which a world spotlight upon science through the IGY gave to scientific advances, we should try to have a World Law Year at the earliest possible time so as to achieve the same impetus for advances in a rule of law for the world. Such a World Law Year would stretch the minds of lawyers to the great achievements we must accomplish to harness the new miracles developed by the scientists for man's benefit rather than his death.

The spirit of Law Day is being carried out in our own country by plans and programs in every State and every local community on this our second annual Law Day U.S.A. And hand in hand with this effort is the work of the American Bar Association's Committee on World Peace Through Law. On Wednesday in Dallas, we completed the last of five regional meetings to focus the manpower and brainpower of the great lawyers of our Nation upon ways and means of establishing and maintaining peace through law. Henry Bowden and Charles Lokey of Atlanta attended the regional meeting for southeastern lawyers in Charlotte, N.C. At these regional meetings these practicing lawyers are asked to evaluate where we are and where we should go in this great program of world peace through law. Through editorial comment and news stories engendered by these meetings the great promise of a world ruled by law, instead of terror, has been brought to nationwide attention. Many of the Law Day speakers throughout our land today will speak on the objectives of this world peace through law program.

The International Bar Association and the Inter-American Bar Association both adopted resolutions this month approving this law for weapons program. They also have created special committees to aid it. In addition, their resolutions called upon all the lawyers of the world to do all that is necessary to forward this program toward a lawful world.

The reverberations of Law Day U.S.A. are thus of worldwide scope, effect, and importance. The record of one year's achievements is remarkable and most encouraging.

Despite contrary beliefs, the world largely runs on ideas and ideals. Nothing is as powerful as an idea—not even an atom. Especially is this true in our shrunken world where rapid communications and transportation cause almost instantaneous contact between Akron and Accra, New Delhi and New Haven. The idea and ideal of a world operating under the rule of law is fast becoming more and more powerful as more and more people comprehend the potential of a lawful world.

We have long espoused freedom and justice for man as the free world's promise. We have never quite spelled out how these most precious possessions are to be obtained by those who do not yet have them. If we now espouse the rule of law as a constructive and creative means to achieve and maintain freedom and justice between nations, as well as within nations, we will thereby offer a plan whereby people may turn our promise into reality.

The rule of law within a nation is made up of constitutions, statutes, customs, which grow into legal rules, and the legal procedures and judicial tribunals by which all of these hundreds of legal rules are applied, interpreted, and enforced. In essence the rule of law means all of these; it means also what is fair and reasonable under the moral standards which have come down to us in the accumulated wisdom of the ages.

In the beginning of time there was no rule of law. Might made right between men. But first in tribes, then in cities, later in city-states and finally in nations the rule of law slowly developed. This was done through a gradual creation and strengthening of legal processes, procedures, and institutions. This same process must be followed between and among nations if the rule of law is ever to replace the rule of terror in the world community. We will thus step by step gradually make a new use of an age-old idea through its expansion to control the new horizons of our era of explosive and rapid change.

I cannot emphasize too strongly that in seeking a world rule of law ours is the strategy of gradualism. We do not expect to create a lawful world overnight, or in a year, or in several years. It will take years and perhaps decades of great effort.

We are not going to make the mistake of attempting more than we can really accomplish. We urge as a first step only the application of the rule of law in a world judiciary to international disputes.

We are committed to the art of the possible. We are not urging world government or similar proposals.

We are not shooting for the moon.

We propose to move step by step, to build brick by brick.

We believe that a half of a loaf is better than no loaf at all and that a slice is better than no half loaf. We are willing to take this slice by slice.

Nor do we propose to flounder on the peril of perfectionism. After thousands of years we are still improving local laws, State laws, National laws, local courts, State courts, and National courts. If we waited until our traffic laws were perfect, for instance, before we allowed traffic to move, our streets would be empty of cars. We will make a start and work then for the refinements.

Let me list some of the main conclusions which I have developed through my association with this lawyer's crusade for peace:

1. The Connally reservation, under which the U.S. Senate requires the United States to sit as a judge of the jurisdiction of the International Court of Justice (World Court) in each case filed there against the United States, should be eliminated. By such action we can show the world that we who live under the rule of law at home are now willing to do so in resolving justiciable international disputes with other nations. Until that reservation is eliminated—and only the Senate can do this—our talk about a rule of law in the world community rings rather hollow. That reservation has created such a roadblock to its door that the World Court has decided only 11 cases in the 13 years of its existence.

2. Our United Nations delegation should urge the World Court to sit at U.N. headquarters in New York. The Court is just too inaccessible at The Hague—another reason for its empty courtroom.

3. The World Court should also be urged to announce its willingness to sit in panels—as presently authorized—all over the world. That announcement would bring cases to the Court by eliminating the great expense of litigating at The Hague.

4. New regional courts should be created in such areas as the Americas, among NATO members and in other regions. The highly successful European Court of Justice which now decides disputes growing out of the European Economic Community has pointed the way here. Appeals should be from these regional courts to the World Court.

5. A world conference of lawyers should be held to focus lawyer and public attention upon the foregoing and other steps which could help move the nations of the world toward trying disputes out in courthouses under the rule of law instead of fighting disputes out on battlefields via bombs and other weapons.

6. As a foundation for the world conference of lawyers regional international conferences of lawyers should be held in Latin America, Asia, Africa and Europe to discuss how to achieve world peace through law.

7. Other nations should be encouraged to carry out their own Law Days so as to create a favorable public opinion within nations for this worldwide program of law to replace weapons. Even with two law days we in America have hardly brought our people to the point of full appreciation of the law's utility internationally.

8. A World Law Day should be held with all nations conducting their Law Day on the same date. This should so dramatize our cause as to capture the attention and imagination of all peoples for what law can do in the world community.

9. As a final big push to accomplish the essential "breakthrough" toward a lawful world a World Law Year similar to the International Geophysical Year should be carried out. Concentrated effort on a worldwide basis achieved many great things in the scientific field. The same technique should work in law as well.

While the people of the world speak many different languages and have many diverse forms of government, the rule of law is a universal idea and ideal which all men have in common, even in countries which do not have it. By placing governments under law nationally we have brought order and stability within nations. We must put nations under the rule of law internationally, thereby creating order, stability and peace. By creating a world ruled by law we erect a new standard of decency in international relations.

Supremacy of the rule of law within nations achieves and maintains freedom for man. Supremacy of the rule of law between nations can achieve and maintain freedom of man from the dread scourge of war.

Law Day, U.S.A., throws a spotlight upon what the rule of law can do for man if but

put to work in the world community. Thus is rendered a great public service to our Nation and to the peoples of all nations. In this great law for weapons program we lawyers have as our client civilization itself. And while our goal may seem ambitious it is certainly a goal which is not beyond the power of those to whom our plea is addressed, that is, the people of the whole world.

No greater challenge exists in the world of our time than that of creating a formula to prevent a war no sane man could ever want. We of the law know the rule of law is such a formula. Creating a workable plan to make this formula a success is our challenge, our obligation and our opportunity. We must stretch our minds to create the legal rules, the legal procedures and the courts which will do this in the world community. We could make no greater contribution to justify our heritage and to fulfill our destiny than to have inscribed large in history that we gave the best we had to bring into being a world where all men can live under the rule of law and thereby walk in freedom, in dignity and in peace.

What Loyalty Really Means?

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. METCALF. Mr. Speaker, as is pointed out in an introductory statement in the Sunday supplement, Parade magazine, the Communists for years have used May 1 as a day on which to flaunt their disrespect for American institutions.

Recently a countermove has arisen, and more and more Americans have been using May 1 as a day to reaffirm their allegiance. By Public Law 85-529, the 85th Congress designated May 1 as Loyalty Day. It also is Law Day by Presidential proclamation.

In recognition of this first observance, Parade carries the following statement by John W. Mahan, of Helena, Mont., commander in chief of the Veterans of Foreign Wars of the United States:

WHAT LOYALTY REALLY MEANS

(By John W. Mahan, commander in chief, Veterans of Foreign Wars of the United States)

Today, as the Nation observes its first official loyalty weekend, every citizen should pause to ask himself, "What does loyalty really mean?"

Does it mean only that you love America's mountains, lakes, and gadgets? I hope not. I also hope your concept of loyalty is not a society where merely to disagree is to be disloyal.

To me, the greatest test of loyalty—of love for country—is your day-to-day respect of the rights of your fellow man. Your neighbor's right to voice his own opinion, his right to privacy, his right to his own property—these basic freedoms are the heart of our loyalty to the great American ideals of Washington, Jefferson, and Lincoln.

I think it is ironic that the Communists, who preach peace and freedom, live in terror—terror of their neighbors, terror to speak their minds, fear of the midnight knock on the door. Loyalty to them is not in their hearts—it's a gun in their backs.

As a parent, I feel that my greatest responsibility to my children and my country is to pass on to the younger generation the inspiring ideas that have made Americans duly free men.

War is horror and bloodshed. But there are fates worse than death. Over the years Americans have known this. Battlefields throughout the world are testimony to America's allegiance to freedom.

To me, this allegiance—and loyalty—certainly must be one and the same.

It Seems to Me Says Harry V

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled, "It Seems to Me Says Harry V," which appeared in the March 1959 issue of the Insurance Index and written by Mr. Harry V. Wade, president of the Standard Life Insurance Co., of Indiana.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME SAYS HARRY V—THE LIFE INSURANCE INDUSTRY SHOULD STOP AND REGROUP ITS FORCES AT THE SENATE INCOME TAX HEARINGS TO INSURE SENSIBLE AND EQUITABLE LEGISLATION

(EDITOR'S NOTE.—The author, Harry V. Wade, president of the Standard Life Insurance Co. of Indiana, has just returned from Washington where he attended the Senate Finance Committee hearings on the Federal taxation of the life insurance business. The Index is indebted to Mr. Wade for taking time to express his following views on these very important hearings.)

A long distance call from the Insurance Index requesting this article galvanized the lethargic composer of "It Seems to Me" into action after a 5- or 6-year vacation. It is occasioned by the Federal taxation of life insurance mess now existing in Washington. The word "mess" is used advisedly and accurately. Never has the life insurance business which for generations has been noted for its cohesiveness and generally good public relations, split up into so many sections. A woeful lack of dynamic leadership on the part of all of us has been demonstrated in the last few months. The writer was aghast at the way certain parts of the life insurance business viciously attacked other parts in front of the Senate Finance Committee. All of this bickering should have been conducted on the floor of some meeting room in a hotel, before any representations of any kind were made to Congress. Admittedly, no trade association has the right to stifle the speech or actions of any member, but the trade associations could have and should have thrashed out the entire matter even if they had to be in continuous session for days. As soon as this debacle has come to its bloody close, our ranks should reform.

The writer, of course, is not too conversant with any form, Federal or otherwise, of taxation and he is only generally familiar with the provisions and the probable results of the proposed bill as passed by the House of Representatives. However, in listening for a couple days to the testimony given before the Senate committee he was impressed with the fact that with but a few exceptions he was as conversant with the bill as most of those testifying. It is entirely possible that some of our very large companies who have sizable staffs to deal with matters of this kind have taken the proposed bill and reduced it to a draft of a life insurance tax return form but most of the life insurance companies have not had the staff to do this. Until such a feat has been accomplished, none of us know what the tax bill is going to do to us. In the case of my own modest sized company, although we have accurately estimated what the tax would have been on last year's basis and what it would be on the 1942 basis, our estimate of the tax to be imposed by the proposed bill varies anywhere from 90.4 percent to 139 percent of the 1942 basis. The writer was given the impression from a number of gentlemen representing other companies in Washington that their estimates varied perhaps as widely as did ours.

For better or for worse, the Federal Government is on a spending spree, and the good Lord only knows where it's going to end. Life insurance companies should pay their fair share of the bill, but it is most unwise for Congress to hastily enact any bill unless a thorough study has been made as to the bill's effect on the general economy. The writer is impressed with the fact that our Representatives in the House and our Senators in the Senate, almost to a man, are dedicated, hard-working people. They have no desire to work a hardship on either the stock or the mutual companies, the large companies or the small companies. On top of this, they are seriously concerned and are charged with the responsibility of setting public policy and in not upsetting our most delicate economy. It seems to me that they would be wise to have the Treasury Department draw up a tax blank either based on the House bill as enacted, or thinking of the Finance Committee after it has had several executive sessions. The Finance Committee could then send this draft of the blank to every life insurance company in the country and, in effect, require them or subpena them, to fill out the blank to the best of each company's ability, submitting same to the committee for further study. If some such procedure is not followed, all of us are guilty of going off half-cocked. For example, I heard the responsible actuary of a sizable company state that if interest on municipal bonds were made tax deductible, inside of 5 years phase two of the bill would be noneffective, due to the fact that the stock companies would go all out for municipal bonds (I end this rough quotation). If this gentleman is right, obviously we'll have the doggonedest bull market in tax-exempt municipals this country has ever seen. In fact, the market has already been affected by the threat of this bill. Although the bull market would help municipals, it cannot help but have an adverse effect on farm and home mortgages, industrial and commercial mortgages, bonds, and, moreover, the Federal debt itself. On the other hand, if municipals are not going to be tax exempt, then the cost of financing State, county, city, school district, etc., improvements is going to go up considerably. Certainly the vocal displeasures of the boys back home will be expressed to Congress. The thing to do is to so frame the bill that the ownership of municipals is made no more or no less attractive than it is at present—not an easy or quick operation, but one very important to the general economy of our Nation. Fortunately or unfortunately, the life insurance business constitutes a sizable segment of the security and mortgage market in this country. Therefore, all of us should go very easy in making such a drastic change in Federal taxation as is now contemplated. Nothing will be lost by taking additional time to thoroughly study all of

the possible effects of any tax bill. The life insurance companies are as much interested in the future welfare of our Government as any other group of citizens or corporations. In fact, for many reasons, we should be more so. Deliberative and prudent steps at this time should be the order of the day for both Congress and the life insurance companies. Let us not make quick but lasting errors by precipitate action which are not called for at this time. Cool thinking after a good bit of study will produce a tax bill that is fair to all and yet not upset the U.S. economy which is in a very delicate condition at this moment.

Commuter Passenger Service in New Jersey

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. CASE of New Jersey. Mr. President, the people of northern New Jersey area are beset with critical problems as they seek to maintain essential rail passenger service. For the people of our State, many thousands of whom commute daily to New York, the problem has been growing for some time. Several of us have been endeavoring to keep commuter passenger service alive while States and localities continue to press for long-range solutions.

I received a recent letter from Orrin H. Lincoln, Jr., secretary of the Somerset Hills Transportation Association, which outlines the latest steps which this particular commuter group are taking.

I ask unanimous consent that Mr. Lincoln's letter be printed in the Appendix of the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SOMERSET HILLS
TRANSPORTATION ASSOCIATION,
Basking Ridge, N.J., April 14, 1959.

The Honorable CLIFFORD P. CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: This letter will confirm our telegram of April 9, 1959, concerning the rapidly deteriorating situation with respect to commuter transportation on the Lackawanna Railroad.

The Somerset Hills Transportation Association is a nonprofit organization with 10 trustees composed of the mayors and 1 citizen from each of the 5 Somerset Hills communities. It is the aim of this association to seek ways to maintain and improve the commutation service to our communities by the Lackawanna Railroad.

Following announcement by the Lackawanna Railroad on April 9, 1959, of plans to discontinue all local passenger service on June 9 unless it receives financial relief, the trustees of the Somerset Hills Transportation Association met and passed several resolutions.

A resolution was passed approving and endorsing the passing of assembly bill 257 in the New Jersey Legislature to eliminate taxes on passenger facilities of the D.L. & W. Railroad.

Another calls for a study by the association to determine if certain trains can be eliminated or combined and still render adequate or even improved service, and to confer with the Lackawanna on possible train schedule revision.

A third urges a public meeting of Lackawanna and Port of New York Authority officials to ascertain whether a joint agreement can be reached for port authority ownership and operation of the Lackawanna's Hoboken terminal.

A fourth suggests that the State should pay the Lackawanna for out-of-pocket deficits in operation of its passenger commuter service. A special committee was named to study the most equitable way for the State to raise the money needed to pay the deficit.

Another committee is distributing a questionnaire to commuters on the Gladstone branch to determine how public convenience and necessity would be affected by the Lackawanna's discontinuance program, and will use the results of the study in talks with the company and State officials.

The association will be willing to accept some reduction in service on the Gladstone branch, and higher fares, if our studies show that such changes are necessary. We would, however, expect a corresponding improvement in quality of service. When our studies are complete, we propose to meet with officials of the Lackawanna Railroad to discuss possible revisions of schedules to help cut costs.

Very truly yours,
ORRIN H. LINCOLN, Jr.,
Secretary.

The Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. PROXMIRE. Mr. President, there has been much criticism of waste in our foreign aid program. I have been one of the critics. I shall continue to be. On past occasions I have offered amendments that would sharply cut parts of our foreign aid program. I have voted and will continue to vote for a reduction in appropriations for foreign aid where the record shows that this is the only effective way we can curtail waste.

On the other hand, there is one foreign aid program that has cost relatively little, that has already done much good, and gives promise of doing far more in the future. I refer to the program for technical cooperation, otherwise known as point 4.

Mr. President, I ask unanimous consent that an editorial tribute to point 4 by the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

POINT 4—AFTER 10 YEARS

The point 4 program marks its 10th anniversary Thursday. In commemoration, former President Harry S. Truman, who espoused and sold the plan, is to be cited by the National Conference on International Economic and Social Development.

It's a citation the Nation might share. Point 4 was a great idea and resulted in a most effective and economical means of helping needy nations over the world.

Point 4 was proposed in Truman's inaugural address back in 1949. Its tag name stuck to it, whereas the three preceding points in Truman's program—which are still very much with us—have lost their numbers. The other three points were these: Unfaltering support for the United Nations; continuation of programs for world economic recovery; strengthening freedom-loving nations against aggression. Together, these have been the basis of our foreign policy for a decade.

The idea that underdeveloped countries could best be helped by technical assistance—by know-how—was first suggested in the State Department by a low-ranking public relations man, the late Ben Hardy. His proposal found no takers among his superiors. But it interested a White House assistant, who called it to Truman's attention. And Truman gave it wholehearted support.

It was a simple idea, really. It was that many peoples needed rather elemental and simple forms of assistance even more than big development programs. They could benefit most by learning elementary sanitation, how to get clean drinking water, how to improve agriculture and use better seeds and fertilizer, how to read and write, how to care for children, how to find ways to make money or improve living standards through simple crafts or new food sources.

Thousands of American technicians have gone out over the world in the last decade to work on point 4 projects. We have seen many of them in many countries—dedicated and trained experts working on the land and with the people. It is impossible to assess the good they have done.

When the Eisenhower administration came into office it changed the name of point 4 to the Technical Cooperation Administration. It didn't like the association point 4 had with Truman. But it is a tribute to the program that even today the men who run it and the men and women in the field and the recipients in foreign countries invariably call it point 4.

Of all air programs, this has been the most welcome, the least costly, and almost undoubtedly the most effective.

Governor Meyner Proclaims Loyalty Week

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent that a proclamation issued by Gov. Robert B. Meyner, of New Jersey, calling on the citizens of this country to observe Loyalty Week, April 26—May 3, be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

Whereas an opportunity is provided annually for every citizen to reaffirm his faith in the United States of America through a program sponsored by the Veterans of Foreign Wars of the United States; and

Whereas there have been periodical attempts over the last two centuries to stifle and destroy the hard-won rights of free speech, freedom of the press, and the right to worship as one chooses; and

Whereas each of us should make a personal pledge to uphold these God-given rights in the defense of which thousands of our fighting men have died on battlefields all over the world;

Now, therefore, I, Robert B. Meyner, Governor of the State of New Jersey, do hereby

proclaim April 26–May 3, 1959, as Loyalty Week in New Jersey, and I urge that all citizens of this State renew their undivided allegiance to the Government of the United States and the ideals which it defends and preserves. I further hope that all civic groups will in this week give expression to that loyalty through public demonstrations of all kinds; through the display of our National Emblem and through cooperation with our overseas veterans who sponsor this observation.

ROBERT B. MEYNER,
Governor.

Editorial Broadcast Over Station KRXK

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an editorial broadcast by Gene Shumate, president of radio station KRXK over that station at 1:45 p.m. April 26, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

On April 17, U.S. Senator HOMER CAPEHART, of Indiana, submitted an agriculture bill proposal on the floor of the Senate. On that date the Associated Press radio wire carried a few stories on the proposal, devoting little time to it, describing it as an elaboration of the soil bank plan. Little more has been said about it since that time. Friday morning KRXK Washington farm reporter Harry Lando devoted a couple of minutes to the Capehart farm bill and commented that it seemed to have little chance of being accepted.

A few days ago I received a copy of the CONGRESSIONAL RECORD for April 17. It was sent to me by Idaho Senator HENRY DWORSHAK. And I have spent a few hours this past week reading the proceedings of the Senate during the time of the Capehart proposal. I believe it has not been faithfully reported. For that reason, the KRXK editorial today will review some of the high points.

There are three sections to the Capehart proposal. One does have a resemblance to the present soil bank program, but there's one aspect that makes it so different that it's significant.

Before going into the bill further, I might mention that it is rather a surprise to find such detailed farm legislation being proposed by Senator CAPEHART. Although he is from a nominal farm State, Indiana, he has never been considered one of the farm-bloc Senators and I had always thought him more identified with the thinking of the National Association of Manufacturers than with any other group. Maybe that's because I knew that he himself was an industrialist and had manufactured electronic equipment. You are probably familiar with the names of Capehart radios and record players.

But the Indiana Senator came to his feet on April 17 and said he was going to propose a farm bill; furthermore, that he thought the farm problem was the most important issue facing Congress right now; and that his bill was not just for the relief of the farmer but for the general taxpayer as well.

CAPEHART quoted many figures. Among the most important were these: The total farm income last year was $13 billion—the cost of operating the Department of Agriculture was approximately $6½ billion, or about half of the total farm income—and that the U.S. Government now owns $9 billion of farm commodities. He made his point that farm commodity prices were depressed by the huge surpluses. And his proposal was to do something about those surpluses.

How would he do it? In three ways: No. 1, retire producing acres; No. 2, stop the Commodity Credit Corporation from selling commodities on the domestic market; and No. 3, develop research programs for increasing the potential for providing markets for larger production and stability of prices.

The No. 1 point is the one with some similarity to the present program, with a major exception the acres taken out of production would be acres that had actually been producing basic commodities in 3 of the past 5 years, and not just marginal land. It is the marginal land that has been put under the soil bank provisions, for the most part. The Capehart bill would pay the producer $25 an acre per year, to be paid semiannually, up to 40 acres plus half of the remaining eligible acres. As I understand it, it would amount to something like this: A Madison County dry farmer, with a farm of 1,000 acres, has—for the past 3 out of 5 years—had approximately 300 acres in wheat. He could retire 40 acres, plus half of the remainder, or 160, for a total of 200 acres. For this he would receive $5,000. Apparently, he could farm the remaining 100 acres in any way that he wished. The Senator puts another restriction on the program, however. The limit the Government would pay for unused acres would be $1 billion a year. In other words, he wants to take 40 million producing acres out of production.

Now, point 2, and this is the big one, and the one that news releases apparently missed. He would take the present surpluses off the market. The law would say that the Commodity Credit Corporation may not dispose of any commodity to which it has or hereafter takes title, except: And there's a long list of exceptions, including donation or sale for disaster relief, school lunches, national emergencies, et cetera, and at not less than current parity price plus reasonable carrying charges whenever the President determines it necessary to prevent hardship. In his comments on the floor of the Senate, Mr. CAPEHART pointed out that we now have a law which says the Secretary of Agriculture may not sell in the domestic market any of the $9 billion worth of commodities which we have on hand, except at 5 percent above the support price—not 5 percent above parity, not 5 percent above 90 percent of parity, as many people advocate, but 5 percent above the existing support price. Wheat is now supported at 75 percent of parity. CAPEHART points out that there's no reason why a private enterpriser should pay any more than 5 percent above 75 percent of parity, as it stands now. He knows where it is and he can get it at any time he wants to get it. The Senator contends this holds the price down—which it does, of course—and goes further to say that the individual producer has no chance against the present program.

What would happen if the Government went out of the wheat-selling business? And this holds true for other basic commodities in surplus. The price would go up, because the surplus would have disappeared overnight. True, it may have been an artificial disappearance, but it would have disappeared. The entire visible supply of wheat in the country right now is 1,600 million bushels, and of this the Government owns or controls 1,300 million. Take the 1,300 million off the market and the scramble begins to secure supply, and with the scramble the price goes up.

Apparently, it is the thought of Senator CAPEHART that thus reducing the supply, and combining that with the limiting of actual producing acres, the commodity market stabilizes and future surpluses will not be a problem.

So that's the essential meaning of the Capehart farm bill. The third section, additional research, is not new. It's been proposed before, but has never had the "crash" priority rating that the Capehart bill would give it.

I would suggest that all of you listening who are interested in farming make it a point to study this proposed legislation, and whether you are for it or against it, you write your views to Senators DWORSHAK or CHURCH, or Representative BUDGE. Our Congress is stalling on farm legislation right now. It seems pretty obvious that no one figures he has the right answer. Your letters will inspire greater push from Idaho because they will convince your Representatives that the need is now.

A Tax Cut You Can Aid

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. HALPERN. Mr. Speaker, one of the more basic elements in our American heritage has been our readiness to change to new ways, to adopt new ideas and techniques, and to forgo the outworn methods and practices of the past. The fluidity of American life has kept us experimenting, seeking, inquiring in an attempt to improve and develop.

Life magazine on April 20, 1959, published a striking editorial pointed sharply at our national addiction to a top-heavy, overage, agricultural subsidy program—an outmoded hangover from different, more difficult days. In this editorial, entitled "A Tax Cut You Can Aid," the editors describe the fallacy of retaining the old high-cost support system in an era of emerging giant corporate farms and in a revolutionary period of expanding production efficiency.

The existing system is costly, it is not providing real assistance where it is most needed, and it is fast becoming divorced from the realities of modern-day agricultural production techniques. The taxpayers, particularly the city consumers, are paying a double crushing tax under the present program, the article points out "the cost of the subsidy plus higher prices for food."

A new look at this expensively mushrooming program is essential. The problems of supply and demand as well as an adequate living standard for our farmers should be approached in the light of modern concepts and means, not through an antiquated, extravagant, subsidy program. To emphasize this need, I have the unanimous consent of my colleagues to have this recent editorial from Life magazine printed in the RECORD as part of my remarks:

A TAX CUT YOU CAN AID

Fellow taxpayer, on this annual occasion of wailing and gnashing of teeth, we have a question to ask you: If a man came up to you and asked you for a lot of money so he could raise the price of your food and of the

shirt on your back, would you hand it over—or sock him?

The answer is, you are handing it over, billions upon billions, and it is being used to raise the price of your food and clothing. We're talking about the subsidies being paid to farmers for crops that aren't needed, to raise new surpluses to pile on top of staggering existent surpluses.

This economic madness has now reached its ultimate absurdity with the multimillion dollar soil bank program which is enabling quite a few farmers to retire: by agreeing to take their entire farm out of production for many years, they can get enough Government money to sit back and do nothing at all. Does that make you feel good at income tax time? Well, listen to this:

Out of every tax dollar you pay this year for nondefense Government needs, nearly 20 cents of it will be spent on these needless handouts to farmers.

At this very moment you have nine billions of your money tied up in these surpluses. They are now so huge that it will cost you more than $1 billion this year just to pay storage and other charges.

You've got as much money sunk in this unwanted surplus as you will spend this year on the whole U.S. Army.

You're going to spend another $5.4 billion on supports this fiscal year. And it isn't all going, or originally intended, to help the struggling small farmer stay on his feet. The great bulk of it is going to corporations or other farm outfits with operations so huge that two of them got more than $1 million each in loans, while 15 others got more than $250,000. Such loans frequently wind up as subsidies.

The Government has now so much wheat stacked up that if not another bushel were grown this year we would still have enough for all our domestic and foreign needs. In spite of this you, the American taxpayer, paid $330,267.51 in the form of a loan to the corporation of Tom Campbell, the millionaire wheat king of Montana (Life, Mar. 23), who is perfectly capable of looking after himself.

Do you know how much of your tax money is going to support this wasteful and self-defeating program? Every single penny you pay above the basic 20 percent rate goes into the farm supports. The $5.4 billion now going into this is $2.2 billion more than the entire Federal budget in 1929.

Farmers, once free and independent, can now be arrested and prosecuted for growing too much grain even if they do nothing with it but feed it to hogs on their farms.

The Government has so much surplus cotton that it has been dumped overseas at less than the price paid. But U.S. shirtmakers have to pay an artificially high price for cotton, thus making your clothes cost more than they should. Make you happy? Well, reflect on the further fact that you paid $781,274 for a loan to Mississippi's Delta & Pine Land Co., a big corporation. The loan, unrepaid, became an actual subsidy.

Corngrowers, who recently voted to accept a lower support price ($1.12 a bushel) in return for freedom to plant as many acres as they please, are getting ready to plant what is expected to be the biggest crop in U.S. history. The prospect of even trying to cope with this surplus has struck Eisenhower's economizers with fear and trembling. To buy it up would send the already fantastic cost of subsidies right through the ceiling.

In short, the whole farm support program, which has cost you $18 billion in a quarter-century, is a colossal failure.

The only sensible thing to do about it is to get rid of it, stop it. Why go on pouring good money after bad?

The subsidies were enacted in the depression, when farmers were in desperate need. Today, farming is a big business, highly mechanized, performed mainly by large operators and enormously efficient. Thanks to chemical fertilizers and automation, each year it gets more out of every acre. There is no more reason why you should give a subsidy to this successful big business than to General Motors or any private operation. It can stand on its own feet. When it is left to find its own way in a free market you'll get cheaper meat, bread, and clothing. And the farm business will shake down to those efficient enough to survive.

Of course, that kind of a jolt will create distress for some of the smaller, marginal farmers who are on land that should not be in cultivation. But the taxpayers should be perfectly willing to spend whatever is necessary to relocate them. Such aid would only be a drop in the bucket compared to the billions now going to the big fellows who don't need relief.

Cynics in Washington say that no farm bill of any kind—for better or for worse—can be got through Congress in this political year when every other Senator is a would-be President. The cynics assume that you taxpayers will go on as before, merely shelling out this money for what is, in reality, a double tax on you—the cost of the subsidy plus higher prices for your food.

Well, you can prove the cynics wrong. In this country, the voter is king. When he squawks loud enough, Congress listens—even more so in a political year. So start squawking loud and long enough to put an end, for good and all, to this incredible farm scandal that is getting worse every year.

Merchants of Filth

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including a brief editorial that appeared in the April 28, 1959, issue of the Washington Daily News entitled "Merchants of Filth." It is a brief and timely statement.

Postmaster General Summerfield and Chief Inspector, Post Office Department, David H. Stephens and their associates have been diligent in their efforts to deal with one of the most important problems affecting America today. The sending of this filth through the mail has become a big-time racket. It is estimated this business amounts to $500 million per year.

The editorial reads as follows:

MERCHANTS OF FILTH

Filth beyond the imagination of most decent people has been collected by Postmaster General Summerfield in his campaign against salacious matter in the mails.

The traffic in lewd merchandise amounts to half a billion dollars a year, according to Mr. Summerfield. And much of it is directed to children. Often obscene literature, advertising these merchants' wares, is sent to children who have answered comic magazine ads for toys.

A great difficulty in catching these people is due to the law which forbids investigators to open first-class mail. Here is a place where parents can help.

Give the postmaster promptly any such printed or picture matter you may discover, along with any available information concerning it.

Voluntary cooperation of this kind has helped obtain many convictions. You can help dry up this river of filth.

The Legislative Process and International Law

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. WILLIAMS of New Jersey. Mr. President, while our whole citizenry maintains a watchful eye on each new development in our foreign policy relations, I think it most desirable to pinpoint the vital role the Congress has in formulating and implementing foreign policy. This significant participation by the Congress had developed in a real sense only since World War II. Today we see the Executive negotiating with foreign countries, but in the framework provided by the Congress.

How and why this has come about and what meaning it holds, is the basis of a penetrating article written by Walter Surrey, of the District of Columbia bar, formerly Assistant Legal Adviser on Economic Affairs of the Department of State and former Director of the Military Assistance Program of the Department. A rereading of this article so impressed me that I commend it to the attention of my distinguished colleagues, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LEGISLATIVE PROCESS AND INTERNATIONAL LAW

(By Walter S. Surrey, of the District of Columbia Bar)

I very much doubt whether, before World War II, the American Society of International Law would have accorded the hospitality of its forum to a speaker proposing to deliver a paper covering the subject "The Legislative Process and International Law." It would have been most difficult in those days to conceive that any sustained discussion of international law in terms of the legislative process could have much substance or consequence.

Let us go back to the year 1936. It was in December 1936, that Mr. Justice Sutherland delivered the opinion of the Supreme Court in the case of *United States* v. *Curtiss-Wright Corporation*. This case was concerned with the question of whether the Congress could grant broad powers to the President in the field of international relations without establishing standards to guide him in the exercise of those powers. In discussing the relative powers of the Congress and the Executive, the Court said:

"In this vast external realm, with its important, complicated, delicate and manifold problems, the President alone has the power to speak or listen as a representative of the Nation. He makes underlying treaties with the advice and consent of the Senate; but he alone negotiates. Into the field of negotia-

tion the Senate cannot intrude; and Congress itself is powerless to invade it."

Indeed, the Court quoted with approval the report by the Senate Committee on Foreign Relations dated February 15, 1816, reading in part as follows:

"The President is a constitutional representative of the United States with regard to foreign nations. He manages our concerns with foreign nations and must necessarily be most competent to determine when, how, and upon what subjects negotiations may be urged with the greatest prospects of success. For his conduct he is responsible to the Constitution. The committee considers this responsibility the surest pledge for the faithful discharge of his duty."

Or we could have used the year 1941 as a starting point of contrast when, in the case of the *United States* v. *Pink*, the Court quoted with approval the decision in the Curtiss-Wright case. It was in that same year that the Lend-Lease Act was enacted, which gave the President broad powers in the field of procurement and transfer of defense articles to other countries. The terms and conditions upon which the foreign government was to receive aid were to be those which the President deemed satisfactory, and the method of repayment was to be in kind or property or any other direct or indirect benefit which the President deemed satisfactory. The only significant congressional limitation was that the President was specifically forbidden to assume or incur any obligation on the part of the United States with respect to postwar economic policy, postwar military policy, or any postwar policy involving international settlements except in accordance with established constitutional procedure.

Now let us walk around and through the field of the U.S. foreign relations in terms of how the Congress today participates in the development and execution of our foreign policy, why this has come about, and what it means.

A convenient departing point might well be an examination of the first Economic Cooperation Act of 1948, contrasting it with the Lend-Lease Act of only 7 years before. The Economic Cooperation Act, unlike the Lend-Lease Act, was a complex piece of legislation covering a multitude of subjects in considerable detail and setting down definite conditions which the President was to obtain from the foreign governments prior to any furnishing of aid.

The undertakings which the foreign government had to assume as a condition precedent to receiving aid included promotion of industrial and agricultural production, internal fiscal and monetary measures, increase of trade with other participating countries, including reduction of trade barriers, full utilization of its assets, including the dollar assets of its nationals, increased accessibility to materials required by the United States to be provided to the United States and its nationals, publication of reports on the aid program, and additional provision of information required by the United States in connection with the aid program, the deposit and utilization of the local currency counterpart of grant aid, and submission to an arbitral tribunal of cases espoused by the United States involving property rights of U.S. nationals affected by governmental measures of a participating country.

These are only some of the principal conditions which were required by the Congress to be included in a bilateral agreement between the recipient country and the United States as a condition precedent to a country's being eligible to receive aid. The Congress went further: it wanted to maintain a running review of the progress of the administration of the aid program. Thus a bipartisan Congressional Joint Committee on Foreign Economic Cooperation was established, consisting of three members each from the Senate Foreign Relations and the House Foreign Affairs Committees, and two from each Appropriations Committee. The function of this committee was to "make a continuous study of the programs of the U.S. economic assistance to foreign countries, and to review the progress achieved in the execution and administration of such programs."

This characteristic of the ECA Act of 1948—the spelling out of detailed provisions for the administration and execution of our foreign policy in the field of economic aid—has been carried forward by successive Congresses in successive aid legislation. Let us examine how far this has gone by making a rather cursory but, I think, significant, review of the Department of State publication, "United States Treaties and Other International Agreements for the Year 1956."

In 1956 the United States concluded 260 treaties and other international agreements. Of these, only five were actually in the form of treaties. These treaties dealt with (1) a multilateral convention on slavery, amending the Slavery Convention of 1926, (2) a treaty of friendship, commerce and navigation, (3 and 4) two double taxation treaties, and (5) a multilateral treaty, the International Wheat Agreement. The rest were in the form of agreements not requiring the advice and consent of the Senate.

Of the other 250 agreements, at least 95 percent were entered into under authorization of legislation. This 95-plus percent includes parcel post, passport, and visa agreements and other agreements important to our Nation's orderly day-to-day living but not significant in that aspect of our foreign policy which is concerned with the maintenance of the strength of the free world in the cold war struggle. What is significant to our discussion, however, is that at least 179 of these 250 agreements were under legislative enactment which detailed to a very great degree the terms of the agreements, and that these agreements did concern themselves with the execution of our foreign policy in the waging of the cold war. One hundred and sixty-six of these 179 agreements were under one or more of our legislative aid laws, and 13 were under the Civil Atomic Energy Act of 1954.

Thus, the greater activity and the most significant activity in the conduct of our foreign affairs—those activities which are in the mainstream of our foreign relations, insofar as treaties and agreement are concerned—were in large part through Executive agreements whereby Congress not only authorized such agreements but set forth specific terms and conditions to be included in the agreements. Today, therefore, in the most important areas of our formal relations with foreign countries, the negotiation of those relations by the President are conducted in a framework provided by the Congress and governed by conditions spelled out in advance by Congress.

The significant factor in the establishment of these formal agreements, therefore, is often not what the President negotiates with the foreign government, but what the President negotiates with, or wrangles from, the Congress. Indeed, once this basic negotiation between the President and the Congress has been accomplished, and authorizing and appropriation legislation has been enacted, then the implementing agreement, that between the United States and the foreign power, may often be relatively easy. In order to look into the meaning of any such agreement, we should first look to the legislative histories of the authorizing and the appropriating legislation.

Why has this significant participation of Congress in the formulation and conduct of our foreign relations developed? Since the war, our foreign relations have really been carried out in two major areas. The first deals with our relations with the other half of the bipolar world, the Soviet Union and its satellites. Basically, although there have been some recent changes and others are portended by the newspapers, our foreign policy for this area has dealt, not in terms of reaching agreements, but in terms of waging the cold war through propaganda. There are, of course, exceptions to this, such as the granting of aid to Poland under Public Law 480, and our recent cultural exchange agreements with the Soviet Union, but essentially the course of our conduct of foreign relations with the Soviet bloc is one designed not to reach agreement.

How we conduct this propaganda battle, however, does concern the Congress; and the attitude of the Congress plays a large part in determining what the President can do in this field. Congress appropriates the money—or doesn't appropriate it—for waging this propaganda war. Congressional investigations can vitally affect the content of the propaganda, even to the extent of causing administration book burnings abroad. Congress attitude on mainland China plays a significant part in our nonrecognition policy. It is often true that Congress attitude in the first area, our relations with the Soviet bloc, is used to affect what the President wants in the second area, our relations with our allies, the neutrals and potential allies.

And it is in the second area of the conduct of foreign relations—our relations with our half of the bipolar world—that Congress plays a very decisive role. In the conduct of these relations, since the conclusion of World War II, our policy has derived from the fact that we are the member of our half of the bipolar world which has the money, and the execution of our foreign policy in this area revolves around our money. It costs the United States money to provide mutual defense aid; it costs the United States money to provide defense support aid (which in the old days we unknowingly, or perhaps crudely, termed economic aid); it costs the United States money to provide surplus agricultural commodity aid; it costs the United States money to provide equity capital to assist in the development of the underdeveloped countries; it costs the United States money to provide guarantees of private investments; it costs the United States money to provide point 4 technical aid; it costs the United States money to provide for educational exchanges.

The annual battle on foreign policy on the Hill deals primarily with the question of how much money the executive branch can get out of the Congress for the implementation of our foreign policy with respect to our half of the bipolar world. Now the fact that money is in large part the source of our foreign policy with respect to our half of the bipolar world leads to other consequences. At the outset the President, in getting up a program for the carrying out of foreign policy for the next fiscal year, has to make two basic decisions. The first is, How much money does he need to do what he thinks it is necessary to do. This is never really a clear-cut decision for it is in large part qualified or at least colored by the second question, How much money does the President think he can get out of the Congress? And if it is the administration's Congress, it does not necessarily mean that the task is any easier. Witness the present stronger Democratic than Republican support for foreign aid in the Congress.

The process of getting money out of the Congress is based on many considerations. In addition to how much is needed, there is the basic consideration as to how much a burden can be put on our own economy, both from the economic and the domestic political point of view. Other considerations are: What does the President have to do in the conduct of foreign affairs to induce the Congress to meet his demands and what terms will he have to offer to or accept from the Congress as conditions precedent to getting the money? And, mind you, these conditions laid down by Congress for the grant-

ing of aid can go quite far. For example, the Battle Act, as it is popularly called, or the Mutual Defense Assistance Control Act of 1951, deals with the trade relations involving strategic materials between the recipients of our aid and the countries in the Soviet bloc. Here is U.S. legislation which sets down the trade relations of one group of foreign governments with another group of foreign governments as a condition to the first group receiving our aid. I am not saying that this is good or bad, but I am saying that it is a clear example of the extent to which Congress has gone in enacting conditions for the execution of foreign policy.

The fact is that our foreign policy, as regards our half of the bipolar world, can be summarized in one word—dollars—and this necessarily means that the Appropriations Committees have a much more important say in the conduct of foreign relations than was ever conceived by the Constitution or by tradition to be their responsibility. This is an enormously significant development. It to some extent reverses the constitutional role of the Senate and the House. The Senate in 1956 advised on and consented to five treaties, three of which were relatively unimportant; the House had to originate the appropriation acts to make possible around 170 executive agreements, all of which dealt with the waging of the cold war.

What does this development whereby Congress plays a vital role in the formulation and implementation of foreign policy mean to us? First, from the narrow point of view, whether one is the professor concerned with theory or the attorney concerned with a client's interest, it does require that one know how the legislative process operates. If we are practicing attorneys, it means we had better learn how to lobby; if we are textbooks writers on international relations and law, we had better understand the operation of the legislative process; if we are representatives of a foreign government, we had better learn as much as we can about this strange relationship between the Executive and the Congress.

The conduct of a large segment of the external affairs of the United States is no longer an esoteric subject. The development of our more significant foreign policies evolves from the same legislative process in the same manner as, for instance, authorizing and appropriating legislation on a roadbuilding program to counteract the recesison.

But more important, what does this development, involving the sharing between the President and the Congress of policy formulation and execution, mean in terms of the conduct of our foreign relations? From an overall point of view, I think it is good—a conclusion, I hazard the guess, with which few members of the Department of State will concur. Certainly it is more democratic. Certainly it requires the executive branch to think more about and justify better any given foreign policy program. Certainly it requires, in order to maintain continued congressional support, periodic "agonizing reappraisals" of our foreign aid programs, which in turn should result in the reformation of those programs to meet current conditions. This is particularly true today. Certainly it removes the weight of certain pressures, both foreign and domestic, on the executive branch. There is no more succinct reply to a foreign government's complaint than the finality of the sentence: "Congress says it must be done this way." And there is nothing so gratifying to the State Department policy executive as fending off a domestic pressure group by saying: "Tell it to the Congress."

But there is an inherent evil in this development which can only be cured, or at least curtailed, by wise action on the part of the President and his aids. Simply stated, it is that 96 Senators and, more significantly, 435 Representatives, cannot all be expected to be educated and sophisticated on all phases of our foreign policy, though generally they can be expected to be voluble, and always they can be expected to be decisive—they do have the vote. This means that the executive branch must cease being frightened by congressional intervention in foreign relations, particularly when combined with congressional lack of undersanding. The intervention is here to stay, so it is better to do something about the lack of understanding. Too often executive reaction is: "Congress won't like the fact that India and Pakistan aren't the friendliest of neighbors; tone it down or the appropriation will be cut." To paraphrase Joe Louis' famous remark on Billy Conn, "You can run away from a foreign policy problem, but you can't hide it."

The annual battle on foreign aid authorizations and appropriations should become more and more a day-by-day educational activity. It becomes increasingly more essential that the key committees, particularly the Foreign Relations, Foreign Affairs and Appropriations Committees, and individual key Senators and Representatives, be kept currently abreast of foreign policy developments. And this is not acomplished by spasmodic briefing sessions. It is best done by having an officer of an executive agency, such as the State Department or the ICA, or the Atomic Energy Commission, selected because he is knowledgeable on a particular problem, discuss that problem on the Hill from the very inception of his work on it. Admittedly, this task may generally be tiresome and often frustrating; but it is worth the effort. The Marshall plan, the Atlantic Pact and the first Mutual Defense Assistance Act were successfully initated because this effort was made.

It is also important that organizations and people interested in our foreign relations take more time to discuss the problems with congressional committees and individual Congressmen. I say discuss, rather than submit reports, because, while any Congressman is thoroughly literate, he generally has no time to prove it. And this does not mean that the discussions with a Congressman, by representatives of this society, for example, must be in terms of solutions—unless, of course, you represent a client.

Transmission of knowledge of the facts frequently is more important than transmission of solutions. And often it is equally important that the Congressman learn that there may be no easy or even relatively immediate solution, as may well be the case, for instance, with Arab-Israel relations.

One final word: To a significant degree a Congressman does reflect public opinion. He may help mold that opinion, but even then, the opinion he has helped mold comes back to mold and sometimes control his attitudes. Those who went along with McCarthyism on the State Department unfortunately found this to be true. So it becomes more important that the American people be more and better informed about our external relations—more and better informed primarily by the executive branch, but also by private organizations, such as this society.

Whether we think the development of Congress' role in foreign affairs is good or bad, it is a fact that the Congress now shares with the President in the development and, to a lesser extent, the execution, of our foreign policy. It is a fact that the overall conduct of a significant part of our foreign affairs is very much in the well of the House and Senate. The formation of the principal segments of our foreign policy is out in the open, debated and developed by a democratic procedure. It follows that an informed people and an informed Congress are the best guarantees that this method for the formation of our external relations will work at least moderately well.

Address of U.S. Senator A. S. Mike Monroney, of Oklahoma, at Paul M. Butler Testimonial Dinner in South Bend, Ind.

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BRADEMAS. Mr. Speaker, on April 29, 1959, in South Bend, Ind., nearly 800 friends and neighbors from throughout the State gathered to pay tribute to one of Indiana's most distinguished citizens, the hard working, courageous and dedicated chairman of the Democratic National Committee, the Honorable Paul M. Butler.

The principal speaker at this great banquet in honor of Paul Butler was one of the finest Members of the U.S. Senate and another distinguished American, the junior Senator from the State of Oklahoma, the Honorable A. S. MIKE MONRONEY.

I am proud to include in the CONGRESSIONAL RECORD the splendid address delivered by Senator MONRONEY on this occasion:

I am a lucky Senator indeed to be invited here for this very happy occasion.

It's always a pleasure to come to Indiana to address the front-line fighting troops of the Democratic Party. It's much different here than in my State of Oklahoma. Here, in this area, it's hard to be a Democrat. Old, bad habits are hard to break, and so you face an uphill fight in every election.

In Oklahoma and other parts of the great Southwest it's hard not to be a Democrat. And so I am always glad to salute the people who turned the tide to win outstanding victories for our party in Indiana.

But to be here on this occasion—when a dear friend of yours and mine is honored by his fellow townsmen and others of Indiana—gives me particular pleasure. This warm and enthusiastic testimonial diner is a well deserved tribute to a great Democratic leader—Paul Butler.

When the invitation was extended to me I wondered why, out of all 64 Democratic Senators, I was lucky enough to be chosen to speak on this occasion.

Reflecting that South Bend's most famous product is the great Notre Dame football team, and knowing that Paul Butler is Notre Dame's No. 1 fan, I finally figured out why this honor came to me.

I asked myself what State had done the most in recent years for Notre Dame and I came to the very definite conclusion that undoubtedly it was Oklahoma. On the 50th aniversary of our statehood, November 7, 1957, Oklahoma was kind enough to Notre Dame to terminate our record-breaking chain of victories and to establish Notre Dame as the outstanding team in the Nation for that year.

It was a footnote for football history that the team we beat in starting this chain—Notre Dame—turned out to be the one that broke our long winning streak in the end. And so I was happy to accept this invitation as partial payment on South Bend's debt to Oklahoma.

I hope that before we turn to the urgent business of discussing the Republican Party and its current Washington product, you will permit some brief observations on the Democratic Party and its present chairman.

Many Democrats in the past have written distinguished records in the position that

Paul Butler fills today, but few, if any, have matched his achievement in rebuilding the party from the ashes of an overwhelming defeat in 1952 to the healthy, robust, aggressive force that it is today. With the party treasury deeply in debt, with even the bastions of the South in political ruins, Paul Butler began the long, hard task of creating an alert, alive, and effective Democratic Party.

He didn't do this on a one-State or a one-section basis, but sought to place the Democratic Party again in the forefront as the truly great national party.

Lets' face it—perhaps Paul stepped on a few toes, hurt the feelings of a few leaders in various sections—but his concern was for the health of the entire Democratic Party, and his courage and drive rebuilt this party to its effective position today.

It was inevitable that in this process, there should be sectional criticism. For Paul Butler has faced no less a task than to articulate for the Nation the broadest aspirations of a national party during a period when that party lacked the natural public platform which the Presidency provides.

Certainly we in Congress can take considerable pride in the fact that the record of the Democratic Party in both Houses contributed substantially to winning the sweeping public endorsement in last fall's elections. But we all are practical enough politicians to realize that elections are not won alone in the halls of Congress, but in the tens of thousands of precincts throughout the Nation. It was in rebuilding this party machinery for the Nation—to the State, to the county, to the township levels, that Paul Butler committed his attention and his leadership so effectively.

No one today who has seen the shambles of the Republican national organization—confused and befuddled, even though they still control the vast powers of the executive department of this Government—can help but realize the superb achievement that Paul Butler has wrought for his party. There has been no patronage; there have been no fancy appointments to ambassadorships; there have been no Cabinet posts—in fact, no executive power to serve as convenient leverage for Paul's rebuilding job. It all had to be done with bare hands and a determination that the Democratic Party would again be resurgent.

The record of the last congressional elections indicates the degree of this resurgence—when Maine joined our ranks with the election of Governor MUSKIE to the Senate, and Vermont sent to the Congress its first Democrat in more than a century.

The extent of this devastating defeat administered to the Republicans portends great days ahead in 1960.

This was done by Paul Butler—not by sitting in a Washington office and issuing pious declarations—but by traveling the long, tedious paths to the 48 States and in these States to the county seats, to insure that every party worker was trained and encouraged in performing the duties required in his particular area of responsibility.

This program has virtually transformed the great western reaches of our country from a happy hunting ground for musclebound Republicans to what approaches a monopoly of Democratic representation in the Congress and in the Governors' chairs.

I predicted in my closing campaign speech at Evansville that after November 4, 1958, the GOP would not be able to run the Republican elephant any more—they would just have to stuff him. And sure enough, not long ago they stuffed the world's largest elephant and placed it in the Smithsonian museum for all to see.

I am proud of the part that Paul Butler has played in stimulating young men of character and ability to enter the political field and to give us the greatest asset a party can have—young, enthusiastic and energetic candidates for positions of responsibility in State and National Governments.

The best illustration I know is here in South Bend, because the consensus among the press and others who watch young Congressmen come and go is that one of the brightest young stars of this victory is your own JOHN BRADEMAS.

Few men have come to the Congress or to the Senate, during my 20 years here, so well equipped as JOHN BRADEMAS. His educational background, his experience in the teaching field, and his practical experience in government make him one of the most brilliant young leaders in the new Congress. Of course, this was perhaps apparent to me somewhat earlier than to others, because of the insight he showed in selecting his administrative assistant.

But my opinion, which might be somewhat open to question, is shared by Speaker SAM RAYBURN, Majority Leader JOHN MCCORMACK, and the Democratic whip, CARL ALBERT. The fact that in his first term he won an assignment to the committee that handles two of the most important fields of government—namely, labor and education—proves the regard that the House leadership has for him.

I have the great pleasure also of serving with your new Democratic Senator, VANCE HARTKE, who has been my long-time friend. I met VANCE when he was promoting the first Jefferson-Jackson Day dinner at Evansville many years ago, when I was fortunate enough to be invited as speaker. I recognized his leadership then. I have admired and respected his progress upward in the political field, and I rejoiced, as you did, in his overwhelming victory in the election last November.

He has already won his spurs in the Senate. His ability has been recognized by the choice committees to which he has been assigned. I have the honor of sitting with him on the important Interstate and Foreign Commerce Committee, where he has already proven his competence in the wide field in which this committee must legislate.

Winning a position on the tremendously important Finance Committee is unheard of for anyone who has not had at least 6 to 12 years of experience in the Senate—yet he was given this assignment by LYNDON JOHNSON and the Senate leadership.

Because of his grasp of municipal affairs he also is making a mark for himself as a member of the District of Columbia Committee. This is indeed a record of achievement and one that marks him as a man to watch.

Other examples of Indiana's great Democratic resurgence reversed the ratio in the House of Representatives. Where once RAY MADDEN and WINFIELD DENTON held out against nine Republicans, the Democrats now have eight seats and the Republicans only three. Every crap-shooter knows that "eight" is a much better point than "two." But better still, let's concentrate on capturing those three to roll an "eleven" in 1960.

It is now my sad duty to turn to a less pleasant subject—namely "the team"—which is what the Republicans call the Eisenhower administration—to the chagrin of all good football fans. You know, even the worst football teams usually excel in some department. They've got a guy who can pass—or maybe a place kicker—or maybe a good center. If they haven't got any of those—then they at least have a good cheer leader, or pep club, or drum majorette, or band. But not this team. All it's got is a publicity agent.

But you just can't sell a bad performance no matter what kind of press agentry you use. The fans are lots smarter than the Republicans realize. Even the kids are too smart for the Madison Avenue selling job.

Let's look at the record. The farm front has folded up under Benson's hammer blows. While living costs are hitting new highs each month, farm prices are scraping bottom with new lows. This is the Benson policy of killing two birds with one stone—the consumer with high prices and the farmer with low prices.

The Benson policy was to reduce the farm surpluses by reducing the acreage and the price support levels and thus reduce production and the cost of the farm program. Shades of Wrong Way Corrigan—our surpluses are higher, our support prices much lower, our production greater. And the cost of the program to put the farmer in the fix he is in is six times greater than it was under the Truman administration—$6 billion today against $1.05 billion under the Democratic program of farm prosperity.

Instead of liquidating the surplus, Secretary Benson has liquidated the farmers. A total of 4,231,000 of our farm population has left the farms since 1950. What Secretary Benson referred to as the swollen bureaucracy of the Department of Agriculture in 1953 has gained in population under Benson by nearly 7,000 since that date.

But perhaps we can excuse the team on the farm front. After all, they only pass by the farms on the way to the golf courses. But with so many men from big business brought into this administration you would expect some degree of expertness in fiscal affairs.

Instead of the sound fiscal policy that was promised throughout 1952 and 1956—we have had a record number of fiscal fumbles to mar the game. Management of the budget has led to a continuing series of red figures and heavy deficits. This year the budget deficit will range upward to $12 billions in the red. The cost of paying the interest on the public debt in 1952 was $5.9 billion. This year the budget asks for over $8 billion to meet the new Republican interest cost for the largest debt in the Nation's history. An increase of over $2 billion because Secretary of the Treasury Humphrey, the Republican fiscal giant, planned it that way.

This interest cost—I might remind you—is second only to the cost of national defense in the budget. This $8 billion added cost buys nothing—it is a deadweight upon the taxpayers as this administration raised its own rent on the borrowed money.

The new fairytale budget—which the President and all of his Cabinet are urging us not to unbalance—never was balanced. The reliable Joint Committee on Revenue and Taxation has declared that the budget overestimates expected income in the amount of $1.6 billion. And even before that, the fairytale balance had been achieved by listing revenue from increased postage rates and gasoline taxes not enacted nor likely to be enacted by Congress.

Meanwhile, as a consequence of its tight money policy as an alleged weapon against inflation, the cost of interest rates to little business, farmers, cities and towns has climbed to the stratosphere to the tune of some $20 billions. These higher interest rates have had a direct impact upon the ever increasing cost of living for everyone.

During the campaign last November, the resistance to the Republican policy of tight money and higher interest rates voiced in Congress and by the Democratic National Committee played a definite part in the Democratic sweep.

People found out the hard way that the old definition of what the two parties stand for still holds true: The Republican Party believes in high wages for money—and the Democratic Party believes in high wages for people.

The sad fact is that the Republican piety over a balanced budget is a complete fraud—because it applies only to the budget for fiscal year 1960, the last complete budget year before the next election. It is to be achieved by cramming everything possible into the budgets for 1959 or 1961.

The budget for 1959 is already unbalanced and the Republicans couldn't care less whether it's unbalanced by $12 billion or $15 billion, as long as the 1960 budget is lily white. Likewise they aren't interested in 1961, since that is too late to have any immediate political benefit.

This administration is avoiding deficits—it's just shuffling them from 1 fiscal year to the other—in the hope that the political hand will be quicker than the voter's eye. The real tragedy is that the pea in this political shell game is our Nation's safety.

Remember the promises of 1952 and 1956 for a strong national defense? While our commitments abroad have multiplied like Texas jackrabbits, the administration's economy ax has cut deeper and deeper into the numbers and equipment of our military forces.

Year after year the manpower of our Army, Navy, Marine Corps, and Air Force has been cut. New weapons, ballistic missiles, and airlift have been squeezed to the minimum.

It has been the leaders of the Democratic Party that have sounded the warning and led Congress to vote more instead of less to strengthen our defense against the threat of expanding Communist military strength.

Our lagging missile program was drastically stepped up. Cuts in manpower proposed by the Eisenhower administration were resisted in Congress, and money was voted to build up—rather than tear down—our ground and sea forces. Most of the additional funds voted by the Congress were frozen by the administration—as was our fighting strength.

Even funds for our National Guard and our Reserve forces—made even more necessary by the reductions in the Regular Army—were cut by the administration, and restored by Congress.

But it has been in the field of foreign policy that our greatest shortages in ideas and ideals have occurred. We have slipped, and slipped badly, in furnishing leadership in this most vital field where the peace of the world hangs in tenuous balance.

The democratic leadership of the Congress has time after time rescued the President on the vital issues of foreign aid and foreign trade to overcome heavy Republican opposition. Congress cannot make foreign policy, but wisely and patriotically the democratic policy has been to keep it out of partisan politics.

Democrats in Congress have repeatedly offered new ideas and new ideals in the struggle to win the hearts and minds of the world's people. One billion people—almost one-third of the world's population—swing in the balance between communism and freedom. These are the populations of the new nations which have only recently won independence from colonial rule. They are looking for a new way of life. Our programs and our leadership can bring to their new freedom a new hope of an improved standard of living.

The shape of tomorrow's world will be decided by the way this billion uncommitted people choose. If they join the billion already under communism, then two-thirds of the world will be under a slave-state system—and the one-third of the world's people living under democratic governments will face gradual erosion of the areas committed to freedom.

The Democrats have shown great understanding of the need for a long-range modernized approach to meeting this Communist challenge in the cold war of economics. In the Senate in the last session of Congress we moved to change our outdated foreign-aid program from one of grants or accommodation-lending by Uncle Sam alone. We urged the administration to get the free world to join in an international banking system for a long-range program to supply financing for economic development by sound banking methods. To achieve this end, a substantial use could be made of the local currencies of these nations which we receive from the sales of our agricultural surpluses abroad.

The Democrats have supported also the vast expansion of peaceful uses of atomic energy. We have a deep feeling that instead of emphasizing the capacity of our bombs for catastrophic destruction, we would impress these billion uncommitted people more by showing how the horror of the atomic bomb could be beaten into a plowshare—to become mankind's greatest servant.

Instead of telling the world how many millions we can cremate with one big blast of a hydrogen bomb, we could far better tell them how we have developed means for making it work for man's survival.

Already we have crossed the threshold to find some 100 uses for atomic isotopes in the diagnosis and treatment of diseases. Soon, with enough research, we may find in atomic medicine the cure for cancer or other dread diseases that have beset mankind throughout history.

In agriculture, atomic wastes and byproducts can be useful in producing better strains of fruits and vegetables. New livestock breeds of greater size can be created through other byproducts of atomic energy.

In engineering, underground blasts have indicated great new uses for atomic energy in mining and petroleum recoveries. Perhaps some day underground blasts may develop new harbors along our coasts or along the coast of South America from one single explosion.

In large areas of the world where deserts meet the sea, poverty and starvation occur because of the lack of water for irrigation and human consumption. We are nearing a solution to the problem of transforming sea water to fresh water by desalting processes. Surely atomic reactors can hasten the time when we can make many areas, now worthless deserts, bloom like the Garden of Eden.

Many of you have seen the great transformation of farm life when the REA lines reach the farm homes of America. Life comes from the darkness of the 19th century into the brilliantly lighted world of the 20th century by the magic of electricity.

In most of the areas where these one billion uncommitted people of the world live, electricity is nonexistent or so expensive that only the very few can use it. This is because oil or coal must be shipped halfway around the world to supply the energy required to generate elcctricity.

If we could mass produce atomic reactors at relatively low cost and sell them on long terms, it would bring the hope of the electrical age to thousands of towns and villages of the world now in darkness. Instead of fuel of great bulk shipped at great expense, atomic fuel could be sent in by airmail. A package no larger than a pack of cigarettes can furnish the energy to light and heat a village of 10,000 people for an entire year.

These are but a few of the things we can and should do if the face of Uncle Sam which the world sees is to be the kindly smiling face that we know it to be. But the rest of the world does not automatically know the great spiritual values we hold. Deeds, not words, are required.

I feel if we can spend some 44 billions on the science of death, for our weapons and defense—and I'm for that amount and more—that we should tithe, and spend one-tenth of that amount on science for life.

We have the duty to provide the continuing leadership required if the world of tomorrow is to see our hopes of today realized. Thus can our generation give thanks for the blessings of our science—by sharing with others the abundance it can produce.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, May 1, 1959

Mr. WILLIAMS of New Jersey. Mr. President, this month's American Federationist magazine contains an article by the distinguished senior Senator from Oregon [Mr. MORSE] entitled, "This Problem Can't Wait." The problem which cannot wait is that of raising the minimum wage to enable all of our citizens to make an equal adjustment to rising costs of living and the pressures of inflation.

I have the privilege of being a cosponsor with the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mr. MORSE], and several other colleagues of S. 1046, a bill which would raise the minimum wage to $1.25 an hour, and extend its coverage. This bill would bring the Fair Labor Standards Act in line with the present day cost of living and the general standard of wages in the country.

I request unanimous consent that Senator MORSE's very cogent and pertinent article on this minimum wage question be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WAGE-HOUR ISSUE: THIS PROBLEM CAN'T WAIT

(By Hon. WAYNE MORSE, U.S. Senator from Oregon)

On February 16 I had the privilege of joining with Senator JOHN F. KENNEDY, of Massachusetts, in introducing S. 1046, a bill which would raise the minimum wage to $1.25 an hour and greatly extend the coverage of the act to employees not now covered.

There is at present a process in our social and economic life which bodes ill for the future of our great country, a gradual development among American wage-earners of a permanent depressed class numbering hundreds of thousands who have little realistic hope of keeping pace with the majority or of attaining what we like to consider a typical American way of life.

This development has been under way for nearly a decade. It has proceeded in boom times and in recessions alike. It is virtually unaffected by the rise and fall of employment or by the progress of organized labor at the bargaining table. It is unrecognized by most of our countrymen. Yet, unless it is checked, it can have the most profound impact upon our society.

This depressed class consists of American citizens whose earnings are keyed to the Federal minimum wage and a substantial fraction of the 20 million other workers who are wholly devoid of wage-hour protection because of exceptions now provided by law.

These are employees who, if covered by the Fair Labor Standards Act, earn $1 an hour or a few cents more and, if not covered, may earn as little as 50 cents an hour, with no premium for overtime.

Bear in mind that these are employed workers performing useful, indeed indispensable, functions in a wide range of business, industrial, and commercial enterprises.

They are employed, but no matter how long and hard they toil, they cannot earn enough to meet a basic minimum standard of food, shelter, clothing, and medical care.

Congress long ago decided that such a state of affairs was contrary to the national interest. The original Fair Labor Standards Act, which became law in 1938, pledged to correct and as rapidly as possible to eliminate conditions of employment detrimental to the minimum standard of living necessary for health, efficiency and general well-being of workers. The policy is clear enough; so, unfortunately, is our failure to carry it out.

It is an astonishing and tragic fact that the law is farther away from fulfilling its objectives today than it was 21 years ago. The minimum wage itself is less adequate, and a greater proportion of the working force is denied protection.

A few figures are illuminating.

The 1938 act set the minimum hourly wage at 25 cents, with a raise to 30 cents mandatory after a year and with a further increase to 40 cents provided through the operation of industry committees. At that time the average hourly wage in American industry as a whole was 63 cents.

Today the legal minimum is $1 an hour—but the industrial average is $2.19. A difference of 38 cents has become a difference of $1.19.

Equally startling is the record since the minimum of 75 cents an hour was established in 1950. At that time the average industrial wage was $1.38. The average has climbed 81 cents and is still rising; the minimum has gone up only 25 cents.

Even in the 3 years since the $1 minimum took effect, the average has gone up 30 cents.

And wages are only a part of the story. Paid vacations and paid holidays, pensions to supplement social security, sickness and accident benefits, medical and hospital insurance, supplementary unemployment benefits and many other socially desirable terms have become typical fringe benefits for many industrial employees.

Though the general public undoubtedly thinks otherwise, these terms are far from universal. To the depressed class of workers they are almost unknown.

Numerous studies of low-wage occupations, whether or not they are now covered by the law, have shown that the progress of the higher paid, organized workers does not trickle down to the rest. Let me note, in passing, that the reverse is also true. Since the very beginning, increases in the Federal minimum have had little direct impact on wages substantially above the minimum.

Moreover, the gulf between the lowest paid workers and others will continue to grow unless a remedy is found. Millions of workers are now covered by cost-of-living and improvement factor clauses, assuring them of regular wage increases even when basic contracts remain unchanged.

Thus the depressed class is not merely a low-paid group. It has assumed a distinct identity as a class increasingly isolated from the great mass of wage earners, a class that is denied the voice, the power and the progress of other American workers, a class condemned to poverty.

The penalties imposed upon these workers are not merely relative. The present minimum wage is simply not enough to meet minimum human needs. According to a Department of Labor study, a family of four requires an income of at least $2.25 an hour. Other studies have estimated the minimum living costs of a single person at nearly $3,000 a year, or nearly $1.50 an hour. At best, members of the depressed class are 33⅓ percent below a living wage.

Let me cite a truly ironical fact. In many cities the employed head of a family of four, who earns $1 an hour, would be better off if he quit his job and went on home relief—because home relief budgets for families of this size, even though they are designed simply to ward off starvation, frequently call for more than $2,000 a year.

I have referred only briefly to the question of wage-hour coverage, but this is of at least equal importance. The price of the 75-cent minimum in 1950 was a reduction in the number of workers protected by the law. Among those wholly excluded are workers in the retail and service trades, whose numbers are relatively greater with each passing year.

What does all this mean to the rest of us? In the narrowest and most selfish terms, it means money.

Poverty below the subsistence level, as we all should know by now, is quickly translated into slums, delinquency, and disease—and, therefore, into higher taxes to curb these evils.

Moreover, our national economic health is at stake. An expanding national economy, one that will absorb both the present unemployed and the 700,000 or so new workers who enter the labor market annually, can be achieved only if we have the ability to consume what we produce. We can't reach that goal while millions of our citizens are unable to afford even the bare necessities.

Our recovery from last year's recession is an apt example. All the economic signs were favorable toward the end of 1958. There was clearly a pentup demand for goods of all kinds; inventories were depleted; the shakeout had apparently run its course.

But in a matter of months the much-heralded revival had lost headway. Production soared, but sales lagged behind. Employment fell off. Inventories began to grow again. There weren't enough customers with money to buy what they wanted and needed.

We in the United States have never sought to bring about economic equality among our people. We picture our country as a land of opportunity, in which each of us can reasonably expect to prosper in proportion to his diligence and skill.

To be sure, we have not fully realized this goal, but for the most part, until recent years, we have recognized our shortcomings and tried to correct them. The Fair Labor Standards Act itself is an example.

Unless we continue on this course, unless we strive ceaselessly to make this a land of opportunity for all, we make a mockery of our own pretensions and place a heavy burden on our conscience as a people.

What do we propose?

First, we propose to raise the minimum hourly wage to $1.25—a modest step when it is considered that industrial wages as a whole have gone up 30 cents an hour since the $1 minimum was instituted.

Second, we propose to extend the coverage of the law to some 7,500,000 additional workers, most of them in the retail and service trades, with lesser numbers in a dozen other fields. This, too, is modest enough. It would leave more than 12 million workers still unprotected.

What possible objections can be raised against these proposals? Knowing the opposition as I do, I predict there will be three principal points of attack. One will come from the self-appointed "defenders of small business," who are in reality lobbyists for the huge chain and department stores. They will be raising a wholly untenable argument.

Our bill would apply to retail establishments with gross annual sales of $500,000 or more. These include only 3 percent of the Nation's retail enterprises, yet these 3 percent employ more than half the Nation's retail workers. The other 97 percent, the bona fide small businesses, would not be involved.

These big operations can certainly afford a $1.25 minimum and a 40-hour week. But surveys have shown that in practice they pay more of their workers less than $1 an hour than do the single-owner stores. By forcing the huge chains to met fair labor standards and by increasing the purchasing power of the lowest paid, we will help small businessmen, not hurt them.

Another equally specious argument will undoubtedly be raised by the Eisenhower administration—that our bill will be inflationary. But studies by the Department of Labor after each previous increase in the minimum wage have proved that this is simply not true. There has been no significant effect upon either prices or wages, and there is no reason to expect a different result this time.

Finally, the diehard opposition from low-wage States and low-wage industries will raise the tattered banner of local autonomy. They will claim that minimum wage regulation in retail and service industries should be left in State hands. But the record shows that the need is greatest in those very States where no action will ever be taken. The few effective wage-hour laws at the State level are in the States where wages are already higher than average and where union organization is strongest.

I hope that this year Congress will not be deterred by these baseless objections.

The problem confronting us is both grave and urgent. It must be met promptly and firmly if we are to maintain a sound economy, a good conscience, and the cause of democracy throughout the world.

The C. & O. Canal National Historical Park

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, last Saturday, with 36 others including my sons, Don and Chris, I walked 14 miles along the towpath of the C. & O. Canal on the Potomac River above Hancock, Md.

No other Member can make this statement. My good friend and highly respected colleague—and leading conservationist—HENRY REUSS, of Wisconsin, did put in a momentary appearance during the lunch break. I also observed his lovely wife and two daughters walking on the towpath, but the only activity I personally observed on the part of my colleague was the consumption of a bottle of beer—from Milwaukee, by the way—at a time when the extent of my thirst was exceeded, and only by a hair, by the strength of the requirements of congressional courtesy.

It is alleged, incidentally, by Rick Wing, the administrative assistant to the gentleman from Wisconsin, that Mr. REUSS, his wife, his two daughters, his two sons, and his two dogs did in fact walk about two-thirds of the distance along the route of the hike. If this is true, and I suppose it is, then, of course, my colleague is two-thirds of a C. & O. Canal authority.

This expedition is the fifth organized by Justice Bill Douglas, of the Supreme Court, to call attention to the beauties of the towpath country which extend some 185 miles from Washington, D.C., to Cumberland, Md. Of course, the Su-

preme Court never interferes with the legislative branch but one does gather that there is a campaign to convince Congress that we should make the area into a national park.

The United States already owns it and the Park Service looks after it. National park status would allow the purchase, as money was made available, of lands between the towpath and the river, and the building of parking areas, picnic facilities and other improvements. It would also mean more publicity for the area and hence more use by more people.

WHERE THE DISPUTE IS

The cost would be negligible and, with respect to the purchase of adjacent properties, controllable. Almost everybody wants the Chesapeake and Ohio National Historical Park to be established. So where is the rub? The rub is that the hiking justice and his influential cohorts, local and national, want a bill that says nothing at all about the possibilities that 35 miles of the area, just above Washington, might have to be flooded out by a dam.

Of course this could be done by Congress even if the bill was silent, although this might be more difficult. I am glad conservationists and recreationists are powerful. Usually I contribute my bit to their weight. However, every Member, at least if he is from the West, is convinced that no single purpose approach to resource development is sound. We have to weigh multiple purposes and make decisions on the facts in each particular case.

That is what we must do here. We know that Washington may very well have a serious water problem in the near future. We know that one solution might be a dam on the Potomac River. Maybe we will have desaltification developed in time to make this unnecessary. Maybe the cost of such a dam, considering the expensive land to be flooded by the pool, would make it too expensive.

Maybe I did not hike far enough or fast enough. As you can see, I do not agree with my hosts. Perhaps in addition to bruising and blistering my tender feet, the hike addled my brains, for I find I agree with the Star's editorial and disagree with the Post's position—whereas usually I am in the reverse position.

WATER CAN'T BE IGNORED

I agree with our alert and able colleague, JOHN FOLEY, who represents that part of Maryland and who wants legislation to go through the House in this session. He recognizes that his colleagues who serve on GRACIE PFOST'S Public Works Subcommittee of the Interior and Insular Affairs Committee, and above all, the very able and conscientious Mrs. PFOST herself, cannot ignore the very real and proven problem of water for Washington, D.C.

When I heard my friends on the hike talk about the plottings of the public power lobby, I tried to tell them that whatever the hunger of any special interest group for a mere 10,000 kilowatts I could not imagine this being a real factor under the circumstances.

It was a lovely hike. I hope to do it against both at that point or in other places along the old C. & O. Canal. I thank my hosts, the C. & O. Canal Association, and pledge to them my full support for their national park—this year, with a reservation taking into account the possible needs of Washington for an assured adequate water supply.

I also want to express my thanks publicly to Mr. and Mrs. Jack Widmyer at whose home my sons and I were given hospitality at the end of our hike. Never did a shower, a change of clothes, and a chair seem so welcome.

Under leave to include extraneous matter, I am inserting a recent editorial and letters to the editor on the issue of all or none.

[From the Washington Star, Apr. 27, 1959]

HOW TO KILL THE PARK BILL

Advocates of the proposed Chesapeake and Ohio Canal Park have chosen a strange way to support their project before Congress. Their all or nothing opposition to any water-supply safeguards in the pending legislation could kill the whole park undertaking. For it is hard to believe that Congress would authorize a park along the upper Potomac River unless some provision were made for possible dams and reservoirs which engineers testified will be needed to assure adequate water in the future for the Washington metropolitan area.

Despite such testimony by Army engineers and District water authorities, National Park Service Director Conrad Wirth told a House Interior Subcommittee that he would prefer on bill at all to one which would sacrifice any part of the canal. If by this he meant that a canal park should have absolute priority over an adequate water supply for Washington, Mr. Wirth was expressing a viewpoint that is unrealistic and unacceptable to the District and the many communities around it whose health and safety depend on such water.

Fortunately, only a relatively small part of the proposed park would be taken up by the water-storage facilities. There is room, therefore, for a reasonable compromise which will leave most of the park undisturbed, while guaranteeing Washington and its suburbs the water essential to survival in some future emergency period.

[From the Washington (D.C.) Post and Times Herald, Apr. 28, 1959]

NOT TONGUES BUT HANDS OUT

The logic of your April 22 editorial concerning the Chesapeake and Ohio National Historical Park, is indeed difficult to understand.

At one point you state, "Let there be an unequivocal reservation in the C. & O. Canal bill for whatever dams may become necessary, for Washington's water supply which must have first priority." And then you proceed to castigate Mrs. PFOST, the chairman of House Public Lands Subcommittee, for her insistence upon the very reservation which you advocate.

Mrs. PFOST has devoted more of her own time and more of the time of her subcommittee to consideration of the C. & O. bill than to any other single piece of legislation this year. I have attended virtually all of the hearings, and not once do I recall Mrs. PFOST having advocated, either expressedly or by implication, a power dam on the Potomac River.

The rural electric co-ops which you so unhesitatingly accuse of seeking a high dam at River Bend, having their hands out and being extremely vindictive and predatory, have not even entered an appearance at the hearings.

The position of the rural electric cooperatives in this matter is simply that if and when a reservoir storage project at River Bend becomes necessary to meet the water supply, flood control, and pollution abatement problems of the District of Columbia metropolitan area, incidental hydroelectric power be included if feasible. What it is that you find so inequitable and unjust in this position, I completely fail to comprehend.

Your edition of April 22 also carried a news story which correctly reported that representatives of wildlife conservation organizations, and the director of the National Park Service testified that they would rather have no Chesapeake and Ohio Canal Park bill at all than any which contains an effective reservation for later construction of a water storage reservoir at River Bend when and if such becomes necessary. This is about as unrealistic, uncompromising, and self-serving a position as has ever been taken before a subcommittee of the Congress of the United States.

How your newspaper can criticize members of the House Public Lands Subcommittee in their effort to provide a future water supply for this area is incomprehensible to me. The subcommittee wants to vote out a park bill. The electric co-ops want a park bill. But the childish all or nothing attitude of the Park Service and the wildlife conservation groups has, I fear, substantially reduced the chances of getting a C. & O. Park approved this year.

CHARLES A. ROBINSON, Jr.,
Staff Engineer, National Rural Electric Cooperative Association.
WASHINGTON.

I wish to make it perfectly clear that proponents of a dam at River Bend are concerned primarily with the indicated future needs of water supply for the people of the area. Dr. Abel Wolman's study of the pollution problem has already shown that the erection of a dam is necessary if we are to have a cleaner Potomac. Past studies of the Corps of Engineers have also pointed to the value of a dam above River Bend.

In the light of the information already available, it would seem that prudent people would support a bill which says, "Let us proceed with the establishment of a park as quickly as possible, and for the time being we shall not spend time, money, or effort on improvements in an area which may have to be inundated. Let us await the findings of the studies now under way and then act accordingly."

If a dam is shown to be necessary both for the purpose of providing needed water supply and for pollution abatement, it seems only logical that the power potential which such a dam would and could provide should be utilized. This is all that the rural cooperatives are saying; it is what Mrs. PFOST is saying. Neither the co-ops, nor the labor unions oppose a park—they want a park.

ALBERT K. HERLING,
Chairman, Potomac River Development Association.
WASHINGTON.

Two Christians in Politics: U.S. Representatives J. Edward Roush, of Indiana, and Byron L. Johnson, of Colorado

---

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BRADEMAS. Mr. Speaker, I know that many Members of Congress

regard their service in public office as a religious vocation.

Two of the Members of Congress who best exemplify the description "Christians in politics" are our distinguished colleagues, the Honorable J. EDWARD ROUSH, Representative of the Fifth Indiana District, and the Honorable BYRON L. JOHNSON, Representative of the Second Colorado District.

I am very pleased to include in the CONGRESSIONAL RECORD a fine article concerning Representative ROUSH and Representative JOHNSON which appeared in the April 1959 issue of the journal, Progress, published by the International Reform Federation.

The article follows:

LOST AND FOUND

Every congressional election brings with it a turnover in the membership of the Congress. In the 1958 election the International Reform Federation lost two of its trustees. The Honorable William S. Hill, who had represented the Second Colorado District for nine terms, decided that he had enough and was not a candidate for reelection. The Honorable John V. Beamer, the fourth-term Congressman from Indiana's Fifth District, was defeated. The federation felt a real sense of loss. Not only had we lost the valued guidance and help of two able men, but the Nation had lost two leaders of marked moral integrity. We mourned the loss.

Since we could not live in the past, and our hopes for moral and social progress pointed toward the future, we interested ourselves in the successors of Mr. Hill and Mr. Beamer. And we discovered that the people of Colorado and Indiana had sent two young dedicated Christian gentlemen to the 86th Congress. We lost two outstanding elder statesmen. We found two youthful public servants with wisdom and courage to face the hazardous future. We believe that God had a hand in raising them up.

Congressman BYRON L. JOHNSON, representing the Second Colorado District, was a guest of the federation at the fellowship breakfast in January. He made a vivid impression on me as he gave his personal testimony to the importance of moral values and social idealism in building any sound legislative program. His presence in Washington church circles already has been felt as he has alined himself with worthy enterprises.

Mr. JOHNSON is a family man (two sons and a daughter); he is a churchman (Congregational). His political experience prior to his election to Congress included a term in the Colorado Legislature, and service as administrative assistant to the Governor of the State.

Congressman J. EDWARD ROUSH, representing the Fifth Indiana District, cherished an ambition to sit in the Congress from his early youth. The road was not easy. He was elected to the State legislature while still a student in the Law School of Indiana University. Five years later he was elected as prosecuting attorney for Huntington County. Two years later he was defeated in his primary bid for the congressional nomination. Prior to this political activity he had given 6 years to service in the Army during World War II and later in the Korean conflict. His perseverance was rewarded with election to the 86th Congress in 1958.

Mr. ROUSH is a family man (two sons and a daughter); and he is an active churchman. A member of the United Brethren Church, he has served as a member of the board of education of his denomination, and as a member of the board of trustees of Huntington College. Above all he is committed to the application of Christian convictions to practical politics.

The editor has written many times on the question of Christian vocations and he passes along the testimony of Congressman ROUSH as it appeared in the United Brethren.

"It has been my conviction that opportunities for Christian service are present and demanding to be attended to in every area of life, in every business and in every profession. In some areas the need is not quite so apparent. In some areas the road is rougher. In some areas the challenge is greater. But regardless, the reward—if the challenge is met—is gratifying.

"This has been my experience in my chosen profession (law) and in politics. People are clamoring for Christian lawyers, they seek out Christian businessmen and they like to vote for Christian office seekers. I have been blessed by having been elected to one of the high offices of our land. I have an opportunity which can come to only a few men. I see in this office an unusual opportunity for service—Christian service. I see in it an opportunity for Christian testimony, an opportunity which I intend to take advantage of."

Congressmen JOHNSON and ROUSH are two of the scores of public servants who feel that they have been called to service. They believe that God's best purposes for His children can be fulfilled through their dedication to His will. With that kind of leadership, I do not fear the future, even in such an age as this.

Amending Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act.

SPEECH

OF

HON. STEVEN V. CARTER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5610) to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes.

Mr. CARTER. Mr. Chairman, to a country boy from Iowa all this oratory could be a wee mite confusing. It seems to me mighty significant if we check the record to see who the friends of H.R. 5610 and H.R. 1012 really are. It is easily apparent from what has been said here today that the employers, the Republican policy committee, and their agents here are supporting H.R. 5610. A few moments ago, the president of the Republican policy committee admitted that a confidential report had been issued to all the Republican Members subsequent to the meeting in the White House in which the Republican policy committee reports that the administration and the Republican Party are supporting H.R. 5610.

On the other hand, it is clearly apparent that the employees of the railroads, together with their supporters here, are definitely for H.R. 1012.

This might not be so significant if the arguments that they are using were valid. However, through the whole tone of the arguments presented by the opponents to H.R. 1012 this afternoon are the same arguments that were put forth by the railroad employers 13 years ago, when the employees first sought the benefits which H.R. 5610 takes away from them. These arguments are the same kind of arguments that were advanced when the first employees sought a fairer share of the benefits from our economic power in the days of Samuel Gompers. These arguments leave me cold, and I want to announce here and now that I am going to vote for H.R. 1012.

There have been five amendments to H.R. 1012 which make it identical with the bill that has just passed in the Senate and which take all the wind out of the sails of those who are supporting H.R. 5610 and opposing H.R. 1012. The first four amendments to H.R. 1012 as now being submitted are in H.R. 5610. They are:

First. The first amendment provides that the 10-percent increase in the retirement annuity applies only to annuities that accrue after the month of enactment of this act. This is the feature of the original H.R. 1012 which increased the cost to the railroads to $45 million and created the most objectionable feature.

Second. The increases in the retirement tax will not take place until a month after the enactment of this bill.

Third. The increase in the lump-sum payments is made only with regard to deaths occurring after the month of the passage of the bill.

Fourth. The maximum rate of contributions into the fund were increased from 3.50 percent to 3.75 percent.

Fifth. The Retirement Board during this emergency period in which we had so much unemployment is given power to borrow from the retirement fund for unemployment and sickness payments, and it will be repaid to the retirement fund, together with 3 percent interest.

H.R. 1012 with these amendments retains the present benefits that have been granted to the employees and at the same time grants them the increases to which they are entitled.

In comparing the fringe benefits to be received by the 700,000 employees of the railroads of America under this law with the fringe benefits being obtained by the employees in other transportation areas not covered by the law but obtained by contract, we find that the railroad employees still are not receiving as much as they should have. In view of all these considerations, it is easy to see why I am going to support the substitute bill, H.R. 1012, and vote in behalf of the workingmen of this great country. It is between you and your conscience whether you shall support the employers or the workingman, but there isn't any particular point in your claiming that by supporting H.R. 5610 you are supporting the workingman, because that bill takes the benefits away from the working people that they now have.

Pending a Reply From State, a Fact-Finding Trip to Nicaragua

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 1, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release issued from my office on April 29, 1959:

WASHINGTON, D.C., *April 29, 1959.*

Following is the text of an English translation of a letter to Congressman CHARLES O. PORTER, Democrat, of Oregon, from the Ambassador of Nicaragua, inviting Mr. PORTER to visit that country, and the text of a letter from Mr. PORTER to Secretary of State Christian A. Herter in which he invites the State Department to comment on the merits of the proposed visit.

PORTER said that "pending a reply from the Secretary of State, which I shall certainly weigh carefully before making the decision, I feel as though such a visit might well help the cause of democracy in this hemisphere as well as add considerably to my own knowledge on this subject." The names of those PORTER intends to take with him if he undertakes the fact finding expedition to Nicaragua are listed in the letter to the Secretary of State.

APRIL 24, 1959.

The Honorable CHARLES O. PORTER,
The House of Representatives,
Washington, D.C.

DEAR MR. REPRESENTATIVE: I am pleased to confirm the invitation which I personally extended to you on April 9, 1959, on behalf of the President of Nicaragua, Luis A. Somoza D., to visit our country accompanied by a group of persons whom you may wish to travel with you.

President Somoza has special interest in discussing with you general aspects of policy relative to Central America, as well as in affording you an opportunity of seeing by direct appreciation the real truth about Nicaragua in all its facets. He has instructed me to inform you, on his behalf, that it would be a pleasure to receive you and your companions as guests of the Republic of Nicaragua.

In order that you may more completely enjoy your sojourn in Nicaragua, we have decided not to prepare a formal program. Naturally, the protocol section of our foreign ministry will be at your disposal should you find it desirable to avail yourself of its services.

For the purpose of informing the Nicaraguan people of your visit, we will appreciate it very much if you would advise us some time in advance of the date of your arrival to Managua.

I take advantage of this opportunity to renew to you, sir, the assurances of my highest consideration.

GUILLERMO SEVILLA SACASA,
Ambassador of Nicaragua.

APRIL 28, 1959.

Hon. CHRISTIAN A. HERTER,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: The President of Nicarauga has invited me to visit his country as his guest. He wants me to see for myself that Nicarauga, contrary to opinions I have expressed on occasion, is a democracy, not a dictatorship. I can bring with me any persons I choose to help me investigate the facts. Of course, I am to be entirely free to go any place and talk to anyone.

The suggestion of this visit was first made to be by our Ambassador to Nicarauga, Thomas E. Whelan, when he was in my office early in March. Later the Ambassador of Nicarauga invited me personally and we discussed the matter at length. I told them both that I had my doubts about whether anything useful could be accomplished and that I would consult with the Department of State upon receipt of a written invitation.

A copy of the invitation and a copy of the translation are enclosed. I will appreciate your comments and an opportunity to confer with Department specialists in due course.

If I accepted the invitation, my present plans would be as follows: Set aside a long weekend when I would miss on business on the floor of the House, which would mean I would have a maximum of 4 days for the visit.

Ask to accompany me the following: Robert Alexander, author of "Communism in Latin America" and professor at Rutgers University; Martin Agronsky, NBC commentator; John O'Rourke, editor of the Washington Daily News and former president of the Inter-American Press Association; and Ulises Carbo, subeditor of Presna Libre, Havana, Cuba; Fabricio Ojeda, Caracas, Venezuela; and perhaps others.

The trip would be publicized in and out of Nicaragua. Informed persons would be encouarged to write to me. We could stop briefly in both Costa Rica and Honduras to talk with exiles before going to Nicaragua. The entire group would of course be extensively briefed before leaving the United States.

In Nicaragua we would stay at a hotel and would not be entertained by the Somozas or the Government or by any other political faction. We would split up into groups of two or three to cover the prisons, the schools, the press, radio, the opposition, peasants, businessmen, and others, all more or less at random.

I told both Ambassador Whelan and Ambassador Sevilla-Sacasa that it is possible our report would be inconclusive because of the short time available. My own opinion, at present, is based on many talks with Latin Americans, including Nicaraguan exiles, and with U.S. experts, including several in your Department. I believe President Somoza achieved his office by force and fraud and maintains himself by the same means. I believe any liberalization of policy, such as allowing a free press and radio (which I understand do exist) and proclaiming amnesties (which I understand are more proclamation than fact), arise from his fear of revolution and the Somozas' wish to remain alive and continue to be enriched by the extensive wealth in Nicaragua which somehow has accumulated to their family.

My opinion is that any freedoms we might observe could be and would be set aside by the Somozas the minute they felt their dignity or wealth to be endangered.

These opinions of mine, widely held in Latin America, are not news to Ambassador Whelan or the Somozas. They apparently believe that I would alter them if I consented to visit Nicaragua.

If in fact, the Government of Nicaragua is firmly committed to democratic institutions, and if I could so decide from such a visit, then I'd like to say so publicly and rejoice accordingly. Of course, from here at this time, it would seem that one of the best proofs of good faith would be to arrange for free elections immediately.

Apart from the question whether I could do any good is the question whether the trip would do harm to surging democratic forces in Latin America. One Latin American friend of mine, a leading democrat, says Somoza wants to "use" me and that my visit would create confusion among the democratic forces of Latin America and disappointment to the Nicaraguan youth.

It is not clear to me why these results would have to occur. With this in mind I am releasing this correspondence to the press in the hope that others will express their opinions of the advisability of this trip and the best ways to make it worthwhile if I do decide to accept the invitation.

Very truly yours,

CHARLES O. PORTER,
Member of Congress.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Statement of Dr. N. R. Danielian Before the House Foreign Affairs Committee

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mrs. BOLTON. Mr. Speaker, on April 27, 1959, the Committee on Foreign Affairs heard testimony on the mutual security program by Dr. N. R. Danielian, president of the International Economic Policy Association. For the interest of my colleagues, I would like to insert Dr. Danielian's thought-provoking observations in the RECORD.

Dr. Danielian, who is also president of the Great Lakes-St. Lawrence Association, is well known to many Members of Congress for his many years of effort in behalf of the development of the St. Lawrence Seaway. To him much credit is due for this great achievement.

Under leave to extend my remarks, I include Dr. Danielian's statement as follows:

STATEMENT OF DR. N. R. DANIELIAN, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE, MONDAY, APRIL 27, 1959

Mr. Chairman, I appreciate the opportunity of resenting some ideas on the mutual security program to your committee. I am appearing here on behalf of the International Economic Policy Association, which has been organized by a group of individuals interested in an effective international economic program, including mutual security.

Lest what I say later on may be misunderstood, let me state at the outset that we support the President's mutual security program. Although we are in no position to pass judgment on the exact amount of money required, we must be guided by the recommendations of the Executive and the conclusions of the appropriate congressional committees. Personally, I would go a step further and state that if the program could be made effective in stabilizing the political and economic conditions in the area outside of the Soviet orbit, I would not be averse to using larger resources. * * *

Having said this, I wish now to proceed to a consideration of the basic objectives and the methods whereby the mutual security program and complementary financial programs may be made more effective, for, unless we succeed in this, the whole structure of Mutual Security will crumble in American public opinion. Furthermore, even if we are successful in maintaining a flow of aid over the next 10 or 15 years, we may discover that we have not achieved the results we had hoped for.

In discussing this problem, I wish to make it clear that there is no criticism implied on our part of any individuals or institutions in government. In fact, we believe that the program has the best leadership and guidance under Douglas Dillon that we could possibly want and we share with him his desire to improve the program in every possible way.

Before reaching these conclusions that I shall present to you now, the International Economic Policy Association made a thorough study of the criticisms that have been directed at the mutual security program. I must make clear that these are not our criticisms but a compendium of what others—to a large extent Members of Congress—have been saying about this program. We made an attempt to analyze the main objections to it.

We completed the study last October and submitted it to the Under Secretary of State for Economic Affairs in November. This study raised the following questions:

"I. What are the basic strategic and economic premises upon which the mutual security program is based, and are these premises valid in serving the long-range interest and security of the United States?

"II. What are the economic effects of the mutual security program upon the national economy and upon domestic industries which may be threatened by the financing of foreign competition, and do these economic effects threaten the long-range security of the United States?

"III. Is the administration of the mutual security program adequate enough in terms of personnel, procedures, structure, and methods of coordination to serve the security needs of the Nation?

"IV. Is the relationship between the executive and legislative branches of the Government in regard to foreign aid legislation being jeopardized by inadequate fiscal reporting, lack of clear presentation on the part of the executive agencies, or lack of adequate understanding on the part of the Congress; and, finally, are human relations factors not directly related to the merits of the mutual security program threatening its disposition?

"A thorough reexamination of these fundamental questions must be undertaken if the general welfare of the country is to be served."

We are assured that the State Department has given serious consideration to the criticisms summarized in this study. The Draper committee also has had a copy of it, and they have stated to us that it has been most useful to them in their current review of the program. Members of the Boeschenstein committee have also had access to this report. We are convinced that serious consideration is being given by the administration to the various points raised in this study. * * *

It is essential not to pull the rug from under the Executive at this time by drastic action and to give the administration an opportunity to review the programs in the light of these various recommendations.

* * * * *

Although I do not pose as a military strategist, I have tried to follow, as any informed person should, the evolution of our power relations with the Soviet bloc. I recall back in 1948, a week after the Republican National Convention in Philadelphia, I was visiting with Senator Vandenberg, then chairman of the Foreign Relations Committee in the Senate, discussing this very question. I told him at that time that, though the Marshall plan was necessary to revive Western Europe, it would not achieve security for the United States because once the Russians got the atomic bomb and the means of delivering it, we, sitting here in the capital of the United States, would be literally under the guns of the Soviets. This has come to pass.

I have been of the opinion since 1947 that the strategy of the Soviets was to gain time for the development of the ultimate weapons whereby they could threaten us directly from the Atlantic and the Pacific coasts and over the North Pole. They accomplished this by keeping us busily fretting over a two-dimensional strategy, concerned over boundary lines in Iran, Turkey, Greece, Berlin, and the 38th parallel, all peripheral situations which kept us busy in the production of conventional weapons, while they were busily engaged in the conquest of three- and four-dimensional power, namely, time and space, and atomic and hydrogen weapons. By emphasizing the third- and fourth-dimensional spheres of power, they have narrowed or eliminated the gap in the military balance of power between the United States and the Soviet Union. This, obviously, was one of their main objectives and they have achieved it.

The next objective has been to undercut the economic underpinnings of the Western world, particularly Western Europe and Japan. The breakup of the colonial system, an important economic prop of Western civilization, helped the Soviets in this program. The Marshall plan and other economic aid programs since, as well as our agricultural surplus disposal and military expenditures abroad, including offshore procurement, have taken the place of the income that West Europe and Japan used to receive from the colonial system.

These programs, of course, have helped build up the productive capacity of Western Europe and Japan, but have not solved the fundamental imbalance between the industrially developed nations and the rest of the world. Western Europe and Japan still need to import food, fuel, and industrial raw materials. In the absence of income from colonial possessions or from the U.S. taxpayer, they must pay for these imports through export sales of their own.

Into this situation, the Soviets have stepped with a variety of programs. * * *

While we are worrying about geographic lines of demarcation on the periphery of the Soviet empire, they are busily engaged undercutting the economic props of our allies, principally by three means: (1) through political subversion; (2) aid programs to encourage government-owned plants; and (3) dumping of products in world markets to undercut Western export markets.

These are the sticks of their inducements. The carrot is the offer to buy the surplus products of many countries in order to shift economic orientation away from us to the Soviet orbit.

* * * * *

The blatant attempts to take over political power through subversion, as in Iraq, ride upon the popular revulsion against poverty and oppression. These movements are successful, however, only because there is no effective opposition with a wide base of support against the Communist agitation. * * *

Iraq happens to be one of the countries in which there is a well-conceived developmental program, using 70 percent of the oil revenues which it receives; and yet the prospect of better economic future through these government-sponsored programs does not seem to have allayed the revolutionary and Communist instigated explosions. * * * Iraq is a case study that should be very carefully

analyzed, for it shows an instance of a paternalistic, government-sponsored and technically well advanced and well financed developmental program which has failed to stem the revolutionary tides. Why?

Before answering this, let us go to the next method that the Communists are using to undermine Western institutions: Government-to-government economic aid programs designed to put the governments of Asian and African countries into business. This should be no surprise, and certainly no cause for emulation, since one of the primary tenets of Communist philosophy is government ownership of the means of production. It is perfectly reasonable, therefore, that they should concentrate, at cheap interest rates, on luring the governments of underdeveloped countries into economic enterprises. At the same time, of course, they have not relaxed their effort to take over those governments through internal subversive action. Thus, they encourage governments to go into ownership of productive enterprise, and then they attempt to take over the government itself. Once successful, they will have achieved the objectives of Communist society; namely, making the state the purveyor of everyone's livelihood with consequent suppression of individual freedom. This also undercuts markets for the products of our allies. In this respect, time is on the side of the Communists because it is not likely that developmental programs, however speedy and extensive, will satisfy the desires of expanding populations in time to blunt the revolutionary ardor of many of these people.

Thus, an investment in plants by the Soviets in these countries, which they hope to take over by subversion, is an investment in a Communist future. Is emulation the answer to this problem?

The third Soviet method is underselling Western capital and Western products through politically induced low interest rates and low prices. This, again, will make it difficult for our allies to make a living by the sale of their products. * * *

What is the answer to this challenge and is the mutual security program meeting this challenge? In analyzing situations of political subversion, we find that what is lacking in those countries is an effective opposition. What is the natural base of opposition to communism, and what are we doing to encourage it?

In Western Europe the Marshall plan succeeded in holding the internal Communist movements in check because there was already an established propertied class and well-entrenched religious institutions. The two together have formed the basis of the Christian Democratic Parties which have held Western European democratic institutions inviolate against the strong minority Communist movements.

In the underdeveloped countries, however, there are no such basic institutions with a wide enough base upon which to build opposition to communism. * * * Our western civilization has been based primarily upon private ownership of property and business, which has created a class in society which is willing to stand up for its rights, even against the state. In the history of the Western World, the development of democratic institutions, the right of franchise, the protection of individual rights, the evolution of judicial systems to enforce them, are traceable to the rise of commercial and industrial interests. Individual freedom and democratic processes, in short, have historically developed in countries with a strong and diversified private ownership base. The groups with such an interest are the natural foes of communism.

The reason why there is no strong opposition in Iraq and most of the underdeveloped countries to revolutionary movements is the absence of a strong and broadly based private ownership group, with a stake in the protection of property and individual rights, whereas it is easy enough for Communists to develop well-disciplined cells among the poor. In country after country, the populace, spurred by Communist cells and aided by revolutionary use of fast transportation and instantaneous communication, are rising against the central governments sustained by the police power. Where the police power falters, the government falls, either by assassination, displacement, or exile.

If we are to stem or slow down the tide of revolution, in order to gain time for the developmental work to take effect, the only focal point of such opposition to communism must be the evolution of a private ownership group in those countries.

We must realize that the contest between communism and western civilization, having reached a state of military stalemate, is now in the area of economic and political institutions. If we believe that in the long run private ownership is the foundation from which will evolve political stability and individual freedom, the judicial system that protects private rights and democratic processes of popular election of governments, then our programs must encourage the institution of private ownership.

To think of our obligations to other nations only in terms of economic and technological developments would be to misread the portents of history in the same tragic manner in which we misread the military threats of the Soviet in terms of geographic boundaries in the past 12 years.

If we make this mistake, we may find that 10 years from now, although we have helped many countries with harbors, roads, and factories, we have lost their governments to Communist-induced revolutionary movements.

It would seem but a simple fact that, if it is in the interest of the Soviet to encourage government ownership of the means of production and to inspire revolutions to take over these governments, we, in our programs, should encourage the contrary to these policies, namely, the institution of private property, the evolution of legal systems that would protect property and individual rights. Those who acquire a stake in this system would, in effect, oppose, because of self-interest, the Communist movements, on the one hand, and government encroachments, on the other.

If this theory be correct, then it makes no sense to compete with the Soviet in the establishment of state-owned systems. On the contrary, we must spend every effort to persuade the governments of friendly nations that their own long-range stability depends upon the development of an indigenous private ownership group and that our aid programs should be so channelized as to create such groups in their native countries.

This will be much harder than present programs. There is likely to be even more waste of funds and the hardships and difficulties will seem to be insurmountable at the present time but, in the long run, it seems to me that it is only by the adoption of an institutional approach and not a technological or financial approach solely that we are going to be able to oppose communism in these other countries. It is said that such institutions do not now exist, that there is no manpower qualified in administration and technology, that there are no traditions and judicial systems upon which this concept can be built. If so, the challenge is so much greater.

Another aspect of this problem is that in the Soviet system all capital and technological knowledge is centered in the government, all foreign aid programs emanate from government policy and have the total resources and weight in manpower and technological know-how of the whole Soviet civilization.

In our case, the government commands but a small fraction, through taxation, of the national resources, and but an infinitesimal fraction of the technological know-how. In our society, both capital and knowledge, particularly in the technical field, is mostly concentrated in private hands. If we are to meet the Soviet challenge, therefore, doing it wholly through tax money and government institutions is like putting the junior varsity team against the first stringers.

This is no reflection on the caliber of the men who sacrifice much to serve their country abroad but it is a statement of fact that the government does not command the total resources of our people to meet the unified challenge of the Soviet. Hence, the engagement of our private resources in the development of this philosophy of economic development through private ownership is a necessary condition.

I do not subscribe to the theory, on the other hand, that private capital and private know-how can do the whole job because there are many situations in the world where the private profit motive and the fiduciary responsibilities of corporate managements in the safeguarding of their stockholders' money would not permit them to undertake this task on their own responsibility. Further, there are development projects of a nonrevenue producing nature, such as roads, harbor improvements, hospitals, and schools which are properly programs for government rather than private action. On the other hand, foreign aid resources and government employees are not, alone, enough to do the job.

Thus, we are confronted with the task on the one hand of redefining our political and economic objectives abroad in the underdeveloped areas and, secondly, of devising institutions which will bring together both Government and private resources for the accomplishment of a program which has institutional and judicial—as well as economic—objectives. This, I believe, is the challenge to the present and the succeeding administrations.

Much progress has been made in this past year in redefining the objectives as well as exploring means of accomplishment. Whereas the Draper committee has been considering the strategic values in the military and economic aid programs, the Boeschenstein committee and the Strauss study have explored the institutional aspects of this program and the ways and means of encouraging more private participation. Dean Donald David, now chairman of the executive committee of the Ford Foundation, sparked much of this interest in the partnership concept between private enterprise and Government to achieve these developmental objectives abroad. But very few have centered their attention on the main anti-Communist device, the only one which will make native people stand up and oppose it, namely, private ownership and the prospect of enjoying the fruits of their labors, under free and democratic institutions.

How do we implement such a program? The International Economic Policy Association commends the following proposals to the attention of the Congress: Tax incentives to private enterprise abroad must be granted to equalize the risks; extension of guarantees on investments against damage from civil strife; protection against currency depreciation and devaluations. Most important, perhaps, is the channelization of foreign aid funds and reinvestment of local currencies in productive enterprises abroad, through local financial institutions and private ownership units; development of partnership arrangements with U.S. or western private enterprise in construction, management, and training of personnel. The establishment of regional universities, as proposed by Senators MANSFIELD and JOHNSON, and others—perhaps one

for Asia, and one for Latin America and one for Africa—where able young men from the respective countries of the area can mingle together in an atmosphere of freedom and secure the advantage of a technological education under western teachers, with the use of mutual security and local currency funds; extension of an expanded agricultural surplus disposal program, through private channels over and above normal commercial markets, to relieve hunger and destitution, and to provide a capital base for new industrial enterprises; the use of private contractors in the accomplishment of developmental projects, with training of native personnel as a part of the obligation of the contract; clarification of antitrust laws * * * to permit a combination of American firms to pool their resources in the accomplishment of these objectives; the encouragement of conventions among nations, and development of judicial standards in each nation to protect private investments.

These and many other devices must be carefully studied, planned for and fitted into a pattern to accomplish the overall objective which must be defined as (1) our own national security; (2) the national independence of other countries; (3) the development of private property institutions; (4) the protection of individuals against arbitrary action of the state; and (5) economic development within the framework of these institutions. Out of this complex, I am sure, over a period of time, democratic governments, with greater stability, will emerge, as they did in the Western World from the time of the French Revolution.

In emphasizing private property rights, I want to make it clear that I include all forms of private property, individual, partnership, cooperative, and corporate. And in basing the institutions of individual freedom on private property, I am not unmindful of the fact that, historically, free labor unions have come into existence and flourished under the private enterprise system. I cannot conceive of free labor unions in a state where the government owns all the means of production.

In conclusion, I repeat that the mutual security program must be supported, as a vital holding operation, while the administration is engaged in a reevaluation of the objectives and the means. We cannot pull the rug from under our Government and create an economic vacuum. That would be just as drastic as pulling back all our military positions to the North American Continent.

Behind the Scenes With the Labor Unions

EXTENSION OF REMARKS

OF

HON. ELMER J. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. HOFFMAN of Illinois. Mr. Speaker, the honorable body on the other side of the Capitol last Saturday passed the so-called labor reform bill. It will now come before the House for consideration and I commend to every Member the timely editorial of the Chicago Daily News of Saturday, April 24 which follows:

HE MAY NOT CARRY A CARD BUT—BRIDGES SHOWS HIS COLOR

The Senate has been wrestling with its conscience the last few days on the matter of a labor reform bill. In the nip and tuck voting, conscience has manifested itself in various ways, some indistinguishable from the applied pressure of powerful interest groups.

While this was going on, a remarkable and related interview before the House Un-American Activities Committee produced several items that should have been of interest to the Senators. The witness was Harry Bridges, the west coast leader of the Longshoremen's Union, who for 20 years has successfully dodged deportation.

Bridges had plenty of sharp retorts ready for the committee, but on the key question of whether he had ever been a Communist he pleaded the fifth amendment "for the first time in my life."

Bridges was reminded that he once threatened to call a longshoremen's strike to prevent American arms from reaching Chiang Kai-shek if Chiang attempted to retake the Chinese mainland. He hedged this threat, under questioning, by saying that a strike to prevent U.S. arms from reaching an ally would be a matter for the union to decide.

In other words, Bridges is saying his union has the right to nullify U.S. foreign policy, if indeed the Government should ever favor such an invasion, which we hope it would not. And on top of this startling doctrine, he adds that he would not bar a known Communist from office in his union.

Bridges also revealed a working arrangement with unions abroad—including some in Communist countries—that could produce a worldwide boycott of shipping in support of local strikes.

When all this is added up, the question of Bridges' Communist membership is really beside the point. What he stands for speaks lounder than any card he might carry.

To allow shipping on the west coast and in Hawaii to remain dependent on the whim of such a man stretches tolerance beyond reasonable bounds. Yet far from losing power he has been gaining more, in league with the racket-ridden Teamsters Union led by Jimmy Hoffa.

Hoffa has nearly succeeded in welding together a transport union combine—including Bridges' longshoremen—capable of paralyzing the business of the whole country. The Senators who are bleeding about a labor bill that might be too tough had better wake up before Bridges, Hoffa, and company show them what tough guys can do in the absence of tough restraints.

Odd Fellow Grand Decoration of Chivalry Conferred on Unknowns of World War II and Korean War

EXTENSION OF REMARKS

OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. DOWDY. Mr. Speaker, in 1940, the Independent Order of Odd Fellows conferred its Grand Decoration of Chivalry upon the Unknown Soldier of World War I. In connection with the May 3 ceremonies at the 25th annual pilgrimage to the tomb, the Grand Decoration of Chivalry was conferred on the Unkowns of World War II and the Korean war, the jewels representing the decoration to be placed with the World War I jewel in the Hall of Trophies at Arlington Cemetery.

I request that the presentation of the jewels by Sovereign Grand Master Fred L. Pardee, and the acceptance thereof by the superintendent of the cemetery, Mr. Lockwood, be made a part of the RECORD:

PRESENTATION OF GRAND DECORATION OF CHIVALRY BY MR. PARDEE

My brothers, sisters, and friends, on July 7, 1940, Grand Sire George S. Starrett (now deceased) had the honor to confer upon the Unknown Soldier of World War I the grand decoration of chivalry and to present to Colonel Lymon, of the U.S. Army and official representative of the U.S. Government, the grand decoration of chivalry jewel to be deposited in the Archives of the Hall of Trophies. Recently, our Government has erected two other tombs and in them have been placed the mortal remains of the Unknown of World War II and the Unknown of the Korean war.

The Government of the United States has once again conferred a high honor upon the Independent Order of Odd Fellows and has granted to us the privilege of conferring upon the Unknowns of World War II and of the Korean war, the grand decoration of chivalry and has graciously offered to accept from our hands the grand decoration of chivalry jewels. This decoration and the jewels which accompany it is the highest honor that can be conferred upon a member of our fraternity and is awarded only to a brother who has rendered outstanding service in the cause of Odd Fellowship above and beyond the call of duty. The grand decoration of chivalry and the grand decoration of chivalry jewel are comparable to the Congressional Medal of Honor.

As sovereign grand master of the Sovereign Grand Lodge of the Independent Order of Odd Fellows and as the representative of approximately 1½ million members of our fraternity, I most solemnly and reverently approach you and these Tombs of the Unknown for the purpose of presenting through you to the U.S. Government, these jewels, emblematic of the highest honor that can be conferred by our order. These jewels are to be placed in the Trophy Room beside that of the Unknown Soldier of World War I, there to remain in the custody of the United States of America as a perpetual symbol of the undying gratitude and deepest appreciation in which our fraternity and its members hold the sacred memory of our national and fraternal heroic dead and for the courageous and unselfish sacrifices they willingly made to preserve for posterity the priceless freedom and liberty bequeathed to us by our forefathers. In these Tombs of the Unknown lie the lifeless bodies of two Americans who symbolize all that is high and noble in our ideals and principles and who are also representatives of every man and woman who freely sacrificed their lives for the preservation of these sacred ideals. They also symbolize every true Odd Fellow who has given his life in the cause of his country. These ideals are in perfect accord with the teachings of our order for one of our fundamental principles declares that one cannot become an Odd Fellow in spirit and in truth unless he is grateful to his Creator, faithful to his country, and fraternal to his fellowman.

I deeply appreciate the honor that has been conferred upon our order and we have had specifically prepared for presentation, these jewels which I now place upon the pedestal.

Mr. Lockwood, Superintendent of Arlington Cemetery, it is with sincere gratitude for this most distinguished honor that has come to our fraternity, that I, as sovereign grand master of the Independent Order of Odd Fellows, now present to you these jewels, emblamatic of the grand decoration of chivalry, to be delivered into the custody and possession of the United States, together with our most sincere thanks and deepest appreciation.

ACCEPTANCE BY MR. LOCKWOOD

Mr. Pardee, on behalf of the people of the United States of America, I accept the grand decoration of chivalry jewels which your esteemed organization has presented to the Unknowns of World War II and the Korean war. I thank you.

Odd Fellows' 25th Annual Pilgrimage to the Tomb of the Unknowns

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DOWDY. Mr. Speaker, yesterday, May 3, 1959, it was my privilege to serve as program committee chairman for the 25th annual pilgrimage of the Independent Order of Odd Fellows to the Tomb of the Unknowns. At the ceremony preceding the laying of the wreaths, the principal address was delivered by Sovereign Grand Master Fred L. Pardee, of Little Rock, Ark. I respectfully request that his address, as follows, be made a part of the RECORD:

ADDRESS AT TOMBS OF THE UNKNOWN

My brothers, sisters, and friends, we have assembled here this afternoon for our annual ceremony at the Tombs of the Unknown and I am deeply impressed with the solemnity of this occasion. We are most forcefully reminded as we gather in this silent city of the dead of the uncertainty of human life and that it is appointed unto men once to die. For many years our order has held its annual pilgrimage to the Tomb of the Unknown Soldier of World War I to pay tribute to the one who lies here unknown to anyone save God himself and who symbolizes all who paid the supreme sacrifice that we might enjoy the freedom and liberty which is ours today.

Almost 19 years have passed since Grand Sire George S. Starrett (now deceased) conferred upon the Unknown Soldier of World War I the Grand Decoration of Chivalry and presented to Colonel Lyman the Grand Decoration of Chivalry Jewel on behalf of the Odd Fellows and Rebekahs throughout the world. Since that time our country has been forced to engage in two other momentous wars which have resulted in thousands of our men and women paying the supreme sacrifice in the defense of our beloved Nation. In honor of these loyal and brave citizens who willingly gave their lives that we might enjoy the privileges and benefits which are ours today, a grateful Government has provided a final resting place for the Unknown of World War II and the Unknown of the Korean war and these beloved servicemen lie beside the Unknown Soldier of World War I.

We have gathered here today to pay tribute to those who represent the hundreds of thousands of our citizens who gave their lives in the cause of justice and liberty and it is fitting and proper that we pause amid the busy affairs of life and reflect upon the responsibilities that rest upon us. How important that we should examine our lives and take an inventory of our inner selves and then ask the question: Have I been true and faithful to the fraternity which I represent and loyal to the country of which I am a citizen? Do we as Odd Fellows and Rebekahs and as good citizens of our Nation, recognize the fact that we should conduct the affairs of our lives on a high and lofty plane and use our best endeavors to bring about the day when all the world shall be at peace and all men shall hail each other as brothers?

When an individual or a nation is possessed with power, that power can be a potent factor for either good or evil. From the very beginning of time, men have sought power for various reasons. Some crave power through wealth, some for political purposes while still others seek it through the social or business world. How careful we should be that the lust for power does not overcome the finer and nobler things of life. How forcefully we are reminded that an insatiable desire on the part of many leaders of the past to possess power to rule the world is the reason why we have the Tombs of the Unknown today. On the other hand, power can be a powerful factor for the moral and spiritual welfare of the world in which we live. Surely Odd Fellowship can be a source of power in this present age for the advancement of civilization and the opportunities for our fraternity to take its rightful place in the world today are gerater than ever before in the history of our order. To achieve success in this realm, we must recognize the source from which we come; that we are the creatures of a supreme being, a creator and preserver of the universe. We must also remember who we are; that we have been made in the image of God. This should cause us to realize our responsibility to our Creaator, our duty to our fellow man and our obligation to our country. Thus we will be a powerful factor for the betterment of mankind and our influence for good will be felt throughout the world: May we recognize that we are indeed a worldwide international fraternity whose principles and ideals are above reproach. Let us remember that we seek to improve and elevate the character of man and to bring about a better understanding and a closer relationship among peoples of all nations.

We must also remind ourselves that our Nation has been built upon the character and ideals of its citizens. No country can rise above the principles and ideals which are instilled into the hearts and lives of those who live within its boundaries. We are proud that this Nation has never been the aggressor in any war it has been forced to wage. We have taken up arms against the enemy when forced to do so to preserve our honor and the welfare of our country. The members of the Independent Order of Odd Fellows throughout the United States are proud of the fact that we are an integral part of such a great Nation and that the Odd Fellows and Rebekahs throughout the world subscribe to the same high ideals for which we stand in this great land where we are privileged to live.

These unknowns fought and died because they were imbued with a deep sense of responsibility not only to their own country but also to the world at large. They believed in universal justice for all and they were unwilling to compromise with the forces of evil in order to permit others to satisfy their lust for power and allow greedy men to gain control of the world for their own selfish desires. They were not afraid to do battle in the cause of justice so that right might triumph over might and they freely sacrificed their lives in order that we would be privileged to enjoy the freedom and liberty which is ours today.

From the very beginning, our Order has stood for those things which are high and noble and lofty. Our fraternity was founded on three of the greatest principles known to mankind; namely, friendship, love and truth. Odd Fellowship was builded on a solid and firm foundation and down through the years, is has stood the test of time. How important that we should put into practice in our daily lives these great principles of friendship, love and truth for through this medium we can truly be instrumental in bringing to pass that age when all the world shall be at peace and all men shall hail each other as brothers. May we as Odd Fellows and Rebekahs endeavor, as far as humanly possible, to attain that level of perfection which will cause us to always strive for higher thoughts, for nobler deeds and for greater achievements. May we ever remember that we cannot truly be Odd Fellows and Rebekahs unless we are grateful to our Creator, faithful to our country and fraternal to our fellowman.

As we have assembled here today to pay homage to our unknowns as well as to the thousands and thousands of men and women who have freely laid down their lives for our beloved country, may we be forcefully reminded of those immortal words spoken by Abraham Lincoln when he said "We here highly resolve that these dead shall not have died in vain." May we ever realize that we should constantly strive to build a bigger and better America, an America that will not only be stronger from a physical and material standpoint but especially morally and spiritually. And as we strengthen the physical, mental, moral and spiritual walls of our mighty Nation, we shall also be the means of spreading the gospel of freedom and liberty to all nations, tongues and creeds throughout the world. May we so live and practice the teachings of our great fraternity that we shall be instrumental in sowing the seeds of friendship and brotherly love, of mercy and toleration, in the hearts of men and women everywhere. Thus we shall have a part in bringing to pass that era for which people in all ages have longed and for which these unknowns paid the supreme sacrifice; namely, that all the world shall recognize the fatherhood of God and the brotherhood of man, and the peace of God which passes all understanding shall reign in the hearts and lives of all people everywhere.

God has graciously blessed this great Nation of which we are a part and He has smiled with favor upon our beloved order which has grown and prospered during the past 140 years. We owe much to our Creator and to our forefathers who have builded well and who have been uncompromising in their battle with the forces of evil who would destroy all that is near and dear to each of us. These unknown soldiers possessed this same love for their country as well as this same uncompromising spirit and were unwilling to yield to the enemy even though it resulted in the sacrifice of their lives.

As we pay homage today to these brave servicemen of the past, God grant that it shall not be merely lip service. May the shining example which they have left to us be the means of inspiring Odd Fellows and Rebekahs everywhere to rededicate and reconsecrate our lives to the welfare of the beloved country to which we owe allegiance and cause us to solemnly resolve to practice the teachings of Odd Fellowship and live its principles and ideals to a greater degree than ever before.

And now, as I bring my message to a close, may we again be most forcefully reminded of our responsibility to our fraternity, to our country and to our God. May the memory of the heroic sacrifices of those whom we honor today inspire us to be more faithful to our order and more loyal to our country. May the gentle influence of friendship, love, and truth, of faith, hope, and charity, and of universal justice so permeate the hearts and lives of men and women everywhere that the entire world shall soon be privileged to know the same freedom and liberty which we enjoy today; that this mighty Nation which we proudly hail as our beloved country shall never again be called upon to take up arms against any people in any part of the world

and that the freedom and liberty which is ours shall triumph over the forces of evil and shall reign victorious until time shall be no more. God grant that we shall soon be privileged to see this glorious day and we can then proudly say to these brave men who rest in this silent city of the dead: "Truly, you have not died in vain."

Seventieth Birthday of Francis Cardinal Spellman

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LINDSAY. Mr. Speaker, today is the 70th birthday of one of the most distinguished and respected citizens of the United States, who I am fortunate enough to have as a resident of my district. Francis Cardinal Spellman, archbishop of New York since 1939, is one of those unique individuals who seem to spend their lives doing the most good for the greatest number of people in the most effective possible way.

It is a great privilege to call the attention of the House to this milestone in the life of so beloved a person and to include at this point an article which appears in today's New York Times in tribute to him:

SPELLMAN MARKS 70TH YEAR TODAY—CARDINAL PUTS HIS MILITARY VICARIATE FOREMOST IN HIS TWO DECADES HERE

(By George Dugan)

The world's best-known Roman Catholic prelate, with the exception of Pope John XXIII, will be 70 years old today.

He is Cardinal Spellman, archbishop of New York since 1939.

Yesterday, in an interview at his residence, the cardinal gave every indication that he expected to live and work well beyond the traditional 3 score years and 10.

Pink-cheeked and smiling, the spiritual leader of more than 1,550,000 Roman Catholics in 10 New York counties said without hesitation that his most rewarding experience over the last two decades was his ministry to the men and women in the Armed Forces.

The cardinal is military vicar of about 2 million Catholics serving their country here and overseas.

CHRISTMAS WITH TROOPS

Most of his Christmases in recent years have been spent with American troops in Korea, Greenland, Alaska, and the Far East. Age, it was clear, should not prevent another trip this year.

The prelate is regarded as one of the ablest administrators in his church. His bent for organization and his business acumen have made the New York archdioceses a model of efficiency and solvency.

But, despite a split-second daily schedule that would tax a man half his age, the cardinal has a warm, outgoing personality that is at its best in informal moments.

Today Cardinal Spellman will mark his birthday in relative quiet. He intends to celebrate mass at the Church of the Holy Ghost in Whitman, Mass., the town where he was born and the church where he served as altar boy.

On Tuesday he will be guest of honor at a birthday reception and tea tendered by the Ladies of Charity of New York Catholic Charities in the Biltmore Hotel.

MILESTONES OF PRELACY HERE

Twenty years ago, on May 23, Cardinal Spellman was installed as archbishop of New York. Some of the highlights of those two decades follow:

The Roman Catholic population in the archdiocese has grown from 1 million to 1,558,000. New York is the third largest See in the United States. Chicago is first with 2 million, and Boston second with 1,580,000.

St. Patrick's Cathedral was renovated at a cost of $2,500,000. This was exclusive of the mounting of the cathedral's monumental bronze doors, the rebuilding of the organ, and the installation of a new rose window.

New York Catholic charities expended nearly $55,500,000 for the care of families, the aged, neglected children, and the sick.

More than $40 million was spent on hospital expansion. Eleven million more is now earmarked for new projects.

An integrated ministry has been extended to some 500,000 Spanish-speaking newcomers to the city.

Yesterday the cardinal received a birthday letter from President Eisenhower. The President said: "On such an important milestone, I assure you of my warm felicitations, in which Mrs. Eisenhower joins. You can look back on your years of dedication to the people of your church and of our country with gratification and pride, just as you look forward to giving of your wisdom and experience to help solve the problems that lie ahead."

Have We Reached a Point of No Return?

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. HOFFMAN of Illinois. Mr. Speaker, every day our citizens are becoming more and more aware of the condition of our economy, the mounting national debt and the heavy tax burden to meet these demands. This awareness is expressed in layman's language in the editorial by Bud Booth, associate editor in charge of DuPage County editions, Paddock Publications, Arlington Heights, Ill., on April 9, 1959.

The editorial follows:

April is election month throughout DuPage County and in many other areas as well. Economy—the need for more of it—is an issue in many campaigns, and few citizens can be found frowning on any aspects of moneysaving as advocated by candidates for offices at all levels.

The people have become very aware of such needs—especially when they are confronted by another annual tax bill. And it's often a bill that has gone up measurably in the short space of 12 months. Economy thus becomes logical talking point with no little merit.

People going to the polls will have heard a whole group of suggestions as to how a candidate or party will curtail their taxes or, at least, give them more for what they're paying. It's at this point that we realize a sad tragedy of this day and age of advancements and improvements in so many directions.

All this economy talk is coming forth from the varied local levels of Government, but few—if any—citizens are going beyond what they can immediately visualize coming from their wallets or purses. This is minor league, obscure stuff when we glance upstairs to a place called Washington, D.C.

There's a little money being spent there too—we only wish it was just a little. It may as well be for how many times do we, as ordinary citizens, look upstairs to this major league of levying and spending and think about mentioning the need for economy to the people we've sent to the Nation's capital?

Do you know what our national debt is now?

Wouldn't you like some sunny day to learn that the money taken from your weekly pay check is going down—even a little?

Wouldn't it be nice to find the road that goes down before we reach the point of no return? We only hope that this point hasn't been reached already.

Each and every one of us has waited too long now by months and months in urging that some sort of blockade be applied to the national debt and the only way we get even a small fence put up involves writing our Washington representatives in letters by the hundreds and thousands.

Those who are serving us in the Senate and Congress as we want and deserve to be served will listen to these letters and they'll bring our voices to the floor provided we speak up with enough authority and in enough quantity to show that we're in no way a small minority.

President Eisenhower has the right approach and outlook to make national economy an actuality, but too many citizens we have elected and sent to Washington have put politics before consideration of such plans.

We fervently find that we have no space in our family finance picture to tolerate the relatively unimportant political desires of some of those we've voted for in preference to saving the money we would like to have saved.

About this time we'd like to be sitting down with a few thousand other newspaper editors that we know feel the same for this space will, unfortunately, be read by only 30,000 or 35,000 people at best.

Enough Anthracite Coal for 200 Years Available at Present Mining Rate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Wilkes-Barre Record of Wednesday, April 29, 1959:

ENOUGH ANTHRACITE FOR 200 YEARS AVAILABLE AT PRESENT MINING RATE

Looking ahead to availability of future supplies, authorities agree there is sufficient anthracite in place and minable to supply present markets at current rates of consumption for around 200 years, according to Anthracite Institute.

Though well over 99 percent of all anthracite produced in the Western Hemisphere is mined in a few counties in eastern Pennsylvania, embracing a surface area of only 484 square miles, relative importance of these counties in their share of the industry's total output has changed in recent years.

Over a 20-year period, Luzerne and Schuylkill Counties have averaged 67 percent of th total output. These, plus Lackawanna County, produced 81 percent of the output; and the three, plus Northumberland County, 92 percent of the total.

Changes have been brought about by a variety of reasons, including depletion and exhaustion of minable reserves, technological developments in extractive process and economic factors, including relative unit costs in different producing areas, the institute said.

Luzerne County mines in 1938 produced 44 percent of total production; 39.8 percent in 1943; 36.6 percent in 1948; 33.5 percent in 1953 and 33.1 percent in 1958.

Schuylkill County mines produced 21.1 percent total output in 1938; 23.7 percent in 1943; 29.3 percent in 1948; 33.3 percent in 1953, and 35.7 percent in 1958.

Mines in Lackawanna County produced 18.2 percent of total production in 1938; 15.1 percent in 1943; 14.6 percent in 1948; 11.7 percent in 1953 and 10.2 percent in 1958.

Northumberland County mines produced 8.8 percent of total output in 1938; 9 percent in 1943; 11.7 percent in 1948; 13.9 percent in 1953, and 12.7 percent in 1958.

In 1938 Columbia County mines produced 2.5 percent of the output; 1.4 percent in 1943; 2.8 percent in 1948; 2.4 percent in 1953, and 4.3 percent in 1958.

Carbon County mines produced 4.2 percent of output in 1938; 5.2 percent in 1943; 4.7 percent in 1948; 5.1 percent in 1953, and 3 percent in 1958.

Production for the week ending April 25 was estimated at 254,000 tons, bringing output since January 1 to 5,035,000 tons, 326,000 tons or 6.1 percent less than the 5,361,000 tons mined from January 1 to April 26, 1958.

REA Bill—Primarily a Political Gimmick

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Syracuse, N.Y., Herald Journal of Wednesday, April 29, 1959.

I do not condone the kicking of a dead horse, but I feel I should offer my colleagues this bit of evidence that the folks at home were not fooled by the Humphrey-Price bill. They saw through it for what it really was:

REA BILL—PRIMARILY A POLITICAL GIMMICK

Twenty years ago, in an attempted streamlining of the Federal establishment, the Congress established a logical chain of command for the operation of the Rural Electrification Administration.

The agency was housed in the Department of Agriculture. REA loans, which amounted to half a million dollars or more, came under the Secretary of Agriculture's review.

This arrangement was affirmed in another reorganization measure passed in 1953.

But the Senate has decided, by a 60 to 27 rollcall vote, and the House agreed, 254 to 131, that the review authority should be taken away from Secretary Benson; that is all REA loans can be approved, or rejected, by the REA Administrator and that's that.

Except that President Eisenhower has vetoed the measure. Democrats in both the Senate and House will try to displace the veto.

We have decided that this unnecessary legislation adds up to a political maeuver. Why?

The judgment is found in the REA record of the last few years, particularly since the Eisenhower administration took office.

In all that time, the Secretary of Agriculture has never interfered in any way with REA loan applications. That was the gist of testimony obtained at hearings in June 1958, and when the hearings were duplicated in March, this year.

The Congress, then, under its Democratic leadership has been putting in its time on a phony issue.

Republicans should rally to support the President's veto.

Gen. Milan Stefanik, a Slovak Hero

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. MULTER. Mr. Speaker, Europe, cradle of human liberty, has bred many champions of the rights of men and nations. Among these could be counted Gen. Milan Stefanik, the great Slovak hero, who saw his people achieve independence after the First World War and died in a tragic accident soon after.

Milan Stefanik was a brilliant young man who could have devoted himself happily and successfully to his great love, astronomy. In his early youth he had had to leave his native land, which was under foreign domination, and go to France in order to pursue the scientific studies which were his absorbing interest. After many trials and disappointments the young Slovak scientist at last gained recognition and by 1914 he was in fact regarded by continental learned societies as one of the brilliant young astronomers of Europe. But he could not smother love of his own land nor forget the shackles which bounded his compatriots. When war came in 1914, Stefanik, 34 years old at the time and at the height of his career, abandoned it all to enter the French Air Force and fight for the victory of the Allies. Combined with his active service was work in orgqnizing the Czechoslovak military forces in exile, who played an effective role in the war, and the Czechoslovak National Council from which the independent state of Czechoslovakia was to evolve. Victory brought with it its own sweet fruits of independence for his homeland and a position of national honor and service in his new country for the young war hero. In May 1919, an untimely accidental death cut short his fruitful and dedicated life.

We can hope that the Europe of our day will find other great souls like Stefanik's lead and organize and fight in pursuit of the ideals of human liberty and democracy which he held dear. New times brings with them new problems. In Stefanik's day the problem was national independence for particular European groups. Today the problem is how to achieve a unified, independent, and democratic Europe. In such a Europe Stefanik's Czechoslovakia, free of its Communist masters, could have a worthy place.

We could find no better way of honoring the memory of Milan Stefanik than in emulating his dedication and selflessness in advancement of the ideals of freedom which are yet so far from universal fulfillment.

ICEM and Refugees

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the first two of a series of articles written by a distinguished and able journalist, Mr. Edward P. Kennedy, the political reporter of the Easton Express, published in my hometown, Easton, Pa.

Mr. Kennedy was invited by the Department of State to serve as public member on the U.S. delegation to the 10th session of the Council on the Intergovernmental Committee for European Migration—ICEM.

The above-mentioned follows:

[From the Easton (Pa.) Express, Apr. 18, 1959]

A LOOK AT THE REFUGEE PROBLEM

(By Edward P. Kennedy)

Back in Easton after a 2-week trip to Europe, I am preparing a series of columns for next week, mainly on what I observed as a public member of the 10th annual conference of the Intergovernmental Committee on European Migration (ICEM) at Geneva, Switzerland. Heading the agenda was the refugee problem, given especial prominence because of designation of the period starting July 1 as World Refugee Year. In an unexpected extension of my trip, I went to Salzburg, Austria, and viewed several refugee camps partly housing Hungarian and Yugoslav escapees.

The trip included stops in Rome on the way to Geneva and in Paris on the way home. In Rome, I saw United States Representative FRANCIS E. WALTER, of Easton, who proposed my appointment, receive a decoration from the Italian Government for his assistance with migration of surplus populations. The Easton Congressman was on his 13th trip to Europe.

With WALTER'S party during most of the trip, and part of the time with U.S. Representative ARCH A. MOORE, JR., Republican, of West Virginia, I was impressed with the ease of travel by congressional and other VIP groups, State Department or other U.S. officials met us or saw us off at airports, facilitating going through customs and border police. Many were the invitations to dinners and cocktail parties, causing me to realize that an ironclad digestion is one of the prime qualifications of an American delegate abroad.

I found I concur with the analysis of others that there is less war fear abroad, at least in the sections I visited, than here. An American official in Switzerland told me that the Government in a recent period of crisis sent out a letter to its nationals suggesting, because of uncertainty, the purchase of foodstuffs and other materials. The purchases were made with no disorder nor sense of crisis, he said, suggesting that by contrast

a similar move here would arouse much hysteria.

As an it's-a-small-world note, I will report that the TWA plane which carried the Walter party to Geneva from Rome was in command of Capt. Walton H. Smiley, who lives near Stroudsburg. The Very Reverend Francis B. Sayre, of Washington, D.C., a member of the U.S. delegation, is a grandson of the Bethlehem resident for whom Sayre Park in that city was named.

[From the Easton (Pa.) Express, Apr. 20, 1959]

A LOOK AT THE REFUGEE PROBLEM—JULY 1 BEGINNING OF THE HUMANITARIAN YEAR

(By Edward F. Kennedy)

The bitter plight of refugees who fled across frontiers with nothing but the clothes on their backs was given especial attention at the meeting of the Intergovernmental Committee for European Migration I attended April 7–11 at Geneva, Switzerland. This was because the year starting July 1 has been designated as World Refugee Year, a humanitarian counterpart of the just-ended geophysical year.

ICEM's two-phase program deals with the refugee problem and also with that of the movement of surplus populations to countries which need more people. The organization, made up of 28 nations of the free world arranges transport for emigrable refugees and persons wishing to leave overcrowded countries. It also coordinates efforts to prepare these groups for successful lives in new, strange surroundings.

Although the refugees' need is well recognized, there appears surprisingly little agreement about their actual number. Estimates of the number of refugees in Europe and the world vary widely, I learned at Geneva and on a trip after the ICEM meeting to refugee camps at Salzburg, Austria.

The World Refugee Year program was discussed at a special ICEM session the afternoon of April 9, at which U.S. Representative FRANCIS E. WALTER, of Easton, was chairman. Before WALTER took the chair, Ambassador Alberto Berio, of Italy, the regular chairman, paid tribute to the Easton man who was awarded the Italian Order of Merit in Rome the week before for special service to the cause of migration.

WALTER voiced the hope that WRY will not be considered a mopping up operation. He emphasized that the refugee problem is of continuous nature, and that any attempt to solve it in 1 year would inevitably lead to frustration. He said, however, that manageable situations exist and a major effort may result in their solution.

WALTER at that time made no estimate of the number of refugees, but urged study to determine the size of the problem and what phase to ameliorate.

Dr. Auguste Lindt, the United Nations High Commissioner for Refugees, gave an estimate that present nonsettled refugees number around 123,000 with those who are emigrable, 43,500. He listed 32,000 in Austria, of which 12,500 can be emigrated; Italy, 9,500 with 8,000 emigrable; Germany, 49,000 and 5,000; Greece, 9,500 and 1,000; other Western European countries, he said, have 4,000; the Middle East, 5,000 and the Far East, 8,000, all emigrable. He termed the problem "very manageable, not astronomic."

Many refugees can be emigrated from countries of first asylum only with difficulty because they are the hard-core cases suffering from physical or mental disabilities. Some do not wish to move, so can be integrated where they are living.

Dr. Lindt suggested that government could observe the refugee year by accepting groups not normally admissible, by raising the age limits which now bar many, admitting refugee families now too large to qualify and admitting those presently not sufficiently skilled or those including physically handicapped. He urged that the idea should be abandoned that "all refugees are a social burden," since some may prove technical or economic assets.

Claude de Kemoularia, special U.N. representative for WRY, suggested aid for Arab refugees as a worthy WRY aim. Dr. Elfan Rees, representing the International Committee for the year, recalled that the idea for the effort arose from the writing of "three angry young men" in a British magazine and spread rapidly through Great Britain. He warned there will be a depressing effect on refugees—"the men who vote with their feet"—if the plan is unsuccessful.

A similar warning was given by John W. Hanes, Jr., heading the U.S. delegation. He said hopes of refugees can be raised only to be dashed if the program for WRY is not well conceived. He said a presidential proclamation soon will announce U.S. cooperation in the plan. He announced at this session contribution by the United States of $150,000 to aid new refugees from Algeria.

The Very Reverend Francis B. Sayre, Jr., dean of the Washington Cathedral and a U.S. public member, spoke as chairman of the U.S. committee on WRY. He had preached on the refugee program Easter Sunday over a TV-radio hookup and said it received much response in the United States. Representatives of 18 other nations pledged support of the WRY program.

At a press conference earlier that day, Walter gave an estimate that he thinks the European refugee problem is one having to do with "less than 40,000 people."

Some estimates run much higher. Walter, in the conference, cited a recent New York Herald Tribune editorial referring to "the world's 2 million refugees." A New York Times' story of April 8 on plans of the administration for evacuation of European camps speaks of an estimated 15 million refugees, "with some 160,000 in European camps."

The discrepancy in figures appears partly a matter of definition. Some cite all who have crossed borders, some list the nonsettled refugees, and some only those who are emigrable. Also, there seems a difference depending on whether the estimate is made by groups responsible for providing funds for the program, by professionals employed in governmental refugee agencies, or by philanthropic groups concerned with the refugee problem. Some have been so unkind as to suggest that high estimates are made by these last groups for fear they will "run out of refugees" and thus lose their reason for existence.

Livestock Prices

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. HOEVEN. Mr. Speaker, one of the well-known and highly respected livestock commission firms in my congressional district has recently compiled certain statistics regarding livestock prices. The following statement and tables were prepared by the firm of Wagner, Garrison & Abbott, of Sioux City, Iowa:

Many times through past years we have been compelled to defend livestock feeders both by word of mouth and through this medium against those who would have the world believe that livestock prices are too high.

Contrary to this, we take the stand that the price of cattle either alive or on the hook is still a commodity that is selling below other commodities that make up our standard of living. To substantiate this statement we have compiled some authentic figures that prove conclusively that livestock prices are well behind many other major items that govern today's living standard.

Below is a comparison as of a given day in the years 1937 and 1958. These figures prove beyond any doubt that beef is the best buy for today's dollar—and that $30 cattle is not just a high point in a given market—but possibly a figure that could be used as a yardstick for future operations:

	October 1937	1958	Increase over 1937
			Percent
Top price for fat steers	$18.00	$27.25	51
Milk per quart	.12	.25	108
Bread per loaf	.08	.19	138
Coffee per pound	.25	.93	272
Bus fares	.709	.16	105
Movie tickets	.23	.50	117
Autos (Chevrolet)	730.00	2,600.00	256
Gasoline per gallon	.14¼	.25	54
Coal per ton	11.19	29.14	150
Steel per pound	.02½	.06	140
Copper per pound	.13	.25	92
Lumber (board foot)	.03	.12	300

These figures, plus other information we have at our fingertips, and of course, our own conclusions point toward a relatively high cattle market during 1959 barring unforeseen drought conditions.

IRBM, Not Bases, Said To Be Ready in Britain

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the New York Times of Wednesday, April 29, 1959:

IRBM, NOT BASES, SAID TO BE READY—PENTAGON SPOKESMAN HINTS SYMINGTON WAS CORRECT ON BRITAIN—DENIES DECEIT

WASHINGTON, April 29.—There are probably no complete intermediate-range ballistic missile installations in Britain, with weapons, launching platforms, and trained crews ready to fire, it was indicated at the Pentagon today.

The Defense Department refused to comment officially on charges by Senator STUART SYMINGTON, Democrat, of Missouri, that the Nation had been misled in believing that the U.S.-equipped IRBM bases in Britain were operationally ready.

The Senator specifically cited testimony by Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff, who told a congressional committee last January that the 1,500-mile weapons delivered to Britain were ready to go.

A Defense Department spokesman said today that Pentagon officials had never meant to imply that the entire weapons installation in Britain was combat-ready. In promising operational readiness of the missiles in Britain, officials here merely referred to the missile itself, and not to the allied equipment, the spokesman said.

The Defense Department spokesman noted that last September, at least 2 months before the original target date of December

1958, the first Thor IRBM was delivered by airplane to Britain.

It was a fully tested missile, capable of being launched with an atomic warhead. Its delivery, with those of an unspecified number of other missiles in the weeks that followed, fulfilled the implicit promise to the public in official statements, the spokesman declared.

Under the terms of the British-U.S. agreement, it was emphasized, the British were responsible for the construction of the bases. Moreover, the terms of the agreement called for the firing by British crews, with the nuclear warheads in the hands of U.S. officials.

The British crews did not arrive for training in this country until March 1958. The first British crew did not successfully fire a test missile until last month at Vandenberg Air Force Base in California.

MAY NOT BE READY TILL 1960

One estimate at the Pentagon was that the IRBM installations in Britain would not be fully operational—in the sense that everything was ready—until perhaps the end of 1960.

The Thors, developed by the Air Force, are the first intercontinental range ballistic missile weapons to be completed and deployed to operating sites by the United States. Another weapon, the Jupiter, developed by the Army, has also been completed. It is slated for deployment to an IRBM base in Italy.

The arrangements for British IRBM bases were initiated at the end of 1956. The final agreement was not signed by the United States and Britain until February 24, 1958. Over the last few years, leading U.S. officials, including President Eisenhower, have referred to the operational readiness of the Thor missile.

Actually, the final test of the missile, declaring it a combat-ready device, was made last June at the testing center in Cape Canaveral, Fla. But most military officials stated simply that the Thors would be operational at the British bases by December 1958.

The prevailing impression here has been that by declaring the Thors operational in Britain, officials have indicated that these weapons were capable of being fired, should war break out suddenly.

The possibility that the deployment of the operational missiles to British sites did not mean that they could be fired at those sites appears not to have been brought out until Senator SYMINGTON'S speech yesterday.

The Senator had been a consistent critic of the administration's defense policies.

Rhode Island Independence Day

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. FORAND. Mr. Speaker, May 4 is a glorious day in the history of Rhode Island. One hundred and eighty-three years ago, on May 4, 1776, Rhode Island became the pioneer State to declare its independence of monarchial rule. The formal severance took the form of the repeal of "an act for the more effectual securing to His Majesty the allegiance of his subject in this, his colony, and dominion of Rhode Island and Providence Plantations." Under this act the general assembly struck the king's name from all commissions, writs, process, and other legal proceedings, substituting the following phrase: "The Governor and Company of the English Colony of Rhode Island and Providence Plantations."

This declaration of independence, characteristic of Rhode Island's individuality and courage, must have been an inspiration to the more cautious and hesitating colonies and an incentive to the Continental Congress in its declaration for all the Colonies on the memorable Fourth of July. The heroic men who struck that courageous blow for civil and political liberty, struck not for themselves alone nor for us, but for humanity. Today, when a tyranny more sinister than that which they knew is pressing everywhere against the frontiers of the free world, their act should be an inspiration to all of us.

That act, by which Rhode Island stood forth the first free and independent commonwealth on the American Continent, was in keeping with a long standing tradition of freedom in the colony and the State. Rhode Island's first great contribution to the cause of liberty was in its founding. The independence of Rhode Island began, in fact, when Roger Williams first set foot on that free soil. He initiated the lively experiment of founding a most flourishing state in civil things alone with a full liberty in religious concernments. When in 1656 other colonies urged sanguinary edicts against the Quakers and threatened to sever all commercial intercourse unless Rhode Island joined in the persecution, this was their answer:

> We shall strictly adhere to the foundation principles on which this colony was settled, to wit: that every man who submits peaceably to civil government in this colony shall worship God according to the dictates of his own conscience, without molestation.

In his gift to the world of the doctrine of religious liberty, Roger Williams stands among the few preeminent benefactors of mankind.

Another field in which Rhode Island took the initiative was the opposition to British taxation acts. In the agitation over the Sugar and Stamp Acts, Rhode Island was conspicuously aggressive. In 1733 Richard Partridge, the colony's agent in London, wrote Governor Wanton a letter in which he said:

> The levying a subsidy upon a free people without their knowledge, against their consent—a people who have no representatives in the state here * * * is, I understand, a violation of the right of the subject.

Partridge presented a petition to Parliament for the colony, for the first time putting forth the doctrine which forbids taxation without representation, a doctrine which became the bugle call of American independence.

When war began, Rhode Island was not wanting in initiative. The day following the Battle of Lexington found 1,000 men on the march from Providence to Boston, but they were stopped by dispatchers from Lexington. Rhode Island troops were not only among the first to respond but they were apparently the best prepared. Washington Irving in his "Life of Washington" wrote:

> One of the encampments, however, was in striking contrast with the rest, and might vie with the British for order and exactness. Here were tents and marquees pitched in the English style; soldiers well drilled and well equipped; everything had an air of discipline and subordination. It was the body of Rhode Island troops, which had been raised, drilled, and brought to the camp by Brigadier General Greene of that Province.

In days of prosperity and luxury patriotic sentiment may lose its keen edge. Let us strive to keep alive our historic past. The knowledge that the light of religious liberty dawned in Rhode Island and that the principles of free democracy there reached, at an early date, a high state of development, must ever be a proud heritage to every citizen of our State.

A Bill To Provide Additional Means of Securing and Protecting the Civil Rights of Persons Within the Jurisdiction of the United States

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. HOLTZMAN. Mr. Speaker, I am this week introducing in the House of Representatives a bill which will amend the Civil Rights Act of 1957, by including therein some of the provisions which had been proposed in my previous bill in the 85th Congress, specifically the antilynching provision.

The legislation introduced at that time contained the 4-point program of the President, and, in addition, four other provisions, among them the strengthening of basic civil rights statutes by increasing punishment where death or maiming result from violation of these statutes.

During the hearings several years ago, some of our colleagues had suggested that there be a moratorium on a strong antilynching provision. Unfortunately, such a provision was not included in the bill as finally enacted, and recent happenings in Mississippi prove that now is not the time for a moratorium.

The entire country, and indeed the entire world, was horrified by the tragic demonstration of mob violence in Poplarville, Miss., and I am sure that the many justified protests against such a brutal and heinous crime are echoed by men and women of good conscience throughout the country.

We cannot assure that legislation of this nature will prevent the recurrence of such ruthless acts, but, as in the case of the Federal laws against kidnaping, the statute called for would certainly serve as a deterrent to those who would commit these atrocities.

Our Constitution is one of the greatest documents in the history of the world, and guarantees the protection of his life, property, and civil rights to each and every citizen, regardless of his race, creed, color or national origin. It is morally right that freedom apply equally to all Americans, and if we are to continue to preach democracy, freedom and equality

to the rest of the world, we must practice what we preach. When our own house is swept and clean, then and only then will these goals have true meaning.

It is most important that we prove to the world, particularly to those nations behind the Iron Curtain, and those on the brink, that the United States is a land where freedom and individual rights are respected and protected by the highest standards of justice. We cannot and must not countenance defiance of what is legally and morally right. We have a wonderful and enviable heritage to maintain, and it is up to us in the Congress to fulfill our responsibilities of leadership and to enact strong laws which will guarantee these basic rights, and wipe out the shame and disgrace all decent Americans experience when these acts of violence are perpetrated against our fellow citizens.

In the light of recent developments, I cannot overemphasize the importance of strengthening our Civil Rights Act, and I urge my colleagues to join with me in this move to restore our national pride.

The text of the bill follows:

A BILL TO PROVIDE ADDITIONAL MEANS OF SECURING AND PROTECTING THE CIVIL RIGHTS OF PERSONS WITHIN THE JURISDICTION OF THE UNITED STATES

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Congress hereby finds that, despite the continuing progress of our Nation with respect to protection of the rights of individuals, the civil rights of some persons within the jurisdiction of the United States are being denied, abridged, or threatened, and that such infringements upon the American principle of freedom and equality endanger our form of government and are destructive of the basic doctrine of the integrity and dignity of the individual upon which this Nation was founded and which distinguishes it from the totalitarian nations. The Congress recognizes that it is essential to the national security and the general welfare that this gap between principle and practice be closed; and that more adequate protection of the civil rights of individuals must be provided to preserve our American heritage, halt the undermining of our constitutional guarantees, and prevent serious damage to our moral, social, economic, and political life, and to our international relations.

(b) The Congress, therefore, declares that it is its purpose to strengthen and secure the civil rights of the people of the United States under the Constitution, and that it is the national policy to protect the right of the individual to be free from discrimination based upon race, color, religion, or national origin.

(c) The Congress further declares that the succeeding provisions of this Act are necessary for the following purposes:

(1) To insure the more complete and full enjoyment by all persons of the rights, privileges, and immunities secured and protected by the Constitution of the United States, and to enforce the provisions of the Constitution.

(2) To safeguard to the several States of the United States a republican form of government from the lawless conduct of persons threatening to destroy the several systems of public criminal justice and frustrate the functioning thereof through duly constituted officials.

(3) To promote universal respect for, and observance of, human rights and fundamental freedoms for all, without distinction as to race or religion, in accordance with the undertaking of the United States under the United Nations Charter, and to further the national policy in that regard by securing to all persons under the jurisdiction of the United States effective recognition of certain of the rights and freedoms proclaimed by the General Assembly of the United Nations in the Universal Declaration of Human Rights.

(d) To the end that these policies may be effectively carried out by a positive program of Federal action the provisions of this Act are enacted.

SEC. 2. The Civil Rights Act of 1957 is amended by adding at the end thereof the following:

"PART VI—CREATION OF A JOINT CONGRESSIONAL COMMITTEE ON CIVIL RIGHTS

"SEC. 171. There is established a Joint Committee on Civil Rights (hereinafter called the 'Joint Committee'), to be composed of seven Members of the Senate, to be appointed by the President of the Senate, and seven Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives. The party representation on the joint committee shall as nearly as may be feasible reflect the relative membership of the majority and minority parties in the Senate and House of Representatives.

"SEC. 172. It shall be the function of the Joint Committee to make a continuing study of matters relating to civil rights, including the rights, privileges, and immunities secured and protected by the Constitution and laws of the United States; to study means of improving respect for and enforcement of civil rights; and to advise with the several committees of the Congress dealing with legislaiton relating to civil rights.

"SEC. 173. Vacancies in the membership of the Joint Committee shall not affect the power of the remaining members to execute the functions of the Joint Committee and shall be filled in the same manner as in the case of the original selection. The Joint Committee shall select a chairman and a vice chairman from among its members.

"SEC. 174. The Joint Committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such places and times, to require, by subpena or otherwise, the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, and to take such testimony as it deems advisable. The provisions of sections 102 to 104, inclusive, of the Revised Statutes, as amended (2 U.S.C. 192, 193, 194), shall apply in case of any failure of any witness to comply with a subpena or to testify when summoned under authority of this section. Within the limitations of its appropriations, the Joint Committee is empowered to appoint and fix the compensation of such experts, consultants, technicians, and clerical and stenographic assistance, to procure such printing and binding, and to make such expenditures as, in its discreiton, it deems necessary and advisable.

"SEC. 175. Funds appropriated to the Joint Committee shall be disbursed by the Secretary of the Senate on vouchers signed by the chairman and vice chairman.

"SEC. 176. The Joint Committee may constitute such advisory committees and may consult with such representatives of State and local governments and private organizations as it deems advisable.

"PART VII—PROHIBITION AGAINST DISCRIMINATION OR SEGREGATION IN INTERSTATE TRANSPORTATION

"SEC. 181. (a) All persons traveling within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, and privileges of any public conveyance operated by a common carrier engaged in interstate or foreign commerce, and all the facilities furnished or connected therewith, subject only to conditions and limitations applicable alike to all persons, without discrimination or segregation based on race, color, religion, or national origin.

"(b) Whoever, whether acting in a private, public, or official capacity, denies or attempts to deny to any person traveling within the jurisdiction of the United States the full and equal enjoyment of any accommodation, advantage, or privilege of a public conveyance operated by a common carrier engaged in interstate or foreign commerce, except for reasons applicable alike to all persons of every race, color, religion, or national origin, or whoever incites or otherwise participates in such denial or attempt, shall be guilty of a misdemeanor and shall, upon conviction, be subject to a fine of not to exceed $1,000 for each offense, and shall also be subject to suit by the injured person or by his estate, in an action at law, suit in equity, or other proper proceeding for damages or preventive or declaratory or other relief. Such suit or proceeding may be brought in any district court of the United States as constituted by chapter 5 of title 28, United States Code (28 U.S.C. 81 et seq.), or the United States court of any Territory or other place subject to the jurisdiction of the United States, without regard to the sum or value of the matter in controversy, or in any State or Territorial court of competent jurisdiction.

"SEC. 182. It shall be unlawful for any common carrier engaged in interstate or foreign commerce, or any officer, agent, or employee thereof, to segregate, or attempt to segregate, or otherwise discriminate against passengers using any public conveyance or facility of such carrier engaged in interstate or foreign commerce, on account of the race, color, religion, or national origin of such passengers. Any such carrier or officer, agent, or employee thereof who segregates or attempts to segregate such passengers or otherwise discriminate against them on account of race, color, religion, or national origin shall be guilty of a misdemeanor and shall, upon conviction, be subject to a fine of not to exceed $1,000 for each offense, and shall also be subject to suit by the injured person in an action at law, suit in equity, or other proper proceeding for damages or preventive or declaratory of other relief. Such suit or proceeding may be brought in any district court of the United States as constituted by chapter 5 of title 28, United States Code (28 U.S.C. 81 et seq.), or the United State court of any Territory or other place subject to the jurisdiction of the United States, without regard to the sum or value of the matter in controversy, or in any State or Territorial court of competent jurisdiction."

SEC. 3. (a) Sections 241 and 242 of title 18, United States Code, are amended to read as follows:

"SEC. 241. Conspiracy against civil rights; interference with such rights

"(a) If two or more persons conspire to injure, oppress, threaten, or intimidate any inhabitant of any State, Territory, or District in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or laws of the United States, or because of his having so exercised the same; or

"If two or more persons go in disguise on the highway, or on the premises of another, with intent to prevent or hinder his free exercise of enjoyment of any right or privilege so secured, they shall be fined not more than $5,000 or imprisoned not more than ten years, or both.

"(b) If any person injures, oppresses, threatens, or intimidates any inhabitant of any State, Territory, or District in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or

laws of the United States, or because of his having so exercised the same; or

"If any person goes in disguise on the highway, or on the premises of another, with intent to prevent or hinder his free exercise or enjoyment of any right or privilege so secured, such person shall be fined not more than $1,000 or imprisoned not more than one year, or both; or shall be fined not more than $10,000 or imprisoned not more than twenty years, or both, if the injury or other wrongful conduct herein shall cause the death or maiming of the person so injured or wronged.

"(c) Any person or persons violating the provisions of subsections (a) and (b) of this section shall be subject to suit by the party injured, or by his estate, in an action at law, suit in equity, or other proper proceeding for damages or preventive or declaratory or other relief. The district courts, concurrently with State and Territorial courts, shall have jurisdiction of all proceedings under this subsection without regard to the sum or value of the matter in controversy. The term 'district courts' includes any district court of the United States as constituted by chapter 5 of title 28, United States Code (28 U.S.C. 81 et seq.), and the United States court of any Territory or other place subject to the jurisdiction of the United States.
States.

"§ 242. Deprivation of rights under color of law

"Whoever, under color of any law, statute, ordinance, regulation, or custom, willfully subjects, or causes to be subjected, any inhabitant of any State, Territory, or District to the depreviation of any rights, privileges, or immunities secured or protected by the Constitution and laws of the United States, or to different punishments, pains, or penalties, on account of such inhabitant being an alien, or by erason of his color or race, than are prescribed for the punishment of citizens, shall be fined not more than $1,000 or imprisoned not more than 1 year, or both; or shall be fined not more than $10,000 or imprisoned not more than 20 years, or both, if the deprivation, different punishment, or other wrongful conduct herein shall cause the death or maiming of the person so injured or wronged."

(b) Chapter 13 of title 18, United States Code, is amended by adding after section 242 thereof the following new section:

"§ 242A. Enumeration of certain civil rights

"The rights, privileges, and immunities referred to in section 242 of this title shall be deemed to include, but shall not be limited to, the following:

"(1) The right to be immune from exactions of fines, or deprivations of property, without due process of law.

"(2) The right to be immune from punishment for crime or alleged criminal offenses except after a fair trial and upon conviction and sentence pursuant to due process of law.

"(3) The right to be immune from physical violence applied to exact testimony or to compel confession of crime or alleged offenses.

"(4) The right to be free of illegal restraint of the person.

"(5) The right to protection of person and property without discrimination by reason of race, color, religion, or national origin.

"(6) The right to vote as protected by Federal law."

(c) The analysis of chapter 13 of title 18, United States Code, immediately preceding section 241, is amended as follows:

(1) Strike out—

"241. Conspiracy against rights of citizens."

and insert the following—

"241. Conspiracy against civil rights; interference with such rights."

(2) Immediately after—

"242. Deprivation of rights under color of law."

insert the following—

"242A. Enumeration of certain civil rights."

SEC. 4. Section 1980 of the Revised Statutes (42 U.S.C. 1985) is amended by adding at the end thereof the following new paragraph:

"Fourth. The several district courts of the United States are invested with jurisdiction to prevent and restrain acts or practices which would give rise to a cause of action pursuant to the first, second, and third paragraphs of this section, and it shall be the duty of the Attorney General to institute proceedings to prevent and restraint such acts or practices."

On Polish Constitution Day: Tribute to a Brave Nation

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. CONTE. Mr. Speaker, today we take appropriate notice of a great day in the history of Poland—the 3d of May, the date of the great Polish Constitution, the first democratic constitution in the world.

This document guaranteed to all Poles, regardless of their class or rank, whether they were peasant or merchant, laymen or clergy, the great rights of equality, freedom of conscience, religion and speech, and a share in the Government for every citizen. This constitution was to be revised every 25 years. It was an ideal constitution, a forerunner of our modern democracy, and later it was used as a model by nations seeking to perfect their own way of government.

We all know that great tragedies which befell the Polish Nation and her brave people. But we know too that, despite the sufferings of invasions, partitions, and occupations, the desire for liberty has always remained strong in the hearts of the Polish people.

It was this longing for freedom—so often unattainable in their homeland—that brought many Poles to American shores. Poland's loss was to be America's gain. Once in this country they assisted us in our struggle for independence.

Ever since the American Revolution, Polish blood has been shed for American liberty. Thaddeus Kosciuszko, Casimir Pulaski, and hundreds of other Polish patriots fought with the Continental Army.

Americans of Polish descent fought in the Mexican, Civil, and Spanish-American Wars for the preservation of liberty. More recently in World War I, 300,000, and in World War II over 900,000 served to make our country secure.

Not only did Polish-Americans contribute to the security of our land, but they also aided in its development. These Polish immigrants came to this country endowed with a capacity for industry and love of God. Their assiduousness contributed to the growth of America. They assisted in the cultivation of our soil, in the construction of our railways, in the development of our coal, iron, and copper mines and in the expansion of our industries. Their religious faith made them peaceful, honest, and loyal American citizens. In addition, their cultural achievements have become an integral part of the varied culture of America.

It is appropriate on this anniversary of Polish Constitution Day that all Americans express their appreciation to the Polish-Americans for their contributions to the defense and development of our country.

At the same time all Americans should take this opportunity to reiterate their deep concern for the brave people of Poland who are deprived of freedom today. We want to assure these courageous men and women that we will never enter into any agreement with the masters of the Kremlin which will legalize and help to perpetuate the enslavement of the Polish Nation.

Until these men and women, who have so clearly shown their deep love for freedom, are free to choose their own way of government and live without fear of political persecution, we in America cannot enjoy our freedom to the fullest extent. For our hearts are burdened by the knowledge of the burden carried by our fellow men in Poland and the other brave nations now under Soviet control. In the deepest sense, their struggle must be our struggle, and our freedom will only be perfect when we have won for them the precious freedom for which they have struggled so long and courageously.

Increased Medical Research

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. ZELENKO. Mr. Speaker, I have today introduced a bill to provide funds for increased medical research by the National Institutes of Health, without adding to the Federal Budget or increasing the Federal deficit.

The bill will authorize the Postmaster General to issue a specially designed stamp of 4-cent denomination that would be sold to the public at a price of 6 cents. Purchase and use of this stamp would be strictly voluntary.

Two cents of each sale would be segregated by the Postmaster General as trustee of a national health research fund and turned over to the Secretary of Health, Education, and Welfare for use, as a gift from the American public, for additional research in cancer, mental health, heart disease, arthritis, and other of the medical research needs of the National Institutes of Health.

This bill would make it possible for over 170 million Americans to contribute directly and substantially toward medical research and to add their gifts to the funds now being spent by governmental and private agencies. At a trifling cost, the purchasers of these stamps, which will be usable as the equivalent of all U.S. postage stamps of equal denomination, would each add his or her might to the intensive efforts now being made by American scientists, doctors, and researchers, and have an important individual part in the medical discoveries that will result from this public fund. This mass contribution should amount to about $10 million a year.

Everyone receiving a letter bearing this distinctively designed stamp would know that the sender is playing a vital role in a total national effort for the improved health and well-being of all humanity.

This legislation was suggested to me by Mr. Paul Taubman, of New York, eminent composer and owner of the famous Steinway stamp collection.

By means of this law many millions of persons who do not earn enough to make substantial contributions toward worthy health projects can thus, in their small monetary but great charitable attitudes, render assistance toward medical research. I urge the passage of this legislation.

Resolutions on Disarmament and Nuclear Bomb Testing

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BURNS of Hawaii. Mr. Speaker, the Hawaii Mission of the Methodist Church, at its 54th session, concluded on March 9, 1959, adopted two resolutions with reference to disarmament and nuclear bomb testing. The Methodist Church of Hawaii has a distinguished record of service to the community. The resolutions adopted represent the serious thinking on matters of general concern which has characterized their contributions to the community. I wish to commend to the attention of the Members of Congress the care and concern of my constituents in the subject matter of the resolutions:

RESOLUTION ON DISARMAMENT

Whereas we believe that God, who is sovereign over nations and peoples, has made of one blood every nation of men, and wills that men should live together in an order of freedom and justice, and at peace with one another; and

Whereas we know today that if either the United States or the Soviet Union should commit its full power to all-out international war, mutual destruction would ensue; great cities would lie in ruins; whole populations would be destroyed; a radioactive plague would settle on the earth; and the well-being, perhaps even the existence of future generations would be placed in grave jeopardy; and

Whereas the lifting of the burden of the armaments race would not only serve to alleviate the fears that too often stifle international cooperation and lead to war but would have enormous economic benefits as well: Therefore be it

Resolved, That we plead with our Federal Government to continue discussions aimed toward universal disarmament by multilateral agreements no matter how difficult and trying the task may be, always determined to know that the only alternative left in case any given conference breaks down is a renewal of negotiations and never a renewal of arms race which would only lead to mutual suicide.

Adopted this 7th day of March 1959.

HAWAII MISSION, THE METHODIST CHURCH, 54TH SESSION,
——— ———, *Secretary.*

RESOLUTION ON NUCLEAR BOMB TESTING

Whereas a significant number of eminent scientists in the field of nuclear physics are deeply concerned over the increased danger of radioactive fallout resulting from tests of modern weapons of war; and

Whereas they agree, on the basis of certain facts gathered from previous bomb tests, that radiation is a very serious biological threat both to those living now and to generations yet unborn; and

Whereas the testing of modern weapons, because of their hideous destructiveness, produces an atmosphere of fear and distrust and thus jeopardizes our opportunities for a peaceful settlement of differences between nations: Therefore be it

Resolved, That we call upon our Territorial Legislature to ask the Congress of the United States to forgo all such tests while making every effort to secure reliable agreements from other nations to do the same, and be it further resolved that we ask our Government to continue and even intensify research that has to do with peaceful use of nuclear power.

Adopted this 7th day of March 1959.

HAWAII MISSION, METHODIST CHURCH, 54TH SESSION.
——— ———, *Secretary.*

Rural Development Workshop

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BAILEY. Mr. Speaker, at this time, I wish to call attention to an important national meeting that will be held at the Jackson's Mill State 4–H Camp in my district, May 11 to 15. During that week, State and county leaders in the national rural development program will come together in workshop sessions to evaluate the program and discuss improved methods of moving forward with county, area, and State projects. Thirty States participating in the rural development program will be represented at the meeting, as will the cooperating Federal agencies.

According to present plans, leaders from the States will compare experiences and develop methods and procedures for further implementing and improving the program. State delegations, upon their return to their respective States, will provide similar training to their county workers. In other words, this will be a "how to do it" type of workshop.

Among other objectives will be a review of experiences to date in the various States; identification of the most common problems and the most productive procedures for conducting rural development work in the States and counties.

It will be a work conference in the strictest sense, with a minimum of formal presentations. The talks or presentations will be in the areas where the people from the States have signified a need for help.

The Jackson's Mill workshop on rural development marks an important milestone in the progress of this national program. Out of the 5-day conference should come a clearer understanding of what can be done within the framework of present programs to promote the economic development of the Nation's rural areas, small towns, and rural communities.

The workshop should act as a seedbed of ideas, generating many new and more effective development efforts in rural areas throughout the Nation. My district is honored to be selected as the site of this important meeting.

Textile Workers Union of America Maintains That Economic Situation in Massachusetts Would Be Improved by Enactment of H.R. 4488 and S. 1046

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the estimates by the research department of the AFL–CIO, showing the impact of the proposed improvements in the Federal wage and hour law on the economy of Massachusetts, as submitted to me by Mr. J. William Belanger, New England regional director of the Textile Workers Union of America:

TEXTILE WORKERS UNION OF AMERICA,
Boston, Mass., April 23, 1959.

Hon. THOMAS J. LANE,
The House of Representatives,
Washington, D.C.

DEAR MR. LANE: The research department of the AFL–CIO has just issued estimates showing the impact of the proposed improvements in the Federal wage and hour law on the economy of our State. I feel you will want to have these figures in connection with your study of the pending legislation.

In Massachusetts, an increase in the minimum wage to $1.25 and extension of coverage to unprotected workers, as provided in the Kennedy (S. 1046), Roosevelt (H.R. 4488) bills would require raises for an estimated 165,000 low-paid workers.

The required increase in total wage and salary payrolls in Massachusetts would be slightly over one-half of 1 percent.

Although small as a proportion of total payroll, the increase would be a considerable

addition to the purchasing power of the State's lower-income families. In dollar terms, the increase in purchasing power for Massachusetts' low-income workers would be an estimated $50 million a year.

You will understand, of course, that not all the low-income workers in any State can be reached by Federal legislation. And if you will study the terms of S. 1046 and H.R. 4488 you will find that there has been a specific exemption of small businesses, especially retail establishments, in the coverage section of the legislation.

Permit me to emphasize the fact that the problem of low-wage competition, particularly in the consumer goods fields, apparel, textiles, etc., is once again becoming very severe. We in New England are being hurt by the South, as well as other regions of the country. In addition, we have the problem of substandard operations right within our own State and in adjoining States. I refer to the type of operator who leases a closed textile plant, for instance, and, taking advantage of the plight of stranded workers, pays wages close to the absolute minimum allowed by law. One way to lessen the danger of this type of vicious exploitation is to increase the minimum wage.

It is our earnest hope that hearings on this legislation can be held within the next couple of weeks and thereafter brought to the floor of the Senate and House as promptly as possible. The economic situation in Massachusetts and in New England demands the earliest possible action on S. 1046 and H.R. 4488.

J. WILLIAM BELANGER.

Liberty Trees

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. HARRISON. Mr. Speaker, in 1775, Thomas Paine wrote a poem, "Liberty Tree," in which we find the lines:

From the East to the West blow the trumpet to arms,
Thor' the land let the sound of it flee:
Let the far and the near all unite with a cheer,
In the defense of our Liberty Tree.

Drawing their inspiration from Paine's words, the Junior Chamber of Commerce of Strasburg, Va., has undertaken the distribution of liberty trees, American white pine seedlings planted in red, white, and blue pots with soil taken from Jamestown, Bunker Hill, the Alamo, Valley Forge, Yorktown, and the historic Shenandoah Valley.

Tomorrow, Tuesday, May 5, the Strasburg Jaycees will visit the offices of each Member of this House to present one of these trees. A similar distribution is planned in the other body.

Mr. Speaker, under leave to extend my remarks in the Appendix, I include an outline of the program, as follows:

The liberty tree program is a patriotic, nonprofit project of the Strasburg Junior Chamber of Commerce. It is designed to stimulate a greater appreciation of the American heritage and the privileges of American citizenship. As a part of this program the Jaycees in cooperation with selected members of the Strasburg High School will present to schoolchildren historical sketches on great leaders of the Revolutionary period, emphasizing their devotion to their country and their contribution to the American democratic system. Historical sketches to be presented this year are on the following: George Washington, Alexander Hamilton, Thomas Jefferson, Patrick Henry, and Nathan Hale.

Proceeds from the sale of liberty trees, after project costs, will be used to further patriotic instruction in the public schools, and establishing a scholarship, or grant fund, to render assistance to some college student, sophomore or above, majoring in history, and contemplating entering a career of teaching. This award will be made without regard to race, color, or creed. This fund is entitled the "Nathan Hale Fund."

Special acknowledgement and thanks are extended to the following persons and institutions for their assistance in furnishing soil samples used with each liberty tree:

1. The Jamestown Foundation with offices in Williamsburg, Va., and Theresa N. Freeman, staff member.
2. Capt. Arthur J. Reinstein, of the Metropolitan Police force, Boston, Mass.
3. Edith Simpson Halter, hostess-historian, the Alamo, San Antonio, Tex.
4. E. C. Pyle, superintendent, Valley Forge Park, Valley Forge, Pa.
5. Colonial National Historical Park, Yorktown, Va.

Mr. Speaker, I also include an inspirational message, written by John O. Marsh, Jr., the project director, which is included in a leaflet accompanying each tree.

THE THEME OF THE LIBERTY TREE

I am a liberty tree, and although I am just like the millions of American white pine seedlings planted in good American dirt across the length and breadth of our land, I am different. You see, I am a bit of your heritage, a part of your country, the spirit of America.

Let me tell you about the soil in which I grow, and as you learn my history perhaps you shall learn some of your country's, and I hope love your land more by its retelling. The bulk of it is from the Shenandoah Valley. George Washington passed over, or near it, many times as a young surveyor, and it has been suffering and sacrifice as your country was molded and reshaped by fire. Across this ground echoed the Rebel yell and the rumbling of Blue and Gray artillery.

Around my roots is the beginning of the patriot's dream—Jamestown Island, and though they, that brave handful of Englishmen who established their country's first permanent ettlement in the New World, could not see, nor imagine the fruits of what they began there, yet all the ingredients of their new country's greatness were present—hope, courage, sacrifice, fear, sugering, and a longing of freedom that made them journey here. Time and time again these ingredients of greatness reappear in the fabric of our heritage to create an American shrine as a tribute to its peoples' love of country. It is in the soil of some of these shrines I grow.

With me is a little of Bunker Hill, where wave after wave of British Redcoats in perfect cadence moved up its slopes, time and time again, to face the withering, decimating fire of colonial militiamen who would not flee and whose lines did not break, and when finally forced to withdraw they left an example and an inspiration to men who fought for the cause of liberty.

It was the same kind of raw courage that was to sustain your forefathers at the Alamo where your country was given a battle cry and a lesson in great sacrifice, so I'm glad part of the Alamo will help sustain me.

I want you to realize that this independence you enjoy, and, I am sure, love more than you often demonstrate, was not once so easily assured, but that hope was tried by despair; faith challenged by adversity. And to remind me of duty if in the face of misery; hunger in a land of plenty; cold in a nation of comfort, there is a touch of ground from General Washington's encampment at Valley Forge.

Victory is with me—Yorktown, where your liberty was won; but not without the help of others—here the French. From this great battlefield your ancestors were to return to their homes to build a growing expanding America in such seemingly far away places as New York, Connecticut, Georgia and all the other colonies. And America, the magnificence of which was beyond the patriot's wildest dream; but from Yorktown they marched in humility born of duty, unaware of the greatness they had done there, oblivious to the gratitude of posterity.

That's my story, it is the spirit of America; it is why I am part of your heritage. I hope you will plant me, care for me, help me grow, and as you see me, perhaps for just a moment, you will remember the soil in which I live, and what your forefathers did there to give you your country, and to make me a liberty tree.

Farmer Stanley Yankus

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. SHIPLEY. Mr. Speaker, many of us have been reading the past several months about one Stanley Yankus, the farmer who owned and operated a farm in the great State of Michigan. He received a lot of support when the Government levied a $5,072 fine against him because he planted 35 acres of wheat on his farm when they had ordered him to plant only 15 acres. In receiving this attention, he has made a lot of friends. But when I picked up the Washington Post Friday, May 1, 1959, I read the following: "Farm Rebel Yankus To Go to Australia."

It is said that his decision was made primarily for his two sons, Russell, 13, Dennis, 11, and daughter, Karen, 3, and he has sold his farm and plans to leave the United States within 30 days. He has said that he thinks freedom has a greater future in Australia than in the United States. Stanley Yankus thinks that he has been done a great injustice by our Government, because he was penalized by one of the laws of this country. Has he forgotten or is he ignoring all the other laws that have protected and helped him so much? Is he going to ignore all the freedoms that he has had in this country, because he simply does not like or does not believe in one law and only one law. Every country must have laws to protect its people and economy, and so forth, but because of one law that he does not like he is willing to forsake the United States for a new country. Has he forgotten that the draft law is a law that many people do not like? Has he forgotten the mothers and fathers who lost their sons because of this law? Has he forgotten the income

tax law, which none of us particularly enjoy, but we accept it as part of the great freedoms that we enjoy here. Now because of one law he has decided to tuck his tail and run.

Has Stanley Yankus thought about how the Communist Party and the Kremlin will contort, misrepresent, and blow his picture up in other countries as a man who was abused so terribly by our Government that he has given up this country. Has he thought of the injustice he is doing to the United States by making this decision. This country has given him more opportunities as a freeman than any country in the world, and yet he is so quick to denounce and stain this Government which has been so kind to him and his family and the millions of others who live here.

If after very careful consideration, his decision still remains the same that he will move to Australia then I say to him take your bags and move out of this country, because you are not worthy to live here. Is he forgetting that only in this country could a farmer, build up his farm and prosper the way he has and then be able to sell this farm for $30,000.

Another privilege that he is enjoying is the fact that he can leave this country any time he wishes. This is another law we have here and he is not hesitant about accepting it. I think he should be ashamed to turn away from a country that has been so kind to him in so many ways and his given him so much. He is running away from the problem. Where is his backbone and his stamina? Where is his fight? Is not this country worth fighting for, Stanley Yankus? The parents who had sons killed in our past wars did not move out of this country because they disagreed with the draft law. They stayed here and continued to fight for and enjoy the freedoms this country has to offer. They did not turn and tuck their tails and run like a scared hound dog.

"Mr. Yankus, if you honestly and sincerely believe that freedom has a better future in Australia, why are you retaining your U.S. citizenship for 5 years? Are you afraid that you are wrong or do you know that you are wrong and intend to come back.

"If you sincerely believe what you have said about the United States, Stanley Yankus, I say to you, pack your bags, get on the plane and relinquish your U.S. citizenship, because you have no right here."

Revelry in the Face of Danger

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a timely and thought-provoking article, by Ralph McGill, and appearing in the Washington Post of April 30, 1959. Pretty much the same situation existed in our country in the period immediately preceding World War II. I hope Mr. McGill's optimism, as expressed in the last paragraph of his article will, if conflict comes prove to be correct.

It is hard to convince some persons—too many—that the best way to avert conflict and war is to be powerfully strong militarily, particularly in the area of military research and development, before the fact, and to have sound policies and firm leadership.

It is most important in the face of imminent danger to note the too large percentage of people who take the easy road, responding to and thinking in terms of hope alone, rather than the hard way, of viewing the present world situation from a rational and realistic angle.

To respond to hope is natural and we should think in terms of hope but to hope for the best, but be prepared for the worst.

Interpreting Mr. McGill's timely warning, that is what he urges.

REVELRY IN THE FACE OF DANGER—THOUGH MANY SEEK TO ESCAPE CRISIS BY IGNORING IT, HOPE IS SEEN

(By Ralph McGill)

A friend of mine from New York, whose trade is to work in that nebulous but exacting field called public relations, and whose further chore it is to entertain various clients whose bents run often to night clubs and the like, came to see me.

He looked haggard and there was no bounce in his step, and the bounce, as one and all know, is a necessary attribute to a man whose task it is to bring sweetness and light and mutual admiration where none, or little, before existed.

"I never saw such a frantic season," he said. "Night clubs in New York are doing well and in New Orleans the Bourbon Street strip and jazz joints are jumping with persons energetically seeking recreation. It fretted me because they were working so desperately hard at it."

He paused and sighed from way down deep. "I wrote something down for you," he said, and took from his pocket a sheet of folded paper. He read from it:

"With the enemy's approach to Moscow, the Muscovites' view of their situation did not grow more serious, but on the contrary became even more frivolous, as always happens with people who see a great danger approaching. At the approach of danger there are always two voices that speak with equal power in the human soul: One very reasonably tells a man to consider the nature of the danger and the means of escaping it; the other, still more reasonably, says that it is too depressing and painful to thing of the danger, since it is not in man's power to foresee everything and avert the general course of events, and it's better therefore to disregard what is painful till it comes, and to think about what is pleasant. In solitude a man generally listens to the first voice, but in society to the second. So it was now with the inhabitants of Moscow. It was long since people had been as gay in Moscow as that year."

"I won't ask you to be a quiz kid," he said. "That's from Tolstoy's 'War and Peace,' and the antics of myself and my fellow man over the weekend impressed it upon me."

I reached over to a shelf and get Byron's poem, "Waterloo," which deals also with a later event in the history of Napoleon. It begins:

"There was a sound of revelry by night,
And Belgium's capital had gathered then
Her beauty and her chivalry, and bright
The lamps shone o'er fair women and brave men;
A thousand hearts beat happily, and when
Music arose with its voluptuous swell,
Soft eyes looked love to eyes which spake again,
And all went merry as a marriage bell:
But, hush, hark! A deep sound strikes like a rising knell!"

It was the beginning of Waterloo and the destruction of the Napoleonic power.

This human, but nonetheless curious, effort to escape from the reality of a situation was never better illustrated than in the Confederate capital city of Richmond in the last anguished months before it fell. Mrs. Mary Boykin Chestnut's "Diary From Dixie" reports its frivolous, almost frantic, attempt to disregard what is painful until it comes.

Today many Americans are heeding what Tolstoy called "the second voice." They squirm away from the reality of the sacrifice in taxes and goods which must be made. They try to find an escape in criticism and doubting.

But there are enough who will face the issues to solve them. There is within the Republic the will and intelligence to find ways and means to meet the threat which is of war, yet not war alone, but war plus a fanatic ideology appealing to millions long without food, direction, education, information, or any concept of order. Those who insist on listening to that "second voice" are just the extra weight we must carry into the fight.

Asbury Park, N.J., Observed Loyalty Day, Sunday, May 3, 1959

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. VAN ZANDT. Mr. Speaker, on Sunday, May 3, 1959, Post No. 1333 of the Veterans of Foreign Wars of the United States of Asbury Park, N.J., sponsored its third annual Loyalty Day parade with some 10,000 participants from all over northern New Jersey. In addition to the parade Post No. 1333 of the Veterans of Foreign Wars of the United States turned over to the city of Asbury Park a beautiful memorial which included a water fountain located in the community park.

This great demonstration of loyalty was witnessed by hundreds of the residents of Asbury Park and vicinity and it was my pleasure to deliver the principal address for the occasion which follows:

LOYALTY DAY ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, SUNDAY, MAY 3, 1959, 2:30 P.M., ASBURY PARK, N.J.

It is an honor to have been invited to participate in your annual Loyalty Day program which this year has nationwide significance since 1959 marks the first time the observance has been sanctioned permanently by the U.S. Government under Public Law 85-429, approved July 18, 1958.

As many of you know, it was my privilege for several years to introduce legislation in Congress annually designating May 1 as Loyalty Day.

Last year, it was possible through approval of House Joint Resolution 479, which I sponsored in the House of Representatives, to have the observance of Loyalty Day on the 1st day of May each year made permanent.

The department of New Jersey Veterans of Foreign Wars of the United States has been among the pioneers in VFW circles on the east coast that inaugurated the observance of Loyalty Day over 10 years ago.

The VFW sponsorship of Loyalty Day was enthusiastically received and was accorded national recognition by receipt of seven consecutive awards from Freedoms Foundation at Valley Forge.

The awards included the top award of the George Washington Honor Medal for the 1955 program and the foundation's highest recognition in 1953, 1954, 1955, and 1956—the distinguished service scroll for winning the fourth, fifth, sixth, and seventh awards.

As many of you know, it has been my privilege on several occasions to speak in New Jersey during the observance of annual Loyalty Day programs sponsored by the Veterans of Foreign Wars and supported by city, county, and State officials and other patriotic organizations.

This splendid community cooperation has made possible the success of Loyalty Day programs in the past and now that May 1 has all the aspects of a national holiday, it is no longer a VFW-sponsored observance but, in fact, is now officially approved by the U.S. Government and thus is deemed worthy of universal recognition and patriotic support.

It is always a pleasure to return to New Jersey because in my official capacity as commander in chief of the Veterans of Foreign Wars of the United States for three successive terms, I visited this great State on numerous occasions and, as a result, bonds of friendship were formed which have grown stronger down through the years.

Therefore I am enjoying this opportunity to once again visit my many friends in the Garden State.

It is indicative of the community spirit sweeping America in connection with Loyalty Day programs to observe that today's program is made possible by the zealous efforts of the third annual Loyalty Day parade committee comprised of representatives of the city of Asbury Park, the county of Monmouth, together with the district posts of the Veterans of Foreign Wars, the American Legion and their respective ladies' auxiliaries.

The fine parade and the excellent program marking the 1959 observance of Loyalty Day in this community have earned the warmest commendation for all organizations and committees which have labored hard to achieve the success that has been attained.

Loyalty Day gives all Americans an appropriate occasion to lay stress on our blessings as free people at a time when the Kremlin is staging worldwide demonstrations and proclaiming that Russia is a workers' paradise.

It has been truly said that "loyalty means liberty" and since loyalty is everybody's job, it behoves all red-blooded Americans to maintain a vigilant attitude and to speak out in no uncertain terms against the danger of subversive forces within and the peril of international gangsterism without.

We should heed the admonition of Mr. David Sarnoff, chairman of the board of directors of the Radio Corp. of America, who said in speaking of loyalty in an address on Veterans' Day 1958, "loyalty to our country is loyalty to ourselves."

To Mr. Sarnoff's timely advice I should like to add that what we need as a people in providing inspiration and strength is a double-barreled dose of good old-fashioned patriotism.

To many people in the United States patriotism has become outdated and nationalistic.

The custom of displaying the Stars and Stripes proudly before the home on national holidays is almost a thing of the past.

Today the Communists of America as well as of the world are working harder than ever to bring America under the spell of the Kremlin dictators.

Only recently a top American official said that more espionage agents are at work in America today than any time in our history.

On Red May Day in the Red Square of Moscow, Nikita Khrushchev praised the Communist world and spread the Communist propaganda of the day.

His statements were publicized throughout the universe and carried on the front pages of the world press.

As usual the American people and our goal of world peace were held up to ridicule, by the Kremlin's No. 1 propagandist.

Mind you, even in the face of the Kremlin's brutal attacks on our Government and way of life, we have some Americans who are content to sit idly by and call patriotism outdated and nationalistic.

Yes, this same group are the ones who say we should not worry about Communists and ignore their constant efforts to destroy us as a nation.

Now let us talk frankly about our arch enemy, communism.

It is a deadly enemy. It is a deadly enemy because never for a moment does it abandon its two basic aims: to remake man, and to conquer the world.

It is particularly our enemy—not because we so choose, but because it has chosen us as its prime target.

Communism regards the strength and the way of life of the United States as the chief obstacle to its plan to remake its own people and to remake the world in the image of its blueprint.

Yes. We have been picked as enemy No. 1. No matter what President Eisenhower says or does, no matter whether the Secretary of State conducts himself with tact or tactlessness, no matter how well the tourist behaves when he visits the Soviet Union, nevertheless, we will still be enemy No. 1.

Whether our working class is prosperous, or hungry and jobless, or jobless and not hungry, we will still be enemy No. 1.

Whether we treat racial minorities decently, or indecently—we will still be enemy No. 1.

Whether we pull out of Berlin, Quemoy, or the Middle East or do not pull out of Berlin, Quemoy, or the Middle East we cannot disengage ourselves from this enemy.

Let us not listen to the siren song of those who tell us that we can get a release of tensions and a little peace in our time if we only disengage ourselves.

If we disengage ourselves we leave another strip of land to be occupied—a new place from which battle will begin.

Ladies and gentlemen, the Communists know, to be sure, that they cannot conquer us. They know a lot about our economic and military strength. And with this knowledge they do not covet for a moment the risks of all-out war with us.

There are two things which the Communists are determined with all of their might to avoid: One is all-out war—the other is all-out peace.

In their clever and deceitful manner they will keep us involved in this cold war as long as they have the power to do so.

Frankly, they do not wish an all-out war because they believe that time and history are on their side.

Let me repeat again, ladies and gentlemen, the Communists have picked us as enemy No. 1, and in so doing they have singled us out as the enemy of the things they are trying to do to their people and to their neighbors.

Regardless of the fact that in the Kremlin's eyes America is Russia's No. 1 enemy, the fact remains that not a day passes but that our Government makes a sincere effort to terminate the cold war and usher in an era of just and lasting peace.

In trying to achieve the goal of universal peace it is a significant and deplorable fact that Russia, as a government, lacks national integrity, as evidenced by her long record of broken promises.

Today thereare more demands for American-Soviet talks, and some are already underway.

Unfortunately, the odds are 13 to 1 that every Soviet promise will be broken, and to justify this statement let me remind you that in 1943 four pacts with Russia were signed by an American President, and all four were broken. In 1945 six pacts were signed with Russia, and five were violated.

In 1955 President Eisenhower traveled to Geneva to meet the Russians and the trip was fruitless.

In addition between American and Soviet foreign ministers there have been 426 days of talks since 1943 with these results:

(a) In 1943 three pacts signed and all of them violated by Russia.

(b) In 1945 and 1946 a total of 11 pacts were signed and only one was kept.

(c) In 1947 one pact was signed and Russia violated it.

In the field of disarmament nearly 500 meetings have been held and nothing has been settled as yet.

In fact, they keep asking us back on their terms for another round of so-called conferences.

Thus we see the Communist mentality and the utter lack of integrity on the part of the Kremlin.

The present threat to world peace over Berlin so carefully played up by the Russians should answer those smug Americans who think patriotism is outmoded and who prefer to ignore the fact that we are the No. 1 enemy of ruthless communism whose lack of integrity is evident by the long list of broken promises.

Ladies and gentlemen, involved as we are in a cold war that from the standpoint of cost could destroy us economically, the time for unity has come in meeting the challenge of the Kremlin.

As David Sarnoff said in comparing a cold and a hot war—"We can 'freeze' to death as well as 'burn' to death."

Ladies and gentlemen, this need for national unity must rise above partisan politics—for every American must stand shoulder to shoulder—to let the Red rulers and the world know we are standing firmly against Communist aggression that has plagued the world for 40 years.

In seeking national unity we have a strong ally in Loyalty Day because in its short history it has kindled the fires of partiotism by counteracting the mass demonstrations formerly held by the Communists here in the United States on May Day.

Unquestionably, Loyalty Day has struck the Reds a severe blow.

But, ladies and gentlemen, let us not sit back and bask in past glories but rather make our voices heard around the world, shouting that we are free, loyal, and united Americans, ready to fight if necessary to defend the heritage that has made this country a giant among free nations.

Let us pray that Loyalty Day will inspire, strengthen, and unite us as a nation so that all of us will receive "that double-barreled dose of good old-fashioned patriotism" which I have prescribed.

Such a brand of patriotism will give us a keener and deeper appreciation of our American system of government and those who found and preserved it.

It will continue to inspire us to keep faith with those illustrious Americans who since

the founding of this Republic have given their lives on the altar of freedom.

After all when we as Americans realize the true value of our blessings then we will give full time to promoting an unadulterated type of real love of country.

All of these things, ladies and gentlemen, are part and parcel of the broad field of true patriotism.

I say to you: True patriotism is the most effective antidote to godless communism and the ruthless cold war challenge of Soviet Russia.

By working together to protect, preserve, and to promote American ideals we repay our debt a sa nation to the American way of life that has done more for more people than any form of government yet devised.

One of the most inspiring features of Loyalty Day programs such as your program is the participation of proud Americans whose ancestry may be traced to foreign lands yet who appreciate the precious blessings they enjoy as American citizens.

Loyalty Day definitely provides a time for us to examine and restate in terms of today's needs the rights and responsibilities of American citizenship.

Loyalty Day is a day which should bring us to our feet to salute the flag of our country.

Also, it should awaken us to a state of continual alertness to the causes which would undermine our Nation.

Furthermore, this appreciation of our American citizenship will be stimulated throughout the year by individual and collective effort to learn more of the history and ideals of our great American heritage of liberty and freedom.

Ladies and gentlemen, as I conclude, let me leave this thought with you.

Today we are hearing a lot about the so-called wave of hysteria and fear resulting from the efforts to ferret out Communists and subversive elements in every walk of life.

Let me assure you that we have nothing to fear as a nation if every American worthy of the name will measure up to the high standards of citizenship as embodied in the type of Americanism exemplified by our forefathers and defended to this day on the field of battle by succeeding generations.

In short these are perilous times, for the Soviet challenge to the American way of life was never more real or of a more definite threat.

Therefore, on this loyalty day of 1959, let us heed the stern admonition of George Washington when he said that in times of dire emergency we should make certain that we put only Americans on guard.

Secretary McElroy Explores the Possibility of Vastly Increased Military Spending—Has He Changed His Mind?

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. STRATTON. Mr. Speaker, the subject of the status of our national defense and the specific requirements of the 1960 budget has already been explored in some detail during this session of Congress by Members of this body as well as by Members of the other body. One of the most eloquent and outspoken proponents of the administration's defense budget has been, of course, the distinguished Secretary of Defense, Neil H. McElroy. In testimony after testimony taken here on Capitol Hill, Secretary McElroy has defended the present level of military spending as adequate, and he has joined with other members of his administration in deploring what he has regarded as the serious consequences that might accrue as the result of any increase in military spending that might be proposed by this Congress. The Secretary maintained this position even though the Soviets have been outstripping us in the field of ICBM's.

I recall in this connection, Mr. Speaker, that when the Secretary appeared before the House Committee on Armed Services, he replied to a question which I directed to him on this particlular subject, and it appears on page 915 of the so-called military posture briefings before the committee:

Mr. STRATTON. How does the calculated risk that we are taking in the budget compare with the calculated risk that we took in 1959? Is it greater or less?

Secretary MCELROY. That is a question that I wouldn't know the answer to. My belief is that there is no serious calculated risk in any of these, and I think the fact that the Joint Chiefs of Staff have given me a signed memorandum which says that they see no serious gaps in the program indicates that the best people that we have in the military also feel this away.

Incidentally, Mr. Speaker, the signed memorandum to which the Secretary referred was the same memorandum to which each of the four Chiefs of Staff had also written certain detailed reservations, and the reservations were later submitted to the Preparedness Subcommittee of the other body and also appeared in full in the New York Times.

As is well known, Secretary McElroy has announced his impending retirement from the Government within the next few months.

In view of Secretary McElroy's stanch position in support of the military budget, I was profoundly surprised to read the other day in the press accounts of an address which the Secretary made to the Bureau of Advertising of the American Newspaper Publishers Association dinner in New York City on April 23, in which the Secretary was reported to have said that since the Soviet Union may shortly increase its military production by some 50 percent this country must also be prepared to match or better that increase, either by an overall boost in our gross national product or by some serious restriction of expenditures in nonmilitary fields.

The Secretary's speech, which seemed to fly completely in the face of his sworn testimony before the Congress and to represent a related recognition of the validity of the position of those Members of Congress who have questioned the adequacy of the 1960 military budget, struck me as an amazing document. I obtained a copy of the speech and I believe that it deserves very serious study by every Member of this body.

I also believe that, the Secretary's speech raises certain very serious questions which ought to be fully explored by the committees of this Congress without delay. If the Soviet potential is so substantial in the military field, and if it seems likely in the very near future that we may have to undergo such a drastic increase in military spending as the Secretary has suggested then how can we be quite as certain as the Secretary has been that the military expenditures for fiscal 1960 as proposed by the administration are indeed adequate and that no serious element of risk is involved?

In view of this statement by the Secretary, one might even wonder whether the Secretary's impending retirement really stems from a desire to return to civilian life or whether the Secretary is perhaps not quite as completely satisfied with the adequacy of the 1960 military budget as he has suggested.

To me the amazing thing about the Secretary's address is that it has caused such a minor ripple in the press. Only one article, to my knowledge, has explored the implications of this address, a report by Mr. R. H. Shackford, of the Scripps-Howard newspapers, which appeared in the Washington Daily News, Monday, April 27. Mr. Shackford suggests that the Eisenhower administration is, as he put it, "very gingerly trying to prepare the American people for bad news ahead—more taxes, harder work, greater productivity, fewer luxuries, and maybe even more governmental controls."

Secretary McElroy in his address says that the threat of increased Soviet military spending is something "which may force us to make some hard choices."

Mr. Speaker, if hard choices have to be made, then is it not well that the Secretary should discuss these hard choices now with the Members of Congress before the 1960 military budget is adopted? Perhaps if these hard choices do have to be made, then we ought to begin thinking about them this year rather than at some future date. Because the longer we put off such hard choices, the greater will be the risk we run that our response to the Soviet challenge will not be sufficiently great.

Under leave to extend my remarks, I include both the text of the Secretary's address and also the text of the article by Mr. R. H. Shackford, which appeared in the Washington Daily News:

THE FREE WORLD'S COMPETITION WITH COMMUNISM

(Talk by Neil H. McElroy, Secretary of Defense, Bureau of Advertising dinner, New York City, N.Y., April 23, 1959)

The last time a Secretary of Defense was given the opportunity to address this distinguished group was in 1948—just 11 years ago—when Mr. Forrestal reported to you on the state of the Nation's defenses.

That year, 1948, was a year of great and historic change in the military and foreign policies of this Nation. Just to illustrate how momentous these changes were, I might remind you that on one day in June 1948—the Senate of the United States passed the first peacetime draft law in the history of our Nation and on the very next day, by an overwhelming vote, approved the Vandenberg resolution—a resolution that charted the course of collective security for the United States and the nations of the free world—a course we have been following ever since. These were 2 days in which the stream

of our history was diverted into new and untried channels.

The draft law of 1948, plus a supplemental military appropriation of over $3 billion in the same year, represented our first concrete efforts to rebuild our Military Establishment from its postwar low.

The Vandenberg resolution—in the foreign policy field—was an unprecedented departure from anything we had ever before attempted. Through this resolution the Senate of the United States advised the President of certain steps it thought he should take in the field of foreign policy. You all know that President Truman took this advice—first by negotiating the North Atlantic Treaty. In succeeding years President Truman—then President Eisenhower—established a whole series of mutual security arrangements—which today form the warp and woof of our national security policy. Undermine them or take them away and we would have to evolve a brandnew defense strategy, if we were given the time.

You gentlemen who publish newspapers know better perhaps than any other group in America what caused us to take those momentous steps in 1948. You remember because you lived through those postwar days of frustration.

Earlier, you had written about the hope for the United Nations Charter and world peace through international resolve and agreement. Then as the years 1945, 1946, and 1947 unfolded, your papers were forced, in truth and objectivity, to publish a different story—a story of partial disillusionment—of shaken faith in a scarred United Nations, stranded on the rocks of the Soviet veto. Gradually it became painfully apparent to you and, through you, to the American people, that the Communists had no intention of abiding by the spirit of the charter; that they were intent on nothing less than world domination; and finally, that we—the United States—were the main stumbling block in their path.

Like the practical people we are—we reacted to the all too apparent danger. Perhaps it was the brutal suppression of Czechoslovakia in February of 1948 that started us down the dual highway of rearmament and collective security we have been following ever since. Certainly this first forcible Communist conquest of a stable free government was a profound shock to our people. Again what they read in news accounts and your editorial pages shed an altogether new light on the power and complete ruthlessness of Communist aggression.

If Czechoslovakia wasn't enough to spell out the ultimate Communist aims—the beginning of the Berlin blockade in the following months of 1948 was the convincer. This was the first great proble into the moral and military backbone of the United States. Would we allow 2 million Berliners to starve? Would we turn them over to the Russians to be exploited? Or, would we take heroic measures?

You told the American people that story too—the story of the airlift—we flew supplies into beleaguered Berlin for month after month. We moved atomic bomb capable B–29 bombers to England. We broke the Berlin lockade. But, more important, we demonstrated to the Russians and the whole world that we would not yield a rightful position to a threat of force. We had met our first great post war test. It was only the first of many more to come in the years between then and now.

But in 1948, as you told this story, up and down the face of this peace-loving land—and told it as only a free objective press can—our people got the point. They always will when the facts are made clear to them. America's security was in danger. "Do something about it," they told their leaders. So their leaders did.

The Marshall plan sped through Congress—so did the Draft Act and large supplemental appropriations for the Armed Forces. Finally, in the closing days of the Congress, the Senate passed the Vandenberg resolution.

These steps were not easy for America to take. The Senate resolution was violently attacked on the floor of the Senate and in the editorial columns of some newspapers—as an absolute and utter abandonment of traditional American foreign policy. Opponents cried that it violated the counsel of George Washington and Thomas Jefferson to avoid permanent or entangling alliances. It undermined the United Nations. It would bring on a third world war.

Actually, the collective security policy of our Government was approved by our people in the beginning because it made sense to them as a way to avoid a third world war. It makes just as good sense today.

I have gone into this bit of history between Mr. Forrestal's appearance before you and mine tonight—for the reason that I think a clear understanding of the events of his day are essential to a comprehension of today's policies. If the people know why the Nation had no option but to go forward with collective security in 1948, they will better understand why we cannot go backward in 1959 and beyond.

I believe it is important for all of us to reexamine—and then retell—the story of the beginnings of today's military and foreign policy. The plain fact of the matter is that the strategic concept of this country for survival is collective security. It is a concept on which the military posture of the Nation is based. The reasons which led to the adoption of this national policy of collective security in the forties—have not lost their urgency or their cogency in the fifties, nor will they in the foreseeable future.

Basically, the doctrine of collective security requires strength among our allies around the world. They have the manpower and they have the will to preserve their independence. What most of the free world countries lack, is weapons to match the manpower and the will of their people. What we do, through our program of military assistance, is to provide such countries with appropriate weapons and with training in the use of those weapons.

The administration of the military assistance program has not been perfect, but it has been effective. The measure of its effectiveness will always be its deterrent effect on Communist advances into free world territory—direct and indirect. The program was inaugurated, just 10 years ago, to build up peaceful barriers to further conquest by Soviet communism. I believe it has fulfilled that purpose admirably, in spite of occasional blunders of administration.

Repeated, bitter attacks on our foreign assistance programs leave in their wake a very large, never answered question—What is the alternate national security policy to be if the doctrine of collective self defense is abandoned?

The President's Committee To Study the United States Military Assistance Program—otherwise known as the Draper committee—has recently given an answer to that question. The only alternate they could see to our foreign assistance program—and they so reported to President Eisenhower—was to take "our first stand in the last ditch." The Draper committee put it this way:

"The choice our country faces is very real and near at hand. In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, we may be gradually choking this vital feature of our national security to death."

To this I can only add—with the full unanimous support of our Joint Chiefs of Staff—when we choke the military assistance program we have a strangle hold on our own military policy. That program is as much in our national self interests as the weapons in the hands of our own forces. Both are absolutely essential to our own protection.

Now let's take a hard look at our own defenses—our own weapons systems, never forgetting that they are integrated into the system of collective security I have just discussed.

Any nation which builds its defense position soundly does so on the basis of its special advantages. That is exactly what America has proceeded to do over the years. We believe—considering our geographical position, our allies and our military know-how—that the weapons systems we have evolved offer the best possible combination to keep anyone from attacking us.

Our planned programs for the future are responsive to all the variables in the formula which best defines America's security needs. They will respond to future intelligence of Soviet capabilities, to technological breakthroughs—which we constantly seek—and to the changing strengths of our collective security arrangements.

America has today the strongest air striking force in the world. This force is composed of the largest heavy bomber force in existence, as well as the largest medium bomber force. These forces are backed up by mobile carrier-based aircraft and tactical fighter bombers stationed in many strategic places around the world.

You may be sure that these bomber forces—all four of them—will be kept in any status of alert required to insure their ability to deliver unacceptable punishment to any nation which might attack us. They are peaceful barriers to aggression—peaceful but effective.

I feel before I leave the weapons business and get into other fields that affect the country's security I should make some comment on the so-called missile gap. There may develop within the next few days a disparity between the number of long-range intercontinental ballistic missiles in our stockpile and those in the Soviet Union's. I said "may develop," because whether a gap opens up depends in large measure on the willingness of the Kremlin to concentrate on the production of missiles to the full-rated capacity of the Russian nation and its satellites.

I believe it is wrong, and the Joint Chiefs of Staff believe it is wrong, to compare our heavy weapons delivery systems, category by category, and insist on being numerically greater in each. Our Armed Forces are built to fit our needs—presumably the Soviet's are select to fit what they consider to be their needs. So long as the United States continues to have an overall preponderance of capability to deliver high-potency weapons—on target—we need not fear attack. We have such a preponderance now, and no one in this administration—civilian or military—has any intention of allowing this condition to change.

The military strength of this or any nation is best measured by adding a sum total of its separate strengths into a composite whole. When this is done our military leaders, and again I refer to the Joint Chiefs of Staff, conclude that our composite strength is adequate and has no serious gaps.

This calendar year 1959 we expect to add to our powerful mixture of weapons delivery systems an initial intercontinental ballistic missile capability—not a large capability numerically—but we believe approximately as large as what the Soviet Union will have in 1959. Our planned future deployment of ICBM's, as we are financing them in the 1960 budget, provides numbers which in concert with our other weapons systems—such as our massive aircraft strength and the Polaris system—we believe to be fully ade-

quate to deter the outbreak of general war. The military program of this country is based solely on what is required for national security. It is not determined by budgetary considerations.

Next year a number of our atomic submarines will be carrying deadly Polaris missiles. Just one of these Polaris submarines on station, ready to fire, will have striking power hundreds of times more effective than the first and only atomic bombs dropped in combat.

The Soviets have made no claim to the development either of a nuclear powered submarine or a Polaris type missile. They are fully aware of the military advantages and relative invulnerability of this weapons system. So, while it must be assumed that at some future time, the Soviet arsenal will include Polaris type submarines, it seems clear that the United States has a considerable lead in this highly important weapons system.

Next year also, this country will add to its offensive armament powerful air-to-ground atomic missiles—which can be fired from our heavy bombers hundreds of miles outside target defense areas.

We confidently expect that our own military strength integrated with our collective security strategy will continue to be successful in discouraging Communist military attack on the free world. But acceptance of the belief that the Communists will hesitate to use military conquest as a means to their objective of world domination does not mean they will have given up the objective. It only signifies that the Soviets may decide that the use of military conquest has become unprofitable. We may be sure that such possible abandonment of one means will only cause the Communists to concentrate their efforts on other avenues they believe will lead them to absolute world power.

Thus, the United States and the other nations of the free world are bound to be projected into other spheres of competition. We must be alert to the dangers which may develop in the new areas. Let me name a few of these spheres. First and most important—the competition for the mind of man—all else is subsidiary to this battle — second, economic competition — third, competition in the field of education.

In the competition for the mind of man the free world has for export the best and most admired product in the history of mankind—freedom—freedom wrapped in all kinds of packages—packages so attractive that man has always jammed the world's market places wherever they could be possessed.

There is freedom of religion so ardently desired by the Buddhists of Tibet and the Moslems of the Middle East, not to mention millions of people behind the Iron Curtain—who have already lost this freedom to Communist Godlessness.

There is freedom of speech and of the press so respected by you and by me and so abhorrent to Communist countries where control of information media is indispensable to oppression. Freedom of the press and freedom of expression rocked all of Hungary in a few hours. It is something no Communist country can tolerate and survive. They let a hundred flowers bloom—in words of Mao Tse-tung—only so they can snip off the heads of the 99 they won't want to mature into dangerous thought.

There are many lesser freedoms—all of which we have and consider essential to happiness—and all of which the history of the modern world tells us man aspires to possess. There is freedom to travel, freedom to live as one wishes and where one wishes, freedom to work an one pleases, and at what one pleases and freedom to save and invest in ways which permit the individual to share in the growth of the country. All these freedoms are denied in the Communist world and will be denied to the people of any nation which comes under Communist domination.

The recent brutal aggression by Communist China against Tibet is a classic example of the utter worthlessness of Communist promises and agreements. The world remembers the words of Chou En-lai at the Bandung Conference—honeyed soothing words, cooing to all its neighbors that China stood—I believe "resolutely" is the Communist word—for noninterference in the internal affairs of others.

The dramatic flight of the Dalai Lama in the face of a formal agreement to respect the religious beliefs and political system of Tibet should convince the rest of Communist China's neighbors of its true intentions. Those intentions do not differ from those of the Communist Party of the Soviet Union. They were aptly put by Mr. Allen Dulles just a few days ago, when he stated: ["Their] mission continues to be the subversion of the entire free world, starting, of course, with those countries which are the most vulnerable."

The problem we must solve is how to prevent those most vulnerable nations from being sucked into the maw of Communist promises, and thus lose their status as free nations. Somehow we must make the classic Communist pattern of penetration and subversion so obvious that it will be rejected summarily. Recent news dispatches and editorials from the Middle East and India indicate that Communist heavyhandedness in the Berlin crisis, in Iraq, and in Tibet is making its mark on the mind of uncommitted men. More of our resources and ingenuity must be devoted to delineating clearly these true images of the Communist technique and displaying them in the showcases of the world.

One of the dramatic demonstrations of popular decision between communism and the free world took place several months ago in Berlin where, as you well know, the Communist system exists in the very same city with a free government. In a city election where the lines were clearly drawn the Communist Party candidates of West Berlin received less than 2 percent of West Berliners' ballots. We expect and are confident that the world will make this same choice whenever free government and the Communist variety compete in the open market.

Now, I would like to speak about some of the tough decisions which face the people of this country if we are to prevail in nonmilitary as well as military spheres of competition with the Communist system. I have, in the past, labeled these as "hard choices."

We have a system of government by laws—where as much freedom of choice is left to the individual as is consistent with those laws. No one tells our large corporations how much of their profits must be plowed back into industrial expansion nor what kind of product they shall make for X years into the future. Similarly, no one tells Johnny or Mary or their parents, what their education and their profession shall be.

The Communist system of government controls is the very antithesis of ours. It prescribes what will be made, how it will be made and what will be done with the finished product. Then it decides how much of what is produced will be used for the direct benefit of the people—and how much will be used for military purposes or reinvested in expansion of the means of production. It likewise subordinates the wishes of the individual in its system of education—a system where quotas are established in each category deemed by the state as essential—and all facilities and resources—including human resources—are mobilized to meet the estimated needs.

Since we are in competition with a country which operates by a totally different set of rules, it may be necessary for us to tighten our belts and step up our national effort. Thus, in our long range competition with the Soviet Union in the economic and educational fields we may be faced with some difficult decisions.

In the economic field, for instance, the Soviet Union, for all its failure to meet announced goals, has made tremendous strides in developing its economy. Its total output is still less than half of ours but by diverting dictated percentages into designated channels they manage to stay on a par with us in some fields and perhaps even go ahead of us in others. For one example, the Soviet Union devotes twice as great a percentage of its gross national product to military ends as the United States for about the same total military expenditure as ours. They, similarly, devote nearly twice as great a percentage of their total output to industrial expansion as this country. All of these things they can do because the state wills that the people must do without the consumer goods their people want—and our people have in abundance.

The Soviet Union has recently announced a new 7-year plan and boasts that by 1970 or sooner she will advance to first place in both volume of production and per capita production. Our intelligence discounts this claim as propaganda but the discount is not so deep as to encourage complacency on our part. Indeed, we anticipate enough economic progress by the Soviets to predict probable necessity for change in some of our economic thinking and practices.

Mr. Allen Dulles estimates that the Soviet Union could, as a result of increased productivity over the next 7 years, increase her present military spending by 50 percent. This is an area where the Soviet Union's effort must be matched or bettered. It is, therefore, one of those areas which may force us to make some hard choices. We either have to boost our own gross national product so that whatever increase may be required in military spending will not disturb other areas of our economy or we have to cut down on expenditures in those other areas to compensate for the increased military budget.

The Soviet Union may also channel a large percentage of her increased resources over the next few years to expand her trade and aid policies with those vulnerable but uncommitted nations of the world. This course, too, many mean changes in emphasis in our own economy and sacrifices for our people.

We can no more afford to lose the economic competition with communism than we can afford to fall behind militarily. One of the major influences in attracting the mind of man to one system of government as opposed to another is demonstrated success in economic growth. Today the United States is the acknowledged leader. To maintain that position of leadership we may have to divert more of our output into upholding our worldwide responsibilities and less into what our people would like to have.

The only way I know to meet Soviet economic competition is to increase our own output. This may mean plowing back a larger percentage of our gross national product into capital investment for industrial expansion, the kind of expansion which will provide facilities for greater production of all types of goods including, if need be, more military hardware. It may mean that our people will have to learn to get along with less in current consumption. Othewise, we may come out second best in a competition for which there is no second prize.

I believe our economic system—like our social system—is the greatest in the world. We must keep both systems so healthy that no country to which a freedom of choice is still open would think of choosing the Communist way.

In the field of educational competition we likewise must surge forward. Not only must we keep pace with the rising demands of technology—but we must train more and better leaders in all fields of human activity—publishers, military, business, labor, teachers, politicians, diplomats, and many others. We must contrive to do this, within the basic framework of the freedom we prize so highly. This can be accomplished only by a truly massive national effort to encourage, help, and persuade our youth along educational lines which will marshal the Nation's intellectual resources.

We must devise means to reduce mental wastage to a minimum. This means identifying our talented youngsters early. But identifying them and their special talents is only a small part of the problem. They must then be encouraged and stimulated to continue their education in the fields for which they are best fitted. Parents, teachers, and community leaders must join in the effort to influence youth toward right decisions in the field of education.

Youngsters need guidance and intelligent persuasion. Both must come from knowledgeable and interested adults. It follows that a need exists to educate adults not only in what the Communists are truly after but in how their aims, objectives, and practices require certain special and continuing efforts in our own educational system. I know a great many of you publishers have taken the lead in fostering adult education along the lines I have suggested. This is a continuing task which requires community and individual leadership of the highest order. Those who understand the threat we face must communicate that understanding to all who touch the lives of our children to the children themselves.

The fact that we operate in this country on the principle of freedom of choice doesn't mean that we can't do something about guiding our young minds into channels which will increase our productivity and our capacity to give true leadership—intellectual and cultural as well as economic and military—to the free world.

We have certain known, well-defined gaps in our educational system—such as weaknesses in science, mathematics, and language instruction. Our educational leaders and responsible members of our communities are hard at work defining the extent of our educational gaps and now they may be bridged. Already they have concluded we will need better teachers and more of them and that we will have to pay them more. This will mean more taxes for our people—an unpleasant but, in my judgment, a necessary price to pay for the development of our most valuable resource. Another hard choice.

I know it is clear to all those here present that America does face a struggle for survival. In facing this fact we should occasionally remind ourselves that we have tremendous advantages over those who have announced that they will bury us.

We have stronger defense forces and we intend to keep this posture.

We have strong and loyal allies. We can and must keep those allies strong with whatever military and economic assistance is required.

We have a strong, healthy, efficient economy—the economic growth of Soviet Russia raises questions for us as to how we may best use the output of our economy in order to serve our own people and the free world.

We have a system of education which has made our country great—has offered opportunity unlimited for individuals with the right kind of guidance and the right kind of inner drive. Some gaps have developed—in curriculum weakness, in neglect of the teaching profession, and in lack of pupil motivation. These gaps are inconsistent with the requirements placed on us by our position of world leadership. They must be closed.

We have freedom—all the freedoms in the spectrum—freedoms without which the spirit of man withers and dies. Here, above all, is the source of our strength—the shine of our example for the rest of the world.

We seek only to preserve those freedoms—for ourselves, and for others who aspire to live and worship outside the suffocating, godless, Communist system. With these advantages and a sense of dedication to their preservation there is no struggle we cannot win.

[From the Washington Daily News, Apr. 27, 1959]

MORE TAXES, FEWER LUXURIES ARE IN OFFING—U.S. NEW "DIG IN" ERA TO TOP RED, EXPERTS WARN

(By R. H. Shackford)

Very gingerly, the Eisenhower administration seems to be trying to prepare the American people for bad news ahead—more taxes, harder work, greater productivity, fewer luxuries, and maybe even more governmental controls.

If high administration spokesmen mean what they are saying, they believe such steps will be necessary if the United States is to meet an intensified Soviet military-economic challenge.

The administration prophets so far are Central Intelligence Agency Director Allen W. Dulles and Defense Sevcretary Neil McElroy. Their cautious soundings are being made in the midst of the budget battle with Congress, but also as the economy surges toward record highs.

WARNING

Allen Dulles launched the first trial balloon in this direction early this month in a speech warning about the rapid rate of increase in industrial production in the Soviet Union.

He estimated that further Soviet increases in the next 7 years would make it possible for Nikita Khrushchev, if he wishes, to increase military spending 50 percent and divert large resources to his trade-and-aid campaigns in uncommitted nations.

The unpleasant possibilities in this for Americans was left to Mr. McElroy to discuss in his address to the American Newspaper Publishers Association. Although there was emphasis on the claim that the United States militarily is stronger today than the Soviet Union, the most important section of the address discussed the hard choices Americans will have to make to keep the balance that way.

HIS VIEWS

Mr. McElroy warned that the United States cannot let the Soviets best us in either military strength or economic competition. His picture went like this:

Military: "The Soviet Union's effort (possible 50 percent increase) must be matched or bettered. * * * We either have to boost our own gross national production so that whatever increase may be required in military spending will not disturb other areas of our economy, or we will have to cut down on expenditures in those other areas to compensate for the increased military budget."

Economic: "One of the major influences in attracting the mind of man to one system of government as opposed to another is demonstrated success in economic growth. Today the United States is the acknowledged leader. To maintain that position of leadership we may have to divert more of our output into upholding our worldwide responsibilities and less into what people would like to have."

THE LIST

Some things Mr. McElroy said would have to be done if we are to stay ahead of the Soviets:

Plow back a larger percentage of the gross national product into capital investment for industrial expansion.

Produce more military hardware, if the Soviets move in that direction.

"Learn to get along with less in current consumption."

"More taxes" to pay for better education.

"We anticipate enough economic progress by the Soviets," Mr. McElroy said, "to predict probable necessity for change in some of our economic thinking and practices."

He didn't detail changes contemplated, but warned that if we fail to meet the Soviet economic-military challenge, "we may come out second best in a competition for which there is no second prize."

The Original Thirteen

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE ORIGINAL THIRTEEN

(An address by imperial Sir George E. Stringfellow, imperial potentate, AAONMS, of East Orange, N.J., before a large group of Masons and Shriners, assembled by Kerbela Temple, in the Scottish Rite Auditorium, Knoxville, Tenn., April 15, 1959)

Illustrious Sir Harold L. Gill, potentate of Kerbela Temple and members of your divan, past potentates, heads of units, presidents of Shrine Clubs, distinguished Masonic guests, brother Masons, fellow nobles and illustrious Sir Ed Hicks, past potentate, first vice president Southeastern Shrine Association and imperial potentates special aid for Tennessee, I bring you the greetings of the imperial divan, the board of trustees of the Shriners hospitals for crippled children and the 800,000 Shriners, which I have the privilege to represent.

Your temple, as many of you know, will observe its 44th birthday next July. Kerbela was the 138th of the 166 temples to be chartered and is now 88th in membership. She stands high in the council of the Shrine of North America.

Kerbela numbers among her membership, outstanding citizens, legislators, and statesmen. I would mention two of your outstanding legislators and statesmen, in the persons of the Honorable B. CARROLL REECE, and the Honorable HOWARD H. BAKER, who have rendered worthwhile service to your temple, to their congressional district and the Nation.

I wish to speak to you about the Shrine of North America. Its philosophy, its ideals, and its contributions to the brotherhood of man and the aid it has given to crippled children.

At first there were 13 members. That was June 6, 1871.

Now, scattered in 166 temples in the United States, Canada, Mexico, Hawaii, and the Canal Zone, there are more than 800,000 members of the ancient Arabic Order Nobles of the Mystic Shrine—800,000 Freemasons with reverent minds and merry hearts, dressing up in outlandish costumes to parade across the continent, just for the fun of it; and then, with a tenderness that passeth understanding, creating and maintaining their hospitals for crippled children, who might well go through life in pain and misery but for them.

These are the Shriners, members of an organization, formed as a sort of relax from the more philosophical work in the various rites

of Freemasonry; a playground, as it were, for highup Masons, but still not a part of Masonry itself.

It was sometime in the summer of 1870 that Dr. Walter M. Fleming wrote a ritual whereby weary and thirsty sons of the desert might rest and refresh themselves at some oasis on the long and sandy trail toward Mecca. Dr. Fleming's personal oasis was a tavern called Knickerbocker Cottage, located at 6th Avenue and 28th Street in New York and operated by William Fowler, who catered mostly to a rather select group of masonic brethren.

It was in this tavern that Dr. Fleming began to discuss his ritual and a possible new masonic order with such cronies as Billy Florence, the outstanding actor and comedian of his time; Billy Paterson, a linguist and printer; and Charles T. McClenachan, the Nation's top masonic ritualist and head of the Scottish Rite in New York. And then, on June 16, 1871, these 4 and 9 others met in the Masonic Hall in New York and agreed to organize the shrine. They established as a prerequisite that all members should be Knights Templars or 32° Scottish Rite Masons. But it was not until September 26, 1872, that the organization was completed and Mecca Temple in New York was formed, with Dr. Fleming as the illustrious potentate.

With the help of Florance, Paterson, McClenachan, and Fowler, Dr. Fleming surrounded the shrine with an aura of oriental mysticism, and established the legend that the order could trace its origin to the Caliph Ali, son-in-law of the Prophet Mohammed. And the shrine grew, slowly at first, with Dr. Fleming doing most of the work and paying most of the expenses. But it did grow, and on June 6, 1876, Dr. Fleming and others formed the Imperial Council, with temples under charter or dispensation in New York City; Rochester, N.Y.; Montpelier, Vt.; Cleveland, Ohio; Albany, N.Y.; Cincinnati, Ohio; and Troy, N.Y.

Dr. Fleming was elected imperial grand potentate and held the office until 1886, when he was succeeded by Sam Briggs of Al Koran Temple in Cleveland, who served until 1892, when more than 50 temples had been established.

Those were the rough years, when from time to time it was not certain that the shrine would live. But it did, and perhaps as much as anything else, it was the parades that really contributed to its eventual growth. The first parade of the shriners in their national convention was really more of a procession as the nobles, decked out in full evening dress, marched from the Old Dennison House in Indianapolis to the Scottish Rite Cathedral for their annual banquet. And in Omaha in 1892, there as a regular parade with a band and red fire, a mechanical elephant, Nubian slaves, and a sort of guard of honor that executed intricate steps, the forerunner of the present magnificent shrine patrols.

Through all the years, the shriners had made it a point to be charitable. There were Christmas baskets for the needy and money for victims of disasters like the Johnstown, Pa., and Galveston, Tex., floods; the San Francisco, Calif., earthquake and fire; the Jacksonville, Fla., yellow fever epidemic; and the Ohio River floods. But it was not until 1920 that the Imperial Council session in Portland, Oreg., that the shrine really found its glory and its soul. There, under the prodding of Imperial Potentate W. Freeland Kendrick, of Philadelphia, Pa., who fathered the idea, and following the inspired bubbles speech by Forrest Adair of Atlanta, Ga., the shriners established their hospitals for crippled children. In these 17 institutions of mercy, more than 100,000 children have had their lives made worth living. These little crippled children have never paid one cent for the help they have received. All races, all colors, all creeds have been welcomed in the mansions of mercy—and will continue to be.

This and more is the heritage that the original 13 began that June evening in 1871, a heritage more glamorous with each passing year; a heritage of the love of life.

Public Needs Protection Against This Kind

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DEROUNIAN. Mr. Speaker, I wish to call to the attention of my colleagues an article by Westbrook Pegler, which appeared in this morning's edition of the New York Journal American:

WHY SOFT-PEDAL THIS LABOR BOSS?

(By Westbrook Pegler)

To sincere, tenacious fighters against communism, the public presentation of the recent threat of a big strike against the nonmunicipal hospitals in New York was a discouraging experience. Our political parties and our press say they are against communism and pro-Communists. But when Leon Davis, the boss of this evil venture, in which the sick are hostages, was thrown into ugly prominence, a great mass of hand-dug verified material was ignored.

Davis has a background as red as a cut throat. He was born in Russia and did not come here until 1921. He has never shown any opposition to the force which is the only enemy of the United States in the whole world. His union's record is as bad as his own. Nevertheless, my own verified disclosure of facts and those by George Sokolsky in the New York Journal-American were, with trifling exceptions, the only recognition of this phase of the story that was presented to the public in New York during this poignant crisis.

With a large staff of pundit reporters and editors, the Times, in one editorial, refrained from mentioning even the title of this union, which is Local 1199 of the Retail Drug Employees. And, of course, the editorial gave no sign that this was anything but a straight labor controversy between a respectable American union, under law-abiding leadership, and a group of employers who had some errors to answer for, as indeed these employers have. The union, itself under Davis, however, had waged notorious picket-line warfare for 18 months against a midtown drugstore and this violence was fair augury of tumult at the hospitals. In fact, Davis frankly threatened assaults on the picket lines.

A "PROFILE" ABOUT DAVIS

The exception which I noted was an editorial attack in Roy Howard's World-Telegram, which also struck a slight, glancing blow in an excessively fair "profile" about Davis. In that latter opus the World-Telegram quoted Davis thus: "I didn't answer (the House Committee on Un-American Activities) because I didn't think it was any of their business."

The question was this: "Does your union comply with the non-Communist affidavit requirements of the NLRB?"

Actually Davis did not refuse to answer. He did answer that his union had not complied.

Further testimony ran thus:

Question. "Are you or were you a member of the Progressive Committee To Rebuild the American Labor Party in 1944?" (This party was a Communist front.)

Davis refused to answer, invoking freedom of speech, press, and association and the immunity of a witness from self-incrimination.

Question. "Were you a member of the Citizens Committee To Free Earl Browder?" (The former head of the American Communist Party.)

Davis invoked the first amendment.

Question. "We find from testimony that you signed a Communist Party petition No. 139 to place Isadore Begun on the Communist Party ballot in 1938."

Again Davis took the first and the fifth.

A few lines later, Davis declared that there was no Communist menace in this country. He said the Communist Party was not an "enemy of the American labor movement" and praised the Communists because they were "a help to the advancement of the people of this country."

A RIGHT TO KNOW

The signature "Leon Davis" appeared on two nominating petitions of the Communist Party in New York in 1940 and a third time the same name was written on an independent nominating petition, this one for the notorious Communists Israel Amter, Elizabeth Gurley Flynn, and James W. Ford.

Well, dammit, I am as much the press as any owner or publishing corporation. I say the people's right to know included this phase of this crisis right here in New York. I hear loud pietistical bawling from the publishers' conclave about the reluctance of Washington bureaucrats to reveal information about scientific matters which we lack even type to print. We lack even the intelligence to understand it.

Anyway, the remedy for that is good reporters and gadfly editors to make them get the story. I am discussing here suppression by the press, itself, of information in hand which the people have a right to know, and easily could understand.

Now this rotten union and Davis will get credit from their underpaid subjects for winning them raises which will be paid out of additional taxes.

In the World-Telegram profile, Davis frankly warned us that "if there is a picket line, somebody is going to get hit."

So, here we are taking this threat from a professional parasite who called communism "a help to the advancement of the people of this country."

Walla Walla Centennial

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mrs. MAY. Mr. Speaker, it gives me particular pleasure and a great deal of pride to call to the attention of the Congress a forthcoming event in my home State of Washington, and more particularly in Walla Walla, a city of which the entire State is justifiably proud. The event is a triple centennial, celebrating the 100th anniversary of the formation of the Walla Walla County government, the naming of Walla Walla, and the charter for Whitman College.

The event, which is expected to attract notice from many parts of our country, takes place from May 11 to May 31 of this year. Program highlights include Western Week, May 11–17, Whitman Week, May 24–31, and the biggest day, May 16, which will include a centennial-Armed Forces Day parade among the many entertainment features.

The Walla Walla Centennial Association and the Whitman College Centennial Committee have made elaborate plans for this event which can be celebrated only once in a hundred years. An important part of the planning includes proper recognition to the famed Whitman College. On December 20, 1859, the legislature of the Territory of Washington granted a charter to Whitman Seminary, from which Whitman College has sprung by amendment of its original charter in 1883. This year Whitman College, in celebrating its centennial, commemorates the founding of the first chartered educational institution in the State of Washington.

I am very pleased to be able to invite all interested to come to Walla Walla in the State of Washington and participate in any of the many events which have been planned, and assure you of a most cordial welcome.

Compensatory Payment Plan for Farmers

EXTENSION OF REMARKS
OF
HON. DELBERT L. LATTA
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LATTA. Mr. Speaker, I have received a letter from Mr. D. R. Stanfield, the executive vice president of the Ohio Farm Bureau Federation, Inc., setting forth reasons for the Ohio Farm Bureau's opposition to the compensatory payment plan for farmers which I should like to call to the attention of the Members of the Congress.

The letter follows:

OHIO FARM BUREAU FEDERATION, INC.,
Columbus, Ohio, April 13, 1959.

Hon. DELBERT L. LATTA,
House of Representatives,
Washington, D.C.

DEAR DELBERT: Our members are strongly opposed to what are commonly called compensatory, production or direct payments to farmers. A survey in the April 1959 Farm Journal shows that only 5 percent of Ohio farmers favor production payments.

This plan appears at different times in different forms, but the proposition is essentially that the farmer sells his product at the market price, and then the Government would pay him the difference between the market price and what the Government considered to be a fair price. Under this proposal the farmer is told he will receive high prices for his products and the consumer will pay low food prices. Everyone knows this is economically impossible.

A recent study by the U.S. Department of Agriculture shows that such a program would exceed $10 billion in cost and would make the American farmer dependent for a large percent of his income on Government appropriations. It would stimulate production in areas where we already have a surplus problem and would lead to a leveling of producer incomes. Direct payments on that portion of a crop that is consumed domestically, in effect would subsidize production for export. This is unfair to the domestic consumer and is looked upon by other countries as a form of dumping. This kind of trade jeopardizes our relationships with our friends in other parts of the world.

Sincerely,

D. R. STANFIELD.

Fryingpan-Arkansas Project

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks an editorial from the Pueblo Chieftain, Pueblo, Colo., on recent developments in the Fryingpan-Arkansas transmountain water diversion project.

It now appears that for the first time the State of Colorado will present a united front on this important reclamation project. I want to commend all of those who have worked to bring about this agreement between the east and west slopes of Colorado. They deserve great credit for what has been accomplished.

One substantial change has been made in the project. It has been agreed to construct the Reudi Reservoir on the Fryingpan River in place of the Aspen Reservoir on the Roaring Fork. The Reudi Reservoir will have a storage capacity of 100,000 acre-feet, as compared with 28,000 feet proposed for the Aspen Reservoir. This change has met with general approval, and will give the western slope of Colorado a storage reservoir for future development.

The editorial follows:

FRYINGPAN AGREEMENT IS A MAJOR STEP FORWARD

It was approximately 10 months ago when the east-west slope controversy over the Fryingpan project broke into a holocaust. It was announced in Washington then that conditional water decrees had been granted to the Basalt and the west divide projects and that the water filing for a conditional decree for the Fryingpan project had been overlooked.

Upon petition to the district court of Glenwood Springs, the hearing was reopened for the purpose of granting the Fryingpan sponsors an opportunity to present evidence in behalf of the filing for a conditional decree which, if granted, would have a prior date to the Basalt and the west divide projects.

The Southeastern Colorado Water Conservancy District had just been formed by court order and was in a position to push the hearing and suit in order to defend the claim made for the Fryingpan water filings.

During the ensuing weeks, Gov. Steve McNichols and Felix L. Sparks, director of the Colorado Water Conservation Board, appealed for time to try to work out a compromise between the Western and Eastern Slopes in order to provide united support in Colorado for the Fryingpan project.

The new conservancy district directors agreed to ask for a postponement of the hearings on the Fryingpan water decree in order to permit negotiations between Fryingpan sponsors, representatives of the Colorado River Water Conservancy District and the Colorado Water Conservation Board which is the official State agency representing all of Colorado in water matters.

Three representatives each were appointed to represent the two water district and the Colorado Water Conservation Board. Many meetings were held in Glenwood Springs, Denver, Pueblo, and in Washington with Colorado congressional Members to bring about a revised set of operating principles which would govern the use of water by the Fryingpan project.

Introduced into the Fryingpan project is the new Ruedi Reservoir which was chosen after approximately $75,000 had been spent by the State in engineering surveys to find a substitute for the controversial Aspen Reservoir.

Ruedi Reservoir will be almost four times the size of the Aspen Reservoir. Its entire capacity of more than 100,000 acre-feet of water will be used for both replacement and regulatory purposes on the Fryingpan and Roaring Fork Rivers.

Thus the new agreement gives the western slope the largest storage reservoir for future development since the construction of the Big Thompson project.

Waters of Ruedi Reservoir will be subject only to call by existing diversions and not for the west divide project which will have an earlier water date than the Fryingpan project. Construction of the west divide project as a part of the upper Colorado River storage project of 1955 is not anticipated for many years.

The Ruedi Reservoir was originally planned as part of the overall Basalt project for which a conditional decree was granted by the Glenwood District Court last year. The two conservancy districts will now join in a stipulation to be filed with the court at the scheduled hearing on May 25 for a common water date for the Ruedi and Fryingpan projects. But this will leave the west divide conditional decree of a prior date, which to some critics is a calculated risk insofar as water diversion is concerned in case the Fryingpan project is not authorized and constructed with Federal funds.

The new operating principles contain significant improvements over the original operating principles which were approved 8 years ago by the Colorado Water Conservation Board as the result of conferences of Eastern Slope and Western Slope representatives. Water for the Fryingpan diversion will now have priority over other uses of water from the Ruedi Reservoir so that the assurance of the diversion is even better now than it was previously.

In such a compromise situation, the Arkansas Valley interests agreed to certain limitations on useage and diversion of water which are actually not required under the Colorado constitution. It is a surrender of certain rights to water in the usual manner prescribed by law.

The alternative was a court fight over the conditional decree for the Fryingpan project which may have consumed 2 or 3 years. In the iterim, no authorization by Congress would have been possible because the water for the project would have been in doubt.

The western and eastern slope water districts have given final approval to the new operating principles and also to the provisions of the stipulation to be filed before the District Court of Glenwood Springs. The stipulation contains the basic revisions of the operating principles and upon which it is hoped the judge of the court will write his decree for the project.

If continued unity is maintained, all Colorado will be behind the project and authorization should be accomplished within a year. Introduction of the bill during this session will provide time for the clearance of all necessary reports for the hearings to be held in January or February of 1960.

It is a great step forward and we only hope nothing occurs in Congress or elsewhere which will prevent authorization.

The St. Louis Globe-Democrat Strike

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. CURTIS of Missouri. Mr. Speaker, the following editorial appeared in the St. Louis Post-Dispatch on April 15, 1959. It is a fair and generous statement of the value and need of competition in the newspaper field to a community. Reporting the news is a basic part of representative government and the larger and more complex the society is the more important this part becomes. I think few people disagree with the thought that legislative bodies, local, State, or Federal, should not have the power to control newspapers. We would soon lose the freedom of the press which is also essential to the operation of representative government. However, to preserve this very freedom, legislative bodies should have the power to investigate into the subject matter. It is a power that should be exercised with great restraint and circumspection, however. As anyone familiar with the power to investigate knows, it can be used to produce results by indirection which would be improper by direction.

The issue of whether an investigation by the Missouri Legislature is in order should be decided by these guidelines, I should think. I also think the public might well be informed on this aspect of the matter, in the instant case as well as the broad question of how well is the public being kept informed today on issues of public concern.

The editorial follows:

IN THE PUBLIC INTEREST

The Globe-Democrat strike is now nearing the end of its eighth week. St. Louis is nearing the end of 8 weeks without a morning newspaper.

The Post-Dispatch is not a party to the dispute, and we consider it improper to inject our opinion on the issues involved. But there is a public interest in the publication of two separate, independent newspapers in this community. We believe the public interest calls for an early settlement of the strike.

In all too many American cities, newspaper competition has disappeared. The Post-Dispatch does not want to see that happen here. When it became necessary for both St. Louis newspapers to achieve production economies by concentrating publication in one mechanical plant, the Post-Dispatch entered into an arrangement for that purpose. This action was taken in the belief that the economies made possible by a joint printing plant would insure the survival of separate ownerships and distinct editorial personalities.

No legislative investigation is going to settle this strike. No matter how much investigating any legislative committee does, the Missouri Legislature has no constitutional power to control newspapers and ought not to have such power.

This dispute can be settled only by the parties to it. Both sides, in our opinion, owe a responsibility to the public to reach an agreement that will permit the resumption of publication of the Globe-Democrat.

Poland's Constitution Day: An Anniversary for All Freemen

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. QUIE. Mr. Speaker, I call to the attention of the House the fact that May 3 marked a historic anniversary in the calendar of human rights and progress.

May 3 is a date of tremendous importance to the freedom-loving people of Poland who, while imprisoned behind the Iron Curtain, have the same aspirations for liberty as we.

It is a significant anniversary to the people of Polish extraction who are splendid citizens of our own country. They have contributed much and, in a very real sense, share the suffering which is being endured by their friends and relatives who are deprived of their liberties in Poland.

Finally, it is a date of great consequence for all of us who admire that nation's great role in the history of constitutional liberty.

May 3 was Poland's Constitution Day, marking the 168th anniversary of the adoption of Poland's Constitution.

It is more than just a date for the history books. It serves notice to the future that free Poland will rise again, will take its place once more with the free nations of the world.

The heroic revolution of June 1956 served notice to the Communist overlords, too. It told them, in graphic, human terms, that the Polish spirit cannot be extinguished by the naked force of totalitarianism.

We in this Nation have been edified by the noble resistance which has been exemplified by the Polish people. We pledge them that we shall not fail them, that we shall not forget their oppression.

Their imprisonment is a challenge to us all. It is a challenge to ourselves—for the man who proudly boasted that he will bury us cannot understand agreements.

Our only hope is to stand with the oppressed—for their courage is enough to sustain us as we wage the peace, as we stand determined not to bargain for temporary peace at the expense of those who are subjected to ruthless authoritarianism.

Mr. Speaker, May 3 and the days which follow it should be remembered as days in which the world lives in the twilight zone of half slave and half free. I pray that the day is fast dawning when all men will be allowed to take up their liberties where the gallant Polish people left off, when they were ruthlessly abducted by world communism.

I wish to extend my very best wishes and my fervent hope for liberty to the people of Poland, and to their relatives who have made such an edifying contribution to the heritage of our own country.

Democratic Leadership?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DEROUNIAN. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the RECORD an article that appeared in the New York Journal-American this morning:

MORSE'S QUARREL WAS WITH MR. LUCE
(By George E. Sokolsky)

There can be no reason in logic or morals to justify a Senator delivering a more than 3-hour diatribe against an American citizen who is invited by the President to serve her country, and then some Senators regarded their dignity as denounced when the lady landed a verbal uppercut at Senator MORSE. The Senate has no dignity and less gallantry when such attacks as Senator WAYNE MORSE permitted himself are made on its floor. When Joe McCarthy did it, perhaps in a better cause, he was denounced and reprimanded.

The fundamental concept which Senator FULBRIGHT and Senator MORSE sought to establish during their attacks on Mrs. Luce was that the Senate, while confirming a Presidential appointee to public office was entitled to demand political conformity, for an entire lifetime, to the party in power in the Senate at the moment of confirmation. This is, in effect, the argument being used against Secretary of Commerce Lewis L. Strauss. Neither Senator FULBRIGHT nor Senator MORSE can fill that bill, because they have shot wide of that mark themselves.

Senator FULBRIGHT, who has studied at Oxford and who admires the British system of government, suggested in 1946 that President Truman appoint a Republican Secretary of State and then resign so that the Government would be controlled by only one party. The Republicans had then won a victory very much like the Democratic victory in 1958. They were a majority in Congress whereas the President was a Democrat. Of course, Harry Truman did not resign in 1946 and the United States managed to survive.

Senator MORSE was a Republican when he first was elected to the Senate. When he could not have his way, he petulantly became a Democrat. He we reelected to the Senate as a Democrat. He had sought to be on the Foreign Relations Committee and could not get that as a Republican. The Democrats put him on the Senate Foreign Relations Committee. He is chairman of a Subcommittee on Latin American Affairs which has a budget of $150,000. This makes WAYNE MORSE important in the life of Mrs. Luce because he could have used his power

and his committee's money to badger her during her term as Ambassador to Brazil, if he chose, to the disadvantage of the United States and of Brazil but to his personal satisfaction.

SHE'S NO SMALL BUREAUCRAT

Senator WAYNE MORSE has shown mixed qualities as a man. He is scholarly, at times brilliant, unreliable in his loyalties, individualistic in his attitude, bitter in attack, vindictive and, in relationship to Mrs. Luce, ungallant.

When he took on this lady, however, he was not dealing with a small bureaucrat afraid of a mighty Senator who could veto his career. Clare Luce is one of the most brilliant minds in this country. She has, to put it mildly, private means and is not afraid to lose a job. It is more than 20 years that I have known her, first as an editor of Vanity Fair; then as one of the more sophisticated playwrights of our country; then as a Congresswoman from Connecticut; but always as a sharp, keen mind that grasps central issues and that can in debate, knock her opponent over with a phrase. That one about WAYNE MORSE having become her enemy after he had been kicked in the head by a horse may have disturbed the dignity of some puffed-up Senators but it reduced WAYNE MORSE'S 3-hour diatribe to a laugh which is what it undoubtedly was worth.

Had Senator MORSE a real sense of humor, he would have gracefully kissed milady's hand and forgotten the whole business, and from what I have heard of the man, from some of his ex-colleagues on the Republican side, he is quite capable of doing just that should the mood come over him.

For actually, he has no quarrel with Mrs. Luce, whose career as Ambassador to Italy was one of astonishing brilliance and success. His quarrel is with Mrs. Luce's husband, who edits Time and Life and whose publications have on occasion given Senator MORSE cause for pique. Surely such a liberal as Senator MORSE does not visit upon the wife his annoyance with the husband.

There is one more point to all this: The Senate has been acting badly about confirmations. It delays without cause. It attacks without particulars. It is unfortunate for the country when this dignified body permits itself to be undignified.

Is the Alaska Statehood Act Unconstitutional?

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. PELLY. Mr. Speaker, in view of a recent statement by Alaska's Governor Egan to the effect that Alaska would not agree to let any fish traps operate and that he feels Alaska can challenge the constitutionality of provisions of the act of Congress upon which the Alaska statehood depends, I wish to point out that such a challenge places Governor Egan and the State of Alaska in a most peculiar position. The act authorized statehood only on the basis that the people of Alaska voted to approve the conditions set out in the act. Among these was one that there should be a period of transition as to control of fish and game, and that during such period, the Federal laws should continue in effect and fish and game remain under Federal management.

The important law, and the one in question to which Congress referred, is the White Act, under which fishing with traps is permissible, subject to general conservation limitations, the same as any other fishing gear.

It is well known that the opposition against the use of fish traps has nothing to do with conservation; in fact, traps can be more effectively regulated for conservation purposes than mobile gear. Representative WESTLAND and myself, in whose districts so many fishermen live who are dependent on fish traps for their jobs, were responsible for this provision. It was added for the express purpose of giving those fishermen, as well as the operators, a period of time to adjust themselves and their operations, instead of having an immediate shutdown of fish traps.

If Governor Egan is correct that these provisions are unconstitutional, there can be a serious question as to whether or not Alaska is a State. In such case, Alaska may still be a Territory, or at least I have understood it to be a rule in interpreting laws that if a provision of the law is unconstitutional, then if the court finds that the law apparently would not have been passed without that provision, the whole act must be thrown out.

My good friend, the gentleman from Alaska [Mr. RIVERS] himself has admitted that the Alaskans voted to accept statehood subject to the conditions imposed by Congress, but he contends that they did not wish to do so—they did it only because they wanted statehood—and therefore should not be bound by their votes.

I do not believe the people of Alaska can accept conditions imposed by Congress and later, after having attained statehood, reject those provisions as not binding upon them.

Meanwhile let me suggest that any threats of lawless violence with respect to fish traps, if such are allowed to operate under Federal law, do not lend credit to the new State. In a frontier community, as with the Old West, one expected occasional brawls, but self-government and statehood are supposed to mean the end of disorder and asurance of the principle of a government of law and not of men.

Politics

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BOLAND. Mr. Speaker, former Postmaster General James A. Farley spoke earlier this year before a group of advertising men in Detroit on the subject of "Politics."

BOLAND SUBSCRIBES TO JIM FARLEY'S POLITICAL PHILOSOPHY

During my 25 years of public service in the Massachusetts Legislature, the Hampden County government, and the Congress, I have always subscribed to the philosophy of politics expounded and explained so cogently by Jim Farley:

In politics the profit is not in material things, but in the satisfaction of serving your country, and your fellow man so that he will have a better way of life.

Mr. Farley then listed his 10 rules for the making of a successful politician. Both Mr. Farley's rules and his political philosophy should be a beacon for young officeholders.

Mr. Speaker, under leave to extend my remarks, I ask that an editorial printed in the Adirondack, N.Y. Daily Enterprise on January 31, 1959, entitled "Jim Farley on Politics" be printed in the Appendix with my remarks. I am sure that my colleagues will find the editorial interesting:

JIM FARLEY ON POLITICS

If there had not been a rigged Democratic State convention at Buffalo last summer, many people think Jim Farley, former U.S. Postmaster General and former chairman of the Democratic National Committee, would have been nominated to run for the Senate and that he then would have gone on to win the election.

Certain it is that Mr. Farley is popular around the State. However, his name was not even allowed to be placed in nomination at the convention. Frank Hogan, who was chosen by Carmine DeSapio over the protest of Governor Harriman, is an able man, but it would have been better for his candidacy and for the Democratic ticket as a whole if he had been nominated in an open convention, running against all the announced candidates, Farley, Finletter, Murray, and Dickenson.

Still better would be to have an open primary eystem in New York, as in many other States. Then candidates would be able to place their names directly before the voters and boss control would not be so easy to maintain. Strong party leadership might still influence primary results, but citizens would certainly have a far greater chance to express themselves than they do presently in the party conventions.

We are sorry that Governor Rockefeller and the Republican legislature did not put through a direct primary law. The Republicans have been just as guilty of undemocratic processes in their conventions through the years as the Democrats, though not so flagrantly as was the case with the DeSapio display of arrogant power last summer.

Perhaps from the GOP standpoint they are delighted to continue the present convention system if only because the Democrats seem determined to operate in such a thoroughly undemocratic way, thus giving the Republicans a dandy campaign issue.

Anyhow, we started out not so much to review the State election setup as to quote Mr. Farley on politics. Politics is often scorned for the reasons cited above, for chicanery that exists, for the compromises that are made, for the character of some politicians.

Politics is the art of governing. To govern well takes great skill, and it takes far more than that. "In politics the profit is not in material things," Mr. Farley recently told advertising men in Detroit, "but in the satisfaction of serving your country and your fellow man so that he will have a better way of life."

This is the essence of politics. This is basically why so many are attracted to it, to serve community or country.

Mr. Farley says he has 10 rules for the making of a successful politician: "A politician must have a good personality. He must have what we call character. He must be a substantial human being. He must work hard. He must be able to get other people to work for him and with him. He must have native ability and must be able to see and use ability in others. He must be aggressive but not to the point of being offensive. He must have a feeling for what people want. He must be able to make decisions. He must understand the meaning of the practical compromise without the loss of principle. Above all, he must be truthful."

Of course, politicians differ widely in their interpretations as to what people want, and in their effectiveness in translating those wants into law, appropriations, or other action. But being honest, having good character, and working hard will help a politician go a long way, just as these same qualities are essential to success in any other line of endeavor.

Educational Appropriations Urgently Needed

SPEECH
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6769) making appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1960, and for other purposes.

Mr. McGOVERN. Mr. Chairman, there are many essential programs in the legislation before us. The security and well-being of the American people depend upon our continued support for these activities.

I believe that it is especially important that we maintain the full amount requested by the Committee on Appropriations for the Office of Education.

There has never been a time in American history when the education of our young people was so essential as it is today. The complex demands of the age offer a special challenge to the educational programs of the Nation.

I strongly urge the House to follow the recommendation of the committee in appropriating adequate funds to meet the full obligations under Public Laws 815 and 874. These two programs which provide funds for school operation and construction in federally impacted areas are essential. I am pleased that the committee is recommending sufficient funds to pay 100 percent of entitlements under the authorizing legislation. The committee recommendation would restore the 15-percent cut made by the Bureau of the Budget.

Last year, when the funds for this program were reduced, it soon became clear that our federally impacted school areas would be placed in an impossible position. Only timely action by the Congress in this session in restoring the cuts saved these school districts from sharp reductions in their educational programs. It should now be clear that the committee recommendation is no larger than necessary for the proper operation of legislation authorized by the Congress and proved by experience.

To indicate the support for this program in my State, many educators wrote, wired, or telephoned their dismay over the cuts that were made last year. Following are some of the persons urging the supplemental appropriation which we passed successfully a few weeks ago:

Mr. M. L. Reynolds, superintendent of schools, Pierre, S. Dak.

Mrs. W. T. McIlravy, clerk, Buckeye School District No. 13, Pierre, S. Dak.

School board, Wahehe School District No. 83, Greenwood, S. Dak.

Mr. C. J. Fiedler, superintendent of schools, Peever Independent School District No. 3, Peever, S. Dak.

Mr. C. L. Lehman, superintendent, Edgemont Independent School District 27, Edgemont, S. Dak.

Mr. Glenn H. Frary, superintendent of schools, Hot Springs, S. Dak.

Mr. Bernard E. Aho, superintendent of schools, Piedmont, S. Dak.

Mr. Ross P. Korsgaard, superintendent of schools, Igloo, S. Dak.

Mr. O. K. Ehlers, superintendent, Smee Independent School District No. 4, Wakpala, S. Dak.

Mr. Gordon A. Aaland, superintendent of schools, Wagner, S. Dak.

Mr. E. E. Grunwald, superintendent of schools, Sturgis, S. Dak.

Mr. S. M. Stickdale, superintendent, Todd County Independent School District, Mission, S. Dak.

Mr. M. P. Livingston, president, board of education, Pickstown, S. Dak.

Wileta M. Hawkins, clerk, Dry Run School District No. 12, Pierre, S. Dak.

LIBRARY SERVICES

The legislation before us also includes funds needed for the continued operation of our rural library service. This program has been of inestimable value to the people of rural America. It does not cost a great deal of money and it returns great dividends in the form of broader understanding, cultural advancement and reading enjoyment for our rural citizens. I urge the approval of this much needed item.

PRACTICAL NURSE TRAINING

There is great need in the country today for additional numbers of trained practical nurses. This is a need which gives every indication of becoming more acute in the years ahead. Here again, we have a fund request that is small in size but big in the dividends that it will return to the health and well-being of our people.

EXPANSION OF TEACHING IN EDUCATION OF THE MENTALLY RETARDED

I am especially pleased that the Committee on Appropriations and the Budget Bureau have recommended a million dollars to carry out the program which we enacted in the last Congress to benefit mentally retarded children.

As the sponsor of this program to expand the number of qualified teachers working with mentally retarded children, I know that it has widespread support throughout the country.

There are approximately 1 million mentally retarded youngsters in the United States who require specialized teaching if they are to become useful citizens. Unfortunately only about 15 percent of these children are given the opportunity to study under the direction of qualified teachers. The funds now being requested will begin a modest program designed to increase the number of specially trained teachers through grants to institutions of higher learning and to state educational agencies.

On next Saturday, I am to be the guest of the South Dakota Association for Retarded Children at their annual convention in Rapid City, S. Dak. This splendid association, whose current president is Mr. Laurie Larson of Sioux Falls, has performed an invaluable service to the people of South Dakota in providing understanding, public support, and facilities for the training of our mentally retarded children. I hope that I will be able to report to them that we have acted favorably on this modest request for funds to implement a most worthy program.

NATIONAL DEFENSE EDUCATIONAL ACTIVITIES AND VOCATIONAL EDUCATION

As one of the subcommittee members who drafted the National Defense Education Act passed by the last Congress, I, of course, hope that the Congress will approve the funds requested to carry on this program in the next fiscal year.

The activities authorized in this act have won the enthusiatic support of those interested in education across the Nation on a scale that goes beyond even the most optimistic hopes of those of us who drafted the program.

I urge my colleagues to grant the amount which this legislation calls for and to support also the funds requested for carrying on the time-tested programs in the field of vocational education.

Kennedy-Ervin Bill

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BOLAND. Mr. Speaker, the Labor Committee in the House will be holding hearings this month on the Kennedy-Ervin bill which passed the Senate last Saturday by a near-unanimous vote. The Members of this body will then be called upon to vote on this vital piece of legislation.

HONEST WORKINGMEN AND CLEAN LABOR UNIONS STIGMATIZED

I am sure that all of my colleagues are well informed on abuses that have been revealed during the last 2 years by the McClellan committee in the Senate. There is no question but that reform legislation is desirable and needed. Senator KENNEDY, of Massachusetts, a mem-

ber of the McClellan committee and chairman of the Labor Subcommittee in the Senate, is to be commended for the hard work and long hours he has put in on the labor bill which has now come over to the House for consideration. Both he and the senior Senator from North Carolina, Mr. ERVIN, recognized the need for legislation in this session of Congress if we are going to move in the right direction to protect some 17 million honest workingmen in this country from the stigma that has been associated with labor unions because of some few crooked and unscrupulous labor bosses.

CORRECTIVE LAW NEEDED

Mr. Speaker, Columnist Walter Lippman wrote about the need for enacting this labor bill in his Washington Post article last Thursday. I ask that Mr. Lippman's piece be printed with my remarks. Senator WAYNE MORSE, of Oregon, had the Lippmann article inserted in the RECORD on that day. I would suggest that my colleagues read the column.

Fair Trade Not Fair to Consumers

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DINGELL. Mr. Speaker, the fair trade bill, H.R. 1253, coming before the Congress of the United States is not in the public interest.

Some of the reasons why this bill should be defeated are chronicled in an editorial appearing in the Binghamton, N.Y., Press on March 19, 1959 entitled "Fair Trade Not Fair to Consumers."

In addition to not being fair to the consumers, a fact ignored by those who push fair trade is that it will not help to save the little retailer who it is supposed to aid. H.R. 1253 should be defeated summarily.

The article follows:

FAIR TRADE NOT FAIR TO CONSUMERS

The price fixers are at it again. They're trying to ram through Congress a fair trade law to operate everywhere, regardless of State laws, that would permit manufacturers to fix the retail prices of appliances, drugs, and other branded products.

Fair trade laws operate oppositely in principle from antitrust laws and are opposed by the Federal Trade Commission and the Justice Department. The euphemistic label "fair trade" doesn't conceal from consumers that such laws are against the public interest and in violation of the American system of free competitive enterprise.

The transparent objective of such laws, or at least their effect, is to eliminate competition and boost consumer prices. It is a travesty of economic decency that a move of this sort should be launched at this time against tax-burdened, inflation-harassed consumers.

Fair trade laws aimed at discount houses which have become popular as American consumers have exercised their American right to shop around and get the most and best they can for their rubber dollars. Fair trade is not a little responsible for the popularity of discount houses.

Under the free American system no manufacturer should have the power to control the price of his product in retail markets or after it has passed from his hands. Such a manufacturer would whine like a pup if the prices of his raw materials were price fixed.

Federal fair trade laws of the past have had a hard road to travel in widespread violation, and in invalidation in State courts. State fair trade laws have been almost uniformly invalidated by courts as being in violation of State constitutions.

Members of Congress too often owe their elections to support of militant pressure groups which seek to prey economically on the people as a whole. Fair trade is predatory, aimed at benefiting and protecting the few at the expense of the many.

Existing fair trade statutes, such as the McGuire Act (based on contractual pretense) should be repealed. Instead, the fair traders in desperation try to compound the evils of past legislation in new.

As regards current fair trade proposals, the Federal Trade Commission reaffirms its past opposition. Chairman John W. Gwynne writes:

"The fixing of resale prices is inconsistent with the American system of free competitive enterprise and is contrary to the public policy expressed by Congress in the antitrust laws since 1890."

Law Day

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to revise and extend my remarks in the Appendix today to give a belated commendation to the Institute of Military Law, and the Federal Bar Association, I include the Pentagon's observance from the Office of the Judge Advocate General. Enclosed is their program on Law Day, May 1, 1959. We were not in session on Friday or I would have made appropriate remarks at that time. Since this is the first day of session since Law Day, I hasten to give observance.

I would also like to include herein the President's remarks, issued at the Pentagon and to thank Major General Harmon and his staff for having such a fine program. I have had the privilege of working as a Reserve officer with these distinguished soldiers and lawyers, and they are dedicated advocates and professional lawyers of the highest ability and integrity.

I enclose at this point a program:

LAW DAY PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES

I, Dwight D. Eisenhower, President of the United States of America, do hereby designate Friday, May 1, 1959, as Law Day in the United States of America. I urge the people of the United States to observe Law Day with appropriate public ceremonies and by the reaffirmance of their dedication to our form of government and the supremacy of law in our lives. I especially urge the legal profession, the schools and educational institutions, and all media of public information to take the lead in sponsoring and participating in appropriate observances throughout the Nation.

PENTAGON LAW DAY OBSERVANCE, MAY 1, 1959, PENTAGON INNER COURT

(Sponsored by the Institute of Military Law; Federal Bar Association, Pentagon Chapter; the Judge Advocates Association)

The Institute of Military Law: Comdr. Gay E. Milius, Jr., USNR, president.

The Judge Advocates Association: Col. Franklin Berry, USAR, president.

The Federal Bar Association, Pentagon Chapter: Conrad D. Philos, Esq., president.

PROGRAM

Maj. Gen. Reginald C. Harmon, The Judge Advocate General U.S. Air Force Presiding

Presentation of Colors--Joint Services Color Guard

U.S. Army Field Band
Maj. C. E. Whiting, Director

The National Anthem---The U.S. Army Field Band and Chorus

Invocation-------Chaplain (Brig. Gen. R. P. Taylor
Deputy Chief of Air Force Chaplains

Selection-----The U.S. Army Field Band and Chorus

Recognition of distinguished guests.

Address-----The Honorable Stanley F. Reed, Associate Justice, Supreme Court of the United States

Benediction--Capt. Francis T. O'Leary, CHC, UNS
Assistant Director of Navy Chaplains

Recessional.

COMMITTEES

Maj. Gen. Reginald C. Harmon
The Judge Advocate General, USAF
Honorary Chairman

General Chairman Cmdr. G. E. Milius, Jr., USNR

Finance:
Maj. Gen E. M. Brannon, USA (JAGC) retired
Chairman
Col. C. E. Straight, USA (JAGC)
Col. A. J. Clark, USAF

Operations:
Maj. T. G. O'Shea, USAF
Chairman
Maj. N. J. Cipriano, USA (JAGC)

Press, radio, TV:
Maj. C. E. Barnes, USAF
Chairman
Lt. Col. R. W. Michels, USAF
Lt. F. L. Crowley, USA (JAGC)

Music:
Col. C. M. Munnecke, USA (JAGC)
Chairman
Col. J. L. Searles, USA (JAGC)

Reception:
Comdr. Katherine E. Shilling, USN
Chairman
Capt. Dorothy M. Schomp, USAF

Program:
Conrad D. Philos, Esq.
Chairman
Lt. Col. Mort Gold, USAF

PENTAGON OBSERVES LAW DAY U.S.A. IN COLORFUL CEREMONY

With the reading of the President's proclamation by Maj. Gen. Reginald C. Harmon, the Judge Advocate General of the Air Force, chairman of the event and spokesman for the military legal community, followed by a color presentation by the Joint Armed Forces Color Guard and a resounding rendition of the national anthem by the world famous U.S. Army Field Band and Chorus, military observance of Law Day U.S.A. was inaugurated at the inner court of the Pentagon today. In a ceremony reminiscent of an old-fashioned Fourth of July, area members of the various military services and Defense Department employees took a short time out from the business of running the Nation's Military Establishment to pay tribute to the body of law under which we live.

The program was conspicuously marked by the inspiring address of Associate Justice Stanley F. Reed, longtime member of the U.S. Supreme Court. Justice Reed, commenting on the concept of the rule of law and of government under law, took the opportunity to describe significant development in the rule of law between nations arising out of the United Nations Organization. Attention was also drawn to the body of military law which governs our Armed Forces and the role that the military lawyer plays in that regard.

Deputy Chief of Air Force Chaplains, Brig. Gen. R. P. Taylor, gave the solemn invocation. Prominent members of the military and civilian component of the Department of Defense participated, as did notable members of the Washington area bench and bar and many of the chief military law practitioners. The ceremony closed with a benediction by Chaplain Francis T. O'Leary, CHC, USN, Assistant Director of Navy Chaplains.

In programing this musical military and patriotic tribute to the law and the legal profession, the Institute of Military Law supported by the Pentagon chapter of the Federal Bar Association and the Judge Advocates Association, joins the nationwide effort of the civilian bar, initiated by the American Bar Association, designed to increase the appreciation of the importance of law in the daily lives of our citizens and to emphasize the contrast between the freedom under law which we enjoy and the tyranny which enslaves the people of one-third of the world today. In furtherance of the latter aim, the Pentagon ceremony was particularly significant.

Musical selections by the Army Field Band and Chorus, under the direction of Maj. Chester E. Whiting, before and throughout the ceremony created a holiday atmosphere in the attractively landscaped open area of the inner court of the Pentagon.

Comdr. Gay E. Milius, USNR, president of the Institute of Military Law, indicated that this was the first of what is hoped to be an annual affair.

At the end of the program Justice Reed made a marvelous address and I include his address as part of my remarks here:

Americans gather today in numerous groups, at the suggestion of our civil and military chief, President Eisenhower, to rededicate ourselves to the principle of government under law. It is a satisfaction to have this opportunity, under the auspices of this Institute, to participate in this ceremonial Law Day. It is gratifying to have this reconfirmation that our citizens, civil and military alike, fully realize that we are a people whose Government thus seeks freedom and justice for all under our Constitution. We cherish our liberties as matters of right, not as grants of a benevolent autocracy.

Today our military forces must necessarily be large. We are no longer isolated from the danger of sudden attack. Modern technology has so contracted the world that infractions of our peace, without time for long preparations, are possible. These forces are our protectors, however, with members drawn generally from our families, not a special military clique for enforcement of military rule. Our Founding Fathers felt little need for standing armies and deprecated their establishment for fear that arrogant militarism might get a foothold here and weaken civilian resistance to military usurpations of power. That danger seems imaginary now and will continue to be, so long as the whole people will to live in ordered liberty under law.

The law we honor today is the body of governmentally enforceable rules controlling the relations of man with his fellows. International law lies outside that definition except as our courts may adopt as their own the recognized practices for adjusting differences between citizens of different States or nations to settle disagreements as to their respective rights. As has been suggested by the Vice President, Mr. NIXON, and the Attorney General, Mr. Rogers, we would further the rule of law if nations, including ourselves, would now grant a wider jurisdiction to the International Court of Justice, of which our representative, Judge Green H. Hackworth, for many years Legal Adviser to the Department of State, is a member.

The American Bar Association is making an effort through its Committee on World Peace Through Law, under the chairmanship of Charles Rhyne, for such an advance. If we are not ready as yet to submit to binding decisions on treaties, as to matters essentially within our domestic jurisdiction, such as immigration or currency value or exports, we could have advisory opinions of such a court which would be useful as coming from an authority least likely to be influenced by ulterior reasons.

Thoughtful men even in the midst of exacerbating controversies over matters from Berlin to Formosa are actively working to extend the domain of the law into the world's international relations. If there can be accomplished a worldwide mobilization of men of the law throughout the nations, it will mark a true forward step toward a method for the adjustment of the inevitable frictions that arise in international affairs. Such an effort has especial appeal to our citizens.

It is to be hoped that we are seeing the beginning of the extension, as Wilfred Jenks surmizes in his recent work, of international law, relations between nations, to a "common law of mankind." With individuals of separate nations intermingling in worldwide trade, the creation of international organizations and area treaties such as NATO and the European community, the necessity is obvious. From this necessity springs the Declaration of Human Rights, the effort to agree on the seaward limits of national sovereignty, efforts to settle jurisdiction over Antartica, and rights in outer space. The rule of law approaches new fields.

There was a striking example of the effectiveness of treaties through the creation of the crime of aggressive war, by the Kellogg-Briand Peace Pact of 1928 to which Germany was a party, applied by the allies at Nuremberg to punish the German leaders who violated it.

We have seen the controversies and misunderstanding between our State sovereignties softened and largely satisfactorily adjusted through the use of judicial decisions to settle disputes. From the vantage point of today we see nothing unusual in having courts settle the boundary lines of States. Even when the Tidelands decision barred the rich oil stores of adjacent waters from exploitation by bordering States, the decision was accepted as binding until congressional action gave these public lands to the adjacent States. How much better to live under a rule of law where, for example, the waters of the Colorado may be equitably divided between the States that it touches, rather than to be appropriated by the strongest or wasted into the sea.

Our laws are not improvisations to meet unexpected situations but the product of generations of experience that reaches through the centuries. Our military law, too, has that background. The Founding Fathers were not unaware that life in the military forces differs from life among civilians even in peacetime. Only too well they knew the necessities for rigorous control during war. So it was that the Articles of Confederation provided that "The United States, in Congress assembled, shall have the sole and exclusive right and power of * * * making rules for the government and regulation of the said land and naval forces, and directing their operations." That is practically identical to our present constitutional provision. In fact Mr. Madison's notes show it was "added from the existing Articles of Confederation." If our national forces had been left to the control of the respective States, as No. 4 of the "Federalist" points out, we would not have had unity of command or absence of rivalry for military power between the States or sections.

This solicitude for the maintenance of a national army in accordance with the disciplines that experience had shown, persisted through the adoption of our Bill of Rights. Therefore the fifth amendment, by specific exception, omits the military forces from the requirement of a grand jury indictment, and the sixth amendment, by construction in ex parte Milligan, from the requirement of a petit jury. Since these exceptions withdraw from the military forces protections from arbitrary action greatly valued by civilians, they have been strictly construed in favor of the individual by the Supreme Court, as the recent cases of *Toth* v. *Quarles* and *Reid* v. *Covert* make plain.

Law is dynamic. It gathers "meaning from experience." The scientific advances of the first half of the 20th century, with its revolutionary introduction of motors, planes, electronics, its chemical discoveries in drugs and plastics, automation and atomic energy has not and will not leave society and economics unchanged. Nor will law be left unchanged. Certainly the field of law has felt the impact of these new forces, as has government. But however the tornado may toss the sea, it remains the sea. However strong the pressures of change, the basic concepts of justice remain unimpaired and adaptable to changing circumstances.

Momentous days lie ahead for law and lawyers. Our law must adjust itself not only to the advances of science, as it did when Causby marked for aerial flights a free space for navigation, or when *Reid* v. *Covert* extended concepts of our constitutional law as to jury trial in capital cases to include American citizens accompanying the Armed Forces in foreign lands. The lawyers of the Armed Forces must continue their labors with an open mind, be earnest in their readiness to learn from past errors, and adjust when experience and reflection show a wiser course. Present rules are at best abstractions from the current norms of society.

When words such as reasonable, fair, due process, negligence, or equal protection control judicial interpretation, guided by court precedents and legislation, their meaning will vary with ethical and social experience. The earnest efforts of many minds are needed to continue our life under a rule of law. We made a real contribution toward the rule of law when we accepted judicial determination of disputes between the States of our Union, and concerning the powers of Government under our Constitution. Would not that experience induce us to take the lead in submitting at least many of our international disputes to decision by the International Court of Justice at The Hague? Such a step would brighten the prospect of the achievement of mankind's hope of a world under law. It might save what Mr. Justice Birkett called the "supreme international crime" a war of aggression supreme because that crime contains within itself all of accumulated evil.

It is only comparatively recent that it has been recognized that citizens have rights as well as governments have power, and that only under a rule of law both needs could be satisfied. Since in a republic "all the citizens, as such, are equal, and no citizen can rightfully exercise any authority over another, but in virtue of a power constitutionally given by the whole community," machinery was necessary to adjudge rights. The 17th century philosophers who taught the theory of the inherent rights of man left unnamed the arbiter whose decision would

determine when fundamental rights were invaded by government. Obviously each individual cannot decide that for himself. "Fire burns both in Hellas and Persia; but men's ideas of right and wrong vary from place to place." If we are all to have our way, each would have a universal war against everyone—bellum omnium contra omnes. Everybody would sit in judgment on everybody. We found our answer in judicial review of actions challenged as unconstitutional.

Despite violent reactions against judicial decisions of constitutional problems that have continued since *Marbury* v. *Madison*, *M'Culloch* v. *Maryland*, and *Cohens* v. *Virginia*, no other solution has received general approval. Judicial review as to the validity of legislative or executive action has difficulties in administration but the alternative of unreviewable action has more.

Few governments allow judicial review on the issue of the constitutionality either of legislation or of executive action. The power of courts to pass upon the conformity of such actions with constitutional requirements was an American contribution to the evolution of democracy. Order requires that the power of decision as to constitutionality rest in some body. Our choice has been the courts, which can only interpret after open hearing, with full discussion, and a reasoned opinion.

We lawyers can be proud of the contributions of law to liberty and peace. All of us look forward hopefully to the perpetuation of our democracy through a fair administration of justice. May each member of our profession contribute his full powers to that high purpose.

Market Site Protested

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BOLAND. Mr. Speaker, since coming to Washington as a new Member of Congress in January, 1953, I have read and heard much about how beautiful southwest Washington will be when the redevelopment project has been completed. Now it seems that this section might be the location for a new market area, in addition to beautiful apartment houses, lawns and gardens.

I think that my colleagues might be interested in reading a letter that was written by Charles R. Roberts and printed in the letter box column in the Washington Evening Star on April 24 concerning this proposed southwest market site. I ask that the article be printed with my remarks in the Appendix:

MARKET SITE PROTESTED

Washington is one of the most beautiful cities in the world. Slum areas around the Mall, Constitution Avenue, and the surrounding area were cleaned out not many years ago. But now a new potential slum area is being projected a few blocks away. Within sight of Capitol Hill, the very heart of southwest Washington is about to be disfigured by a projected market, with space for 100 trucks and cars.

Where is the protest of the Fine Arts Commission? The market will be right down the avenue from the Mellon Gallery, and not far from the Smithsonian Institution, a neighbor to many other beautiful attractions of Washington. Citizens are up in arms and Congress is stirred because Members realize that an unsightly area is about to be approved by one of their agents, the Redevelopment Land Agency. Rats will be running in front of cars of Members of Congress, if final approval is given for the market near Capitol Hill.

If land were scarce, it would be a different story. But there is plenty of land for the market, according to real estate men, on the outskirts of the city. And they point out that it will help the traffic situation in Washington if the market is located on the edge of the city.

Why then does the market have to occupy choice land in the heart of Washington? Where are our plans for a new Southwest Washington? If we had vision and vigilance, even the railroad viaduct would be made as attractive as the old Roman aqueducts.

Citizens of the southwest section sold their homes and places of business, often reluctantly, with the hope that a renewal of the section would take place. Now they are discovering that good solid homes were taken down to make way for another Dixon's Court, so long notorious in the southwest area.

It's about time we all made some noise so that our children will not have to move into a ready-made slum area. The architects of our Federal city devised a beautiful plan for the Capitol Hill area. Let us realize their dream in our day.

CHARLES R. ROBERTS.

Against Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. PELLY. Mr. Speaker, I believe if Congress begins passing foot-in-the-door Federal aid to education legislation, the Federal Government sooner or later will come to dominate our schools.

I recognize that many school officials have reason to become a bit frustrated and find that statements to this effect have a sort of hollow ring.

For example, in my State of Washington 36.5 percent of special school bond issues and 17.2 percent of special school levies in 365 different school districts during the past 2 years were rejected, either for want of a sufficient constitutional percentage of voters participating in the election or by a direct negative vote.

But, frustrated or not, anyone who says Federal aid does not mean Federal strings does not know the facts.

Recognition that Federal school aid would destroy local control out of his own experience, has been strongly voiced by Lloyd J. Andrews, superintendent of public instruction of my State of Washington.

Following is an article which speaks for itself. This is entitled "Andrews on Education" and is by a well-regarded news commentator, Charles E. Johns, who writes from Olympia, the State capital. I clipped this item from the April 29, 1959, isue of the Bremerton Sun:

OLYMPIA.—The views on education expressed last week by Lloyd J. Andrews, State superintendent of public instruction, make a lot of sense.

Andrews does not want the Federal Government messing around in State educational programs.

He thinks the National Defense Education Act came about only because a lot of people were scared by the Russians and that changing our education system to the Russian pattern of intensive scientific instruction is ill-advised and hysterical.

Speaking at Harding College, Searcy, Ark., he said:

"The Federal Government has absolutely no business offering Federal aid to the States for education. It is impossible for the Federal Government to aid a State. The best it can do is to collect taxes from the individuals comprising the State and then redistribute their money back to them * * * a process that sooner or later will bring control and domination of the educational program by the distributing agency."

Andrews questioned the credo of the National Defense Education Act that the defense of the Nation depends on the mastery of modern techniques developed from complex scientific principles.

He said the best defense of this Nation ultimately will be in its citizens, as individuals, joining together in their opposition to centralization of power in the hands of a few.

As for Washington school financing: "I would consider an ideal situation to be one where the legislature establishes the policy of the programs to be financed at the State level and the programs to be financed at the local level and then delegates to the chief school officer the responsibility of computing the cost based upon the level of spending for salaries, etc., as necessary to provide the proper personnel and facilities. As long as education is used as a political football, however, this sound and basic approach to the problem is impossible."

Andrews should know his subject. He served Spokane County as a State senator from 1953 to 1957, with assignment to the appropriations committee. He handled educational apropriations in the legislative post. He has now served for 2 years as the State's chief educational officer, and dealt with the problems from the opposite angle. The cost of education is the largest single item in the State's budget and it is constantly going up.

A Depressed Area

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to insert a letter that I have just received from one of my constituents, Mr. J. Emerson Miller, 414 Lynwood Road, Middlesboro, Ky., which is in Bell County in southeastern Kentucky, an area where there is much need and considerable economic hardship and quite serious conditions of unemployment that call for the aid and assistance of the Congress of the United States. The letter from Mr. Miller, who is one of our earnest and respected citizens, is as follows:

MIDDLEBORO, KY., *April 9,1959.*

Conditions in Bell County are fast becoming a national disgrace.

Food, clothing, housing, educational opportunities, and medical care are all desperately needed in an area where depression has never ended, where large-scale poverty abounds, and, as Senator PAUL H. DOUGLAS, of Illinois, pointed out recently, "people are literally starving to death."

As a result of the economic blight that has been slowly spreading over this county for more than a decade, thousands of our people, young and old, are hungry, if not actually starving, from malnutrition; some suffering and slowly dying from lack of drugs and medical care.

On the basis of population, Bell County enjoys these dubious distinctions: has, perhaps, more unemployables than any of the Nation's 3,000 counties; in 1958 had more people receiving public assistance payments than any county in the State; has had in recent years more applicants for surplus Government food than any county, thousands of them in need but unable to qualify for aid because of various Federal and State regulations.

The per capita income of Bell County in 1953 was only $749; by 1956 it had fallen to $688; and has grown progressively lower with the cheapening of the dollar.

Of the county's 1,364 farms, in 1956 only 47 farmowners had incomes in excess of $250 for that year.

Ten thousand or more persons, or one in four, are depending on free government food to keep them alive; the April allotment to an individual for 30 days consisting of corn meal, dried milk, rice and a pound of butter, with a total retail sales value of approximately $1.25, which means slow starvation.

Thousands of miners, unemployed for years, are living in unrelieved want, not old enough to qualify for miners' pensions or social security.

Hundreds of unemployed workers, victims of last year's recession, have exhausted their unemployment compensation benefits and are having to fall back on relief.

Hunger is a daily experience for thousands, children staying home from school because they haven't the energy to study or don't have enough to eat for breakfast. I am reminded of one case—that of a little girl who hold her teacher she had only had a biscuit for breakfast, had nothing for lunch, and had to be taken home before the end of the schoolday.

Equally pathetic is the condition of the high school graduate, who unable to find a job and without means to continue his education, finding himself penniless in desperation tries to sell his blood to Knoxville hospitals.

Then there is the question of public health. A large group of the county's residents, perhaps thousands, are too poor to pay for medical aid, too poor or sick to visit a doctor's office, too poor to buy expensive drugs, and have no money for hospitalization or nursing care. No one knows how many fatally high blood pressure and other caridac and circulatory diseases exist in the county among the middle and older age groups and those chronically ill. Every year there are needless deaths, people who could have been saved by prompt medical attention at the first sign of complaint. There are all too many like an elderly man who remarked to me: "When we uns get bad off we uns jest die".

Our hard-pressed hospitals and overworked doctors must bear heavy costs of medical care of people who must have such care but can't afford to pay for it.

Something must be done to assure medical care and hospitalization for the medically indigent. A partial solution would seem to be the erection of a chronic disease hospital in the county, to be administered, perhaps, by the State department of health.

I earnestly hope the State's lawmakers will immediately recognize the need for and take steps to create such an essential facility. It would be a godsend to the increasing number of our aged.

J. EMERSON MILLER.

Need for Central Single Management and Procurement System

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. BROWN of Ohio. Mr. Speaker, as a matter of record, I wish to extend my remarks in the Appendix of the RECORD and include therein a copy of a letter I recently sent Hon. Maurice H. Stans, Director of the Bureau of the Budget, relative to enforcement of Public Law 81–152—the Federal Property and Administrative Services Act of 1949—dealing with management and procurement matters, recommended by the Hoover Commission and approved by Congress, as well as the McCormack amendment to section 202 of the National Security Act:

APRIL 28, 1959.

Hon. MAURICE H. STANS,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. STANS: I am in receipt of your letter of March 17, 1959, and have given it careful study, and do not believe that it responds properly to my letter of February 21, 1959, as to content or spirit.

I am sure that you know, or at least your staff knows, of the interest I have had for many, many years in improving the supply management activities of the Government and, particularly, in the Department of Defense where so many billions of dollars are expended. Partly because of this long and intense interest, I was prompted to sponsor both Hoover Commissions, and have spent a great amount of time and effort in this area, which I consider lends itself more than any other to economy and efficiency.

When former Director Brundage indicated to the Government Operations Subcommittee on May 28, 1957, that the Bureau of the Budget recognized the importance of this area of management and was working on it, I was pleased, though it was immaterial to me whether the approach to improvement was through a reorganization plan, or pursuant to the Budget and Accounting Act of 1921, or through the Federal Property and Administrative Services Act of 1949, or through the general authority of the President of the United States, or otherwise.

I was interested in results and, quite frankly, I have seen small evidence of substantial accomplishments in this most important area. Certainly, I have seen no recent evidence that the Bureau of the Budget, which is the overall management arm of the President in these matters, has taken vigorous action with respect thereto.

Your letter of March 17 correctly indicates that I have opposed the concept of establishing still another supply service which would operate over and above the numerous existing supply services in the Department of Defense. What I think should be done is to merge or integrate, rather than create still more services. I think we need one effective supply service, rather than many separate and competing services.

It is also true that I have advocated that GSA should be given the tasks which were contemplated with the passage of Public Law 152, and also the means of redeeming them. This action was strongly advocated by the first Hoover Commission. GSA is now 10 years old, and I am sure that you are aware of the fact that it will never operate as planned unless it has the strong backing of the Bureau of the Budget. Specifically, GSA can never operate successfully in the large supply and service areas unless it is organized, staffed, and equipped to take over some of the large common supply and service activities now performed by the military agencies. Here again, I do not favor building up GSA and leaving the military agencies intact. There must be a transfer of stock, buildings, personnel, etc., if there is to be more efficiency, and this is a top management matter affecting organization.

I would suggest, Mr. Director, that the Bureau immediately try to delineate areas of common supply, particularly administrative-type items which can be turned over to GSA from the military agencies.

As a start, why not give it all types of office supplies, equipment, furniture, furnishings, etc., which are used not only by the military, but by numerous civilian agencies? I understand that GSA is serving the Air Force in this field, so why not extend the program to the Army and Navy also? In such a program I would expect, of course, that there would be less organization after transfers were made, than under current operations.

I also note from your letter that you tend to support the single manager systems which have been developed for a few classes of items in the Department of Defense. I am sure you realize that there are only 44,000 items in the single manager systems, and though some of these items are large in volume, the program is relatively small compared to the sum total of common items in the Department of Defense. For example, the general stores items in the services include 100,000 items or more, and even a cursory inventory analysis indicates there is a large duplication in these items in the military services. What has the Bureau done, or what does it plan to do to place these items under a single manager? I note from the Department of Defense appropriations hearings for 1960, part I, page 993, that criteria have been developed for the expansion of the single manager program, and also for the designation of the managers to operate the new plans. If this is so, why should there be long delays in starting other single manager categories? Certainly, with a vigorous standardization program there could be even more commonality with respect to these items.

I have made some inquiry concerning the unity in the military systems in the so-called theaters of joint command and find that a great amount of work needs to be done in the development of standard forms, procedures, regulations, etc., etc., in order that there may be effective and responsive supply systems to back up the unified commands.

I presume that you are aware that the Air Force has started a study as to its communication requirements in the space age. Many people, including myself, wonder why such a study was not directed to the communications needs of the Department of Defense at this time when the idea of joint commands is commonly accepted.

Within the last few days I have noted that the Navy is contemplating a rather important reorganization of some of its ordnance activities involving two or more services. Newspaper articles indicate that legislative action will be required in this respect. I wonder what overall studies are in contemplation at the Bureau of the Budget with respect to ordnance requirements among the three services.

I have also noted that the Army is currently developing a worldwide surplus property program. To what extent is this being geared to the entire program? And what is being done to stop the creation of needless surpluses? You stated in a recent "Face the Nation" program that, "we have consultations going on with the Department of Defense even now, currently, on that subject." This has been a live problem since 1942, and something more than consultations are required to make progress. Now, I am not unmindful of the factor of technological change and obsolescence in this picture. But, frankly, there are too many military services buying, storing, and distributing the 3½ or more million items in the Department of Defense supply systems. This is particularly so for common type items.

Frankly, I think that we must solve the organizational and other problems which help cause the annual generation of $8 to $10 billion in surpluses. If you think that the McCormack amendment, section 202(c)(6) of the National Security Act, as amended, is the correct basis to get the job done, may I inquire what is being done with the Bureau's support in developing an overall program to accomplish the objective? Here again, I am not unaware that good accounting is a tool to good management, but good tools are not enough by themselves.

I have written this letter at some length to indicate the scope and nature of some of the problems which confront us in the supply and service field as I have viewed them over a long period of time. The GAO has issued approximately 200 reports in the last year dealing with some of these matters, though they have not as yet, so far as I know, studied and reported on the organizational weaknesses in the supply and service systems themselves.

It seems to me that the Bureau of the Budget which represents the executive branch topside in management matters, including reorganization, and which has the responsibility for presenting the budget, should be extremely active at this time in an area where the stakes are the national defense and the national economy. If this is not a management and organizational problem of the highest order, then there is none.

Sincerely yours,

CLARENCE J. BROWN,
Member of Congress, Seventh Ohio District.

Poland's Constitution Day

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DAGUE. Mr. Speaker, no one who believes in the sanctity of human freedom can remain silent in the face of the oppression that has been suffered by the gallant Polish people.

When the revolt against Poland's Communist overlords occurred in 1956 most of us entertained the fond hope that at long last a new day was dawning for those oft-oppressed but never subservient lovers of liberty.

In the 2 years that have intervened, however, we have seen the Communists reassert their authority and with the return to collective agriculture and the suppression of the press we can see these brave people once more being pushed toward the shackles that have been their lot decade after decade.

For as many years as we have been free this Nation has championed the cause of subject peoples everywhere and there have been times in the past when we have lent material aid to their liberation. Of late, however, we have too often pulled back and have been content to let our support center in pious platitudes and words of sympathy.

As we prize liberty for ourselves, even so do we have a responsibility to keep alight the flame that burns in the hearts of others. Let us with all of the resources at our command extend the hand of fellowship to our Polish brothers and implement our words with material aid.

Remarks of Acting Postmaster Robert K. Christenberry at Luncheon Meeting of Association of Buying Offices

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call the attention of my colleagues to the remarks made by Acting Postmaster Robert K. Christenberry at a luncheon meeting of the Association of Buying Offices at the Hotel Sheraton-McAlpin, February 18, 1959. This is one of a series of talks made by Mr. Chistenberry in an effort to better acquaint the patrons of the New York Post Office with the services which are offered and the ways in which the postal service can be made more efficient:

Mr. Burston, members of the Association of Buying Offices, and friends, yours is the eighth industrial group I have addressed since the introduction last June of our public postal education and mail improvement program. Although each of these has represented a totally different field, namely—department stores, the shipping industry, hotel, airlines, stock transfer agents, American Telephone & Telegraph, and Sales Executives Club—strange to say, the postal problems of all have been somewhat the same.

You businessmen know the importance of keeping open the lines of communication, and the necessity of connecting with trains, planes, and ships for the expedition dispatch and delivery of your mail. You know that although it is not among the higher-salaried units of your organization, your mailroom is an essential arm of them, and the one that sometimes is responsible for the firm's getting that bid or consummating a contract. Very often not too much attention is paid to this important segment of a business, and whether the practices and procedures employed are serving the best interests of your company. For example, is your mailroom equipment carefully selected; have your scales been recently inspected; is your postal information on rates—train, plane, and ship schedules up-to-date; are you avoiding the use of airmail and special delivery to business firms over weekends when they are closed; for faster service are you relying on airlift which is 4 cents mail sent by plane on a space available basis, instead of regular airmail; are you spending special delivery fees on parcel post packages instead of special handling; are you destroying spoiled envelopes and tapes bearing metered postage instead of redeeming them for 90 percent of their face value at the post office; are you sending out promotional material at first-class instead of third-class rates; have you checked any enclosures included with such material for proper weight; are you cooperating with the post office, and taking advantage of all the services available to its patrons?

The answers to these questions will readily determine whether you are operating your mailroom economically or extravagantly, and whether you are getting the kind of postal service which you expect and to which we feel you are entitled. Significant economies in mail operations and improved service can be obtained only by careful one-the-scene analysis and testing.

Airmail service is one of the most likely areas for realizing postage economies in any company. In appraising the relative merits of air versus surface mail, each company must consider a variety of important factors. One of these is the extent to which its mail is addressed to large cities. Although all large cities have frequent airmail service, many small towns have no direct airmail service; and as a result, a letter or package very often goes through many handlings and transfers. In addition, weather plays an important part; and when planes are grounded because of unfavorable conditions, the mail is forwarded by surface transportation, or is held for later plane transportation, pending favorable weather.

Many firms are unaware of the fact that the post office may forward matter bearing airmail postage via surface transportation if, in its judgment, equal or superior service will result.

One of the main points to bear in mind is—does the destination warrant the use of airmail? In some cases, the letter will arrive just as soon via ordinary first-class mail. For example, Delaware, Maryland, Connecticut, and New Jersey do not receive airmail service from New York. In general, avoid the use of airmail for distances under 200 miles. One of the common errors made by firms is the use of airmail to Philadelphia, Pa.

Among many firms, one of the most frequent mistakes is their failure to give not alone to their own mailroom but to the post office, advance notice of their large mailings. One company had to spend considerable money for postage and overtime pay to send its Christmas customer gifts by special delivery to assure their receipt by December 25—which could have been avoided had they planned their gift-giving earlier and used ordinary mail.

In the case of large dividend and proxy mailings, the New York Post Office has had considerable success in getting the corporations involved to let us have this mail in advance—particularly for distant points—so that simultaneous delivery is made to stockholders throughout the country on the due date. This has made for a greatly improved management-stockholder relationship; and the same procedure has been employed with department stores and advertisers in announcing their special sales and ads.

Simple errors involving incomplete or inaccurate addresses, and multiple letters to the same address are other ways of adding to your mailroom costs.

Postage meter machines should be utilized when the volume of mail warrants, as they are timesavers for your personnel and a record of postage expenditures over which management can exercise control. The value of this type of equipment is also reflected

in the fact that it expedites your mail within the post office—for it eliminates the facing and cancellation operations, and provides for earlier dispatch to trains, planes, and trucks.

The use of zone numbers also expedites dispatch and delivery of mail, for it enables even the least experienced clerk to sort mail much faster. We shall be only too glad to zone any of your mailing lists if you will send them to us. In addition, the separation of local from out-of-town mail likewise eliminates entirely the initial step in mail sorting. To assist in this latter respect, the post office advocates and offers without cost the use of labeled adhesive bands which should enable you to save on twine and rubberbands.

Another method of cooperating with the Post Office Department to help us give you improved mail service, is for you to mail early and often during the day, for—as our slogan says—"It's the better way." This, too, makes for more desirable connections with trains, planes, and ships; more evenly distributes the workload at the post office; and enables us to reduce night tours for the 70 percent of our force who are presently required to work after 6 p.m.—in order to handle the peak load which comes to us from the majority of firms at the close of the business day.

Apropos of this, we have recently introduced a special pickup service at 2:30 p.m. daily in ecrtain business areas, and I am happy to report that as a result of this innovation, we have increased our collections at this time of day from 30,000 to 300,000 pieces of mail. We are prepared to do the same for you members of the Association of Buying Offices, if you feel you would like to take advantage of it.

Another service available to our patrons without cost, is our postal information and training center which we expect to resume in the spring for representatives of business firms and their mailroom personnel to acquaint them with proper mailing procedures and practices, and familiarize them with the numerous methods and services available to them so that they may reduce their mailroom costs—as well as ours—and thus help us give them improved postal service.

This center will be in session every Tuesday, Wednesday, and Thursday, from 2 to 4:30 p.m. The weekly lectures which will cover various phases of postal matters are followed by a question and answer period.

The opening date has not as yet been scheduled, but if any of you are interested in participating just drop me a line and I'll be glad to see that you are notified. In the interim, however, our postal services representatives will be made available to you and your mailroom staff at any time to assist you with any postal problems you may have, make an analysis of your mailroom, and suggest where necessary, better mailing practices at reduced costs.

If, also, at any time any of you—individually or collectively—would like to make a tour of our New York Post Office to get a behind-the-scenes view of the largest and busiest post office in the world—the post office that serves 4½ million patrons of Manhattan and the Bronx through its 109 stations; the post office that employs approximately 37,000 people of all races and creeds; the post office that handles 34 million pieces of mail daily, and does a business of $800,000 daily; the post office that has a payroll of $12,500,000 monthly—I shall be happy, indeed, to make the necessary arrangements for your visit. This, I'm sure will give you a real insight into the magnitude of the operation that is ours here at New York, and make for a better understanding of our mutual problems.

It has been a real pleasure to be with you this afternoon, and to meet such an important body of men who, I understand, represent 95 percent of all department and specialty stores in the United States.

I trust some of the items I have highlighted will help you to effect economies in your mailroom operation, and will encourage you to feel that as taxpayers and users of the mails, you are shareholders in our postal organization, whom we are anxious to serve and whose friendship and good will we value and wish to preserve.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. KARTH. Mr. Speaker, on May 3 many thousands of Americans of Polish ancestry celebrated the anniversary of the Polish Constitution of 1791. My colleague and friend, Congressman FRANK KOWALSKI, of Connecticut, has prepared a most fitting statement for this day which I would like to record.

The Polish people have a long and proud history of producing leaders of strength, courage and deep conviction. Americans of Polish ancestry have proved themselves time and again equal to and reflecting the image of the great Polish leaders.

It is my belief that as Americans who know the value of freedom, we should work continuously to help the Polish people gain greater independence from Soviet Russia. Those who seek our refuge from the present tyrants who control Poland should be welcomed to our shores.

Indeed, we must do all we can economically and diplomatically to help free the Polish people from the domination and rule of atheistic communism. There is another thing all Americans can do, each in their own way, that is to ask the Supreme Being to give the liberty loving Poles the courage, hope, and grace to carry on the struggle for freedom.

The statement follows:

POLISH CONSTITUTION DAY

(By Hon. FRANK KOWALSKI, of Connecticut)

May 3 is one of the most significant landmarks in the history of the Polish people. It was 168 years ago that the great Diet of Poland adopted a remarkable instrument of government that effected a peaceful revolution without resort to the violent and terrifying methods of the French Revolution. By the creation of that liberal and progressive Constitution, Poland's leaders led their countrymen from the feudal path of the Middle Ages to the broad and democratic highways of modern times.

By a very fitting double coincidence, the anniversary of the Polish Constitution falls in the midst of the 16th anniversary of the heroic uprising in the Warsaw ghetto—April 19 to May 16—which is being solemnly observed in Jewish communities throughout the world—and during the weekend in which Loyalty Day is celebrated in the United States.

The Constitution of 1791 introduced the principle of ministerial or cabinet responsibility in the Polish Government. The intricate and obstructive features of the old system and the many class distinctions associated with it were eliminated. A bicameral legislature with full lawmaking authority was created. Economic and social barriers between the nobility and the burghers were lowered. The townsmen recovered the local authority over the courts which they had formerly enjoyed but later lost to the central government. Religious toleration was established and the peasantry was taken under the protection of the law. The Constitution of 1791 thus abolished the worst abuses from which the Polish people had been suffering for centuries and proclaimed the great principles of political equality and representative government that have inspired the democratic movements of modern times.

The Communists have tried in vain to crush religion in Poland. The spirit of Polish resistance is symbolized by the Catholic Church, which has boldly challenged the effort of the Soviet overlords to erase the great religious traditions of the Polish people. Writers, students, and men and women in every walk of life have followed the lead of the church in opposing communism, even at the risk of their freedom and their very lives.

While this spirit lives—and it always will—the people of Poland will pray, and struggle, to win back their heritage of freedom.

Today America is proud to join in celebrating the anniversary of the Polish Constitution of 1791. The contributions which Americans of Polish ancestry have made to every facet of the life and culture of the United States are well recognized and strongly appreciated by all of our citizens.

Today our hearts are heavy because the Poles in their homeland are not permitted by their Communist oppressors to join with us in commemorating this great day. Yet the spirit of liberty, justice, and national independence in Poland cannot be exterminated by any totalitarian conqueror. The Congress of the United States joins all Americans of Polish descent in this celebration and heartily expresses its hope that once again the people of Poland will be able to observe freely and without fear the anniversary of their great Constitution and all that it means to the cause of freedom and justice.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 2, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

Failure by the House to override the Presidential veto was the big event of the week. The Senate had already done so by a vote of 64–29. That put it up to the House. The vote was 280 to override the veto to 146 against it. (I was against, the only Texan of either House or Senate.) This all started with a bill to transfer from Secretary of Agriculture Benson to the Rural Electrification Administration (REA) Administrator the authority to approve or disapprove the REA loans. Far short of making a logical or factual case for the need of such a move, this bill became a political move to discredit Secretary Benson, whom some critics would

blame for the farm program mess inherited from earlier administrations (and for the failure of Democratic Congresses to change it by legislation). Easily overlooked were the facts (1) that the Secretary had never disapproved an REA loan, (2) that the American Farm Bureau backed Secretary Benson and the President in their position, and (3) that the existing law is the result of Hoover Commission streamlining of Government. So it became strictly a political issue, as many saw it. Democrats voted to override the President (plus six Republicans) while Republicans (plus four Democrats) voted to support the President. There's far reaching significance here, considering that many spending bills to exceed the budget are awaiting the outcome, as a precedent. It appears now that a veto will not be overridden on spending beyond the budget, an issue more easily understood. I believe the public will support the President and those of us who believe in not spending more than we take in.

The Health, Education, and Welfare appriation bill passed handily, but with misgivings by some of us who think there is a limit to how much money should be spent. The bill totaling $3,348 million exceeded the budget by $181 million. Items receiving more money than last year (when expenditures exceeded the budget by $13,000 million) include: (1) Washington's Howard University for Negroes, $4.6 million, (2) vocational education grants to States $34 million, (3) sewage treatment plants $45 million, (4) a host of health services. Valid points to remember: (1) Costs, as well as benefits, should be weighed by Congress. It isn't enough idealistically to recognize a need; we must weigh its cost as well as determine if it's a Federal prerogative, (2) programs, once established as Federal in scope and needed should be made self-supporting; this means either cutting the amount to be spent (or limiting increase) or raising taxes to pay for them. Otherwise, we are not being fiscally responsible. An encouraging factor is the reduction of Labor Department appropriation by $23 million below budget estimates. It can be done.

Amendment to the Railroad Retirement Act, and Unemployment Insurance Act passed handily. Retirement benefits were increased 10 percent (as they were 4 years ago). Justifiable concern was felt over a program already running $169 million yearly in the hole. As an effort to correct this, taxes will be increased to employers and employees alike and will keep going up in future years (as a companion measure to social security taxation). The tax incerases are intended to make the program actuarially sound but there is still some question about this. Unployment and sickness compensation was increased from the present 50 percent of daily pay to 60 percent, and the daily amount ranges from $4.50 (to total of $039) to $10.20 (to maximum of $4,000).

For my part, I am concerned that the already financially jeopardized railroads are being overloaded with additional employer costs, with attendant risk to financial solvency to railroad management and workers alike, particularly in view of recent Federal loan aid to help railroads make both ends meet. The expenses of featherbedding still go unchecked, almost uncriticized.

Item of interest: Michigan under Governor Williams, political protege of Walter Reuther cannot meet its State employees' payroll (despite tax advances willingly made by the businessmen so badly maligned by both Reuter and Williams). And Messrs. Williams and Reuther would tell other States and the Federal Government politically how to operate government. Surely now, running out of money proves the fallacy of their teachings, that we cannot spend ourselves rich.

Debatable topic: Can individual human beings, whose intrinsic worth is undisputed by our religious beliefs, develop to their full potential in any society other than capitalistic? I have some ideas about this. How about you?

Israel Independence Day, 1959

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DINGELL. Mr. Speaker, on May 3, Israel celebrates the 11th anniversary of her independence. Over the years the ties that bind together the people of America and Irsael have grown stronger. What is more, our two nations are drawn together by the bonds of common heritage and by the recognition that we both face the threat of Soviet Communist imperialism. This joining of popular feeling and national interest has created a union of America and Israel that is strongly and deeply rooted. Our national policies must be conceived in light of these realities.

There are few lands beyond our own shores for which the American people have as deep an affection as they have for Israel. This is true, in part, because of the many Jewish people in the American community. But our mutual respect is much deeper and more widespread than that. We recall Hitler's effort to obliterate the Jews who were unfortunate enough to live within his tyrannical empire. And we recognize that the Jewish people have created a modern democracy in the Middle East where democracies are few and far between.

When the State of Israel was created we rejoiced at the news, because we knew that at last these people who had endured so much would find a home in the land of their historic kingdom. As they fought for their statehood and finally secured their independence against overwhelming numbers of Arab bands, we rejoiced again and contributed materially to help establish the new nation. It is no exaggeration to say that the aid that has gone directly from the American people to the people of Israel since 1948 has been more than double the official foreign aid that has gone from the U.S. Government to the Government of Israel.

Our friendship and respect for Israel continued as we watched the desert blossom and a democratic society spring up. It is widely recognized that Israel has used American foreign aid to better advantage than any other state in the Middle East. A well-educated, industrious people, they have set forth with the enthusiasm and vision that only pioneers can muster to their cause. They have worked hard and have built a thriving, modern nation where formerly there was little but desert, poverty, and disease.

Today Israel lives in uneasy peace. There is the longstanding bitter dispute with her Arab neighbors which always threatens to erupt in violent border incidents. But now there is also the increasing Russian activity in the Middle East. The Soviets exacerbate local problems to gain influence and perhaps domination in some countries there.

Israel and the United States stand together on their most vital interests in the Middle East. Israel's security depends ultimately upon reaching some agreement with the Arab countries so that she can devote her resources to peaceful economic development in cooperation with her neighbors. Israel's security is also threatened by Soviet expansion. The United States desires the establishment of peace and voluntary cooperation among the Middle Eastern countries. Therefore, our two countries must work together for peace and cooperation in the Middle East.

On this day when Israel celebrates the 11th anniversary of her independence we extend our best wishes to the Israeli Government and to the heroic people of Israel.

Citation to J. Edgar Hoover by Our Lady of Mount Carmel Church of Bayonne, N.J.

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. GALLAGHER. Mr. Speaker, the United Sodalities of Our Lady of Mount Carmel Church of Bayonne, N.J., recently presented a citation to Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, at his office in Washington, D.C.

I heartily concur with the thoughts expressed in the resolution and commend the United Sodalities of Our Lady of Mount Carmel Church for this expression of their esteem.

The citation follows:

"Whereas J. Edgar Hoover has been Director of the Federal Bureau of Investigation for 35 years; and

"Whereas during his brilliant career of courageous, conscientious, and able public service in laboring unrelentlessly in the interest of maintaining and safeguarding the laws of our Nation and protecting our country from the constant threats of subversive elements, especially the Communists who seek to destroy our way of life, guaranteed by the Constitution of the United States; and

"Whereas Mr. Hoover, during this long and faithful tenure has at all times applied himself constantly and diligently in his service to the United States and to its citizens, giving of himself and his time without regard for his health or personal safety, thereby meriting the highest commendation and acclaim from public officials, the press, law enforcement agencies, and citizens, not only in the United States but also throughout the world: Therefore be it

"*Resolved*, That the director, president, prefects, and members of the United Sodalities of Our Lady of Mount Carmel, wish to recognize and extend their sincere and wholehearted appreciation to the Director

of the FBI, J. Edgar Hoover, for his outstanding contribution to the citizens of the United States and to commend him and the entire Federal Bureau of Investigation for their efforts, often silently but heriocally performed, under the most adverse criticism and opposition leveled against them; and be it further

"*Resolved*, That the director, president, prefects, and members of the United Sodalities draw up and publish this formal citation, attesting their admiration, and gratitude to J. Edgar Hoover and the Federal Bureau of Investigation."

In witness whereof we have affixed our signatures on this 12th day of February in the year of Our Lord 1959 at Bayonne, N.J.

A Tribute to Judge Learned Hand

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. UDALL. Mr. Speaker, of the truly great living men in our land today Judge Learned Hand must surely stand in the front rank. Though, to the shame of us all, this distinguished jurist never won appointment to the Supreme Court, nevertheless many think he made his own court, for a time, the first court of the land.

Judge Hand is now retired, but, most fittingly, last month on the 50th anniversary of his appointment as a Federal judge an appropriate ceremony was held to honor him in New York. One of those who presented a tribute at this dinner was Mr. Justice Frankfurter and I am placing his brief tribute in the CONGRESSIONAL RECORD so that it might have the wider audience it deserves:

FELIX FRANKFURTER'S TRIBUTE TO LEARNED HAND

May it please this audience: If Learned Hand is not to suffocate, one of us ought to desist from adding to the outpour of libations. Age, and a precious friendship of 50 years, perhaps make it appropriate that I undertake the uncongenial task of saving the man from the legend. Strange as it may sound, Judge Hand has, if not defects, certainly limitations. I have time to deal with only one of them. He has not been true to the test of the most important teaching of Socrates: "Know thyself."

With ample opportunities of self-knowledge, and after he had reached the Psalmist's age, he thus summed up his life:

"My life"—and since I like to be modern, I ought to say, and I quote—"My life has been uneventful, unadventurous, easy, safe, and pleasant." Could you really pick five more inadequate and inaccurate adjectives to summarize his life?

Uneventiful—if events take place merely in the world of action and not in the arena of the mind.

Unadventurous: if adventure requires the scaling of Mt. Everest and crossing Antarctica, and if there be no adventures of thought.

Easy: Can it really have been easy for him all these years to interpret the mysteries and the mumbo-jumbo of the nine Delphic oracles, and, at pain of a spanking, find clarity in darkness?

Safe: Has his life been safe, secure? He, safe and secure, who has been buffeted and battered by the largest self-doubt of any human being I have ever encountered?

And then he says "pleasant." Well, he has something there, but it is a sly bit of truth. Would he have had as much pleasure in life if he hadn't been there?

Really, for one who is conceded to be the greatest master of English speech on the bench since Holmes laid down his pen, that is a strange show of the misuse of language.

He won't mind, I hope, if I shall try to teach him a lesson in truth-speaking, even about one's self. And so, in substitution of his five inaccurate, inept adjectives I offer you my five adjectives: daring, romantic, antediluvian, sophisticated, and lucky.

Daring: Of course, daring. In a world in which the pressures for conformity are so on the increase, he has dared to be gaily and solemnly himself. He has dared to challenge passion, prejudice, and intolerance, even when parading in the name of patriotism and supported by the voice of the multitude.

Romantic: Isn't the man a romantic, the windows of whose mind are open to every wind of doctrine and who is ready to find the Holy Grail in the most unlikely places?

Antediluvian: Is not our judge antediluvian, who is guided by the reason of which he is the trustee and the delegate, and not the inventor, who deems his duty limited as a judge's duty should be limited and does not feel empowered to remold the world according to his heart's desire?

Sophisticated: Is a man not sophisticated who doubts his own basic premises and yet is guided by them until he discovers better ones?

Lucky: He has achieved the one thing in life that makes all the rest bearable—a happy marriage. Sheer luck. And he has been lucky in his failures. When years ago he offered himself to the electorate of New York (as a candidate for the New York Court of Appeals), they declined to send him to Albany. Now, hasn't he had a better time in New York than he could possibly have had in Albany, native city though it be? And with every respect—with every respect—for that great court, with awareness of his filial attachment to it and high regard for the great men, the truly great men, who have graced that court, surely it is a fact that the range of litigation, the problems that have come before this court, have been more teasing and exiciting even than the problems that come before the great court in Albany.

Finally—and here I may not have all of you or any of you with me; I can't help that—finally, he was lucky in not having drawn a successful ticket in that odd lottery by which men are picked for the Supreme Court of the United States. In the first place, down there his views would have been diluted eight-ninths and here only two-thirds. In the second place, I think almost inevitably, though certainly as authenticated by history, the controversies down there are more strident than they are in the quietude of Foley Square. In the plenitude of Learned Hand's gifts, one of them has been denied him, I think. I do not think he has gaudium certaminis, the joy of battle. Again, he certainly would have, because he should have, found himself more circumscribed in the life in Washington. He would have found himself more contained within the curtilage of the court and, thus, we would have been denied the moral leadership, the great influence of his courageous and eloquent free spirit all these years.

He has demonstrated and given heartening proof of the fact that moral influence, achievement of excellence, the fertilization of thought are not dependent upon place. And so, although Mr. Justice Holmes felt that the right place for Judge Hand, even while he was still a district judge, was Washington, and, if you will forgive me for saying so, although I spent not a little part of my life to promote that end as opportunity availed, I insist with deep conviction that he was lucky in not having won out in that strange lottery.

But luckier have we been that he was endowed with these gifts and has put them to the uses to which he has put them. After every one of us in this room will no longer be here, long after that, Learned Hand will still be serving society so long as law will continue to exercise its indispensable role in helping to unravel the tangled skein of the human situation.

Milwaukee's Civil Defense Director Outlines 10-Point Program for Industry

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. REUSS. Mr. Speaker, we in Milwaukee feel that our Civil Defense Administration has done certainly as much, and probably more, than that of any other major city in the country in making our people aware of and interested in this vital phase of national preparedness.

Not only Milwaukee officials but also many of its citizens have expressed concern, which I share, that the Congress has given insufficient attention to civil defense. It is my hope that the recent reports of the Military Operations Subcommittee of the Committee on Government Operations, and the activities of other congressional groups covering civil defense, will result in the most serious consideration being given to the full implementation and improvement of the civil defense program.

In an address to the Milwaukee Foremen's Safety School on April 22, 1959 Milwaukee's civil defense director, Brig. Gen. Don E. Carleton, made an excellent presentation of the civil defense need, and of a program for industry. Under leave to extend my remarks in the RECORD, I include General Carleton's speech:

WHAT TO DO IF DISASTER STRIKES

We are at war. Whether or not we realize it, we are today engaged in an all-out war with imperial communism as represented by the Soviet Government. This war is being fought on all fronts—economic, political, and military—and I must emphasize at the outset that our loss of any one phase would be just as serious as the loss of the others. We must also not lose sight of the fact that a nuclear shooting war could at any time result from activities in either the economic or political theaters.

In Europe the Communists are waging war on the United States by every means short of shooting. On Moscow's orders, local Communists move swiftly into ready-made crises encouraging Algerian terrorists in France and unemployed workers in Italy. They have deliberately developed a crisis over Berlin, and have, whenever and wherever possible, infiltrated and spread confusion through labor and political movements.

In the Far East, Chinese Communists armed with Russian planes and artillery, periodically bombarded Quemoy and Matsu with the declared intention of taking

Formosa; all-out war or not. The United States is called the "paper tiger" by all Asia. Communism is the "way of the future."

In South Asia, Soviet and Chinese Communists are fighting hard—using all means, including guerrilla war in the jungles. Local Communist parties control a major State in India and are powerful supporters of the Indonesian Government. Once in power, any devastation from the dictated attitude is met by the Communists with devastating ruthless suppression as exemplified by what is going on in Tibet today.

In the Middle East they have used Egypt's Nasser to open the Arab nations to communistic infiltration. They seek to control the oil of the Middle East, not because it is needed by Soviet Russia, but because Middle East oil controls the economy of Europe.

COMMUNIST TARGETS

Africa, the uncommitted continent, is a target of Communist infiltration where race differences are fostered and intensified.

In Latin America, "Yankee, go home" is the cry. Communist agents roam this continent from bases in Mexico and Uruguay. Communist Party membership is soaring in Venezuela, Argentina, and Chile, as well as in Bolivia where our Embassy was recently stoned by street mobs.

Yes, my friends, we are engaged in a war that only our enemy seems wholly committed to fight. While we have attempted to serve and protect each separate agricultural, industrial, and financial piece of our national economy and at the same time fight and win a worldwide war. Gentlemen, this just isn't possible.

From a strictly military viewpoint, how do we stand?

The Imperialist Soviet Government has at this time 175 modern, up-to-date ground divisions, most of them armored and equipped since the end of World War II. This vast force stands poised in western Russia, Poland, East Germany, and Czechoslovakia and can be augmented by at least an equal number of fully equipped divisions from the Ready Reserve in 30 days.

In contrast, we can muster 14 regular divisions now at duty stations extending from Japan to Germany. We can add to that at least 80 more from our allies that are, however, of questionable availability and effectiveness.

On and under the sea, the Soviet imperialists now have a navy second only to the United States. However, they have a fleet of submarines numbering over 500. This is a greater submarine force than that possessed by the rest of the world combined. I ask you to contrast this with the fact that Hitler had approximately 50 submarines at the height of the blockade that almost succeeded in winning World War II.

The United States now has about 100 submarines, only about 20 of which can be considered modern. We do have, as far as we know, the only nuclear-powered subs in the world today, but the Soviets have demonstrated the ability to build nuclear motors that can be adapted to under sea craft.

A DANGEROUS OFFENSIVE WEAPON

The development of the intermediate range (1,500 miles) missile to be launched from beneath the surface of the sea, has radically changed the employment of the submarine from a defensive weapon to one of the most dangerous offensive weapons now known.

Eighty-five percent of our industry and all but 7 of our 50 largest cities are within range of submarine-launched guided missiles.

In the air, the Soviets have more than 1,000 intercontinental bombers. These are able to carry nuclear weapons to any target in this country. They also have about 20,000 light jet bombers.

However, as far as piloted aircraft is concerned, we are considerably ahead of the Communists as to quantity and quality, but it is still believed that the enemy has the capability of penetrating our defenses.

Most of our piloted interceptors would have limited combat capabilities against Soviet bombers at very low or very high altitudes, and enemy pilots could launch supersonic missiles from points beyond the range of our Nike defense.

With the launching of the Russian sputniks and luniks now in orbit around the earth and the sun, the Communists demonstrated their ability to produce intercontinental ballistic missiles which can be armed with nuclear warheads equal to millions of tons of TNT, that could reach any target in the world.

Although our radar warning system can be expected to give us almost certain warning of a piloted bomber attack, it is at present ineffective against intercontinental missiles.

PUSHBUTTON WAR

You should know that we have also been moving rapidly along in the development of our own ICBM's, and although these weapons cannot yet be considered operational, the Atlas and others have been tested over the full 5,000- to 6,000-mile range and landed in the designated impact area with acceptable accuracy. What is more encouraging, it was announced in Chicago a few weeks ago, that our Minuteman, a solid propellant ICBM would be operational by early 1960. Launching sites for these weapons are now being built. The Minuteman missile can be stored indefinitely in underground tubes that are virtually bombproof and can be fired by remote control to strike any designated target on the other side of the earth.

It looks as though the age of pushbutton war is almost here.

So what's to be done?

It is obvious that at this point in time, we may assume that we are just about even with the Communists militarily and that an attack on this country or our allies could be met with a devastating answer.

We must also accept the fact that the West has been steadily losing on the political and economic fronts. Since World War II, the Communist empire has increased from 192 million people to 960 million people and now has complete domination over one-sixth of the land surface of the world.

Our ability to compete with the Soviets on the world market and maintain our present standard of living is severely limited. In fact, as stated earlier, it simply cannot be done.

Khrushchev has stated on numerous occasions, "We are interested in granting economic aid to other countries for purely political reasons and are prepared to undersell the West regardless of cost. We will win, we will bury you."

RUSSIAN INDUSTRIAL GROWTH

Right here may I quote from a speech given in New Orleans recently by Allen W. Dulles, Director of the Central Intelligence Agency. Mr. Dulles seldom speaks in public, and when he does his words are worth heeding:

"Russia's present industrial growth rate is almost three times that of the United States. The Russians are plowing back into investment, 30 percent of their production compared with 17 percent in the United States. They are funneling about twice as much of their entire production and services to military ends as is the United States.

"They gear their economy to growth and military might while we gear ours to higher living standards. Last year the Russians manufactured only 1 auto for every 50 we produced, but they turned out 4 machine tools to our 1."

"If they succeed and we fail," warned Allen Dulles, "it will only be because of our complacency and because they have devoted a far greater share of their power, skill, and resources to our destruction than we have been willing to dedicate to our own preservation."

So what's to be done?

How vulnerable are we? How do our passive or nonmilitary defenses stack up against those of the Soviet?

The Russians have been working hard at civil defense preparations since World War II.

Moscow, Stalingrad, Leiningrad, and other Russian cities are equipped with underground shelters. In Moscow, they are said to be over 100 feet below the surface, in which entrance is gained by high speed escalators.

All new construction must include shelter.

All citizens between the ages of 16 and 60 must take a minimum of 20 hours a year civil defense training.

Neighborhoods and industrial areas are thoroughly organized to respond to the warning signals.

Industry has been following a strict program of decentralization since World War II. Much of the Soviet heavy industry has been moved into the mountains where underground factories have been built.

It is forbidden to build up urban areas in the vicinity of essential heavy industry. Shelter areas are provided in all industrial and business establishments.

NO U.S. SHELTER PROGRAM

In contrast, in the United States, any program for shelter against blast or the heat effects of an atomic explosion is nonexistent. A program for shelter protection against the widespread lethal effects of radioactive fallout is on paper only.

Although our population of 180 million is almost equal to the 192 million in Russia, it is concentrated in a land area about one-third the size of Russia.

Two-thirds of the U.S. population live in cities.

Seventy-one percent of our essential defense industry and 54 percent of our industrial workers are concentrated in 50 of our major metropolitan areas.

Four-fifths of our current population growth is taking place in metropolitan areas and the degree of concentration is steadily increasing.

This concentration of industrial production creates ideal targets for modern weapons of mass destruction. Big cities are easy to find, easy to hit, and easy to destroy with thermal nuclear weapons that measure their lethal area in hundreds of square miles.

So what can we do in industry now that will offer a better possibility of survival under nuclear attack?

1. Establish a self-help or civil defense organization in every plant by establishing an effective emergency communications system. Establish plant fire brigades which can be manned by trained volunteers from the work force. Maintain medical and first-aid facilities and train personnel in their use. Establish and maintain rescue teams through continual training. Complete your plant protection organization by establishing well-trained emergency wardens, welfare and police groups. And, by all means, make certain that you have a warning system that is continually operational.

Many of these things exist to a greater or less extent in large industrial organizations, but in almost all cases need refinement and expansion to meet the emergencies of a nuclear war.

2. Provide security plans for protection against espionage and sabotage. Most defense plants have them, but countless others take for granted that vital processes and equipment are adequately protected by a set of regulations.

3. Provide shelters by designating safe areas in existing buildings and including protective features in the design of new construction.

4. Provide a plan for evacuation, including reporting locations outside the critical target area where help, reception, and care can be obtained.

5. Plan for the continuity of management to include the selection and equipping of alternate company headquarters, the establishment of personnel succession lists, and the development of emergency financial arrangements.

6. Provide protection of vital records and documents by duplication and storage in vaults or areas safe from attack.

7. Provide a plan for emergency repair and restoration to include a system for quickly assessing damage and for restoring production including alternate arrangements for power, equipment, warehousing, and supply.

8. Establish industrial material aid agreements for Civil Defense by joining together with neighborhood industrial plants and facilities to provide assistance to each other in the form of equipment, materials, or personnel in time of disaster.

9. Provide for the decentralization of production. That is be sure that critical items are manufactured in more than one place.

10. Provide for the dispersal of new industrial plants. This is the employment of the simple military measure of using space for defense against attack.

Now, I have outlined the dangers we face, discussed our relative position with our declared enemy, and given you an outline of what should be done in industry.

It is obvious that if we are not going to lose this war there is much to be done.

In closing I quote from the National Plan for Civil Defense and Defense Mobilization signed by the President.

Industry: "The leaders of industry, agriculture, labor, and financial institutions are responsible, in cooperation with appropriate Government agencies, for planning and executing measures designed to assure the continued functioning or rapid restoration to functioning of the essential elements of the national economy."

It is not only the privilege, but the sacred duty of every citizen and every organization to do those things which are necessary to preserve our Nation when attacked; and, gentlemen, we are being attacked at this moment at home and throughout the world.

Tribute to Milan R. Stefanik

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BOLAND. Mr. Speaker, today we pay tribute to a great patriot of Czechoslovakia. General Miland R. Stefanik was the third of the "triumvirate of savants" who, in October 1918, founded the Czechoslovak State. Masaryk and Benese were the other two members of this famous trio.

Stefanik is in the grand tradition of men who gave their all for their country. During his youth he left his native land and went to Paris to study astronomy. He was a brilliant student and very highly regarded in his field. Ample evidence to this effect is provided in the fact that soon after his academic training he was appointed secretary of the Astronomical Observatory in France. This position sent him all over the world on astronomical missions. It was during this time that he became imbued with the spirit of forming the State of Czechoslovakia.

With the advent of World War I, Stefanik abandoned his career and enlisted in the French Army. His many faceted brilliance included the vocation of a military strategist. This was at once apparent and he soon was promoted to the rank of general. Combined with his active, effective role in the war, he was instrumental in organizing the Czechoslovak military forces in exile, and the Czechoslovak National Council which was to be the backbone of the new European state. After the war he was justly rewarded in his homeland with the cabinet rank of Minister of National Defense. Even though in ill health, Stefanik worked fervently and with great diplomacy for his newly constituted nation. Many here in the United States undoubtedly remember his learned and erudite lectures, especially those in Carnegie Hall, New York, in which he explained the Czechoslovak situation so expertly.

It was indeed a tragedy when, at the height of his world prestige, Gen. Milan Stefanik was killed in a plane accident on May 4, 1919. He was but 39 years old. In tribute to him, the Czechoslovakian Government erected a monument in his memory at the place of his death.

It is with pride and respect that I salute this man of many talents. May his guiding spirit be a source of continued hope and inspiration to the subjugated peoples of Czechoslovakia today.

Radiation Fallout From Nuclear Bomb Tests

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. PRICE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a television dialog between a panel of interrogators and my colleague the gentleman from California the Honorable CHET HOLIFIELD. The importance of the subject of radiation fallout from nuclear bomb tests is considered in the dialog. This subject will be explored further this week during hearings by the special Subcommittee on Radiation, of which Mr. HOLIFIELD is chairman:

"FACE THE NATION"

(As broadcast over the CBS Television Network and CBS Radio Network, May 3, 1959)

Guest: The Honorable CHET HOLIFIELD, Democrat of California, U.S. House of Representatives.

Moderator: Stuart Novins.

Panel: John W. Finney, New York Times; George Herman, CBS News; Nat S. Finney, Buffalo Evening News.

Producer: Ted Ayers.

Mr. NOVINS. Much has been said about the dangers of radioactive fallout, and most of what has been said has been contradictory. We have been told that there is danger, and we have been told that there is not danger. We have been told that experts in atomic energy are holding back important information from the public, and we are told that they are not holding back such information.

It is with the hope that some clear statement will be forthcoming that we turn to Congressman CHET HOLIFIELD, who is here now to "Face the Nation."

Representative HOLIFIELD, your subcommittee of the Joint Atomic Energy Committee goes into the fallout problem this week. But, of course, you have been close to it for a long period of time. So let's start the questions, if you will, with the first one from Mr. Finney.

Mr. HOLIFIELD. Fine.

Mr. JOHN FINNEY. Well, Mr. HOLIFIELD, with that introduction, in your opinion, how great a threat does fallout pose to mankind?

Mr. HOLIFIELD. It depends upon the intensity of the fallout, and we must recognize that up until the moratorium, which is in existence now, that there has been an increasing tempo of bomb tests, and we will get into the degree of that intensity as we go through these questions today, I suppose.

But I would say that at the present time I do not think that there is a tremendous danger involved. There may be some danger which has not yet been able to be proven in a laboratory, but certainly there will be danger if bomb test increases in the geometric ratio that it has in the past 10 years.

Mr. HERMAN. Mr. HOLIFIELD, this danger does not exist in a vacuum. How can you compare it to the danger from other radiation sources, from X-ray machines, radium dials, and so forth? How big a danger is it, viewed that way?

Mr. HOLIFIELD. Well, let me atack it in this fashion. The natural background radiation which exists in all parts of the world is generally conceded to be about 7 roentgens over a 70-year lifetime. The bomb test fallout to date has that raised one-tenth. In other words, in the place of ten-tenths of normal background radition, you have eleven-tenths. You have one-tenth more.

Now ,one mouth X-ray might give you from 10 to 20 roentgens. Now, that's on a specialized part of the body; that's not the all-over body exposure. But a GI who goes through the complete set of X-rays may get as many as 25 to 50 roentgens.

Mr. NAT FINNEY. Representative HOLIFIELD, I'd like to ask you a couple of related questions.

I believe that, as a member of the Joint Committee on Atomic Energy, you must have approved, either explicitly or implicitly, the various series of tests that have been conducted by the Atomic Energy Commission so far.

Is that correct?

Mr. HOLIFIELD. No. Those tests are held under the Department of Defense, in conjunction with the Atomic Energy Committee, but it is part of our national policy, and our Committe does not approve specific tests.

Mr. NAT FINNEY. Well, have you—have you disapproved of any of them, or attempted to stop any of them?

Mr. HOLIFIELD. No; we have not.

Mr. NAT FINNEY. I take it, sir, then, that it hasn't been in your mind that these tests that were conducted would do a substantial physical injury to the people of the United States, else you would have attempted to have prevented them, I take it.

Mr. HOLIFIELD. You are right. It is the unanimous position of all the 18 members of the Joint Committee on Atomic Energy that these tests are not detrimental, in a global way, to the people of the world. If there are—if there is any danger involved, it would be of such infinitesimal amount that I doubt if it could be proven

in a laboratory to be of deleterious effect upon a human being.

Mr. NAT FINNEY. And that, sir, is the basis upon which you have been agreeable to having these tests go on?

Mr. HOLIFIELD. That is true. We feel that the national defense is important enough that if there is some risk involved, we must take that risk.

Mr. JOHN FINNEY. Well, then, Mr. HOLIFIELD, if this does not pose such a great danger, the threat of fallout is not a valid reason, then, for us to stop atomic tests at this point?

Mr. HOLIFIELD. It depends upon what you mean by the threat of fallout. If bomb testing continues, and it gets to the point where they have more and more radioactive fallout release, then it will become dangerous, and I think it is the fear of future danger more than the fear of present existing danger which has alarmed the people of the world.

Mr. NOVINS. Mr. HOLIFIELD, in the interest of clarification, is it true that this fallout is cumulative and that the danger is cumulative, it isn't just a case of being exposed at one time and if you get away with that, being safe? The stuff keeps building up, doesn't it?

Mr. HOLIFIELD. That is true. All radiation is cumulative and the figures I give you of the increase of one-tenth of normal background radioactivity is an accumulative figure.

Mr. HERMAN. Mr. HOLIFIELD, it is usually said that the quid pro quo in the danger from testing is that we are building up a deterrent force with which to prevent a nuclear war which would be vastly more horrible. Can we afford to stop testing?

Mr. HOLIFIELD. Well, this is a $64 question, of course.

Now, the national policy at this time, as expressed by the President and the Secretary of State, is to the effect that if the Soviets will agree with us to cease testing, and if they will inaugurate a system of detection and inspection which will prove that they are keeping their word, then we are willing to stop testing for the time being.

Mr. HERMAN. Then does the committee, the Joint Congressional Committee on Atomic Energy believe, with the administration, that a halt in all further testing will keep the relative military positions of the Soviet Union and the United States, as far as nuclear weapons are concerned, unchanged—their relative positions?

Mr. HOLIFIELD. I could not answer for the full committee on this, because I think there is a diversity of opinion on the committee.

I would say that the problem of obtaining an adequate inspection and detection system is very great.

There is one factor which has never been brought into the political discussions between the negotiators in Geneva, and that is the problem of the great land mass of Red China, and it would be entirely possible for the Soviets and the United States to agree to cease testing, and it would be possible that unless the land mass of Red China was included in the detection and inspection system that there could be surreptitious tests by the Russians in the land mass of Red China.

Mr. HERMAN. What I mean, sir, was aside from the question of detecting tests, if the ban is carried out in good faith, does one side or the other stand to lose more in relative military strength?

Mr. HOLIFIELD. Well, this is a question I do not think can be answered.

We do not know exactly what the Soviets have. We are confident that we are ahead of them, I believe, in most of the weapon development.

Mr. JOHN FINNEY. Mr. HOLIFIELD——

Mr. NAT FINNEY. Mr.——

Mr. NOVINS. Mr. John Finney, please.

Mr. JOHN FINNEY. Mr. HOLIFIELD, let's get it on the record here. Are you in favor of a test ban, and if so, under what conditions?

Mr. HOLIFIELD. I am in favor of a test ban providing I could be assured that there was a detection and inspection system, worldwide, in effect which would insure that another nation would not obtain an advantage in the development of weapons.

Mr. JOHN FINNEY. In other words on terms which the Soviet Union thus far has refused to accept.

Mr. HOLIFIELD. That's right.

Mr. NOVINS. Mr. Nat Finney, please.

Mr. NAT FINNEY. Representative HOLIFIELD, John Foster Dulles, in talking about these negotiations that we are now in, in Geneva, said that one of the reasons for going there was the imponderables of the situation, the world situation. And, it was quite clear, he made it clear that one of these imponderables is a worldwide agitation about fallout which makes, builds a level of anxiety.

Now, there are people in this town who believe firmly that the hearings that you are about to hold provide a perfect sounding board for that agitation against the United States.

Mr. HOLIFIELD. Well, I do not share that opinion. I believe that in a democracy the people are entitled to the facts. It will be the attempt of this committee to bring out nothing but the facts. We will have men from both sides of the question testify before us. They will be scientists, in the main, who know something about it from a professional standpoint. Each side, the side that wants the tests stopped will be given, allowed to, individuals will be given, allowed the privilege of testifying, and the people that want them continued will be given the chance to testify. But in each case they will be asked to testify not on philosophical or political opinions, but to give us their professional opinion as to the specific scientific data involved.

Mr. NAT FINNEY. You don't think—do you think the harm that that will do the position of the United States in the world, and I take it that you watched the press tables during the first hearings——

Mr. HOLIFIELD. Yes.

Mr. NAT FINNEY. That that harm is justifiable?

Mr. HOLIFIELD. I do not believe that there will be any harm done. I never believe that in bringing the truth to the people about scientific facts which have a very important impact upon their destiny, that in a democracy that you are doing harm. I think that you, as you spread enlightenment and knowledge to the people in a democracy, it enables them to participate in the function of government more intelligently.

Mr. JOHN FINNEY. Well, along this line, Mr. HOLIFIELD, there have been frequent charges that the Atomic Energy Commission was suppressing and withholding facts about fallout from the American people.

Since your hearings, earlier hearings in 1957 when much of this field was brought out into the open, do you think the Atomic Energy Committee has been guilty of suppression of fallout information?

Mr. HOLIFIELD. I do not know of any specific case where vital information which should be made public has been withheld deliberately. There may have been some omissions or some slowness in letting some of this information out until it was properly checked.

You see, this is a very complicated subject. Our hearings 2 years ago filled two great volumes like this, and we expect to fill two more now on these hearings which will bring up to date the information which has not been publicized to the general public but which may have been released in many instances in scientific bulletins with very low circulation.

Mr. JOHN FINNEY. Well, then do you think the Commission has done a commendable vigorous job in exploring fallout and what threat it does pose to us?

Mr. HOLIFIELD. Yes. I think that in the last year or so that they have been very diligent. Last year the Joint Committee on Atomic Energy furnished them with $17 million for this purpose. This year they are furnishing them with $20 million for monitoring and testing, and testing soil samples and air samples and water samples and milk samples and all these sort of things so that we can get the information.

Mr. HERMAN. Mr. HOLIFIELD, aside from the question of diligence do you think it is wise in principle to have the same organization which is putting strontium 90 and other fallout products into the air, being the judge and making the measurements and telling the people whether they are or are not safe from the products that they themselves are putting in the air?

Mr. HOLIFIELD. In principle, I think that a separate agency should have the function of monitoring all radiation of every type, because you have X-ray radiation and other types of radiation. From a practical standpoint, it seems that right at this time the AEC has the greatest number of trained people, and they are also able to get $20 million a year. I doubt if any civilian agency could get that much money to do this job. And until I'm sure that some separate agency can get that much money to continue the contractual work and the actual laboratory work that they are doing now in the AEC, I would be against changing.

Mr. NOVINS. Mr. Nat Finney.

Mr. NAT FINNEY. Sir, wouldn't that apply to the Joint Committee on Atomic Energy of Congress, quite as well as to the Atomic Energy Commission? Don't you have both responsibilities too in the committee?

Mr. HOLIFIELD. We have the responsibility as long as it remains in the AEC. If for instance this responsibility was transferred to the Public Health Service, then it would go before another committee of the Congress.

Mr. NAT FINNEY. Then in principle sir, you believe that you should give it up?

Mr. HOLIFIELD. In principle, I would be willing to give it up, providing I was sure the Public Health Service could get $20 million a year. But you and I both know that on Capitol Hill it's very easy to get money for the Pentagon and it's very easy to get money for the AEC, but it's very difficult to get money for the Public Health Service.

Mr. NOVINS. Mr. HOLIFIELD, you pointed out a few moments ago that you thought you justified the risks of fallout on the basis of national security, that we had to take certain risks in order to stay at least equal to and hopefully ahead of the Russians.

But you also pointed out that even if the Soviet Union and the United States were to reach agreement on suspension of weapons tests, there still remains this vacuum which you described as the land mass of Red China.

Now, do you feel that on, again on the basis of national security, that it would be worth the recognition of Red China in order to arrive at some kind of means of negotiation with that government to insure that it be brought into any agreement that might be found possible?

Mr. HOLIFIELD. This gets into a different problem and a political problem of evaluation which many things must be considered.

I think, I'd like to answer you in this way: that I think the most important thing that could happen would be to do—to take any step which might be necessary to prevent a nuclear war. I do not see at this time how the detection and inspection system could function safely for our information, unless the land mass of Red China and every other

satellite nation in the world was included in the inspection system.

Mr. NOVINS. Well, then, the implication of what you are saying is that if it is necessary to recognize Red China in order to include it, you would go along with that?

Mr. HOLIFIELD. If it means the difference between having a nuclear war and not having one, and this is a first step toward preventing it, then I would say yes.

Mr. JOHN FINNEY. Well, Mr. Holifield, we have heard a lot of dogmatic statements from people on both sides of this issue of fallout. I'd like to ask you just one, two, three questions here, as to what we know for certain about fallout.

Do we know for certain how long that radioactive debris stays in the air, and how it comes down to earth?

Mr. HOLIFIELD. No; we do not. They are constantly revising their predictions on this. At first, I think Dr. Libbey thought that it would be 7 to 10 years before all of the stratospheric fallout of a particular bomb would come down. I understand that he has recently reduced that now to about 6 years.

I understand that there are people in the Defense Department that think it may be as short as 2 or 3 years.

Now, this does not change the factor of measurements. We are making the same measurements, whether it's 3 years or 10 years, so in one way, you might say, well, if all of a bomb radiation comes down in 3 years, at the rate we are measuring now, it would be less than if it came down in 10 years.

On the other hand, there is another factor that enters into it. Some of the short-life isotopes come down in the first 2 or 3 years, and they have not yet decayed, they have not burned out, in other words, where, if they stayed up there 10 years, they would burn out.

So this is a, this is a mathematical computation that is very difficult.

Mr. JOHN FINNEY. All right. Well, that's a very important and unknown factor.

Now, the second factor: Do we know what happens to that debris once it gets on the ground, how it goes into the plants, how quickly, how much the plants absorb, and how much they reject, and how it gets into animals and food supply? Do we know the exact ratios?

Mr. HOLIFIELD. We do not know the exact ratio. We have a great deal of information on that. We can measure the strontium 90 deposit on the soil. We can tell how deep it goes, how much there is there. We can measure it on the foliage. We can, in some instances, we can certainly detect it in milk, when it goes from the alfalfa the cow eats, into the milk, we can detect it there, and we can actually detect it in the bones of children after they drink the milk.

Mr. JOHN FINNEY. All right. Now we've got it into the children, and into the human beings.

Do we know how much damage is caused by a certain amount of strontium or caesium 137?

Mr. HOLIFIELD. I don't think we know exactly what—what the damage would be.

Mr. JOHN FINNEY. So we have three great unknowns still, don't we, in this whole fallout picture?

Mr. HOLIFIELD. Oh, I think we have many more than that, but three—I will agree to those three you mentioned.

Mr. HERMAN. May I speak to the point of a fourth?

Do we know where fallout is going to come, how it is to be distributed around the earth, in what regions, in what rainy or dry regions, and what belts of latitude?

Mr. HOLIFIELD. Well, we have some information on that and we are going to have more that will be released in these hearings. We know this, that most of the fallout falls in the Temperate Zone. We know that it falls where rainfall falls, more than in desert areas.

Mr. NAT FINNEY. Mr.——

Mr. HOLIFIELD. So we are accumulating some knowledge of it.

Mr. NAT FINNEY. I'd like to ask just one followup question to that.

Mr. HOLIFIELD. Yes.

Mr. NAT FINNEY. Do we have, do we know of one single human being who has become ill or has died from global fallout?

Mr. HOLIFIELD. No, sir; we do not.

Mr. HERMAN. Well, I'd like to speak to that point also, Mr. HOLIFIELD.

Does that actually prove anything? If we have an increase in numbers from, say, so many leukemia deaths to twice that many leukemia deaths, could anyone point to any one case of leukemia and say this comes from strontium 90, and this comes from an X-ray, a foot X-ray machine, and this comes from background radiation?

Mr. HOLIFIELD. You are speaking the truth. You cannot detect the difference, and we do not have enough years of statistical knowledge in order to say at this time that leukemia deaths are increasing or that they are not increasing, as a result of bomb tests.

Mr. NOVINS. Mr. HOLIFIELD——

Mr. HOLIFIELD. This is something we haven't found out yet.

Mr. NOVINS. In view of the fact that there are always unknown quantities and that there has not been enough time elapsed yet to collate all this information and to evaluate it, how can you possibly say that something is not dangerous, when you don't know what effect is being caused?

Mr. HOLIFIELD. Well, we, we say that from the best scientific knowledge that we have, judging on the intensity of the radiation that we do not believe that it is harmful, at least it's not harmful enough that we can detect it.

Mr. NOVINS. You mean harmful to people currently alive?

Mr. HOLIFIELD. Now let me—let me give you an illustration, a quick illustration.

If you get 7 roentgens in a lifetime from background radiation which includes normal background radiation and bomb test radiation, and if it takes, let us say—well, let us take the case of the Russell experiment on mice. Mr., or Dr. Russell used 100 roentgens on 5,000 mice and then he traced the genetic effect on 100,000 descendants of that 5,000 mice and found out that it did do genetic damage. But I point out to you that he used a hundred roentgens on a mouse in order to trace the genetic damage.

Now, when you talk about one-tenth of 7 roentgens or seven-tenths of 1 roentgen, causing leukemia or these other diseases, then I think you are in the realm of speculation and you are not in the realm of proven laboratory experiments.

Mr. HERMAN. Mr. HOLIFIELD, you have overwhelmed us with numbers on that, but is it not generally acknowledged by the geneticists at least that even an infinitesimal extra dose of radiation leads to at least an infinitesimal extra amount of damage to future generations?

Mr. HOLIFIELD. That is a theory they all subscribe to but they cannot prove it.

Mr. NOVINS. Mr. HOLIFIELD, let us—

Mr. HOLIFIELD. The threshold—the threshold—the threshold of radiation damage has never been set, whether it is at 0 or 0.6 or 0.7.

Mr. NOVINS. Mr. HOLIFIELD, let me see if I can break through some of these fractions of roentgens——

Mr. HOLIFIELD. All right.

Mr. NOVINS. And get to what I think most people are probably interested in.

If I asked you, sir, what this current radiation and the foreseeable radiation is going to do to me or to any children I may have, what is your answer?

Mr. HOLIFIELD. I would say that I do not know, nor neither do the scientists know exactly.

Mr. NOVINS. Then how can you say that this is safe?

Mr. HOLIFIELD. Well, I don't think I have said that it was safe.

Mr. NOVINS. How can you say there is no danger in this fallout that is appreciable?

Mr. HOLIFIELD. I said that I did not believe that there was any danger because it is impossible to prove that there is any danger in any kind of a laboratory experiment that I know anything about—of this degree of intensity of radiation. And I feel like that in this instance where there is no proof that this low degree of radiation causes deleterious effects, that the security of the Nation involves taking what risks there may be.

Mr. JOHN FINNEY. Mr. HOLIFIELD——

Mr. NOVINS. Mr. John Finney.

Mr. JOHN FINNEY. I would like to take a reverse side of this coin, that fallout is often used as a reason why we should stop tests. I would like to go into the military reasons why we might have to continue tests.

Do we not have to continue tests if we are going to have small high-yield warheads for our defensive missiles against enemy ballistic missiles?

Mr. HOLIFIELD. Yes; we do have. This is a very important question that you have asked, because at this time our foreign policy is based on massive retaliation with large hydrogen weapons, megathons—1-megathon, 5-, 10-megathon weapons. We are completely ignoring the small weapon field. Now it might be possible that if you had small weapons that you could get by without using big ones. But if you put all your eggs into one basket of big ones, you either are not going to use them because your—you don't want to start that kind of a war, or if you do use them you have started something that I think will be very bad for civilization.

Mr. JOHN FINNEY. Well then are you as a member of the Atomic Energy Committee saying that we should continue tests to develop small tactical defensive war heads?

Mr. HOLIFIELD. I am saying that unless there is the proper kind of a detection and inspection system that we can depend upon, where everybody stops, that we, that we should continue making tests for these small weapons. And I might point out that these tests can be made underground for small weapons without releasing any radioactivity into the air.

Mr. NAT FINNEY. Representative HOLIFIELD, I would like to take you in a little different area.

Mr. HOLIFIELD. All right.

Mr. NAT FINNEY. An old acquaintance of yours over a long period of years is in the switches over in the Senate, Secretary of Commerce-designate Lewis L. Strauss and the other day some pretty extreme statements were made about him.

May I ask, do you think that he should be confirmed?

Mr. HOLIFIELD. Now; I would rather not answer that question. It has nothing to do with these particular hearings and I am not a Senator, I do not have to vote on confirmation.

Mr. NAT FINNEY. Do you think Dr. Inglis' statements about him are substantially true?

Mr. HOLIFIELD. I haven't read Dr. Inglis' statements.

Mr. HERMAN. Let me put it to you this way: Do you have any feeling of national guilt because of the American program of developing nuclear weapons?

Mr. HOLIFIELD. No, sir, I do not; because we are faced with the development of the Soviets of these weapons and I felt that we had to do it in self-defense.

Mr. JOHN FINNEY. Mr. HOLIFIELD, I would like to go to the question of who is watching

out for our health on this? Who is watching out about the milk and how much strontium there is in it? Who is watching out about that Minnesota wheat in which we got some instances in which it had very high concentrations of strontium?

Mr. HOLIFIELD. Well, part of this $20 million that the Joint Committee on Atomic Energy has furnished the Atomic Energy Commission is being used for that very purpose. I have the reports here of the radioactivity in milk for many different places throughout the United States.

Mr. NOVINS. Do they vary very much—excuse me, Mr. Finney, go ahead.

Mr. JOHN FINNEY. They didn't find that Minnesota wheat, did they? That came from Minnesota.

Mr. HOLIFIELD. Well, there are—are many different universities that are testing. Some of them are under contract to the AEC, and some of them are operating on their own. I think the Minnesota detection, soil detection program was under the University of Minnesota, I believe.

Mr. NAT FINNEY. Representative HOLIFIELD, do you consider that 113 units in that one sample of wheat, just taken alone, to be beyond the danger point?

Mr. HOLIFIELD. No, sir. No. You must remember that these measurements are in millionths of a millionth of a curie. They are very small measurements.

Mr. NAT FINNEY. Isn't it true, sir, that the average for the year, which is what you go by, was well within a safe range?

Mr. HOLIFIELD. It was well within what?

Mr. NAT FINNEY. Well within the safe range.

Mr. HOLIFIELD. Yes; it was. It was about, I think, one-tenth of the permissible level.

Mr. HERMAN. In this same line of questioning, since we are asking you questions in the form of statements, as they do in the House, on occasion, would it not also be true to say that a maximum permissible concentration in wheat is the level at which if you eat wheat alone and nothing else for 50 to 70 years, you would get to a danger point in your body?

Mr. HOLIFIELD. That's right. It, the maximum permissible level is for a 70-year lifetime period, and you would have to eat wheat alone to get it.

Mr. HERMAN. So that if wheat is a small part of your diet, then over-maximum permissible concentrations is not anything of a threat?

Mr. HOLIFIELD. Well, there are many other factors that enter. The body discriminates and releases a great deal of that.

Mr. JOHN FINNEY. Mr. HOLIFIELD, just one quick question:

What do you think of the British proposal on the test ban issue, their idea that we set up a predetermined number of inspections on each side and attempt to get around this present deadlock?

Mr. HOLIFIELD. I can't pass judgment on that, because I think there is a bigger problem involved, and that's the land mass of Red China. I think that has to be solved, and why they are not working on this I don't know, because any kind of a test suspension ban without including the land mass of Red China would be worthless.

Mr. NOVINS. Do you feel the State Department should be working on this, sir?

Mr. HOLIFIELD. I certainly do.

Mr. NOVINS. Mr. HOLIFIELD, thank you very much, indeed, for coming here today to face the Nation.

Our thanks also to today's panel of newsmen: to Nat Finney, of the Buffalo Evening News; George Herman, of CBS News; and John W. Finney, of the New York Times.

Poison in Your Water—No. 70

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Redwood City, Calif., Tribune of October 30, 1958, entitled "Water Pollution Robs Bay of Fish, Report Indicates":

WATER POLLUTION ROBS BAY OF FISH, REPORT INDICATES

(By Ray Spangler)

William Dillinger, regional public relations officer for the Fish and Game Commission, painted a bleak picture of the fishing situation in the south bay this week.

He talked before the Sequoia Kiwanis Club and showed a new Fish and Game Commission motion picture, "Fish in the Sea," about ocean sport fishing.

But his primary message was the one of dire water pollution south of the Dumbarton Bridge.

He reported on a study in 1957 by the air and water pollution people in conjunction with the Fish and Game Commisison.

At that time, the Game Commission established 22 stations south of Dumbarton Bridge from which it took bottom samples, set nets, and made other tests to determine the degree of pollution.

The findings, in brief, were that the bottom was a mess, that the fish were disappearing and that only sharks and a few perch could exist in that water.

There were no bass.

In the sloughs, the fish and game net caught nothing.

Dillinger admitted that there must be some fish in the sloughs, however, because there was an important "fish kill," mostly smelt, from pollution near Alviso last August.

It is his belief that the sewage and cannery wastes from San Jose, dumped into the bay with a modest amount of treatment, if any, merely move back and forth in the shallow basin, and make a sort of cesspool of the area.

He doesn't believe, for instance, that the stuff ever gets out into the ocean by tidal action.

"Unless there is a tightening of pollution laws, the condition will get worse and worse," he declared.

"There are various plans for the development of the shoreline of San Mateo County, which will require clean water for swimming, boating and fishing.

"It is time to start ungrading our standards. Now we are not even holding the line."

He agreed that some municipal sewer plants were improving, and I assume this applies to Redwood City, which has a vast addition underway to its treatment plant.

Dillinger feels that what progress is being made will barely keep up with the growth and population and increasing industrial wastes.

Another thing, he pointed out, is that there used to be more water flowing into the bay. Now much of it is held back for irrigation.

In former years the fishing was good, now he thinks it's poor.

Well, be that as it may, Charles Huttmann, our head pressman, has been fishing the bay for at least 20 years.

He usually fishes at Charleston Slough, just south of the Palo Alto Yacht Harbor, and considerably south of the Dumbarton Bridge.

He reports that there are always bass in the area, but that they are probably getting fewer and certainly getting smaller as each year goes on.

The reason: Water pollution, which kills the smelt, the primary food of the bass.

John Mackenhausen, Redwood City harbor master, reports that some of the outboards have brought in bass in the past 2 weeks. Other fish, some big ones, apparently hit by outboard propellers, have come to the surface and died on the beach.

The last big run of bass in this area, he recalls, was in 1940 at the San Mateo Bridge. It lasted for about a week, and during that time many fishing parties set out from Redwood City.

Otherwise, the Dillinger story is true: Too much pollution, too few fish.

The Fish and Game Commission's boat, the *Nautilus*, is berthed at the port of Redwood City.

Occasionally, its little diving boat, the *Mollusk*, is also moored here.

We trust that the legislature will some day get around to the job of reinforcing the water pollution control authority.

There was a time when we thought that the air pollution control should be channeled along the same lines. Now we are convinced that the San Francisco Bay Area Air Pollution Control District is so much more effective than the water pollution district that we see a need for a change in the latter.

Resolutions Adopted by Newark Archdiocesan Federation of Holy Name Societies

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolutions which were unanimously adopted by approximately 550 members of the Roman Catholic clergy and of the Holy Name Societies of New Jersey at the annual convention of the Newark Archdiocesan Federation of Holy Name Societies, held at St. Mary's Church, Dumont, N.J., on Sunday afternoon, April 26, 1959:

Whereas the Federal Bureau of Investigation has, since its creation many years ago, performed commendable service in helping to protect these United States and its people against criminals of all types and also against subversives of all species of cunning and mendacity; and

Whereas in all its work and activities the Federal Bureau of Investigation has shown a deep regard for the constitutional rights of all individuals and thereby has added to the dignity and respect of our democratic system of government; and

Whereas much of the splendid record and achievements of the Federal Bureau of Investigation can be credited to its director, the Honorable J. Edgar Hoover, who by his efficiency and devotion to duty has given to the Bureau a very remarkable leadership based on morality and patriotism; and

Whereas Special Agent William G. Simon, presently in charge of the Newark office, and his predecessors in that office and the many agents serving under them have performed their work in an efficient and dignified manner: Therefore be it

Resolved by the Newark Archdiocesan Federation of Holy Name Societies in convention assembled at Dumont, N.J., on the 26th day of April 1959, That our sincere thanks be extended to the Federal Bureau of Investigation, its director, J. Edgar Hoover, to Special Agent William G. Simon in charge of the Newark office, and all the personnel of the Bureau, for their diligent and dignified efforts to protect our country against its enemies, both foreign and domestic; and be it further

Resolved, That a copy of this resolution be forwarded to Director J. Edgar Hoover, to Special Agent William G. Simon, to our U.S. Senators, to our Congressmen, and to the newspapers.

Whereas the American Bar Association's Special Committee on Communist Tactics, Strategy, and Objectives has completed its report; and

Whereas that report in a brilliant analysis has called to the attention of the thinking populace of the world the impetus given the creeping menace of communism, which daily threatens the peace of the United States affecting subversive activity control laws, sedition statutes, security controls, interpreting the Smith Act, the utilization of the fifth amendment to the Constitution of the United States as a shield to inquiry concerning communism affiliation and various loyalty questions; and

Whereas the masterful analysis of Communist tactics in nullification of anti-Communist legislation, muzzling of the Federal Bureau of Investigation and congressional investigation, eliminating and invalidating security progress, the Communist peace offensive lack of good faith in summit conferences, abuses of international exchanges, its influence upon the organization of Red China, its breaches of good faith in nuclear tests, east-west trade, propaganda, humiliation by imprisonment of our citizens and by its sponsorship of anti-American demonstrations abroad; and

Whereas that report clearly explodes the carefully nurtured fallacies (1) that communism in the United States is dwindling in power because the party is dwindling in numbers; (2) that the Communist Party is just another political party; (3) that poverty breeds communism and that the only alternative to fearful coexistence is world war III with nuclear destruction of our cities; and

Whereas this report concludes with a congressional plan to safeguard the Republic by (1) renewed legislation to meet the impact of these Supreme Court determinations; (2) reconsideration of the policy of recognition of Soviet Russia and its satellites; (3) advocation of preparation of a plan of action; (4) a searching study of communism in accordance with the recommendation of His Holiness Pius XI in 1937; (5) a program of recommended reading so that the enemy of mankind may be truly known: Now, therefore, be it

Resolved by the Newark Archdiocesan Federation of Holy Name Societies, in convention assembled, at Dumont, N.J., this 26th day of April 1959, That expression of deep and sincere gratitude to the American Bar Association, its chairman and membership be made for its long, exhaustive, and fruitful study of the subject matter; for its immediate awareness of the gravity of the subject; and does memorialize the Congress of the United States to study the report at length and initiate remedial legislation to meet the impact of Supreme Court decisions; to reconsider its policy of recognition of Soviet Russia and its satellites; to immediately embark upon the preparation of a plan of action; to initiate a deep and searching study of communism in accordance with the recommendation of His Holiness Pius XI in 1937, and to provide a program of recommended reading so that the enemy of mankind may be truly known and that the dangers of communism may be brought home to each and every citizen of this Republic; and be it further

Resolved, That copies of this resolution be forwarded to the Members of the Congress of the United States for the State of New Jersey so that the sentiment of this meeting may be spread upon the minutes.

Time To Face Facts and Meet the Increased Cost of Medical Care

---

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, on March 13, 1959, I introduced H.R. 5667. It is a bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old age and survivors insurance benefits, and for other purposes.

This bill is identical to the Forand bill, H.R. 4700. My able colleague from Rhode Island [Mr. FORAND] is well-aware of the pressing need in our Nation today to help senior citizens meet the mounting costs of medical care.

Other Members of this House have introduced legislation identical or nearly identical to the Forand bill. This bill and others like it are currently pending before the Ways and Means Committee. I understand that no action is scheduled.

I hope the committee will be able to hold hearings on this legislation. I believe a series of hearings held in various parts of this country would soon point up specifically the burdens now facing men and women in this country who need medical and surgical care.

An excellent fact sheet on our social security program as it was initiated, showing how it has developed, appears in the AFL–CIO News for May 2, 1959. Under leave to extend my remarks in the RECORD, I include it and a copy of the press release I prepared after introducing this legislation.

I am aware that there are programs now being developed by private firms to help face this problem of the cost of medical care. I am hopeful they may provide part of the framework for better and broader programs.

The article and release follow:

[From the AFL–CIO News, May 2, 1959]

MEDICAL LOBBY FIGHTS HEALTH CARE FOR AGED—STUDY SUPPORTS NEED FOR CONGRESS ACTION

On August 14, 1935, President Franklin Delano Roosevelt signed into law one of the most important and lasting improvements in our national policy, the Social Security Act.

The act provided for several programs: Old-age assistance, aid to dependent children, aid to the blind, and unemployment compensation. But the best known program which it established was the old-age benefit system which, in 1939, became the old age and survivors insurance program (OASDI). The D for disability was added in 1956. This is what most people mean when they think of social security.

In the years since 1935, many needed improvements in the social security program have become obvious, and some of them have been met. Coverage of the law, either voluntary or required, has been extended to include almost all employed and self-employed individuals in the Nation except doctors and Communists.

In 1956, after much controversy, an additional program was established to provide for social security protection for workers 50 years of age and older who are totally and permanently disabled, and therefore unable to hold jobs.

At that time Congress also lowered the retirement age for women from 65 to 62.

Furthermore, from time to time, Congress has increased the maximum and minimum benefits to keep up with the rising cost of living.

The social security program has weathered some vigorous attacks. In 1953, following the election of the Eisenhower Administration and a Republican Congress, a few reactionaries in the House conducted a series of hearings under the chairmanship of Representative (now Senator) CARL T. CURTIS, Republican of Nebraska. It became apparent that the committee was out to discredit, and perhaps destroy, the social security system.

But they misjudged the temper of the people and of their own administration. Substantial support was given the social security program, and during the following year Congress extended it instead of injurying it.

SENATE FIGHT ON DISABILITY

Political views on innovations in the system may be illustrated by the fight over granting benefits to disabled persons in 1956. The bill passed the House, which has proved generally more eager to make social security improvements, by a vote of 372 to 31.

In the Senate, however, the Finance Committee eliminated the disability provisions from the bill after 2 months of hearings, precipitating a vigorous political struggle.

On the Senate floor, the late Senator Walter F. George, Democrat, of Georgia, sponsored an amendment to restore the disability provision to the bill. His amendment was adopted by a vote of 47 to 45. Six Republicans and 41 Democrats supported the George amendment; 38 Republicans and 7 Democrats opposed it.

Historically, the establishment and expansion of social security programs have had the strong opposition of business groups and the medical profession, and the strong support of liberal and labor organizations. These groups are active today whenever social security legislation is considered by Congress.

Basically, the social security system is designed to give insured protection to all individuals from economic hardships caused by retirement, disability, or the death of the family breadwinner.

In large part this objective has been met. In recent years, however, an old problem has become more and more apparent and more

in need of solution. This problem is the cost of medical care of old-age and survivors insurance beneficiaries; the aged and widows with dependent children.

PRIVATE INSURANCE FALLS SHORT

Despite the general expansion of private health insurance plans within recent years including those growing out of collective bargaining agreements, the Government reported recently that about three out of five aged persons had no health insurance protection at all, either because such protection was not available to them at all or because the cost was prohibitive.

Typically, health insurance for older persons has many restrictions. It may cover only a few weeks of hospital care each year. The insurance company may reserve the right to cancel it at any time. Benefits may be inadequate. Therefore, health insurance protection may be wholly inadequate even to those who are covered.

Another obvious factor is the frequency of illness. Retired persons are much more likely, as a group, to experience serious illness than younger persons. Those who need health-insurance protection most, then, are those who have it least.

In response to this need, Representative AIME J. FORAND, Democrat, of Rhode Island, in 1957 introduced a bill to amend the Social Security Act by making hospital care and nursing home services available to social-security beneficiaries.

ADMINISTRATION OPPOSES BILL

The Forand bill received the immediate support of the AFL–CIO and other groups concerned with the welfare of retired persons. It also received widespread support from retirees themselves.

The bill was greeted with the opposition of the Eisenhower administration.

Initially, congressional response was cool. The House Ways and Means Committee, of which FORAND is a member, failed to hold hearings on the bill until late 1958, and then only as part of general hearings on all parts of the Social Security Act. The hearings were sufficient, however, to draw the battle-lines on the Forand medical care proposals.

Opposing the Forand bill, in addition to the administration, were:

American Medical Association, American Dental Association, National Association of Accident and Health Underwriters, Health Insurance Association of America, Blue Shield Medical Care Plans, National Association of Life Underwriters, Chamber of Commerce of the United States, National Association of Manufacturers, American Farm Bureau Federation, National Grange.

Those who support expansion of social security to include medical care, as proposed by FORAND, were: AFL–CIO, American Nurses' Association, National Consumers League, Group Health Federation of America, National Farmers Union, American Public Welfare Association, National Association of Social Workers.

Although no further action was taken by the 85th Congress on the Forand medical care proposals, the Ways and Means Committee did request a study and report from the Department of Health, Education, and Welfare.

The report has since been submitted to the committee. It contains abundant statistical evidence that retired workers have incomes too low to meet the rising costs of medical care.

REPORT SHOWS NEED

Furthermore, it shows that hospital and nursing benefits for old-age and survivors insurance beneficiaries are entirely practical.

However, the report did not indicate any change in the administration's opposition to the program.

On February 18, 1959, FORAND reintroduced his bill, H.R. 4700. Several Members of the House and Senate have introduced the same or similar bills.

In announcing its support for the Forand bill, the AFL–CIO Executive Council said:

"The nationwide interest in the Forand bill has further demonstrated the need for making hospital care and nursing home service available to social security beneficiaries. The high cost of medical services should no longer be permitted to bar older people and widows from required health care.

"Proposals advanced by organized medicine and the commercial insurance industry as alternatives to the Forand bill are grossly inadequate and unfair to older people. Only prepayment during years before retirement can make extensive and lasting health insurance available to the great majority of the aged."

Jurisdiction over H.R. 4700 in the House is in the Ways and Means Committee, which is currently considering unemployment compensation legislation.

The AFL–CIO has urged the committee to hold hearings as a first step in securing enactment of legislation providing hospital care and nursing home service for old-age and survivors insurance beneficiaries during this session of Congress.

PRESS RELEASE FROM THE OFFICE OF REPRESENTATIVE CHARLES O. PORTER

Legislation providing certain prepaid health insurance benefits for senior citizens eligible for old-age and survivors insurance benefits under the Social Security Act has been reintroduced by Representative CHARLES O. PORTER, Democrat, of Oregon.

PORTER'S bill, H.R. 5667, is identical to legislation introduced by Representative AIME FORAND, Democrat of Rhode Island. The Oregon Congressman joined Congressman FORAND in sponsoring the bill during the 85th Congress. There are minor revisions in the new bill.

As written, the bill provides certain hospital and nursing home services and surgical services. It is financed by increasing contribution rates of employers and employees by one-fourth of 1 percent each and of self-employed by three-eighths of 1 percent. The health benefits would cause about half the additions to total cost.

Under the section concerning hospital and nursing home services, an eligible person would be insured against the cost of hospital care. This includes a semiprivate room and such services as the hospital customarily furnishes its bed patients. The insurance system would not pay the attending doctor's bills, except for surgical services. There would be a certain freedom of selection of a surgeon except in emergency cases.

A patient would receive up to 60 days of hospitalization in a 12-month period. Nursing home care could total up to 120 days, less the number of days spent in the hospital during the same 12-month period.

Representative PORTER said he had found during his professional career as a politician and lawyer that illness in the family could be financially catastrophic.

"As people grow older they need more medical care, but they usually have less money," he said. "It is difficult to get adequate protection through private insurance.

PORTER said he had in no way closed his mind to the fact that it may be possible for private industry to take care of the Nation's rapidly increasing medical problem. He said he was hopeful that certain programs now being developed such as those designed for retired teachers might provide part of the framework for more expansive programs.

To date 10 Members of Congress have joined Representative FORAND in introducing his bill or similar legislation.

The REA Bill Veto Ill Advised

SPEECH
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. McGOVERN. Mr. Speaker, it is my earnest hope that the House will follow the commendable action of the other body and vote to override the President's veto of the REA bill.

As one of the cosponsors of this legislation, I regard this vote today as one directly related to the welfare of rural America.

I was greatly disturbed 3 years ago when the President vetoed the 90-percent price-support bill for agriculture. I was disappointed again last year when he vetoed our price freeze legislation. I do hope that this time we can be successful in overriding what I am sincerely convinced is an ill-advised veto.

Fair Trade Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. DINGELL. Mr. Speaker, the Oakland, Calif., Tribune on March 24, 1959, set out some excellent reasons why the fair trade bill should be defeated and should not under any circumstances become law.

Under leave to extend my remarks I include the article, as follows:

FAIR TRADE BILL

The Department of Justice has moved into the picture in the efforts to get a Federal "fair trade" bill through Congress and in doing so unlimbered a few lusty blows at this new effort to regiment the Nation's consumer.

Robert A. Bicks, one of the head men in the antitrust division of the Justice Department, told the House Commerce Committee that, for one thing, the proposed law would cost the American consumer at least a billion dollars a year and perhaps more.

But aside from the purely economic aspects he pointed out that the proposal as submitted by Representative OREN HAYS, Arkansas Democrat, contains some very definite assaults on the principles of competition in business.

For one thing, he said, such a law would "signal the abandonment of our time-honored free enterprise ideals for the distribution sector of our economy." For another, it would in effect repeal the antitrust laws for a wide area of retail business.

Also that it "would substitute Federal mandate for State or local discretion in vital areas of how much all Americans pay for products needed for daily living."

Those are all valid and logical arguments and they should be respected.

Appendix

Tenth Anniversary of the Point 4 Program

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by former President Truman at the Sixth National Conference on International Economic and Social Development, the subject of the address being the 10th anniversary of point 4.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF FORMER PRESIDENT HARRY S. TRUMAN ON THE 10TH ANNIVERSARY OF POINT 4 DELIVERED AT THE 6TH NATIONAL CONFERENCE ON INTERNATIONAL ECONOMIC AND SOCIAL DEVELOPMENT, WASHINGTON, D.C., APRIL 30, 1959

I am delighted to be here this evening to join in celebrating the 10th anniversary of point 4.

I am most grateful to you for inviting me to come.

I thought it might be appropriate to review with you the origins of the point 4 concept as expressed in the inaugural address on January 20, 1949.

Some of the circumstances that suggested point 4 were foreign, and some purely domestic. If I am obliged to draw from a political situation some conclusions with which some of you may not agree, I suggest to you this is an historical statement—and that in this case I am acting as the historian. This is the way I saw it, and my only purpose here is to describe what I saw.

The basic policy from which point 4 and the Marshall plan grew was stated in the address to Congress on March 12, 1947, in which I asked Congress to vote emergency aid to Greece and Turkey. In that address I said:

"I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.

"I believe that we must assist free peoples to work out their destinies in their own way.

"I believe that our help should be primarily through economic and financial aid which is essential to economic stability and orderly political processes."

The programs of aid to Greece and Turkey that were developed during 1947 and 1948 were not just in the form of funds or supplies. They included technical assistance of the broadest kind. Hundreds of American technicians were sent to Greece and Turkey to assist in such fields as industry, agriculture, public finance, foreign trade, public administration, shipping, and labor.

The Marshall plan also included technical assistance. During the course of that plan, thousands of technicians went to Europe or were trained in the United States for the purpose of helping to increase European technical efficiency and productivity.

So you see that we in the Government were already thinking in terms of technical assistance by January 1949.

As some of you may remember, we had a presidential election here in November of 1948. The Democrats carried both Houses of Congress by substantial majorities and elected a President. Nearly all the newspapers and pollsters had been saying that the Republicans would win overwhelmingly, so the result of the victory by the Democrats was considered a startling upset and received great attention here and abroad.

Now what was the underlying and well-understood issue of that campaign? It was purely and simply whether the social and economic advances of the New Deal were to be continued or reversed, and whether the United States was going to continue its policies of vigorous leadership of the free world.

The New Deal had brought about fundamental and far-reaching changes in this country.

The power of Government had been invoked to restore our national economy after the depression.

It had been invoked to build a system of social security, to build a broad base of purchasing power among farmers and workers, and to right a long list of economic wrongs and injustices.

And it had been invoked on a broad scale for the relief and rehabilitation and recovery of our friends and allies abroad.

All this added up to a peaceful revolution in this country, and its course had been followed with intense interest all over the world.

Following the election of Republican majorities in Congress in 1946, Republican leaders had made no bones of the fact that it was only a question of waiting until the next election to put a Republican in the White House and reverse the course of the New Deal, turning the pages of history backward.

The meaning of the election of 1948 was that the American people had made it clear they would not tolerate any rollback of the social and economic advances made at home during the preceding 16 years, or any retreat from leadership abroad. They made it clear that they wanted the pages of history turned for the future and the Government of the United States to continue to be responsive to the needs of people at home and around the world.

This was all a matter of intense comment and conversation abroad at the time, and, I might add, considerable rejoicing. The whole free world looked to the United States for leadership.

It therefore seemed not only appropriate but of great importance that my inaugural address should speak not only to the Nation but to the world. It seemed important to declare that the United States was dedicated to help people meet their needs and to realize their aspirations not only at home but also abroad. It was important to say in effect that, the New Deal having just been ratified at home, the United States was willing to help other peoples achieve their own New Deals.

In January 1949, the world was still in a desperate situation. The cold war was just about at its coldest. Only a few months earlier, the Communists had taken over Czechoslovakia, and after that the Russians had blockaded Berlin. Aid to Greece and Turkey had given those countries improved prospects, but Greece's war against the Communists was by no means won. The advance of communism had been stopped in Europe, largely as a result of the policy declaration of the President of the United States on April 12, 1947. But Europe was still hungry and cold, with recovery hardly begun. However, the North Atlantic Alliance was in the process of negotiation, the Marshall plan was getting underway, and if the situation in Western Europe was not good, at least bold programs and policies of the United States designed to improve it were in operation. The policy was the foreign policy of the United States. It was to inform the Soviet Communist dictator that the free world intended to stay free. It was worldwide.

In some parts of the world, however, there was no assurance of American help. The Communists were on the verge of a complete victory in China. Communist war was raging in Indochina. In south and southeast Asia and the Middle East, the British, French, and Dutch Empires were breaking up into a multitude of new independent states—weak in administration, poor in technical skills, and lacking in capital. It was clear that that part of the world especially needed help and hope, and that U.S. policy should be directed to supply it.

There was not much that could be done through military aid. It appeared that technical assistance and investment capital were the most useful contributions we could make to the stability and well-being of the underdeveloped countries.

So you see, events at home and abroad—and the psychological situation both at home and abroad—all pointed to an inaugural address pitched to the needs of the world and reflecting the newly declared mood of the American electorate. The immediate and enthusiastic reception accorded point 4 proves, I think, that our interpretation of the mood and the need was correct.

Although point 4 has become a household word in many countries of the world, it is usually associated—especially in this country—with technical asistance only—as distinct from loans for economic development. I would like to remind you, however, of this other element; and I quote from the original statement of point 4 as follows: "And, in cooperation with other nations, we should foster capital investment in areas needing development."

Please note the words "capital investment."

It has often been pointed out that whereas technical assistance went forward in 1950, there was a long lag in beginning to meet the special investment needs of the underdeveloped countries. Today, however, I am glad to see that this problem is a major subject of discussion and effort and activity.

The first reason for delayed attention to the investment needs of the underveloped countries was the Korean war which diverted energies and resources from economic needs to security against Communist military aggression. Just before the Korean war, considerable thought was being given within the Government to the undertaking of extensive public investment, by a long-term loan program, in the underdeveloped countries. Not only would this enable them to mobilize their own resources, but it would also stimulate a world economic activity from which

Western Europe could earn foreign exchange through increased trade.

I do not mean to imply that this had reached a stage of major governmental concern or activity. But there were a number of people in several departments of the Government who were thinking along these lines, and this was a matter of policy discussion at the time.

All this went by the board when the Communists made their unprovoked attack in Korea. Thereafter, we had to shift the major emphasis to rearmament at home and military aid to our friends and allies abroad. Some economic aid continued but at a lower level and at a diminishing rate. All this was reflected in the Mutual Security Act of 1951.

The sad truth is that only now, 9 years later, are we beginning to recover the perspective we had before the outbreak of the Korean war and to get back on the rails leading to orderly world economic growth. By early 1953, we had about reached a point where we should have returned to major emphasis on development of the underdeveloped countries. But instead, for several years the primary emphasis was upon signing up the newly independent countries of Asia into military pacts and in furnishing them with arms, while neglecting their needs for economic development. The development needs of our Latin American neighbors were also overlooked until last year's demonstrations forced some attention to them.

Meanwhile, precious opportunities to combat communism have been lost. In October 1952, 5 months before his death, Stalin during the course of the 19th Communist Party Congress, called a sharp turn in Soviet strategy. In effect, he recognized that Western Europe could not longer be taken by subversion, and that—as proved in Korea—direct aggression was unprofitable. Communist strategy would thereafter be centered primarily upon Asia and the other underdeveloped areas, and the principal instruments were to be economic lures, infiltration, and domination. Stalin's successors have merely been carrying out the strategy laid down by Stalin himself, only more effectively than he could ever have done it.

The result has been that the Soviet Union has made enormous gains with its economic offensive while we have peddled military pacts. Two years ago, however, this country made a major move to meet the danger by establishing the Development Loan Fund. This fund is certainly a move in the right direction, though its authority is far too limited and its funds far too small.

This brings me to consider with you what is to be done at this session of Congress.

The administration is asking for a 1-year authorization for the Development Loan Fund and an appropriation of $700 million for loans to underdeveloped countries. This is all right as far as it goes. The trouble is that it doesn't go far enough.

State Department officials have said repeatedly the fund needs from $1 billion to $1½ billion this year. And yet the administration asks for only about half what is needed.

Another point:

It is well known that 1-year authorizations for development programs are wasteful and inadequate. Countries that are planning their development ahead, as in the case of India, are kept in doubt and are unable to move ahead with confidence. The authorization clearly should be for 4 or 5 years—as in the case of the Marshall plan. The Marshall plan was a 4-year plan agreed upon by the President and Congress before it started.

Finally, the purely bilateral approach to the investment needs of the underdeveloped countries is rapidly growing obsolete, and we need a new one—an international approach. We and the other industrial countries should find out what the investment needs of the underdeveloped countries are expected to be over a period of years. We should figure out how much capital is available to meet the needs. And we should work out a reasonable, cooperative plan designed to enable the underdeveloped countries to mobilize their own resources and support themselves at a higher standard of living.

We must have an adequate program. I think it is tragic that the administration has asked for funds that fall so far short of the need. It will be even worse, of course, if Congress does what there is so much talk of doing and slashes these already inadequate funds.

We cannot purchase security and peace by pinching pennies at a bargain counter. The needs of the times call for bold action even more than when point 4 was launched in 1949. We should be planning how we can use our strength and resources to the utmost rather than fearfully trying to hoard what we have.

A balanced budget is not our primary need in this time of great danger, although eventually we should have a balanced budget. We need a strong America even more than someone's idea of a budget. We need a strong free world. If we don't have it, a budget makes no difference.

There is a very pertinent lesson in the saying that it doesn't do a man any good to be the richest man in the graveyard. We may be headed for that epitaph.

I believe we shall be living under great tension and in great danger for a long time to come. The threat of war, whether cold or hot or lukewarm, will be the constant companion of this generation, and perhaps the next. The question is: How shall we conduct ourselves in this situation? Shall we ignore the danger? Shall we cower in fear?

I have a suggestion to make. It is that we as a Nation declare a war of our own—a war on poverty, hunger, ignorance, disease, and despair. A war waged at home and abroad. A war waged with the fullest resources of the Nation.

I am confident that, if we do that, we can avoid other forms of war, emerge triumphant over so-called communism—which is not communism but just plain dictatorship. Then we could build a peaceful and a free world. I am confident that in this course lies the greatest hope and promise of our civilization.

Lakeland's Baptist Institute

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story and an editorial commendation which appeared in the March 15 issue of the Lakeland Ledger on the Florida Baptist Institute and Seminary. The school is comparatively new, and is making a tremendous contribution to the community, under the able direction of Dr. Albert Garner, its president.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

BAPTIST INSTITUTE HERE IS GAINING MOMENTUM

Florida Baptist Institute and Seminary, founded here in September 1957, is making brisk progress.

Dr. Albert Garner, its president, outlined the school's progress so far and said indications point to a bright future.

Located on a 10-acre tract at West Walnut Street, the school received a State charter in February 1958, and was fully approved by the Florida Approval Agency and U.S. governmental agencies for the training of ministers and Christian workers last September.

Fifty-four students are now enrolled at the school and 100 have enrolled since the school was chartered, Dr. Garner said.

There is no tuition fee and the school is open to students of all faiths, Dr. Garner pointed out. The school is supported by annuities and gifts from American Baptist Association churches in Florida, Georgia, and Alabama.

Dr. Garner said the school has two major divisions in its training program.

The institute department includes a 4-year course of study in the English Bible and Bible-related subjects. The seminary department offers a 4-year course of study in Hebrew, Greek, and Latin, and a study of the Bible and Bible history in these languages.

Seminary work is open only to those who have college diplomas or special training above the high school level. Bachelor and master's degrees are offered to those who complete the prescribed seminary work.

Dr. Garner heads the faculty, composed of seven full-time professors.

The school was first started under the sponsorship of Grace Baptist Church on a 7½-acre tract. After the State charter was granted, the school purchased 2½ additional acres.

During the past year, buildings located on the new property were repainted and renovated. Classes are being held there now.

Dr. Garner said plans are being made to replace all of the dormitories, apartments, and the educational building with new buildings in a 10-year expansion program.

He said the program should begin in about 18 months.

In addition to heading the school, Dr. Garner is editor of the Baptist Anchor, a semimonthly religious newspaper with a circulation of about 5,000 in Florida, Georgia, and Alabama.

Dr. Garner is the author of four books and numerous pamphlets and booklets. His books are "The Church Covenant," "Bible Analysis," "Christian Doctrine," and "Pearls in the Psalms."

He was cofounder of Texas Baptist Institute, Henderson, Tex., and served as its dean for 8 years. He also served as head of the department of speech at Jacksonville (Tex.) College.

Dr. Garner holds an A.B. degree from Harding College, Searcy, Ark.; an M.A. degree from Baylor University, Waco, Tex.; and a doctorate in Bible languages from the Missionary Baptist Seminary, Little Rock, Ark.

He is married and has one son.

LAKELAND'S BAPTIST INSTITUTE

During the period of less than 2 years the Florida Baptist Institute and Seminary has been in operation in Lakeland, it has established itself as an institution of impressive vitality serving a lofty purpose well.

It, like all such institutions, reflects to a great extent the character of the man who is its president, Dr. Albert Garner, a young man of sincerity, enthusiasm, versatility, and vision. Like all able heads of educational institutions, he has surrounded himself with well-qualified faculty members.

Although the name of the Lakeland institution labels it as one of Baptist affiliation,

it is an institution open to students of all faiths, and it is unique in that no tuition charge is made.

The curriculum covers 4 years of study, with emphasis upon the Bible, Hebrew, Greek, and Latin. In addition to being a minister and an educator, Dr. Garner is an author. He has books, pamphlets, and magazine articles to his credit. He is much in demand as a speaker and makes weekend plane trips to other States to fill engagements.

His versatility has still another facet. He is editor of the Baptist Anchor, which circulates in Florida, Alabama, and Georgia.

The institution is situated on West Walnut Street. The present buildings are inadequate, and so Dr. Garner and his associates have planned a 10-year building program to replace each of the present buildings and add still more structures.

Thus, the institution is one that is an expanding asset for Lakeland and Florida and deserves generous support.

Address by Hon. Jennings Randolph, of West Virginia, at Dedication of Sheltered Workshop and Rehabilitation Center Building, Davis Memorial Goodwill Industries, Washington, D.C.

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. RANDOLPH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the dedication of the Sheltered Workshop and Rehabilitation Center Building, Davis Memorial Goodwill Industries, Washington, D.C., May 3, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY U.S. SENATOR JENNINGS RANDOLPH AT THE DAVIS MEMORIAL GOODWILL INDUSTRIES DEDICATION OF THE SHELTERED WORKSHOP AND REHABILITATION CENTER BUILDING, WASHINGTON, D.C., MAY 3, 1959

General Maas, President Dulin, officers and members of the board of trustees, staff members of the Davis Memorial Goodwill Industries and guests, today we begin the observance of the 25th anniversary of the Goodwill Industries in Washington. Today we dedicate this rehabilitation center building to the further advancement of the cause for which so many of you have worked so tirelessly and devotedly—the cause of justice, not charity, for the handicapped—the justice of equality of opportunity.

This building crowns with success the efforts of many years, the hopes we have so long maintained for expanding opportunities to the disabled, and offers rich reward for the sacrifices and discomforts that staff members and workers have borne during this period of transition. It is with gratitude and thanksgiving to all of those who have contributed to its realization that we observe this latest milestone in the growth of the Davis Memorial. It is indeed a fitting climax to our first quarter century of existence and a hopeful portent of the future.

We have traveled far from those modest beginnings in 1935 when the operations of the Davis Memorial were limited to the workshop offering employment to a comparative handful of disabled men and women. In those 24 years the Goodwill Industries here in Washington has employed over 7,000 workers at wages totaling more than $5 million.

While today, with an annual budget approaching the million dollar mark, employment has reached 275 daily, and in 5 years is expected to be doubled. Yet such statistics do not alone tell the full story.

For today, as in the past, the concern of the Davis Memorial has been for the disabled man or woman as an individual person—not as a figure on the balance sheet. In implementing this concern, our workshop here has kept pace with the development in the philosophy of the sheltered workshop movement. We have, in keeping with the development of the Goodwill Industries nationally, advanced from the concept of the sheltered workshop as primarily and almost exclusively a place of terminal employment, to the acceptance of a dual function—on the one hand, offering continuous or recurrent employment for those for whom opportunities in competitive employment do not exist, and on the other, providing a transitional and diagnostic work experience for those who will graduate into competitive employment.

The ability to perform adequately this dual function is now assured, not only by these new physical facilities, but also by the excellent professional team of the Davis Memorial—including a physician, nurse, medical social worker, psychologist, occupational therapist, physical therapist, and prevocational supervisor.

Thus has almost a quarter of a century's striving finally been rewarded with the physical and professional facilities necessary to carry on the thrilling and dramatic task—the task of restoring disabled men and women to lives of fruitful, constructive, and independent endeavor.

The growth of our facilities and achievements here in Washington has been paralleled by advancement throughout the Nation as well. The Goodwill Industries together provided training, rehabilitation, and employment last year for some 32,000 men and women, with wages of $16,500,000 going to persons in training and workshop employment.

In the Federal-State program of vocational rehabilitation there has also been marked progress during the past year. According to Secretary Flemming, in his section of the recent special report to the President from the Committee on Employment of the Physically Handicapped: "Another measure of growth is the fact that over a quarter of a million handicapped persons were served by the State rehabilitation agencies last year." While, and I again quote from Secretary Flemming, "* * * nearly 75,000 handicapped individuals received rehabilitation services and were established in useful jobs. This was an increase of more than 3,000 over the previous year."

Similar progress has been achieved in the field of research and the training of professional personnel—the two areas on which the future depends most heavily for continued development. In 1958 the Office of Vocational Rehabilitation approved grants for 81 new research projects covering a wide range of rehabilitation problems, while currently there are more than 150 such projects underway.

Today, as a result of Federal training grants from the Office of Vocational Rehabilitation, more than 300 graduate students finish their work each year to enter State and private agencies, compared to about a dozen a year prior to the OVR program.

In addition, training grants were made last year to 30 approved residency training programs in physical medicine and rehabilitation, covering traineeships for approximately 145 physicians, while grants have also been made to 25 of the 82 approved schools of medicine for the purpose of offering basic instruction in rehabilitation.

The Veterans' Administration is pioneering new fields through its current study of occupations held by epileptics and the homebound disabled—hoping to achieve for these groups what its previous studies did for the blind and paraplegics.

Thus, on many fronts there are signs of real and substantial progress. However, there remain several specific areas in which there is a compelling need for greater effort—each of which ultimately resolves itself into a question of communicating our message to the larger national community.

I need not labor here the general problem of creating a more favorable climate for the employment of the physically handicapped. For you ladies and gentlemen are well aware of this and of the employment record of handicapped persons—in such matters as safety, low absenteeism and low turnover, and high productivity.

However, I would like to refer you to an observation made somewhat more than a year ago, by Mr. A. J. Hayes, president, the International Association of Machinists. As Mr. Hayes stated:

"In our goal to place the handicapped in jobs, we are still not being fair with prospective employers in most cases. We produce records proving that the handicapped are able, loyal, productive and safe workers. But in the vast majority of our States, we leave employers of handicapped workers open to unfair liability in case of injuries to the handicapped. It is true that 43 of our 48 State workmen's compensation laws have provisions for some sort of second injury fund. But the real fact is that fewer than a dozen States have second injury funds of the type which really accomplish their objective. The rest of them leave employers wide open to extensive and unfair liability for subsequent injuries to handicaped persons. The result, of course, is to deny handicapped job applicants a fair opportunity of finding employment."

Thus, the revision of State laws in this field offers us, I believe, one of the major challenges in the effort to further equality of opportunity for the handicapped.

In closing, I would now like to address the relationship of employment of the handicapped to the needs of our Nation's productive system as a whole. It is estimated—according to the U.S. Department of Labor—that some 74 million employees will be needed to produce the $560 billion gross national product set as a goal for 1965.

On the basis of recent trends—and assuming a prosperous peacetime economy—we may reasonably expect to have a total labor force of approximately 79 million in 1965. This 79 million labor force would include an estimated 3 million persons in the Armed Forces, a minimum of 2 million unemployed, and the remainder—74 million in civilian employment. Thus it would appear that the 1965 labor supply will be numerically adequate.

But what are the full implications of this figure? Half of this increase of almost 10 million will be accounted for by women—most of whom will be in the younger and older age groups. Among men, the largest increase will be in the 14–24 age group—young men entering the labor force for the first time. The next largest increase will be in the 45–54 age group, and the remainder, 1 million, in the 55 years-and-over group.

Most of the increase in our labor force by 1965 will therefore be in the younger and older age groups.

Another factor which must be taken into account is the effect of permanent and tem-

porary disabilities incurred on the job. According to the current issue of the Monthly Labor Review, there were in 1958 1,810,000 such injuries, of which 75,700 were permanently disabling. The total loss of man-days, that is, immediate and future as a result of deaths and permanent impairments, is estimated at 160 million, or the equivalent of a year's full-time employment of about 515,000 workers.

Add to this figure those who will develop service-connected disabilities and those who will be partially disabled by home and traffic accidents, and it becomes apparent that the numerically adequate labor force of 1965 will depend greatly on what we do to keep it numerically adequate.

Part of the answer will lie in full employer utilization of the physically handicapped—and older workers—with employment by selective placement being the rule and not the exception. The U.S. Civil Service Commission has offered a guide in its pamphlet on selective placement and—according to Chairman Harris Ellsworth—is continuing its investigation by conducting a survey of approximately 30 of the larger agencies in this area.

However, the Government in this field can only propose; it remains for the local community and the individual businessmen to dispose. Thus, we return again to the problem of communication. Our responsibility is clear; not only to communicate to prospective employers that sound business recommends the employment of the handicapped, but that justice requires it—justice, not charity. For it is justice and the right to equality of opportunity which make viable the claim of the handicapped to a life of independence and a share in the fruits of our democracy.

United States, Israel, and the World Crises

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very thoughtful and forward-looking speech about the situation in the Middle East by the distinguished senior Senator from Minnesota [Mr. HUMPHREY], delivered in Chicago on the occasion of the Jewish National Fund dinner to honor that able jurist and devoted public servant, Judge Abraham Marovitz on April 1, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITED STATES, ISRAEL, AND THE WORLD CRISES

(Excerpts from remarks prepared for delivery by Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, at Jewish National Fund dinner honoring Judge Abraham Marowitz, Chicago, Ill., April 1, 1959)

In the past 3 months the American people have focused their attention on the Berlin crisis, almost to the exclusion of any other international problem. This preoccupation with Berlin is understandable, but it can be dangerous. It can be dangerous because that divided city is not the only potential source of open international conflict.

The war which nobody wants could be sparked in Berlin. It could also start in Quemoy or Baghdad.

The delicate Berlin situation is the most serious crisis we have faced since the Korean war, and potentially the most serious Communist challenge since the end of World War II. But it is not the only crisis.

The crisis in the Formosan Strait, although relatively quiet at the moment, is also full of danger. And matters are boiling up again in the turbulent Middle East. Iraq, our former ally, has renounced her membership in the Baghdad Pact. And what is more important, it looks as though this important Middle Eastern country may be slipping from the twilight zone of neutralism into the midnight darkness of communism. * * *

In short, we are confronted with the possibility of a three-headed crisis—in Germany, in the Formosan Strait, and in the Middle East. This raises two serious questions: First, are we really prepared to meet a determined adversary on three fronts simultaneously? Second, if we are not, what should we do to become better prepared?

Berlin alone may test us to the limit. * * *

But this much we can say for the Berlin situation. We are entering into negotiations with the strength of a united Western position. We have the support of Britain, France, West Germany, and our other NATO partners.

Our present policy in the Formosan Strait enjoys no such united support. Our only ally there is Chiang Kai-shek.

Tonight, I want to focus my attention on the third potentially explosive situation—the Middle East. I fear that our economic, political, and military policies are not adequate to a serious challenge in this area. Further, I do not think we are doing all we should do to improve our position.

Consider the challenge and the stakes. The Soviet Union is engaging in a massive program of economic penetration into that strategic, oil-rich area. Her aim is not to foster economic development nor to encourage genuine national self-determination. Her aim is to expel western influence and to expand the Communist empire. Testimony submitted by the State Department in recent weeks shows that the U.S.S.R. is committed to lend Egypt and Syria, the United Arab Republic, a total of $949 million in economic and military aid.

Last week the Soviet Union announced economic aid to Iraq, totaling $138 million. This is in addition to the $120 million in military aid previously disclosed.

The pattern is ominous. The Russians are clearly exploiting the Arab hostility toward Israel to achieve her political purposes in the Mediterranean world.

In the face of this, it is my firm conviction that the United States response has been less than adequate.

* * * * *

I do not suggest that we should compete with the Russians in every country where they have established a foothold, regardless of the internal political situation.

If we competé wherever the Soviet Union offers an aid program we shall be letting Moscow decide how we shall deploy our aid. If we did, the Russians might well tempt us into wasteful squander.

I do submit, however, that in countries where the people and government understand our objectives and are struggling to attain political and economic freedom, we should be maintaining and, yes, expanding our program of assistance and cooperation.

There are countries in Asia and Africa, like India and Israel, where the rule of law prevails and where democracy is cherished and preserved.

What happens in these countries is crucial for the free world. If these countries falter and fail, then other nations in Asia and Africa may turn the Soviet way. It is sound policy to continue and increase economic aid where our dollars work and fight for freedom.

* * * * *

I do not need to tell this audience how important it is to maintain our program for Israel. In 1951 I was one of the 36 Senators who joined in sponsoring legislation in the Senate calling for a grant for Israel.

At that time Israel was struggling to resettle hundreds of thousands of Jewish refugees from the displaced persons camps in Europe and from the Arab countries in Asia and Africa.

The Congress provided $63 million as a grant to help Israel meet a tremendous crisis created by her own humanitarian impulses.

In subsequent years the U.S. Government has continued aid to Israel, and we are glad to see her tremendous gains. She has tripled her population, absorbed newcomers from all over the world, provided them with sanctuary, enabled them to work and prosper.

This spectacular demonstration of how a government has been able to unite and fully employ the three major resources—land, water, and people—is proving to be an inspiration to the new countries in Asia and Africa as well as to free countries in Europe and this Hemisphere. All of us have much to learn from modern Israel. She is serving the cause of democracy on a critical frontier—a great ally.

In recent years the U.S. aid program to Israel has changed. As she has made progress our Government has enabled her to purchase surplus foods and has loaned to her money from the Development Loan Fund. The amount that we have been granting Israel has declined from a peak of $70 million in 1953 to $7½ million in the current year.

This may be an encouraging reflection of Israel's progress. But I hope that we will continue grant aid to Israel as long as she needs it and can use it as creatively as she has in the past.

The administration has indicated that aid to Israel may now come to an end, and that assistance to Israel will consist entirely of surplus foods. In my judgment it would be a serious mistake to terminate economic assistance to this democratic country at a time when she still has massive economic problems growing out of her need to resettle her vast new population, and to build a viable economy.

In addition, Israel stands alone in the area. She must be able to defend herself. I noted a few moments ago the massive aid the U.S.S.R. is pouring into Iraq, Egypt, and Syria. The Soviet Union is extending this elaborate assistance to Israel's hostile Arab neighbors. On top of this the United States has been furnishing military aid to Jordan, Lebanon, Saudi Arabia, and until last July to Iraq.

Israel has not received a single penny of grant military aid. Thus, it would be wrong from every standpoint to end our grant economic aid to Israel now.

* * * * *

I do not need to tell this audience what Israel's development can mean, for you who were pioneers in the Jewish National Fund were the first to show the Near East how to reclaim barren and neglected lands.

You may take pride in the fact that you not only helped to restore the people of Israel to their ancient homeland, you may derive satisfaction from the significant fact that all over Asia and Africa today the story of Israel's challenging and exciting restoration is being told and is being emulated.

How gratifying it is to know that 70 countries of the world have now recognized Israel, and that beyond the immediate perim-

eter of Arab hostility and blockade there are peoples and governments which share our own understanding of Israel's restoration. Many of these countries have offered her sympathy and cooperation.

Israel's growing acceptance in the fraternity of freedom must be recognized eventually by her Arab neighbors who surround her and who still persist in blockade and belligerency.

I have always believed that an Arab-Israel peace will come. It may take time, for the Near East is still tormented and tortured by divisions and tensions. But the internal Arab conflict that now disrupts the region is not an outgrowth of the Arab-Israel tension. It arises from poverty and the inevitable clash between the haves and the have-nots. Unfortunately, most of the Arabs are have-nots. They are the victims of frustration and are easily incited by demogogues who play upon their misery.

I hope that our country will help the peoples of the Near East to a better life. The answer to the Soviet Union is not in arms, but economic development. We must do as much to help the people to utilize their water resources as we have done to find their oil.

Eventually, we will make it clear to these peoples that we have no imperialist interest, and that our major objectives are to help friendly peoples befriend each other, work in cooperation and preserve their own independence and sovereignty.

Let no one in the Near East, whether he be a local ruler or a distant commissar deceive himself into believing that he can dominate this region and use these people to serve his own ambitions for power.

Let the peoples of the Middle East understand that each nation there is entitled to live its own life and a much fuller life than it leads today, free from the aggression and subversion of enemies, free in the evolution of its own destiny. Our policy in the Near East should continue to help the governments there maintain their political independence and at the same time expand the opportunities for economic development and cultural self-expression for their people.

When the peoples of the Near East come to understand that our policy serves their own best interests they will work with us to resolve conflicts, strengthen democracy, and preserve peace.

Inflation Can Destroy Us

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. O'MAHONEY. Mr. President, organized big business is conducting a nationwide campaign to convince little business that a bill which I have introduced to put a brake upon inflation is against the interests of all business. This is a misrepresentation, which would be apparent to anybody who has had the opportunity to examine the census of manufactures recently compiled by the Bureau of the Census. An analysis of the concentration of economic power based upon this census shows that in the industries on which our economy depends, more than 50 percent of the total output is handled by eight or fewer corporations.

Without giving the Federal Trade Commission or any other agency the right to put any ceiling on prices or to prohibit any price increase, I have introduced this bill, S. 215, to provide that in the case of any line of commerce a corporation falling into this category in which eight or fewer corporations handle 50 percent or more of the total output shall give advance notice to the Federal Trade Commission, the Department of Justice, and the Congress of the United States, before making such price increase effective.

We have had no hesitation in providing a cooling-off period in the case of labor. I see no reason why we should hesitate to provide a cooling-off period in cases such as are covered by this bill, cases which can easily produce inflation that will destroy the country.

In order that the full text of my opening statement explaining the bill may be available in the RECORD, I ask unanimous consent that my statement, entitled "Inflation Can Destroy Us," may be printed at length in the Appendix.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INFLATION CAN DESTROY US

(Opening remarks of Senator JOSEPH C. O'MAHONEY, Democrat of Wyoming, before Senate Judiciary Antitrust and Monopoly Subcommittee at hearing on his bill, S. 215, to require concentrated industries to file advance notice before increasing prices, April 23, 1959)

Mr. Chairman, certainly nobody could ask for a more cordial generous and perhaps exaggerated introduction than that which I have had at your hands this morning.

I wanted the opportunity to discuss this bill because I think that we are dealing with one of the most serious problems that this Nation ever faced. In fact we are in this country now beginning to form the outlines of the world in which the next generations will live.

Things are changing so rapidly that we ourselves—this generation I mean—may live in this new world which will not be a free world, a democratic world, a people's world, unless we now in places of leadership and legislative and executive power open our eyes to what is going on.

The time has come to put the brakes on inflation. It is a task which may be accomplished only by the cooperation of leaders in business and the leaders in labor, working in cooperation with the Government.

This Nation can no longer be content merely to drift with the times, for, if we do, not only will the cost of living and the cost of doing business, as well as the cost of Government, increase, but we shall be giving meekly to Communist Russia the principal weapon by which it hopes to destroy the system of private property.

TREASURY BORROWING CREATES ARTIFICIAL MONEY

These are no idle words. I call as a witness the Secretary of the Treasury, Robert B. Anderson, speaking in New York only last Monday. In simple, blunt language, he said: "This country cannot have an enduring bright economic future with inflation."

To illustrate his point, he described the dilemma in which the Treasury finds itself when without funds raised by taxation on hand to pay the bills the Federal Government has incurred, the Treasury is compelled to negotiate short-term loans.

"If," said the Secretary, "I called up a bank and said, 'Will you loan me $100 million at 3½ percent interest for 6 months if I send you over a note to the effect?' the banker would probably say, 'Yes, I will.'

"Where would he get the $100 million with which to credit the account of the U.S. Treasury? Would he take it from the account of someone else? No, certainly not. He would merely create that much money, subject to reserve requirements, by crediting our account in that sum and accepting the Government's note as an asset. When I had finished writing checks for $100 million the operation would have added that sum to the money supply."

INFLATION CAN DESTROY GOVERNMENT

This is an example of how inflation hits the Nation itself. It causes the creation of artificial money, and the more artificial money the Treasury creates, the greater is the danger. How great it is at this moment is proven by the fact that there are now outstanding against the great Government of the United States more than $74 billion in bills and notes payable in less than a year. This is why the national debt is increasing. It has already reached the highest peak in history and there is no present outlook for its reduction. Indeed, we are given to understand that the Treasury Department will again this year ask Congress to pass a new law to raise the ceiling on the national debt.

It is easy to say that the Government should stop spending, but we are launched upon a national program of defense and mutual security for which no new taxes are proposed and which, therefore, compels the Government to continue borrowing from the banks and thereby injuring the credit of the United States.

Many of our leaders talk about economic growth and the necessity of expending funds which the Treasury does not have, but must create with the banks and through the banks to promote this economic growth. It is my contention that economic growth with the national debt at an all-time peak cannot be created by increasing that debt. The danger is, as I said, that the credit of this Government itself may be destroyed. To destroy this credit (and it is only necessary to read the daily reports of the market value of Government securities to know that the Government credit is worsening) is the principal objective of Soviet policy in the economic war. Moscow knows that the free world depends upon the United States for its survival. Moscow knows that many governments in the past have been destroyed by inflation, and the economic war which Soviet Russia is now waging against the United States is designed to add the name of this country to the list of those which have perished from inflation in the past.

BILL IS FIRST STEP TO HALT INFLATION

This is why we must put the brakes on inflation now. The bill which I have introduced, S. 215, and which is the subject of this morning's hearing, is intended to be a first step to bring inflation under control. I do not pretend that this measure is a cure-all. It is not price control, but it does constitute an invitation to the leaders of concentrated industry, on both the management side and on the labor side, to avoid price increases for the products they manufacture and sell without first showing at a public hearing that there is good sound reason for the increases.

WOULD HOLD DOWN PRICES

This is not a punitive bill. It does not impose any penalty for price increases. It levies no fine except a nominal fine of not less than $5,000 nor more than $50,000 upon any corporation "wilfully failing to give the notice" of its proposed price increases. I am confident that no corporation will wilfully fail to give this notice. So the question

arises, what does big management have to fear by explaining to the people, through notice to the Federal Trade Commission, that it has sound reason for increasing the cost of its products?

This is a measure designed to prevent by the light of advance publicity alone unnecessary and unwarranted price increases at a time when all the people and all governments in the United States, local, State, and National, are suffering seriously from inflation.

The bill was prompted by the fact that the increasing concentration of economic power in the hands of giant corporations is giving to big business management the power to regulate commerce, which the Constitution of the United States gave to Congress. "Concentration of economic power" is an easy phrase to use, to be sure, but it is difficult to define simply. Sometimes by business management it is regarded merely as a derogatory phrase used by leftists who would like to "soak the rich," as they say. It is nothing of the sort. It represents a harsh fact of our economic system, which, if not recognized by leaders in business, in labor, and in Government, may well destroy our system of government.

HANDFUL OF CORPORATIONS CONTROL PRICES OF ESSENTIAL COMMODITIES

The Bureau of the Census has proven the amazing nature of this concentration by means of the census of manufacture. This Subcommittee on Antitrust and Monopoly, through a scientific analysis of the census, has proven that this concentration places in the hands of private management the power to control prices on commodities ranging from those which go upon the table of every family in the United States to those which make up the end products of all our basic industries.

CENSUS OF MANUFACTURING SHOWS HIGH CONCENTRATION IN INDUSTRY

Let us take some instances from the commodities, the value of which in national trade amounted to $1 billion and over when the census of manufacturers was made for the year 1954.

In 1954, there were 5,470 corporations producing $3,067,017,000 worth of bread and related products for sale in the United States. Out of this total, the 20 largest companies produced 40 percent, the 8 largest companies 31 percent, and the 4 largest 20 percent. Much as I dislike to leave this concentration of the production of bread for the people of the United States out of the scope of my bill, I did so because I wanted to point directly at the meaning of control which exists when eight large companies handle 50 percent or more of the total output.

Fluid milk and similar produces, like bread, constitute a familiar food in every household. In 1954, 4,572 corporations were engaged in this business, and the value of their shipments amounted to $4,233,983,000.

The 20 largest produced 36 percent, the 8 largest 29 percent, the 4 largest 23 percent. The meaning of this concentration becomes clearer when I put it this way: Of 4,572 corporations engaged in the production of fluid milk and similar products, less than one two-hundredths of the total number handled 36 percent of the entire business.

On the other end of the scale where we find that local companies do little or none of the business, we find a concentration of even greater dimensions. There were 102 corporations classified as steel works and rolling mills in 1954. Approximately one-fifth of the 102, or 20, did 85 percent of all the steel business in America that year. The eight largest did 70 percent, and the four largest 54 percent. Steel is an essential commodity for business, industry and Government throughout the Nation. When the price of steel goes up, the effect is felt throughout the Nation, but, obviously, when only four companies handle over 54 percent of the total output the decisions of the managers of those four companies inevitably sway the decisions of the managers of all the rest.

Certainly this is true when the time comes to pricing the product.

The same is true with petroleum refining. Here in 1954 there were 253 companies. The value of all the shipments was found by the Bureau of the Census to be $11,757,218,000. The 20 largest companies handled 84 percent of the total business, the eight largest 56 percent, and the four largest 33 percent. Let us state this in reverse order. With the 20 largest of the 253 companies in the business of petroleum refining handling 84 percent of the output, it is clear that 233 companies had to be satisfied with only 16 percent of the business. In steel, 82 of the 102 corporations had to get along with only 15 percent of the business. This is obviously concentration of control.

I want to emphasize at this point, Mr. Chairman, that I am not for Government control. Neither am I for private control in the hands of managers who are able to write their own tickets of responsibility, power and duties.

In 1954, 109 corporations were engaged in the manufacture of tin cans and other tinware, according to the Census Bureau. The total value of the shipments that year was $1,366,766,000. Of this total, the 20 largest companies handled 96 percent, the eight largest handled 88 percent, and the four largest handled 80 percent. Or, stated in other words, 89 of all of the 109 corporations engaged in this business had to be satisfied with a mere 4 percent of the total output. Thus does the concept of competition vanish, as well as the concept of local business, local competition.

It must be recognized, of course, by anybody who is familiar with modern industry of this type that big business is essential. There can be no doubt about that. We cannot turn the clock back to the days when there were steel businesses—I was going to say in almost every county of the United States, but scattered through the States. We cannot go back to those days because times have changed. But we must make sure, if we want economic freedom, that the public knows what is going on before the sledgehammer hits them by price increases.

In tires and inner tubes, there were only 27 corporations producing these commodities in 1954. The value of the shipments was almost $2 billion, $1,841,732,000. The 4 largest companies produced 79 percent of the total, the 8 largest 91 percent, and the 20 largest 99-plus percent.

So the story goes from beginning to end. Out of the 65 industries classified by the Bureau of the Census as producing shipments worth $1 billion or more, in 26 cases the largest 8 controlled more than 50 percent. Out of a total of 252 industries producing commodities the shipments of which were valued at $100 million to $999 million, those in which 8 corporations produced 50 percent or more numbered 112.

MANAGEMENT AND GOVERNMENT CAN COOPERATE TO FIGHT INFLATION

Since the bill deals only with those lines of commerce in which eight or fewer corporations produce 50 percent or more of the total annual sales, it is apparent that the measure is intended to deal with those corporations which can be called the superoperators. If the $10 million capitalization requirement contained in the bill is too small, this can readily be corrected.

I have no intention of asking those corporations which cannot participate in the power of management over pricing to be compelled to give notice of increases, because I well know that in far the great majority those companies are merely taking orders from the price leaders. The bill, therefore, cannot be called an attack upon business. It is only, as I said at the outset, an invitation to the managers of the most concentrated industries in the United States to demonstrate their good faith in the fight which all of the people of the United States must undertake to stop inflation if we hope to resist the drive of the Soviet communism to conquer us in an econmic war. It is only, as I have said, an invitation to the managers of these concentrated industries to demonstrate their good faith in this fight. The goal we seek is a goal which will be beneficial to business as well as to all who suffer from the rising cost of living.

More than that, with business and Government cooperating in good faith, there will be punishment for neither the people or the corporations. We know that our Government was created to preserve political liberty and economic freedom. We know that the Communist dictators desire to destroy both. If we don't prevent inflation from crippling the economic strength of this Nation, communism will take over. This bill, I sincerely believe, is the first step, an essential step, to put an end to inflation in the free world.

Salute to School Safety Patrols

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. WILEY. Mr. President, this week school safety patrols from Wisconsin and all over the country will be attending the national school assembly here in Washington.

As a salute to this splendid program, I ask unanimous consent to have a brief statement on its merits printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

The promotion of greater safety through the school safety patrol program is indeed an outstanding program for instilling in our youth the necessity of ever-greater safety in the protection of life and limb.

I am delighted that between 350 and 400 safety patrols from Wisconsin will be in Washington for the 23d national assembly and parade.

According to preliminary estimates, it is expected that over 30,000 young people from throughout the Nation will participate. The various civic and fraternal groups, business firms, schools, and PTA's, labor organizations, and individuals who have contributed financially to make this trip possible for the delegates are, indeed, to be commended.

According to plans as outlined by Mr. B. A. Precourt, safety director for the American Automobile Association, Wisconsin division, which coordinates arrangements for the State group, a record number of about 16 Wisconsin communities will send delegates to this year's assembly. These communities include Adams, Eau Claire, Elkhorn, Hudson, La Crosse, Madison, Plymouth, Prairie du Chien, Racine, Reeseville, St. Francis, Strum, Wausau, Wauwatosa, West Allis, and Whitehall.

This colorful event is a tribute to the Nation's more than 750,000 patrol members who each day protect the lives of class-

mates at school crossings in communities throughout the country.

According to a survey, the school patrol program, since it was launched in 1922, has reduced the traffic fatality rate of children between the ages of 5 and 14 by nearly one-half. This is, in itself, a splendid tribute to the merits of this outstanding program.

Day of Decision

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Army magazine:

The day of decision on the fiscal year 1960 budget is rapidly approaching and the Congress, which throughout the session has exhibited a healthy skepticism toward the sufficiencies of the Army portion of the Defense Department budget, is going to have to come to grips with some very vital problems.

The problems are tough. The decisions of the Congress will affect world strategy and diplomacy, military security, and the economic posture of the United States. In considerirng the grave issues raised by the Defense budget the Congress has needed and has sought the best possible advice and counsel, ranging from the Pentagon Secretariat and the military chiefs to field commanders of the Army, Navy, and Air Force, and to civilian experts and scientists.

The published unclassified testimony of witnesses appearing before the Armed Services Committees and the Military Subcommittees of the Appropriations Committees of both Houses of Congress, plus the hearings of the new Space Committee, is, as is usual, appallingly massive. There is something of almost everything in these records: Words of wisdom and balderdash, trenchant analysis and rambling nonsequiturs. Those members of the committees who listened attentively, questioned wisely, and performed their homework are now close to being experts in their own rights. But even the most knowledgeable man in Congress may be torn by indecision when he compares what he is told by administration spokesmen with what he is told by field commanders.

Consider the dilemma of the most thoughtful and fair minded legislator when he compares the President's press conference statement that he wouldn't know what to do with an additional 30,000 or 55,000 soldiers if Congress voted them to him, with the testimony of Generals Norstad and Hodes that the NATO shield is understrength and needs more soldiers, and with the testimony that Koreans are serving in the depleted ranks of U.S. divisions in Korea.

The thoughtful Member of Congress may reflect on the one hand that the President has a record and a reputation as a professional commander that is second to no other living soldier. On the other hand he may recall that one of the principles that brought success to American arms in World War II was recognition of the fact that the field commander on the spot had a better understanding of his problems and requirements than did Washington. Adherence to this principle by Washington contributed to the successes of the SHAEF commander, Gen. Dwight D. Eisenhower.

The Congressman may also remember that the man who really convinced Congress in 1951 of the wisdom of patricipating in the defense of Europe was not a spokesman of the White House or Defense or State Departments, but a soldier—again Dwight D. Eisenhower—who, like Joshua's emissaries, had gone to spy out the land and returned from Europe to report to Congress that U.S. participation in the collective defense of Europe was feasible and in the best interests of the Nation.

But the inadequacies of Army strength, as seen through the eyes of the commanders in the field, are only one of the many problems plaguing the Congress as it considers the Army portion of the Defense budget. Nor can the Congress be parochial and view the Army portion through blinders that shut out the rest of the Defense budget. The Congress must consider the whole and in doing so it must of necessity make grave decisions that will strengthen or weaken the security of the Nation, not during the fiscal year ahead but perhaps for years to come.

The Congress must consider the nuclear deterrent and how much is enough. It must analyze the meaning of the missile gap. It must make judgents about the military capabilities of Moscow and Peiping and the most likely manner in which those capabilities may be exercised.

But when all of this is done and Congress comes back to the Army budget, convinced of the need for increasing it in order to give the Nation a more balanced military posture, what is it to do? It will desire to give the Army a capability that will truly deter the Communists from engaging in military aggression of any kind. It will want to beef up the Nation's conventional capability against the likelihood of all forms of war other than self-defeating nuclear exchange, which is the way the President has characterized it. Self-defeating, obviously, for both opposing camps.

As Congress considers the needs of the Army it will inevitably begin to establish priorities. What Army program should it strengthen with additional funds and what program may be delayed? The Army needs more active Army strength and a strong and Active Reserve program for both the Army National Guard and Army Reserve. But the Army, as the Congress is aware, also needs more modern weapons. Congress knows of the Army's need for new rifles, machineguns, artillery, tactical surface-to-surface missiles, aircraft, tanks, trucks, radios and radars, and bridging equipment. It is also aware that the defense of the Nation against aerial attack cannot be disregarded and that the development of an antimissile missile is an element in the missile gap that must be closed at fast as is humanly posible.

All of these things are desirable; indeed they are necessities if the U.S. Army is to be the first class fighting force every American citizen wants it to be. But there are also fiscal limits that Congress respects. Conrequently priorities.

Congress should give high priority to the modernization of the field Army. That is, funds for tactical missiles, conventional arms, tanks, light aircraft, communications equipment, and so on. As Congress has been told by the Chief of Staff the funds given the Army in recent years for weapons and equipment of this kind have been insufficient to halt the rate of obsolescence. True, funds have been made available by the administration for piddling numbers of new rifles, machineguns, and tanks, and for tactical missiles but not enough to keep the Army up to date.

As the time comes for the Congress to make its final decisions on the 1960 budget, the priorities it establishes will determine the kind of military security this Nation will have. We hope and believe that Congress on analysis and reflection will place high on its list of priorities in the defense budget these three Army programs: a modernization program that will exceed the rate of obsolescence of Army weapons and equipment; a floor of at least 900,000 on active Army strength, 400,000 on the Army National Guard and 300,000 on the Army Reserve; the fullest possible support of the Nike-Zeus antimissile missile.

If on its coming day of decision the Congress does all of these things it will have shown that it is awake to its responsibilities and that its decisions on the programs it will support are realistic and every bit as important as the money it votes.

Gettysburg, Battles, and Patterns

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. QUIGLEY. Mr. Speaker, I hope that a pattern for the future preservation of historical shrines can be established at Gettysburg in much the same manner as the battle itself determined, in large measure, the future of our Nation. That pattern would be a combination of local and Federal action to preserve the integrity of that sacred soil, local zoning to prevent mistakes of the future, and Federal land acquisition to rectify mistakes of the past. As I have stated before, the beginnings of local action on zoning has already been taken. I hope that the Senate will reinstate the acquisition process by restoring to the budget the necessary funds. With this in mind, I would commend to the Members the following editorial from a recent edition of the Baltimore Sun:

GETTYSBURG—THE ZONE DEFENSE

The National Park Service and Civil War enthusiasts are concerned over the encroachment of motels, hamburger and soft drink stands, garish signboards and other like evidences of commercialism on the sacred soil of the Gettysburg battlefield. Anxiety has been increased since a House committee cut out of the Interior Department budget a Park Service request earmarked for the purchase by the Government of 600 more acres of battlefield land.

Desecration of the battlefield is deplored by everybody but its prevention is not the responsibility alone of the Federal Government. The people of the town and its environs on which most of the battle was fought have a large share as Representative QUIGLEY, whose constituency includes them, has pointed out. He proposes that the local authorities establish zoning to prevent further commercialization.

Even if funds were appropriated for the purchase of the 600 acres it would only correct past errors. Zoning would offer permanent protection and remove the necessity of appealing periodically to the Federal Government to buy more land. Mr. QUIGLEY sees a better chance of the appropriation being restored by the Senate if the people of Gettysburg exert an effort to help themselves.

The battlefield is Gettysburg's greatest commercial asset. It attracts around 750,000 tourists a year and the number is expected to be greatly augmented during the centennial celebration in 1961–65. Tourists of course want places to sleep and eat and places where they can buy souvenirs. But there is a limit to how much of this sort of

thing can be tolerated without destroying the main attraction which is the battlefield.

It would be hard to find a case where intelligent zoning is so essential to commercial enterprise.

President Truman and the Point 4 Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Hon. Eric Johnston on April 30, 1959, at a dinner honoring former President Harry S. Truman.

Eric Johnston has a deep understanding of economic problems of the nations of the free world. His views are quite persuasive to many of us Members of Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY ERIC JOHNSTON AT THE DINNER HONORING FORMER PRESIDENT TRUMAN, APRIL 30, 1959

Ten years ago, on a blustery day in January, an idea was born that has electrified the world.

The place of birth was the great portico of the Capitol of the United States. The occasion was the inauguration of our honored guest as President of the United States.

In his usual concise and clear and understandable way, the President was enumerating the principal points of a foreign policy program for his new administration.

Not many of us, perhaps, will remember the nature and scope of the first three points, as vital and important as they were. Let us recall them.

First, the President pledged his administration to the "unfaltering support of the United Nations," to strengthening its scope and effectiveness.

Second, he pledged through the Marshall plan and related programs to continue America's efforts to hasten economic recovery in Europe and elsewhere.

Third, he pledged to strengthen the arm of freedom-loving nations against external aggressors, to buttress the Atlantic community through NATO, to equip our NATO alliance with weapons.

But the fourth point—point 4 it became to history—was of a different order of magnitude. It touched the basic nature at the very core of our modern civilization. It boldly affirmed the vibrant potentials for growth in all men and in the nations of man throughout the world.

Point 4 came at a moment of monumental need. Perhaps all great ideas come to bear at such moments when time and circumstance are ready for their arrival.

Point 4 was created at the end of a cataclysmic war which had vastly shifted and warped and altered our old world much as the eruption of Vesuvius changed and altered the countryside and the adjacent towns of Italy many centuries ago.

What was the world like back in 1949, the world into which President Truman and our country were suddenly propelled into fantastic responsibility?

The free world in that year was at the precipitous edge of the cliff. Economically, politically—in terms of both its interior and exterior power—the Western alliance was then at a period of maximum tension.

Out of World War II had come two impelling developments to test the free world.

One was the startling and engorging power of Soviet Russia, committed with a driving compulsion to the takeover and swallowing-up of once free nations.

The second development was the sudden emergence of new free nations, a whole world of new nations born from the shreds and shards of old colonial empires.

And it was to these new nations that point 4 was ingeniously, brilliantly dedicated.

Coming with whirlwind speed into the 20th century, these newly free countries had enormous needs. They suffered every ravage of humankind. They knew hunger and poverty, disease and illiteracy, hopelessness and despair.

To draw back from the nethermost regions, these nations needed help, help of all kinds. But especially they needed the skills and the know-how and the techniques of advanced societies to advance themselves.

This was the purpose of point 4. It is this purpose that makes point 4 one of the great historic concepts of our modern era.

Point 4 caught the imagination of the world because it was not an extension of old imperialism, but a promise of freedom beyond man's imagining.

Point 4 gives human resources, skills, and know-how to people who then learn to help themselves. This is its genius. Point 4 technicians help people to do for themselves, not to have things done for them. Human dignity, thereby, is preserved and restored.

This is no charity which creates paternalistic feelings in the giver and degradation in the receiver. Rather, point 4 brings human beings to work together as equals, learning together those skills which have accumulated and been developed over the centuries, and which by quirk of circumstance are concentrated today in a few places.

Now we've had 10 years' experience in point 4. In this decade, thousands of point 4 technicians have worked in scores of nations, both under the American program and under the programs of the United Nations and of other countries.

It is such a short time, but it has been a time for learning tremendous lessons.

These past years, I think, have shown us the profundity of the original concept. Each year point 4 has become more meaningful, more significant. But its real achievement, I am sure, still lies ahead.

It has been said that good ideas become great ideas when put into effective action by men of vision.

Many good ideas never become great. They fail because there is no man to give them flesh, to bring them to life.

But the man who recognizes a good idea and makes it live has the quality of greatness himself. And so it is with the man we honor tonight, a man who knew how to act upon an idea whose time had come.

My friends, it is with the greatest of pride as an American that I now present to you the man who breathed life into a truly great human conception—Harry S. Truman, 32d President of the United States, the pioneer of point 4.

Understanding the East-West Position

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. WILEY. Mr. President, we recognize that the effectiveness of our national policies—in our representative form of government—depends to a large degree upon the readiness and the willingness of the people in our Republic to support such policies.

With the upcoming conference at Geneva on May 11 our conferees will indeed need the unified moral, realistic support of the country.

From time to time I am increasingly delighted to find in an ever-wider variety of segments of the economy thoughtful, constructive, realistic thinking toward the challenge we face in combating communism; as well as a display of practical realism as to how we can best cope with these challenges and theats to our security.

As a splendid example, the recent edition of Realtor's Headlines, published by the National Association of Real Estate Boards, carried a thought-provoking article (a) stressing the doggedness with which Communist leaders continue to pursue their goal of world domination; and (b) a realistic idea of what we, as a member of the world of free nations, will need in terms of contributions if we are to continue to meet the Communist challenge on many fronts.

Particularly, the editorial relates our mutual security program to the world challenge; further, it puts it into perspective with other expenditures for defense. To give my colleagues the benefit of this thoughtful approach to better understand our position, I ask unanimous consent to have the editorial by Eugene P. Conser printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNDERSTANDING OUR POSITION
(By Eugene P. Conser)

Far from the thoughts of most realtors is any consideration of the success or failure of this Nation's foreign aid program. We can be forgiven for we are not unique in that respect. Too many of our countrymen overlook it. We are far removed from its administration, and our disinterest can be excused.

Our lack of interest, however, could be a fatal fault. Let us analyze a few facts:

From within a national budget of $77 billion a year, more than $45 billion is spent to secure our peaceful existence among the nations. Of this amount, some $4 billion is designated as economic aid. The remainder is spent to maintain and strengthen our military defense. It includes aid to the military establishments of friendly foreign nations which we want to remain our friends and permit our continued use of military bases.

Why are we spending this money year after year, always with the threat that the cost will go higher—much higher? We do it to meet the threat of Communist expansion—a country-by-country takeover of nations whose peoples are not alert to the true nature of the "dictatorship of the proletariat" and might be either unwilling or unable to resist Communist aggression.

Are we justified in accepting this costly leadership to counteract the Soviet pressure to gain control of additional strategic areas? We are if we value our own existence as a free people and take seriously the repeated warnings of Soviet leadership, such as:

Marx: "The theory of communism is summed up in the single sentence: Abolition of private property."

Lenin: "As long as capitalism remains, we cannot live in peace. In the end one or the other will triumph."

Stalin: "Good words are a mask for concealment of bad deeds. Words are one thing, actions another."

Khrushchev: "If anyone thinks that our smiles mean the abandonment of the teachings of Marx, Engels, and Lenin, he is deceiving himself cruelly. Whether you like it or not, history is on our side. We will bury you."

Lenin: "Treaties and agreements are promises—like pie crusts—made to be broken."

Foster: "To my great-grandson—who will live in a Communist United States."

Lenin: "First, we will take Eastern Europe, then the masses of Asia, then we will encircle the United States. We will not have to attack. It will fall like an overripe fruit into our hands."

It is true that "seeing is believing." We have been seeing the boasts of Communist zealots come true. We know their objectives. We have seen them march on, cunningly turning the political control of one area after another into the hands of their ardent followers. That they have had some setbacks in the last few years can be credited to the understanding, the courage, and the dogmatic insistence of John Foster Dulles, frequently standing almost alone against the blind censure of friend and foe alike. Our efforts, however creditable, have not been enough. We continue to see one example after another of the ruthless march of communism.

Our foreign aid program—the bulwark of our resistance to communism—must always be open to the most critical analysis, for mistakes are certain to be made. To those of us who value personal freedom and choose not to live under a Communist dictatorship, its success is our first concern. We can rest assured there will be no lessening in the foreseeable future in the annual $40-plus billion cost of our protective covering. We can prate of lowered taxes, but it will be meaningless in a world of Communist conation. Our military defense will be useless if we stand isolated and encircled. Our need is to be only one among many free nations, each with a government freely elected, an economy of individual enterprise, and a landowning people. To give aid in strengthening any other type of economy is merely to help pave the way for communism.

Annual Convention of National Association of Plumbing Contractors

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared relating to the forthcoming 77th annual convention of the National Association of Plumbing Contractors to be held at Miami Beach, Fla., from May 31 to June 4, of this year.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SMATHERS

Between the dates of May 31 and June 4, 1959, at Miami Beach, Fla., the National Association of Plumbing Contractors will hold their 77th annual convention. On these same dates there will also be a National Plumbing, Heating, and Cooling Exposition to demonstrate the progress of this industry.

It is the largest annual conclave of the combined plumbing, heating, and air conditioning industry in the United States. The association, itself, is the oldest trade association in the construction industry and represents a most progressive entity which has contributed substantially to the American way of life. The industry has helped America achieve the highest standards of health, sanitation and comfort in the world.

In its 77th year I am pleased to report that the association has been under the very able leadership of an outstanding native son of Florida. His name is Mr. John M. Rhoades, of Sarasota, Fla. As president of the association, he has served with honor and distinction. Through his efforts, the convention and exposition was brought to Florida for the first time in the association's 77-year history.

Florida is particularly proud of John Rhoades, not only for the contribution which he has made to this great industry, but as a citizen who has served well his community, his State, and his Nation.

Senator Keating's Approach to Eavesdropping Legislation

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. DIRKSEN. Mr. President, the New Orleans Times-Picayune recently published an excellent editorial commending the distinguished junior Senator from New York [Mr. KEATING] for his sponsorship of antieavesdropping legislation. The editorial points out that the bill introduced by him—S. 1292—is designed to protect the right of privacy against unauthorized invasion and, at the same time, to facilitate the fullest use of scientific methods of crime detection by law-enforcement agencies. In the words of the editorial, "Senator KEATING is to be congratulated on the thoroughness and general balance" of his approach to this subject.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIMS OF EAVESDROPPING BILL

Senator KEATING is to be congratulated on the thoroughness and general balance, in the public interest, of a bill he has introduced on the very complex subject of eavesdropping (most generally associated with wiretapping).

It endeavors to protect the private citizen, in every field where Federal legislation properly applies, from invasions of privacy represented by any form of instrumental "tapping," "bugging," etc. At the same time it confers the right of eavesdropping under proper judicial althority on Federal law enforcement officers "hot on the heels of crime;" and likewise protects law enforcement from "leakage" of the fact of application for authority. There are many ins and outs of the matter to which Senator KEATING evidently has given detailed attention.

It seemed surely to be the Senator's intent to do away with the weird coupling of terms in the Federal Communications Act which has failed to protect citizens against eavesdropping per se, or the recording of such intercepted data; but at the same time has hampered Federal law enforcement unduly by its prohibition of divulging such information (specifically as criminal evidence in courts).

For example, information lawfully obtained by State enforcement agencies would be made admissible in Federal prosecutions; and all past information obtained authoritatively by Federal officers, made admissible. The main tenor of the proposed bill is to lift crippling prohibitions against Federal officers. But in view of the troublesome language of the 1934 act, and absence of a repealer clause, it seems advisable for Senator KEATING to insert a section dealing directly and unequivocally, for the future, with the admissibility of "eavesdrop" evidence.

We can find no such direct, unmistakable language. It would be foolish to deprive Federal officers of eavesdrop authority such as is now obtained from the Attorney General, and at the same time retain the inadmissibility status for eavesdrop evidence. As it now stands the officers without elaborate ritual can at least obtain information which may lead to other evidence clearly admissible.

Dedicated Service

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD as part of my remarks a fine editorial about former Secretary of State John Foster Dulles, appearing in the Northwest Arkansas Times, the principal paper of my home town. I think this editorial expresses in a few words sentiments which a great many people in this country share.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEDICATED SERVICE

A dedicated man leaves office as John Foster Dulles bows out as Secretary of State. He has served the United States over a long period of years; served sincerely, the best he knew, and far beyond the highest call of duty in many cases.

He did not spare himself in the service he rendered to his Nation. His trips, made one after the other, to the far corners of the earth, must have been trying on numerous occasions. Doubtless the state of his health would have kept many lesser men home. But he went as he thought his duty called, without complaint, always with hope in his heart that his accomplishments would be worthwhile.

The challenges offered during his tenure in high office have been as great as any the world has ever known, and they have continued over the longest period of time in man's memory. He met them as they arose, maybe not always as some of us would have liked, and certainly not without cause for criticism in many cases, but he never shirked the responsibility of his office.

None of us will know the testing times through which he went as he turned a smil-

ing face. We knew he had the problems of the world on his shoulders, and that he bore up well to outward appearances. That they affected him personally we can never doubt.

There is sadness in the situation as the public-spirited man is stricken and retires from the office he loved. The people he represented for such a long period of time will have great sympathy for him in time of trial.

What Kind of Farm Program

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a thoughtful dissertation on the proper national policy toward agriculture, presented by Arthur T. Thompson, editor of the Washington Newsletter of National Farmers Union, before a meeting of the New Jersey division of Americans for Democratic Action, be printed in the Appendix of the RECORD.

In this speech, Mr. Thompson lucidly explains the purposes of national farm programs, and pinpoints the failures of the Benson farm policies to achieve these purposes. I regard this speech as such a fine presentation of the present confused farm program situation that it is worthy of inclusion in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT KIND OF FARM PROGRAM?

(By Arthur T. Thompson, editor, Washington Newsletter, National Farmers Union)

A proper national policy toward agriculture should result in an ample, but not excessive supply of farm products of the desired variety and volume, sufficient to maintain our expanding population on a healthful diet, keep our carryover reserves at a prudent level and cover export requirements. Under a proper national policy, farm commodities should be produced efficiently, that is, with a reasonable minimum of resource inputs, including labor, and without undue deterioration of the farm plant, especially the soil. These commodities should be available to consumers at the lowest possible cost consistent with a fair income standard for farmers and all others engaged in the essential transportation, processing and distribution of the end products.

Any intervention by the Federal Government to facilitate the realization of such a national agricultural policy should avoid waste and unnecessary expense and also avoid setting up undesirable new trends in social and economic organization.

How do we measure up to these various criteria at the present time? First, it seems clear that the Nation's farmers are producing very efficiently as individuals. The U.S. Department of Agriculture reports that the number of people supplied by one farmworker and the amount of farm output per man-hour have both about doubled in the last 15 years. Farm productivity in fact has risen at a much faster rate than that of industry and the end is not yet in sight.

As a consequence of this surge in unit efficiency, farm production in total has been quite sufficient for current market demand. It is, in fact, excessive by from 6 to 8 percent. This, however, is not quite the same as saying that the "healthful diet" needs of all of our population have been oversatisfied to the extent of 6 to 8 percent. Some studies indicate that perhaps up to 20 million persons without jobs, on pensions or low income subsist on deficient diets, particularly with respect to vitamin-bearing fruits and vegetables and animal proteins.

Thus it appears that current policy is defective in that it is resulting in overshooting the commercial market for farm products, yet at the same time is not bringing about adequate diversion of the excess to needy citizens who cannot fully provide for themselves through the commercial market. It should be noted that about 872 million pounds of food were distributed in 1958 by the U.S. Government to needy people and to school children through the national lunch program, but this by no means covered all supplemental requirements.

How does the present policy rate as regards food costs to the consumer? We find that retail food prices on the whole have remained stable during the past 10 years, much more so than for such other items as rent and transportation. This steadiness of the food price level has exerted a strong stabilizing effect on the Nation's general price level, since food accounts for about one-fourth of the average family's living expenditures.

According to the latest compilations by the U.S. Department of Agriculture, the yearly retail cost of the average urban family's food basket stood at about $1,065 in 1958 as compared with $982 10 years earlier.

What about income to the farmer? Here the story is somewhat different. Whereas 51 percent of consumer's dollar went to the farmer in 1948, by 1958 this proportion had fallen to 40 percent. Farm prices had fallen during the decade and at the same time the farm-retail spread has been increasing. On the average annual market basket cost this spread was $485 in 1948; in 1958 it was estimated at $638, an increase of more than 30 percent.

Since consumers normally do not tend to increase the proportion of their income they spend for food even with substantial increases in wages, it follows that the widening of farm-retail margins has a tendency to depress farm income. Along with this development, there has also been a substantial rise in farm production costs. A large part of the gain in agricultural production efficiency has involved large expenditures for machinery, fertilizers and such. A detailed Federal study made in 1955 showed farmers laid out $40 billion for production and family-living expenses, of which $8 billion alone went for the purchase, operation and maintenance of motor vehicles and machinery. The typical midwestern farm represents an investment of about $50,000 per worker, compared with about $15,000 per worker in industry.

Noting this uptrend in farmers' costs along with widening farm retail margins and execessive offerings to the market, it is not surprising that farm prices have failed to keep farm income on the same uptrend as for total national income. Owing largely to a temporary dip in certain fruit and meat production and to high average crop yields, farm returns in 1958 rose to a little more than $14 billion. This was about 22 percent higher than in 1957 but considerably lower, especially from a buying power standpoint, than in most of the postwar years prior to 1953.

Per capita farm income in 1958 was estimated at $1,068, somewhat higher than the previous record in 1951, but still only about 50 percent of the average per capita nonfarm income. Incidentally, this per capita farm income estimate includes both Government payments and off-farm income and it also reflects an allowance for home-grown food. Farmers do not share in nearly as much of the $5 billion to $7 billion Department of Agriculture budget as is generally supposed. A large part of the budget goes for general services, such as scientific research, meat grading, forest protection, soil conservation and marketing reporting, which are of benefit to the entire population.

From the standpoint of farm income then, the present agricultural policy again appears deficient.

It was mentioned at the outset that any Federal intervention in the agricultural field should avoid waste and unnecessary expense. What does the record show as to this? Regrettably it shows that the Government's programs have resulted in such a pileup of commodities—mostly wheat, feed grains, and cotton—that storage charges alone are running more than $1 million per day and by next year may be approaching $2 million.

This has come about because of an inadequate price support plan under which the Government agreed to accept commodity if the market failed to rise above the support level. In most cases, producers could not qualify for support without making acreage adjustments, but especially in the most recent years, the adjustments asked were not large enough and the incentives offered were too small to get the compliance necessary to curb overproduction.

Even now, the Federal holdings, excepting possibly in the case of wheat, are not as fantastically large as some people think—for example, feed grain stocks on March 27 represent not much more than a 100-day supply—but taken with the privately held supplies, they would have a disastrous effect on prices if suddenly turned loose.

Altogether, the stocks in Federal hands are larger than necessary by usual standards and they are not being utilized to the maximum possible extent to relieve dietary deficiencies either here or abroad. Thus, in a way, these stored supplies stand as a symbol of waste and inefficiency, a further defect in our current agricultural policy.

Lastly, there is a question as to whether our national agricultural policy as reflected in current Federal programs is encouraging desirable trends in social and economic organization of agriculture or whether on the contrary it is setting up objectionable trends.

Latest census estimates show that the number of farm people in this country now is down to slightly less than 21 million, a decline of 17 percent since 1950. Meanwhile, total national population has gone up to more than 175 million. Thus, only 1 American in 8 now lives on a farm as compared with 1 in 3 in 1910.

With the advance of technology, an individual farmer has been able to handle more land with the result that the average farm is now larger and more efficient, especially in the so-called commercial area which with about one-half of our farmers by number accounts for nearly 90 percent of our output. Some this consolidation, however, has involved substantially higher land prices, and larger equipment, hence a larger capital burden for the remaining farmers to carry. Advancing technology and price pressures have also accelerated the tendency to large-scale contract farming and vertical integration under the domination of feed companies, processors, and food distributors. This latter development has resulted in excessive expansion of production, notably in the chicken broiler busines, with the result that many independent family farmers have been ruined financially.

As for farmers in the so-called low-income areas, the present farm policy probably has not compounded their disadvantage, since they share proportionally (sometimes more

than proportionally) in Federal farm program benefits. On the other hand, they deserve more attention than they have been getting in the way of credit for those who are suited for expansion of operations and of education and other assistance for those preferring a shift to nonfarm employment. Incidentally, the out-migration of farm people in the main low-income areas since 1950 has been greater than for any other part of the country.

Thus, we see some desirable trends developing under the present agricultural policy (though some are proceeding too slowly) while other trends appear questionable. The factory farming system falls in the latter class. Firsthand observers contend that it is not really as efficient as it looks when everything is taken into account. Moreover, much of it is conducted today at lower wages than in industry. Carried to extreme, factory farming would develop higher costs and its managers conceivably would adopt the time-honored industrial practice of choking supply drastically any time the market failed to offer a profitable price.

In view of the aforementioned shortcomings under our present agricultural policy, what should be done? Should farming be returned to the free market, so as to put an end to the pileup of supplies in Government hands regardless of what happens to farm income? Or should the Federal Government recognize an obligation to maintain a sound agriculture and assist farmers in some fashion to meet the Nation's food needs without waste and undue income loss?

It is the view of the National Farmers Union that the excess production problem can and must be met, partly by greater utilization among marginal consumers both at home and abroad and partly by cutting back on plantings or marketings for the time being. At the same time, farm income should be given reasonable protection. It is held that this can be done with greater resultant efficiency of our farm plant and without undue cost to the Nation.

On the side of expanded utilization, Nation Farmers Union backs expansion of the school lunch programs, the inauguration of a food stamp allotment scheme and greater use of our surpluses in promoting economic development abroad. Food, for example, could be supplied abroad as part of the wages necessary to build technical schools, irrigation systems and so on.

If such expansion till leave us with too much farm output for domestic absorption at reasonable prices to farmers (and National Farmers Union believes this may be the case for some years to come), then the Federal Government should either set up machinery with which farmers can exert output control themselves or should overhaul present programs so that these become much more effective than at present.

Anything that is attempted should be comprehensive, that is, result in the desired adjustment of output as a whole. Under too many programs in the past, adjustment in one commodity has ben offset by a shift of land or other resource to some other commodity. Too many times aggregate volume of farm products has thus actually increased, with serious consequences for farm income.

Thus, under the National Farmers Union proposal, farmers would be offered a program for referendum approval under which individual producers would have an aggregate marketing quota expressed in dollars. Each producer would be free to produce whatever he liked of any commodity, so long as his total marketings did not exceed the limit.

How large would the national all-commodity quota be? It should be that aggregate quantity of crops, fruits, vegetables, livestock products, and so on which it is estimated on the basis of normal employment would bring prices high enough to yield returns to producers approaching parity income.

At this point, consumers might ask whether such a program might not reduce supplies too much and run up food bills unduly. In the first place, it is not intended that there would be any shorting of total food supplies for the American people. It is obvious that a great deal of the food being produced now is not going into consuming channels; thus a considerable adjustment could take place without affecting national consumption levels one iota.

Second, it may be pointed out that a very large change can be effected in net farm income from a moderate change in farm prices and from an even much smaller change in retail prices. A 10-percent increase in the average level of farm prices (equivalent to not more than a 4-percent change in retail prices) could mean as much as a 50-percent increase in net farm income.

In setting up an output target, National Farmers Union leans to the view of playing safe and then if supplies should prove a little too heavy for the price structure, make supplemental payments direct to the producer. In that way, the food would move on through consumption channels instead of going into a Government warehouse, while farmers at the same time would not be penalized as they are at present for maintaining an efficient, highly productive, agricultural plant.

Some day this Nation will have a population requiring all we can produce under the most efficient conditions. Let us not dissipate our assets of soil and trained farmers in the meantime.

The Need for Economy in Government

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Minot (N. Dak.) Daily News of April 25.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE AGREE WITH MR. LANGER

Do the men who control the Nation's purse-strings practice economy, and believe in it themselves?

We go along with Senator WILLIAM LANGER's idea that if economy is really to be the watchword on the domestic front, the executive and legislative departments in Washington should set the example.

We go along with him also when he says that they are not doing it and that Washington is running hog-wild with the taxpayers' money.

The senior Senator points the finger at the White House and at the Halls of Congress, and calls for the President and for Senators and Congressmen to take a voluntary cut in their salaries and office expenses. It would be our opinion that Senator LANGER is utterly sincere in this, and that the "hog-wild spending" he speaks of, is a form of extravagance to which a halt needs to be called. The executive branch of Government is spending money today at a rate which should be reduced.

Take the Department of Agriculture, for example. While Secretary Benson makes speeches on what he calls sound economics and the high cost of price supports, his Department has put more payrollers into his favorite branches than Henry Wallace would have dreamed of.

The White House itself is an unnecessarily expensive establishment.

All these things add up to a situation which makes those who use "economy" as a watchword look like hypocrites to the tax-paying public.

U.S. Rice Farmers Tap U.N. Technical Aid

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Christian Science Monitor entitled "U.S. Rice Farmers Tap U.N. Technical Aid."

My colleagues will recall that in the last session of the Congress a bill which I sponsored, to provide for the establishment of a fish-rice research and experiment center, was enacted. This article is an excellent report on the progress which has been made since enactment of the bill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. RICE FARMERS TAP U.N. TECHNICAL AID

(By Susanne Davis)

UNITED NATIONS, N.Y.—A Chinese expert is bringing ancient Asian know-how to farmers in Arkansas, helping them improve their techniques of fish farming. The United States—in a very rare departure from custom—is receiving technical assistance from the United Nations' Food and Agriculture Organization.

Rice farmers in Arkansas, Louisiana, Texas, California, and Tennessee may be able to develop a new industry and add considerably to their farm income as a result of this technical advice.

Working with the U.S. Fish and Wildlife Service, Dr. Shao-Wen Ling, the FAO's fish-farming expert, has developed ways in which American rice paddies can be used for raising fish as well as rice.

Dr. Ling has taught biology and worked for the Chinese Nationalist Government in the field of fish culture. He fled China in 1937 after the Japanese invasion and went to Hong Kong, where he worked for the British Government as fisheries biologist.

GOVERNMENTS ADVISED

At the end of World War II, he returned to China to organize a national fisheries research institute. In 1949 he joined the FAO. He has advised the Governments of Thailand, Ceylon, Indonesia, and Burma on fisheries and fish farming under the FAO's technical-assistance program.

Dr. Ling outlined the main steps in setting up an experimental fish-farming station in the news conference at the United Nations.

First of all, there must be a supply of the proper kind of fish to stock the flooded rich

fields. These fish must be bred to grow to maximum size on the food available.

Next, the fish must be harvested at just the right time to fit in with the rice-growing cycle. Later, they must be processed—freezing, canning, curing, and salting facilities must be readily available—and, finally, of course, the end product must be marketed.

The idea of fish farming occurred to rice farmers in Arkansas when they found that fish filled their rice fields during the flooding period. These fish were so-called trash fish—undesirable for eating.

AID SOUGHT

Rice growers thought it should be possible to have food fish instead, and applied to the fish and wildlife service for advice. Experience and knowledge in fish farming was lacking, so the farmers applied to Senator J. W. FULBRIGHT, Democrat, of Arkansas, for aid.

He introduced a bill in Congress to set up a research and experimentation station to study fish farming in connection with rice growing. The bill was approved, and $360,000 appropriated. And Dr. Ling, through the FAO, was hired to work with the fish and wild life service in setting it up.

Dr. Ling says that all the elements for a successful fish farming industry are present in the United States. There is plenty of land and water, he points out; there is no lack of equipment; the climate is suitable, and the amount of fish eaten can well be increased.

The United States meager fish consumption, only 12 pounds of fish per person per year, is a source of amazement to a Chinese, brought up on a fish diet. Dr. Ling says that as the population grows, there will be a greater demand for food.

SEA LARDER DEPLETED?

This increased need, coupled with the fact that the seas are getting "fished out," apparently has convinced him of the advisability of starting a new food-producing industry in the United States.

At the present time, fish farming in the United States is confined to raising game fish to stock rivers and streams for sportsmen. Expanding this practice, the edible buffalo, and cat fish which come to rice paddies naturally, could be raised as well, Dr. Ling believes.

In time, other species might be added and new kinds of fish from other parts of the world could even be introduced and cultivated, he says.

Dr. Ling is just finishing a 3-month tour of duty in the United States. His salary and expenses will be reimbursed to the FAO by the United States, which is not eligible to receive technical assistance aid without charge—it is not classed as an underdeveloped country.

Taxes: The Price We Pay for Civilization

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Paul Talbot Babson, entitled "The Back Yard," which appeared in the April 13, 1959, issue of the United Business Service of Boston.

This is the largest business advisory service in the United States, and its views are read avidly each week by thousands of the Nation's top business leaders.

Famous for its exhaustive studies of the country's economy and the soundness of its opinions on business trends, it has become even more widely appreciated for the "Back Yard" comments of its editor, Paul Talbot Babson, on good citizenship.

In his article he reminds us, as the late Justice Oliver Wendell Holmes once reminded us, that taxes are the price we pay for civilization; and, further, that in this modern world they are the price we pay for freedom from the Communist tyranny, which oppresses so much of the rest of mankind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BACK YARD

(By Paul Talbot Babson)

After totaling the Government's share of my income via form 1040 the other night, I was complaining to Sue about the high cost of government. To which she made the very wifely comment:

"Don't you like it here?"

There was some spluttering on my part for a few minutes, but I finally simmered down and answered her question:

"Yes, I like it here."

And from what you read about other countries—even in the Western World—you certainly must agree that America, even with all its various taxes, is not a bad place in which to live.

As a matter of fact, it's a mightly pleasant place to live.

For from the Pocumtuck Valley to the top of the Tetons there's nothing like it for geographic grandeur. And where else in the world can you debate the virtues of a Ford, Plymouth, Chevrolet, or Rambler with your neighbor, rather than commiserate over the allocation system of acquiring family transportation.

Sure there are local and State taxes too—the newspapers tell us that both Massachusetts and Michigan are going broke, and that other States are following fast behind. But at least you and I have a chance to do something about this.

In so much of the world—in all those other countries—there's no chance for self-expression, no argument tolerated, no valid vote, no freedom of opinion or speech, no real dignity for the individual.

Sue's final thrust came as she signed the other end of the joint return, and I signed the check.

"Let's be happy there's a check to sign, and that you are allowed to sign it."

"North Dakota," Poem by Miss Mavis Merritt

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a poem entitled "North Dakota," written by Miss Mavis Merritt, a sophomore at Central High School, in Grand Forks, N. Dak. The poem was first published at the request of Mrs. William Nelson.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA

GRAND FORKS.—The following poem on "North Dakota" was written by Mavis Merritt, a Central High School sophomore:

"North Dakota, oh you of great lands
That seems to be made with God's own hands,
You with your crops that in the fields do grow,
You with your beauty that all should know,
The scenery you have is so very divine,
And to look upon it is a pleasure of mine.
Stretching along in so endless a space
Is this beautiful, happy, and wonderful place.
The weather is changeable, cold, and then warm,
But these changes bring joy and never alarm.
The stars as they shine down on you at night
Show only your kindness and your great might.

"North Dakota, oh you of great lands
That seems to be made with God's own hands,
You with your beauty that's known far and near
You with your country that knows no fear.
In spring all the creatures of your woodlands are gay
And all the year round they feel the same way.
Your people are happy and glad they live here
In this land that has brought an abundance of cheer.
Peace Garden State seems a wonderful name
All over the State it seems quiet and tame
A place of beauty, a place to see,
North Dakota is where I want to be."

—*Mavis Merritt.*

A Misleading Inaccuracy

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. PROXMIRE. Mr. President, the distinguished Senator from Missouri [Mr. SYMINGTON] has been supported by the Milwaukee Journal recently in his charge that the Chairman of the Joint Chiefs of Staff, Gen. Nathan Twining, has been caught in a misleading inaccuracy in giving the Congress a false picture of Britain's missile capability.

I ask unanimous consent that the editorial supporting Senator SYMINGTON be printed in the Appendix of the RECORD following these remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MISLEADING INACCURACY

Senator SYMINGTON has clearly caught General Twining, Chairman of the Joint Chiefs of Staff, in what can be called a misleading inaccuracy, to stretch on the side of courtesy.

The Missouri Democrat, who is a former Secretary of the Air Force, recalls that last January Twining told a congressional committee that the Thor missiles this country had sent to Britain were sitting there ready

to go. Yet, when Symington visited Britain recently, he found nothing ready to go.

Secretary of Defense McElroy now concedes that the 1,500-mile Thors in Britain are not ready for firing. And a Defense Department spokesman has told the New York Times that in calling the Thors combat-ready Pentagon people meant the missiles themselves were ready, and not the related equipment.

If that is what Twining meant, that is what he should have said. The fact that he didn't is surprising because our concept of weapon development is on the basis of an entire system. That means that while a weapon such as the Thor is being developed, its launching equipment is designed and built, its operating and maintenance crews are trained, and even the technical handbooks written.

It is fitting that McElroy himself has stepped forward to set the story straight. But General Twining's conduct cannot be lightly excused. He made a misleading statement last January which he must have known was misleading. Its effect was to convince Congressmen that our British allies had a missile capability that they did not then have and still do not have.

The Chairman of the Joint Chiefs of Staff is the Nation's No. 1 military man. The civilian Secretary and the Congress count upon him for technical advice. And so, even though General Twining may be optimistic about America's overall defense position, it is essential that he supply full and accurate information.

Essay by Miss Linda Hugg on "A More Successful United Nations"

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. ANDERSON. Mr. President, Mr. D. D. Monroe, of Clayton, N. Mex., a very highly regarded friend of mine for many years, has just sent me a copy of a very fine essay entitled "A More Successful United Nations," by Miss Linda Hugg, a student in Clayton High School, and daughter of Mr. and Mrs. William A. Hugg, owners of Hugg's Department Store in Clayton, N. Mex.

Mr. Monroe advised me that for a number of years the Independent Order of Odd Fellows and its auxiliary, the Rebekahs, have conducted an essay contest through the local schools which has for its object exciting among high school youth of interest in the United Nations. The manuscripts are numbered and sent to a State committee, usually consisting of some member of the Supreme Court and other persons in high positions, who select the best manuscript from each city or county in the State. Then the lodge furnishes that winner with a trip to the United Nations.

This year, Linda was one of the contestants in Clayton, but before she could complete her manuscript, she was stricken with a liver ailment and has been confined in West Texas General Hospital for some time. She has undergone a series of serious operations, and at the present time is apparently well on the road to recovery, and we are expecting her to return to school before long to resume her studies. In the meantime, the contest was concluded and the State winners have been announced and will leave in June for the United Nations.

Because of her illness, Linda was unable to complete her essay until it was too late to enter it in the contest. I am so greatly impressed by the story of this young lady and the fine essay she has written that I want others to share it with me. Therefore, Mr. President, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

A MORE SUCCESSFUL UNITED NATIONS

(By Linda Hugg)

Since the United Nations was established in 1945, it has shone as the light of hope and peace to the war-weary nations of the world. Here, it seemed, was a truly foolproof system, one that would free the world from the destruction of war, and enable the people to live richer, more secure lives.

And the United Nations has made the realization of many of these dreams possible. Through it, many disputes have been settled, and advancements have been made in many fields for the welfare of the people.

But, can any organization be absolutely perfect? Even after seeing the results of these tremendous movements, can it be said that this system is truly foolproof? Before we can answer this question, it is necessary to delve below the headlines, deep into the work of the United Nations, and understand fully just what the United Nations is, what it is doing, what it has failed to do, and how it is correcting these failures.

The United Nations is set up with six principal organs, the biggest of which is the General Assembly, the only body in which all 81 members are represented. This organ is regularly scheduled to meet once a year, though special sessions may be called by a majority of United Nations members, or by the Security Council.

Another important function of the United Nations is the Economic and Social Council, which is responsible for coordinating its economical, social, humanitarian, and cultural activities.

Probably the most influential and best known organ in the United Nations is the Security Council. This body is responsible for maintenance of international peace and security. It is composed of five permanent members—China, France, Russia, Great Britain, and the United States—and six other member nations which are elected for 2-year terms by the General Assembly.

Also in the United Nations, besides the principal organs, are the specialized agencies. These are the organizations which work on humanitarian projects, rather than the pursuit of peace. The most important of these are: World Health Organization (WHO) whose purpose is to improve the health and living conditions of the world; United Nations Educational, Scientific and Cultural Organization (UNESCO) whose purpose is to achieve international peace through education, science, and culture; and the Food and Agricultural Organization (FAO) whose purpose is to improve production and distribution of food and agricultural products. The United Nations has achieved much of its success through these agencies.

To understand the United Nations, it is necessary to know what it is trying to do. Studying the following purposes, found in the charter, will supply this important information. Those purposes pertaining to war are: "To unite our strength to maintain international peace and security; to save succeeding generations from the scourge of war; to practice tolerance and live together in peace; to insure that armed force shall not be used, save in the common interest."

Equally important are the purposes which concern peacetime activities: "To employ international machinery for the promotion of all peoples; to promote social progress and better standards of life; to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal right of men and nations; to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained."

These are the purposes of the United Nations; these are the ideals that were set up as standards to go by, in order that the United Nations could work for the world to the greatest possible advantage.

Following these standards, the United Nations has offered solutions for critical situations all over the world. Perhaps one of the most important of these is the prevention of the Israelic-Arabic war from expanding into a general world nuclear war of holocaust proportions. The United Nations also mediated the conflict which led to an independent Indonesia, and, thanks again to the United Nations, war was prevented over Kashmir. Protection against communism is another goal of the United Nations, and in 1949, the threatened Communist aggression in Iran was extinguished, and the Soviet troops there withdrawn. The United Nations also had a big part in ending the Communist hostilities against Greece.

But the accomplishments of the United Nations must not be limited to the settling of disputes; equally important are its tremendous peacetime efforts to better the conditions of the world.

Along this line the specialized agencies have made much progress in promoting world health and human welfare. Aiding the move for educational advancement, UNESCO has been carrying on a global campaign for free and compulsory education, and has helped establish 33 national centers on fundamental education. Progress is being made in the way of economic advancement by bringing better living to less developed areas through international funds and the pledges of individual governments. And this is just a small, small portion of the United Nations great widespread program of human and world advancement.

Yet, even in the face of these outstanding accomplishments, how successful a United Nations do we have? Any organization has its defects; what are those of the United Nations? How critically do these flaws affect the people of the world?

To answer these questions, we should first look at, and understand the veto, as this is perhaps the main weakness in our United Nations. As was set up in the original charter, any action brought before the Security Council can be defeated by the negative vote of any one of its five permanent members. Although at the time this must have seemed like a necessary safeguard, since then the work of the United Nations has been so hampered by Russia's veto that many people believe this power should be abolished.

The Soviet Union has shockingly abused its privilege as a permanent member, and, with the 82 vetoes on its record, has frustrated the Security Council's work in such ways as blocking the admission of new members and preventing the peaceful settlement of disputes. Also, both greatly important, Russia's veto has left unsolved the problem of control of atomic weapons and has caused the failure of organization of an international police force.

And this brings us to the second main weakness—the lack of enforcement power.

Lord Cherwell, a British peer, put it this way: The Constitution of the United Nations is utterly indefensible. Its resolutions have no effective ways of being enforced, by arms or otherwise. The United Nations police force, in practice, is a mere pawn."

The charter provides for armed forces to be placed at the disposal of the Security Council. But agreement has never been possible with the Soviet Union on the nature of the armed forces to be made available, where they should be stationed, and who should command them. As a result the organization lacks the power to enforce its decisions.

A third weakness of the United Nations which, though not as well known as the others is just as serious, is the financing of the United Nations. This is a task which is becoming increasingly difficult, and a grave obstacle to the successful functioning of the organization. Unless the members of the United Nations demonstrate a greater willingness to accept their share of the financial burden involved, the cause of world peace could suffer a serious blow.

Staggering as these faults are, the situation is not as hopeless as it may appear to be. For although they may not have received much publicity, solutions, either permanent or temporary, have been found for many of the major issues confronting the United Nations.

Since the problem of the veto is probably the most crucial in the United Nations, what is being done about it is likewise most important. And, though unknown to a great majority of people, something is being done. Although the veto cannot be abolished without the rewriting of the Charter, it has been found possible to bypass it in several ways.

The first of these involved placing increased emphasis upon the role of the General Assembly, where the veto does not apply. The vigorous action taken by the Assembly in the Middle East and Hungary is evidence of the wisdom of this move.

In the second place many free world countries have entered into collective security pacts like the Rio Treaty and the North Atlantic Pact. These pacts have served as a constant deterrent to potential aggressors and have added new wings to the United Nations structure.

Third, instead of trying to get the words of the Charter changed, the effort has been made to change the way the Charter is actually used. In this way, the uniting-for-peace procedure enables the United Nations to act despite a big-power veto.

Concerning the problem of enforcement, various opinions have been given. There are many who argue that we will never have an effective collective-defense system unless a truly international police force is created. Others point out that our regional defense pacts, like NATO, have worked with considerable success and that we should move now to develop them into one integrated system. Still others see our best hope in improving the role of the General Assembly in the maintenance of peace. Surely, in one of these alternatives can be found the answer to this question so important to the United Nations future.

While the financing of the United Nations has become a serious problem, partly due to the inability of many member states to give much more than a token contribution, and partly caused by the reluctance of others to give to the United Nations when thousands of their own people are destitute, efforts are being made to improve this situation. Perhaps the answer lies in the latter group mentioned—at any rate, the Secretary-General is hoping for a good response to his recent call for funds. The world cannot afford to put a price tag on peace.

Each of the solutions mentioned is helping to build a more successful United Nations; yet, there is still a long way to go. Several of these are only temporary aids which, although easing the situation considerably, do not entirely solve the problem. No, the United Nations isn't perfect—in fact, many people believe it isn't even successful. But it can be. In the words of Henry Cabot Lodge: "The success of the United Nations in the search for real peace depends entirely on how much support it gets from its members when the going gets rough. We can either throw it away impatiently, and thereby greatly increase the danger of war, or we can perfect it in a way that will make future generations forever grateful that we had the patience and foresight to make this beginning."

Alaska Methodist University at Anchorage, Alaska

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. NEUBERGER. Mr. President, as one of the sponsors of the legislation which made Alaska our 49th State, I am particularly conscious of the need for adequate educational opportunities in this vast northern realm. Alaska's young people will not stay there as permanent residents unless they have genuine opportunities to be educated, both at the secondary and university levels. I am happy to report that the Methodist Church is making a great contribution to the sound and orderly development of Alaska by the building of Alaska Methodist University in Anchorage, which is Alaska's largest metropolitan community.

Already, ground has been broken for Alaska Methodist University on a campus of 248 acres. This occasion was especially gratifying to me, because the individual who had the honor of undertaking this ceremonial and symbolic task was Bishop A. Raymond Grant, of Portland, Oreg. Dr. Grant is one of our most enlightened citizens, as well as being a leading advocate of the construction and expansion of Alaska Methodist University. I should add the fact that Bishop Grant was assisted in the groundbreaking ceremonies by president-elect, Dr. Donald F. Ebright, of Alaska Methodist University.

So that Members of the Senate may appreciate the magnitude of this undertaking, I ask unanimous consent that there be printed in the Appendix of the RECORD the contents of a brochure entitled "Alaska Methodist University," which has recently been issued by the board of missions of the Methodist Church, with headquarters in New York City.

There being no objection, the brochure was ordered to be printed in the RECORD, as follows:

ALASKA METHODIST UNIVERSITY

Modern Alaska, Uncle Sam's last great frontier, faces the problem that every frontier of continental United States faced in its progress from a wilderness to a settled, fruitful community. The dawn of statehood accentuates this problem and brings into sharp focus the need for adequate provision for educating and training its youth within the frontier for the frontier.

In this most rapidly growing population area under the American flag, the student population is increasing at the rate of 16 percent per year. It is estimated that by 1960 Alaska will be graduating from 1,500 to 2,000 students from her high schools each year.

Studies made of Alaskan students going to other States for advanced educational training reveal that less than 5 percent return to Alaska upon the completion of their studies. Thus Alaska has been losing the cream of her potential future leadership.

Alaska has a tax-supported, land-grant university at Fairbanks and a junior college under the Presbyterian Church, U.S.A., in Sitka; but it does not have an independent, church-related, 4-year liberal arts college.

The Methodist Church is now engaged in establishing such a college to round out the advanced educational facilities of Alaska and thus make it possible for Alaska to educate and train her youth of today to become the leaders of her tomorrows.

It has been more than 30 years since the Methodist Church as a denomination has built a new college. This new frontier institution has been chartered as the Alaska Methodist University. It is to be located in Anchorage, Alaska's largest and most rapidly growing city, its most dynamic city, and its most easily accessible city. Within a radius of 300 miles of Anchorage live 64 percent of Alaska's population. Industrialists say that Anchorage will be the Chicago of Alaska's future.

The citizens of Anchorage have pledged over $700,000 toward the founding of this institution, and to date they have paid approximately $275,000 on their pledges. This is a miracle of faith in Alaska's future. It is also a miracle of confidence in the Methodist Church.

A site of 247.5 acres of land has been purchased from the Government by Anchorage citizens and deeded to the university for its campus.

Engineering surveys have been made and a master plan for campus development outlined. A board of trustees has been elected.

This is an advance special project, duly approved. It has this unique significance: It is the only advance special project unanimously accepted by the general conference at its 1956 session in Minneapolis and unanimously recommended to every local Methodist church for consideration in its advance special program for this quadrennium.

Now more than 8,000 Methodist churches are regularly supporting this project. These churches have already contributed over $1 million for the Alaska Methodist University. We hope to begin construction of our initial buildings when we have reached the goal of $2 million ($1 million for endowment, and $1 million for buildings). The Methodist men have joined in the crusade and are raising funds to purchase books for a first-rate library on the campus.

It will take $5½ million to get this 4-year liberal arts college of the Alaska Methodist University established.

Dr. John Gross, of the board of education, points out that the Methodist Church had gone into 11 frontier areas to build colleges and universities before these frontier areas became States. This was the 12th time Methodism made such a notable historic advance.

Defense of Small Business Administration

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. SALTONSTALL. Mr. President, the February 2 issue of Barron's Financial Weekly, which circulates widely in New England, carried an article critical of the Small Business Administration's record of collection of outstanding loans it has made to small business enterprises all over the country.

I do not feel that the criticism is well supported. I know that SBA's methods of making loans and of following through on collections are generally very good, helpful, and effective. Under the direction of Administrator Wendell B. Barnes, the agency has become a potent and appreciated force in the American economy. That responsible banking, investment, and business people agree was indicated recently in Boston when Administrator Barnes and others of his staff held a largely attended briefing session concerning the Investment Division of the Small Business Administration. The meeting was praised by many who attended.

I was glad to note, in a more recent issue of Barron's Weekly, that other readers of that publication disliked the critical article of February 2 and spoke up against it. A letter was sent to the editor of Barron's by officials of the Smaller Business Association of New England in defense of SBA's policies and methods. I ask unanimous consent, Mr. President, that the letter be printed in the RECORD as it appeared in Barron's Weekly.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

IN DEFENSE OF SBA

We have just seen your February 2 issue containing the article "Easy Mark." We find many instances where a failure to give all viewpoints leads to inaccurate and untrue conclusions. The article is distorted by intemperate criticisms and the omission of the many good points of SBA. It indicates little understanding of small business or appreciation for those who seek to help it.

At the Smaller Business Association of New England, we are almost daily in touch with one or the other department of the SBA Boston regional office. We know just how much care and attention is given to assuring loan repayments, for example, in setting up a loan contract. We know that Washington keeps careful check on its regional offices; we find in the Boston office a splendidly administered bureau of the Federal Government.

Your article loses sight of the great good done by SBA in helping small businesses to finance themselves. It is generally recognized that the smaller manufacturer plays a tremendously important role in our economy as component or prime supplier and that the so-called "big" businesses rely heavily on their smaller suppliers. We see many, many examples of loans to this type of company which are well handled and vital to the economy. We think that if you will examine the plus side, you will find SBA's loss experience to be excellent over the years and that by far the majority of borrowers keep right up with their due dates. Even banks have some losses, and we feel that the SBA officers perform their function with care and skill from the bank point of view.

SMALLER BUSINESS ASSOCIATION OF NEW ENGLAND, INC.,
LAURENCE F. BROOKS,
Executive Vice President,
JOSEPH D. NOONAN,
Executive Secretary.

Establishment of a National Park on Padre Island, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. YARBOROUGH. Mr. President, I wish again to call the attention of the Congress to the imperative need for immediate action in the acquisition of land and establishment of a national park on Padre Island in Texas. State and Federal legislators are working closely on this project, to preserve for the people this longest barrier beach along the shores of the United States.

However, the "No Trespassing" and "Keep Out" signs which mark private ownership and have already removed much of this Nation's shoreline from public use, are already springing up on Padre Island. We must act quickly to retain this area as a public playground, a historically valuable site, and a refuge for birds and game.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the Houston Council of Texas Garden Clubs urging that such a park be established on Padre Island.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON PADRE ISLAND, TEX.

Be it resolved—

That the Houston Council of Texas Garden Clubs, including more than a hundred garden clubs with approximate membership of 4,500, endorse Padre Island as a national park.

That Padre Island with the largest undeveloped beach area in the United States provides a perfect haven for recreational seekers and provides a natural seashore park.

That Padre Island in its natural state should be preserved as a heritage for the United States.

That Padre Island with its treasures for nature lovers should be retained partly for bird sanctuaries. Many rare birds winter and nest on the island.

That it is imperative to pass the necessary legislation before the beauties and natural resources are spoiled by overdevelopment.

That Padre Island offers boating for both large and small boats, as the intracoastal canal lies between the island and the mainland and thus provides protective waters.

That development and the park could go hand in hand to preserve this beautiful area, so that generations to come will be enabled to enjoy the natural resources.

HOUSTON COUNCIL OF TEXAS GARDEN CLUBS,
By Mrs. K. C. WARFORD, *President.*

Heavy Gold Flow From United States Causes Global Concern

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. PROXMIRE. Mr. President, last Sunday's New York Times carried a front page story reporting that to the surprise of the experts gold continues to flow out of this country. In the last 2 weeks this gold loss attained a volume of $179 million. This is more than in the entire first quarter of this year.

This is a warning to us to take a hard, clear look at whether or not this country may be pricing itself out of the world market.

As the New York Times reports:

Only a pickup in U.S. exports, will provide any lasting solution to the problem. More and more it is believed that the future of exports will depend in major degree on the future of the U.S. price level.

This of course relates directly to the study I recently proposed by the Banking and Currency Committee of this body of the impact of the investment of American private capital abroad. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the RECORD as follows:

[From the New York Times, May 3, 1959]

HEAVY GOLD FLOW FROM UNITED STATES CAUSES GLOBAL CONCERN—INFLATION BLAMED AS LOSSES ON TRADE DEFICIT FOR 2 WEEKS TOP 179 MILLION

(By Edwin L. Dale, Jr.)

WASHINGTON, May 2.—The heavy outflow of gold from the United States has resumed. The situation has caused some concern, though not alarm, among American and international financial officials.

In the last 2 weeks, the United States has lost $179 million in gold, or more than in the entire first quarter of the year. Last year, the United States suffered its biggest gold outflow ever at $2,300 million.

The reason is that the United States is running a deficit in its transactions with the rest of the world. The main reason for the deficit is that American exports have remained sluggish while imports have been strong.

TWENTY BILLION GOLD STOCK

The United States has such a huge stock of gold—about $20,300 million—that it can withstand a deficit in its international balance of payments without much strain. But the deficit cannot continue indefinitely without trouble.

The results have led some authoritative international financial experts to revise their opinions about the outlook for this year. Some now feel that the United States this year will be a fairly heavy loser of gold, though they had earlier thought the balance this year would right itself.

The continued sluggishness of U.S. exports has led more and more officials to take seriously the problem of American goods pricing themselves out of world markets, though the statistics so far give little support to this idea.

STEEL NEGOTIATIONS WATCHED

In any case, some major figures in the international financial world have concluded that it is imperative that the United States not allow any resumption of inflation, on international payments grounds alone. Some believe that the steel settlement this summer will have a major bearing on the situation, for both practical and psychological reasons.

The gold outflow has also reinforced the determination within the Government to use the Government's fiscal and monetary weapons—balanced budgets and tight money—to prevent renewed inflation.

Although precise figures are not available, there is some evidence that the sudden resumption of gold departure in April can be accounted for by a special situation related to Britain.

The British have been gaining reserves all this year in their ordinary transactions. But they apparently decided to leave their gains in dollar form, rather than convert the dollars into gold, in order to build up the necessary balance to repay $200 million to the International Monetary Fund in March.

That payment was made. Thus any further gains in reserves by the British were probably converted promptly into gold, according to traditional British custom. That is what probably happened in April to account for a large part of the outflow of gold in that month.

However, this explanation really means only that the slowing of the outflow of gold in the first 3 months of the year was artificial. That is, the U.S. balance of payments was still strongly in deficit, but that for a special reason the gold figures did not show it.

DIFFERENTIAL IN INTEREST

Probably the major hope of those who believe the balance of payments will soon improve is that measures to promote economic expansion in Europe and Britain will soon take hold and that Europe will then begin taking more imports from the United States. Europe has been in a mild recession. Virtually all governments have lowered interest rates and taken other measures to spur demand.

The interest rate differential has high rates in New York and lower rates in London and Amsterdam and Frankfurt. It should also help the U.S. balance if the differential becomes great enough.

Short-term funds flow to the money center where the best interest yields are available. Such a flow into New York has the same effect on the U.S. payments balance as an equivalent amount of exports of goods.

But only a pickup in U.S. exports, it is believed here, will provide any lasting solution to the problem. More and more it is believed that the future of exports will depend in major degree on the future of the U.S. price level.

The National Budget

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. YARBOROUGH. Mr. President, billboards and advertisements recently have borne the slogan: "Your future is great in a growing America."

I agree with this, and I believe that in consideration of our national budget we should remember that this is a growing, expanding Nation. There is an old saying that "You only get out of something what you put into it." This, too, I believe, can be applied to consideration of the budget.

The St. Louis Post-Dispatch recently published an editorial concerning the report of the Committee for Economic Development, which I commend to the attention and careful consideration of the administration, the Congress, and the people.

To fully achieve the promise which the future holds, we should judiciously invest today to maintain our position of leadership among the free nations of the world, and to solve pressing national problems such as recovery for small businessmen and the family-sized farmer, and reduction of unemployment.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the St. Louis Post-Dispatch editorial sheet for April 6–12, 1959, under the heading, "Not by a Straitjacket."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT BY A STRAITJACKET

The Committee for Economic Development will find wide acceptance for the conclusion of its research and policy committee that the Eisenhower budget is just about right. The assumptions behind the study, however, need to be reexamined by Congress in the light of the latest economic intelligence before final action is taken on the key appropriation measures in May and June. After all, the Eisenhower budget was put together last November and December. What is happening in the intervening months will have a direct bearing on the soundness of its premises.

Like many students, the Committee for Economic Development is haunted by a feeling that certain expenditures, especially for defense, ought to be bigger than the administration asked. But it finally winds up with the conclusion that if military outlays do have to rise, taxes should be increased to pay for any excess. This is said in a notably small voice. The Committee for Economic Development is no more enthusiastic about a tax hike than anybody else. It ought to know, furthermore, that Congress is not going to increase taxes short of a world emergency. That prospect should have become a leading assumption of its study.

Does it follow, then, that defense expenditures should be shoehorned into the Eisenhower budget even though risk to national security is incurred? That is the administration position, but an independent citizens' agency like the Committee for Economic Development ought to take a broader view. We believe the controlling factor should be, not a budget ceiling, but the clear needs of security. We believe the preponderance of evidence so far supports an increase in funds for missile development at least, and that Congress ought to make these funds available desipte budget considerations if it becomes convinced of the need.

The same goes for certain nondefense expenditures. So long as unemployment remains serious and the economy is significantly underproducing, it would be folly to cut back such job-creating expenditures as those for housing and urban renewal, which are badly needed on many other grounds anyway. It would be irresponsible, of course, for Congress to tear up the budget and go hog-wild on spending. But it could be almost as bad to become transfixed by the image of a statistical budget balance when the important things are production, employment, security, and economic growth.

There are two reasons for believing that some flexibility can be introduced into the Eisenhower budget without instantly bringing an inflationary catastrophe upon our heads. One is the growing possibility that as recovery continues tax revenues may exceed administration estimates. Business Week, for example, estimates that 1959 business profits will reach 50 to 55 billions as compared with Treasury estimates a few months ago of 47 or 48 billion. If that proves correct, the Treasury will have a comfortable chunk of revenue it wasn't counting on to meet any expenditures over the Eisenhower budget.

Secondly, it might be quite possible to run a moderate deficit of one or two billion dollars in the next fiscal year without generating the inflation which the Committee for Economic Development and the administration warn us against. During the present fiscal year, the administration has run an enormous deficit of $13 billion without generating inflation. So long as the labor force is underemployed and the industrial plant partly idle, who can say that a relatively small deficit of, say, 2 billions would do next year what 13 billions have not done this year?

Potential inflation at some future time remains a danger that must be guarded against. That is why it is so important to discourage wage increases which exceed rises in productivity and contribute to a further cost-price push. But fiscal policy does not have to be a straitjacket in order to be noninflationary. More important than a precise budget balance next year is what needs to be done to bolster national defense, to speed full recovery, and to reduce unemployment.

An Address Delivered by Hon. Harry F. Byrd, of Virginia, at the Fauquier County Bicentennial Celebration, Warrenton, Va., Friday, May 1, 1959

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the RECORD, I include an address by the senior Senator from Virginia, the Honorable HARRY FLOOD BYRD, delivered on Friday, May 1, 1959, at the Fauquier County Bicentennial Celebration in Warrenton, Va. Fauquier County is in the heart of that beautiful section commonly referred to as northern Virginia, and is noted for the fertility of its soil, its picturesque scenery, and the solidarity of its citizenship.

On the occasion of the celebration of the 200th anniversary of this county, the citizens of Fauquier paid appropriate tribute to our able and distinguished colleague, the Honorable HOWARD WORTH SMITH, who lives in and is a native son of Fauquier. As Senator BYRD pointed out, Judge SMITH is one of the greatest living Americans. I share the sentiments expressed by Senator BYRD and when the history of this turbulent period is written, the name of HOWARD

WORTH SMITH deserves and no doubt will go down in Virginia and American history as one of the most able, patriotic, and distinguished citizens ever to represent our State in the Congress of the United States.

On this auspicious and patriotic occasion our great Virginia Senator took time also to refer to the deplorable condition existing in this country as a direct result of the ineptitude, if not indeed the venality of the Warren court.

I am confident that the address of Senator BYRD will be read and appreciated by many Members of the Congress, as well as by thousands of American citizens. The address is as follows:

I am deeply grateful for this opportunity to join with you in the celebration of the Bicentennial Anniversary of Fauquier County.

First, I want to congratulate you on your fine representation in the Government of our State and Nation. They are fine citizens of the highest caliber and unquestionable integrity.

I want to pay especial tribute to your State senator, Bob Button, and your delegate to the Virginia House, Tom Frost. In all respects, they uphold the great traditions of Fauquier County in the General Assembly of Virginia.

I was formally invited here not only to participate in this delightful anniversary program, but also to help you honor one of the greatest American citizens of our age and time, the Honorable HOWARD WORTH SMITH.

HOWARD SMITH is a native of Fauquier. But, like you, his State and his country lay proud claim to his citizenship. His fame is nationwide.

He is a man who embodies a rare combination of talents. He is intensely patriotic, exceedingly able, and possessed of remarkable facility for accomplishment.

He is a farmer who, at the same time, knows the problems of agriculture and cherishes that wonderful sense of independence experienced only by those who work with the soil and marvel continually at its productiveness.

He is a banker who knows the problems of business and appreciates our free enterprise system as indispensable to the preservation of our democracy and our freedom, and to the protection of all the free world against Communist aggression.

He is a lawyer who, by tradition and by his training at the University of Virginia founded by Thomas Jefferson, knows that the primary purpose of law is to protect our liberties and freedoms from invasion and abuse, and that ours must be a government by law and not by men.

He is a judge, whose temperament is fashioned from moral courage, stubborn virtue, fundamental convictions, and the elegance of simplicity.

This is the man whom all of us have come to admire, and who is held in great esteem not only by those who know him personally, but also by those who know him only by the lasting reputation he has made.

People all over America join us in our gratitude for the full measure of distinguished service Judge Smith has rendered, and is rendering, to his country, his State, and his community.

Elected and reelected to Congress 15 times, Judge SMITH has only one political platform. It is not long. But it tells the story of Representative HOWARD W. SMITH, Member of Congress from Virginia, and it should be a part of the record of this ceremony commemorating the 200th anniversary of his native county of Fauquier.

I quote in his own words the platform on which he has stood for more than a quarter of a century in the Congress of the United States.

Here it is:

"I will not pledge my support blindfolded to any unknown measures, to any person, or on any subject, but will use my best judgment and discretion after careful study and concentration, and vote for such measures as I believe to be in the interest of the welfare of our country and in conformity with the wishes of my constituents."

In that simple statement, it seems to me we have the creed of an American statesman in his best tradition, asserting independence of thought and action; we have the essence of American statesmanship, withholding opinion and judgment until principles are satisfied.

We have the evidence of responsibility recognizing that public office is a public trust; and we have the manifestation of patriotism which should be engrafted on the bosom of every free American.

A man conscientiously adhering to that platform, with a clean record of performance, for 28 years is essentially a man of tremendous industry, a man of few words, and a man of fruitful action.

As a lifelong student of his Government, as a lawyer, as a jurist, and as a legislator, Judge SMITH knows the source of this Nation's strength and greatness, and at this moment he is doing his very best to protect them from subversion by the Warren court.

Fundamentally, our form of government rests upon the sovereignty of the States which form the Union. And for 6 years since Warren was appointed Chief Justice, the Warren court has struck directly at the roots of our democracy including a clear line of decisions destructive of States rights and concentrating power in the Federal Government.

Since 1953 the Warren court has handed down a number of decisions which would:

1. Limit the powers of the legislative branch of the Federal Government to investigate;

2. Open confidential files of the FBI and interfere with its administrative responsibilities;

3. Disregard the clear intent of laws, especially for evicting subversives from public positions;

4. Destroy the effectiveness of local police protection;

5. Strike down the rights of individuals;

6. Destroy the sovereignty of States guaranteed by the Constitution; and

7. Preempt and nullify perfectly good and constitutional State laws.

All of this does violence to American fundamentals.

Our Constitution establishes three branches of Government—legislative, executive, and judicial, but we find the Warren court assuming the authority of all three.

Under our system the central government has no authority except that granted to it by the States, but we find the Warren court destroying the rights of States, and preempting State laws.

The Warren court school decision is perhaps the most direct blow to State sovereignty to date. And it was a decision based on nothing in the Constitution, nothing in the law and nothing in the precedents.

It was simply a sociological determination by the Warren court expressing the personal philosophy of its membership.

The Supreme Court of the United States for more than a hundred years had held that the separate but equal principle, applied in public school education, was within the discretion of States—with no constitutional conflict.

But what did the Warren court do? Like a bolt out of the blue, it held that the U.S. Supreme Court, and the precedents of a century were wrong, and that decision after decision was invalid.

Now we are told the Warren court decision is the law of the land.

If this is so, it is the ultimate in judicial usurpation of the authority to legislate. If it is the law of the land, it is utterly without foundation in the Constitution.

The word education does not appear in the Constitution of the United States, and the only Federal law ever enacted in this field was passed by Congress to provide for segregation in District of Columbia schools.

But the Warren court school decision in effect amended the Constitution of the United States, and repealed an act of Congress.

To say this decision is the law of the land is to give the Warren court a divine right to be wrong.

If the Warren court decision can be extended to direct a certain Negro child to enter a certain schoolhouse, Federal courts can select textbooks, dictate the philosophy of teachers, and tell them what and how to teach.

The Warren court decision was handed down 5 years ago, and to this date more confusion has developed every day it has been allowed to stand.

The school decision is by no means all of the havoc the Warren court is playing with our dual system of State and Federal Governments.

Using the so-called preemption doctrine, the Warren court has struck down perfectly good and constitutional State laws all over this Nation simply on the grounds that there was a Federal law applicable in the same field.

In the final extreme the Warren court could use this doctrine to destroy our system of States merely by holding that Federal tax laws preempt State authority to levy taxes.

In view of our experience with the Warren court during the last 6 years, I wonder whether some such decision is now so far beyond the realm of imagination.

I have reviewed the record of the Warren court to emphasize the great effort HOWARD SMITH is making to correct the illegal decisions which are being forced upon us.

Last year he introduced legislation outlawing the Warren court's promiscuous preemption of State laws. The bill was passed overwhelmingly in the House of Representatives, but it was lost in the Senate by one vote as a result of a parliamentary maneuver.

If this bill had been enacted it would have been an effective curb on the Court for the future.

The bill has been reintroduced this year. The Senate Judiciary Committee is holding hearings on the bill at this time. We hope it will be enacted during the present session of Congress.

Whenever there is a tough legislative job to do, we find the hand of HOWARD SMITH at work. This is true with respect to drafting legislation, and with respect to committee action on bills before the Congress.

Think of the extremely important legislation he has sponsored. To name a few, there was the Smith Alien Registration Act of 1939 under which the 11 infamous Communists were convicted; there was the Smith antistrike bill which preceded the Taft-Hartley Act; there was the Smith-Connolly Act; and so on.

Think of his tremendous work as a great chairman of the powerful House Rules Committee, which controls legislation coming before the House of Representatives. Few people know the full extent and value of his daily work on this committee.

The great contributions of HOWARD SMITH to his country, his State, his district, and

his community could never be made by a timid man. They would never be made by a man without strong convictions and the courage to fight for them. They could never be made by a man with a lazy mind. They could never be made by a man without clear, direct and profound thought.

He has the complete confidence of his colleagues and associates whether they are Democrats or Republicans because they know he is honest; they know he is able; they know he is fair; and they know he is patriotic.

And you may be sure that the great demands of national and international issues on the time and capabilities of HOWARD SMITH will never distract his abiding interest in the Eighth Congressional District.

And to represent this district in the Congress of the United States is an honor of which any man would be deeply proud. It is the district of George Washington, Thomas Jefferson, John Marshall, Patrick Henry, Henry Clay, James Madison, Zachary Taylor, James Monroe, and Robert E. Lee.

No congressional district in the United States has produced so many great men who have had such a profound influence on the development of our country. Judge SMITH is their 20th century counterpart.

But with characteristic modesty Congressman SMITH says:

"My views are not original with me. They are bred in the bone, nurtured through generations in you and me in this section of Virginia from whose soil came those great statesmen of the past who, with their God-given inspiration, founded and started on its historical course the greatest Nation in all the history of mankind".

I say to you Judge SMITH not only represents the congressional district of these great men of American history, but, he, himself, stands today as one of the greatest living Americans.

Impact of Air Pollution Upon California Agriculture

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. KUCHEL. Mr. President, a few days ago the Senate passed legislation, which had been introduced by my colleague from California and me, providing for a 5-year extension of the law under which the Federal Government is, and has been authorized to conduct research in the field of air pollution.

I hope and believe that the House of Representatives will approve the legislation, so that the Federal Government may continue its beneficent labors in this field under Federal legislation which I was delighted to sponsor some 4 years ago.

In this connection, Mr. President, I have before me a paper delivered before the board of regents of the University of California at Riverside, Calif., last February by Mr. John T. Middleton, which describes the impact of air pollution upon agriculture in my State. It is a most interesting paper. It is not long. I ask unanimous consent that it be set forth in its entirety in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

IMPACT OF AIR POLLUTION UPON CALIFORNIA AGRICULTURE

(Presented by John T. Middleton before the board of regents, University of California at Riverside, February 20, 1959)

Air pollution means different things to different people. To the caveman in the south of France, it meant a nuisance and the soiling of his art works. To the Greek geographer, Strabo, it meant the vile odor of the dye vats in the ancient Phoenician city of Tyre. To the Londoner, it spells disaster; and to one-third of the California citizens, it means personal discomfort.

Air pollution in California produces a variety of adverse effects upon the public, including reduced work performance, impaired highway safety, eye irritation, and respiratory distress. To the California farmer, it means less money in his pocketbook. The paradox is that as more people come to California and require more food, the farmer has less to offer them because of the air pollution the people bring with them.

Since agriculture is an extremely important part of the State economy, it is important to know what impact air pollution has upon it. Where does air pollution affect agriculture and how? The effects of air pollution upon agriculture, in the form of sulfur dioxide from a smelter, were first noticed in the early 1900's in the area about the lower reaches of the Sacramento River in the vicinity of Selby. It was not until 1944, however, that a new type of pollution affected agriculture, this near San Pedro. By 1947 when the Los Angeles Air Pollution Control District was first established, damage to agriculture occurred in a triangular area bounded by Santa Monica, Dominquez, and El Monte. By 1950 the affected area in southern California extended from San Fernando to San Juan Capistrano to Riverside. Pollution also appeared for the first time in the San Francisco Bay area in 1950. The growing menace of air pollution, not only to agriculture but to the public health as well, brought about a collaborative study by the Los Angeles Air Pollution Control District, the California Institute of Technology, and the university for the purpose of determining the ingredients in smog responsible for damage. The telltale fingerprints of smog damage to plants showed these investigators that the culprit was an aggregation of some of the oxidation products of organic compounds. Plants were used to detect the toxic pollutants for there were no physical or chemical methods available. Plants are still used today because there are as yet no satisfactory instrumental methods of pollution detection.

In spite of these findings of this collaborative research team, the effects of air pollution became more widespread and were noticed in 1953 as far south as San Diego, as far north as Ventura, and as far east as the San Gorgonio Pass. In 1957 plant damage was first seen in the San Joaquin Valley in Bakersfield, Stockton, and Tracy. Last year, crop damage was seen in Fresno and in the delta.

Because of the obvious peril of increasing levels of air pollution in 1953, it was necessary to expand the research program initiated in 1950 in order to:

Identify chemically the phytotoxicant;

Relate eye irritation to plant damage and determine whether the eye irritant was the same contaminant as that causing plant damage;

Know whether the effects upon plants were limited to damage of leaf crops or whether also plant growth and product quality were reduced;

Make biochemical and physiologic studies of plants to learn what life processes were affected and to aid in understanding the possible physiological effects upon man; and

Determine acceptable levels of atmospheric contaminants.

Since this activity was multidisciplinary in nature, it required the establishment of an air pollution research committee on the Riverside campus as well as the formation of a statewide air pollution advisory committee designed to coordinate the manifold agricultural interests in air pollution on the four campuses concerned with instruction and research in agriculture.

The identification of the phytotoxicants was undertaken by the university in cooperation with the agricultural industry, the Air Pollution Foundation, and the Los Angeles Air Pollution Control District. Research soon demonstrated that sulfur dioxide was not an important atmospheric contaminant but that ozone, fluorides, perhaps some olefins, and especially incompletely oxidized organics were. Through cooperative studies made possible by the American Petroleum Institute and the Franklin Institute of Philadelphia, spectroscopic methods were employed to learn more about the chemical identity of the materials found in the witches' brew affecting agriculture. From this study it was discovered that there were a variety of complex oxygenated organic compounds, many of them unstable and short-lived. Some of these may be the much sought phytotoxin. Two suspects have been identified as peroxy acylnitrite and butyric hydroxy hydroperoxide. Further work on the identity of the toxicants is in progress at Riverside in an attempt to relate the gross manifestation of air pollution through plant damage and eye irritation to chemical studies utilizing infrared, ultraviolet, time of flights, and mass spectrometry, gas liquid chromatography, and electron paramagnetic and nuclear magnetic resonance spectroscopy.

Auto exhausts resulting from the combustion of a variety of fuels in several different automobiles produced eye irritation but not plant damage as shown by the studies conducted with the Air Pollution Foundation, the American Petroleum Institute, and the Stanford Research Institute. Research at Riverside has shown that the controlled oxidation of more than 25 hydrocarbons known to occur in organic compounds useful as fuels and in auto exhausts, regularly produces plant damage but not eye irritation. It has also been demonstrated that ozone at alert levels damages plants but does not irritate eyes. The Los Angeles Air Pollution Control District has reported that the greatest amount of damage to test plants occurs in areas having the greatest number of cars per square mile and that considerable eye irritation may also occur in this same area. Because of the simultaneous occurence of eye irritation and plant damage in an area with the greatest number of cars, it is generally conceded that both result from vehicular exhaust. However, although statistical analyses may show that these smog manifestations are correlated with the number of vehicles, research does not support this conclusion. There is now evidence to show that the toxicant responsible for eye irritation is different from that responsible for plant damage, and that they originate from different chemical reactions. Different control devices may be required to abate their damaging effects.

The farmer yearly loses about $8 million because he cannot market a variety of field and vegetable crops and many ornamentals, such as carnations, roses, and orchids, due to damage from air pollution. Air pollution also reduces yields in alfalfa, forage grasses, sugar beet, and tomato. Air pollution reduces the growth of oranges as much as one-third, increases leaf drop in lemons to seven times normal, and reduces fruit quality in apricots and grape because of excessive leaf drop. The protein content of alfalfa hay produced in polluted air is lower than that produced in clean air. Many flower crops continue to produce in polluted air but are of poor quality, the flowers small, and the leaves yellow. Cut flowers do not last as long when grown in dirty air as when grown

in clean. Some fruits stored in polluted air ripen faster than they should thereby reducing storability and consumer demand.

Biochemical and physiologic studies at Riverside have shown that the respiration of plants is increased by two to three times and that photosynthesis is decreased. This means that on smoggy days plants may use up more food in growing than they make. Research has also shown that air contaminants alter the permeability of cell membranes to such an extent that foodstuffs become congested in cells and are not transported as normally because water movement is impaired. It has also been demonstrated that the basic metabolism of plants is upset through interference with certain enzyme systems. It was discovered that the poisoning of these enzyme systems could be overcome by the topical application of antioxidans, such as ascorbic acid and reduced glutathione. The antioxidant qualities of these materials as well as zinc ethylene biodithiocarbamate may be beneficial use for man as well as protecting agricultural crops from damage.

Attempts to develop information on acceptable concentrations of atmospheric contaminants have shown that plants may tolerate sulfur dioxide at 0.2 parts per million, ozone at 0.2 parts per million for only a few hours, olefins, such as ethylene, at less than 10 parts per billion, and perhaps fluorine as little as 0.1 parts per billion. Cooperative studies with the Kaiser Steel Co., agricultural interests, and the university are now underway to better describe tolerable fluoride levels. No established concentrations of tolerance for the oxidized organic materials can be given, because the specific chemicals in the oxygenated complex remain largely unknown. Because they have not been identified, it is not only impossible to establish acceptable atmospheric standards, but it is also impossible to provide satisfactory control devices for their removal from the air. Control or elimination of the eye irritant is likewise hindered for lack of adequate chemical-physical information.

This brief discussion shows that air pollution has serious and adverse effects upon California agriculture. Some information has been gained on the identity of the air contaminants causing crop damage and eye irritation, but much more is required to aid in providing effective abatement programs and for the development of effective control devices. Research upon the effects of air pollution on agriculture has wide social implications. Some of these are embraced in the remarks of Sir Hugh Beaver, director of Her Britannic Majesty's air pollution control program, who says, "Good legislation itself will be ineffective unless public opinion supports it, for all experience shows that on public opinion, and on it alone, finally rests the issue." Effective conservation programs have been established for water, wildlife, soil, redwoods, even adobes. Since air is an essential natural resource in limited supply, it must be conserved.

Oil Import Policy Is Senseless

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. PROXMIRE. Mr. President, the Milwaukee Journal last Sunday editorially commended the President for ending the oil import quota on Canadian and Mexican oil; but argued irrefutably that even this improvement does not eliminate the inequity of the quota system itself.

Mr. President, I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OIL IMPORT POLICY IS SENSELESS

The defense argument upon which the recently imposed restrictions on oil imports were largely based never made sense as far as Canadian oil was concerned.

Petroleum produced in Alberta would be just as safe in the event of war and just as available for U.S. use as oil from the fields by North Dakota or Texas.

So President Eisenhower's order ending import controls over Canadian oil that enters this country via pipeline, truck, or train and Mexican oil that comes overland makes good sense.

But what is left unexplained is why the Canadian controls were imposed in the first place. If quotas aren't needed now, why were they needed 6 weeks ago? Why was it necessary to disrupt trade and further arouse the resentment of our Canadian friends over what they consider highhanded treatment by the United States?

The President's new order should help soothe the hard feelings, but it can scarcely restore Canadian respect for our way of doing things. And even though the order benefits Canadian producers and those domestic companies and consumers that use Canadian oil, it does not eliminate the inequity of the quota system itself.

The truth is that while quotas protect most domestic producers of oil they discriminate against the many companies that have geared their operations to oil imports. Quotas also penalize users of oil who would benefit from cheaper prices.

Passage of TVA Self-Financing Bill Vital in the Public Interest

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, May 4, 1959

Mr. ERVIN. Mr. Speaker, in connection with our consideration of H.R. 3460 which is expected to reach the floor this week, I am sure that many Members of this body would welcome a review of the need for this legislation and a brief legislative history; therefore, under unanimous consent, I am inserting it in the Appendix of the RECORD.

The purpose of this bill is to relieve the Federal Government of financing additions to the TVA's power system by appropriations. Instead, it will permit the TVA to sell revenue bonds for building additional generating capacity.

The general provisions of this legislation are summarized in the report of the Committee on Public Works on this legislation, and I quote:

PURPOSE OF BILL

H.R. 3460 would authorize the Tennessee Valley Authority to finance needed additions to its power system by the issuance of revenue bonds in the maximum amount of $750 million outstanding at any one time. The bonds will be secured solely by the revenues of the TVA power system. They will be neither obligations of, nor guaranteed by, the United States.

The bill contains provisions essential for effective use of the bond financing authority. It permits TVA to fix the terms and conditions of the bonds and to enter into appropriate covenants with bondholders and trustees. It requires TVA to charge rates sufficient to operate the system, service the bonds, and meet obligations specified in the bill with respect to the appropriation investment in its power system. Under the bill, these obligations will include (1) payment to the Treasury of an annual cash return to be calculated by applying to the appropriation investment the average interest rate payable by the Treasury on its total marketable public obligations as of the beginning of the fiscal year, and (2) an annual payment of $10 million in reduction of the appropriation investment itself.

The bill does not change the basic provisions of the TVA Act governing the manner in which the TVA Board of Directors shall perform its statutory duties. Under the bill, the Board will continue to have sufficient flexibility to enable it to discharge its responsibilities efficiently and to enable Congress to hold it fully accountable for results. The bill does include a number of special requirements to insure that Congress will be kept fully informed of the use being made of the bond issuing authority. It also contains a provision limiting the area within which TVA power may be sold.

I know there are those who want no bill at all on this general subject. I know that there are those who feel that, if we are to have any legislation on this subject, it should be the most restrictive and most repressive possible legislation that this Congress could enact into law.

There are others who regard this bill as the most vital and important piece of legislation that this Congress will consider. It is most important to many of us because what we do here this week will affect the lives of the people of a great section of our country—an area of 80,000 square miles, comprising parts of seven States, for the TVA service area embraces parts of seven States and has a population of 6 million people.

Today, more than 150 municipally owned power systems and REA cooperative distribution systems in this area have an investment of $781 million, including the great steam plant being constructed by the city of Memphis, Tenn., which is now nearing completion and will go into service in a few months.

There are more than 1½ million power customers in the TVA area who, last year, purchased 19,000,900,000 kilowatthours of electricity. The TVA is the sole source of power for these 150 distributing systems with their 1½ million power consumers.

Therefore, I repeat, what we do here this week vitally affects the 6 million people of this great section of our country and these 6 million people are necessarily interested and concerned in this legislation and what we do about it. Our people need this legislation to finance their future power needs because as we all know the TVA has been denied any appropriations for necessary additions to its power capacities for the past 6 years. We are all aware of the continuing repressive actions and climate toward the TVA which has existed

during those years. We know that no appropriations at all have been made for TVA's power needs in the past several years.

During these last few years, TVA has been using portions of the profits from power sales to make some needed additions to its power system. But, we all know that no utility can possibly keep up with the demand for power in its area if it is limited to using only the revenue from its own power operations. The additional capacity the TVA has built and is building with its power revenue will not be enough to meet the growing demand for TVA power inside its present service area. Its margin of capacity over the demand is getting narrower and narrower. Unless it is able to find other funds, this great area of our country is certain to suffer a power shortage in 2 or 3 years.

What we will consider this week is an alternative method of financing—self-financing by the TVA and by the people of the area. A good portion of the bonds that will be authorized by this legislation will be sold to the people of the TVA area—and I assure you that they will buy them. They will be gilt-edge bonds which will be paid off by the TVA from the power sales to the people of the TVA area.

Surely, at this time, when we are so concerned with the need for reducing appropriations, the Congress will permit the people of our area to finance their own progress through enactment of this self-financing legislation. The bonds are taxable. They are not tax exempt bonds and they will thus produce revenue for the Government and yet the bonds will not be obligations of the Government and will not increase the national debt.

In short, this bill will permit the self-financing of the TVA—it will permit a great agency of our Government to meet its needs and obligations—and the local people who purchase the TVA power will not only pay the entire eventual cost, but they will purchase a large proportion of the bonds when they are issued and thus themselves finance the cost of the power they need.

Mr. Speaker, in our discussions on the TVA—a subject on which almost everyone has a most pronounced point of view—I sometimes think that we become so concerned with "fear" that one region of our great common country may make progress at the expense of another area, that we lose sight of the great contributions to the welfare of the entire Nation that the TVA has made and continues to make.

I am continually surprised to discover that many do not realize that well over 50 percent of the power produced—52 percent at this time—by the TVA goes to meet national defense needs in Federal establishments—in other words to the Federal Government itself. Among the great Federal agencies which obtained great blocks of power from the TVA are the Atomic Energy Commission plants at Oak Ridge and Paducah, Ky.; the great Arnold Engineering Development Center with its jet windtunnel testing facility at Tullahoma, Tenn. in the district which I have the honor to represent. There is also the great Red Stone Arsenal at Huntsville, Ala., where Dr. von Braun and other brilliant scientists are developing, improving, and perfecting the Thor, the Jupiter and our overall rocket and missile potentials and capabilities.

The savings in the cost of power to the Government as a result of the above direct service to Federal agencies are in themselves enormous. For several years now, the Federal Government has used more than 30 billion kilowatt-hours of TVA power annually. A saving of just 1 mill per kilowatt will represent a saving of $30 million a year but this is not the entire saving. As we know, the private utility industry has constructed two large powerplants that also serve the Atomic Energy Commission—EEI in southern Illinois and OVEC in Portsmouth, Ohio. The contracts under which this power is delivered were designed in such a way so as to come as close as possible to the TVA rate and in fact they are almost identical. In other words, these plants were built to meet the challenge of the TVA rates. Now these plants supply AEC with about 20 billion kilowatt-hours annually. And here a difference of only 1 mil per kilowatt would make a difference of $20 million a year in the cost of this power. Of course, nobody can tell what the AEC would have had to pay for power if the TVA had not existed, but in any event it is not at all likely that it would have been able to buy power as cheaply as it now does. So that the savings to the Federal Government in the cost of the power it uses itself, in its own defense establishments, are enormous—I would venture to guess in the area of $150 million a year.

There are many other ways in which the TVA has benefited the whole Nation. I think it is beyond argument that by providing a yardstick of power costs it has held down the cost of electric power throughout the country. It is notable that although we have suffered inflation costs in almost every other field, the cost of power throughout the United States has risen very little.

The TVA has also helped to develop more efficient means of generating electric power. The giant steamplants which it has been constructing have served as guinea pigs in engineering new and better steam generators which have been installed not only in the TVA area but through private utilities throughout the country.

In addition, the TVA has also helped the national economy in the purchases by TVA—and the 150 TVA power distributors—of materials and equipment. Over the past 12 years alone the TVA has bought $1,700 million worth of equipment and about $1 billion of that was purchased from States outside the TVA area.

Mr. Speaker, I should like to insert in the RECORD at this point a list of TVA procurement sources showing the amounts of purchases made in the various States of the United States last year and for the entire 25-year period that the TVA has been in existence. This table shows clearly that some portion of the funds expended by the TVA has gone to every State in the Union and that, indeed, most of the TVA money has been spent outside the TVA area:

TVA procurement sources

	1958	Total (1934-58)
Alabama	$4,085,918	$136,282,777
Georgia	1,080,134	31,255,106
Kentucky	42,470,818	221,187,036
Mississippi	231,017	9,452,169
North Carolina	245,815	14,524,458
Tennessee	40,253,475	486,824,250
Virginia	5,937,621	29,481,906
Total Valley States	94,304,798	929,007,702
Arizona	13,143	142,940
Arkansas	11,932	1,240,729
California	826,645	12,030,849
Colorado	22,730	1,197,154
Connecticut	369,385	8,384,414
Delaware	5,738	19,287,650
District of Columbia	71,234	2,574,982
Florida	164,716	8,472,350

Illinois	13,027,423	149,059,385
Indiana	3,978,114	28,664,361
Iowa	79,542	1,760,898
Kansas	35,449	639,819
Louisiana	963,677	12,103,501
Maine	15,514	620,277
Maryland	892,084	7,564,450
Massachusetts	1,830,759	42,347,587
Michigan	1,365,356	22,339,208
Minnesota	71,615	8,482,068
Missouri	1,917,398	30,074,369
Montana	259	166,084
Nebraska	8,405	514,269
Nevada	187	139,108
New Hampshire	83,908	1,805,847
New Jersey	1,631,610	45,926,147
New Mexico	3,688	59,219
New York	20,822,877	189,965,956
North Dakota		54,009
Ohio	4,364,384	137,947,812
Oklahoma	1,203,828	5,606,991
Oregon	133,485	1,805,890
Pennsylvania	8,378,664	348,918,170
Rhode Island	226,072	2,526,362
South Carolina	43,971	1,935,643
South Dakota		708,660
Texas	820,065	8,172,520
Utah	786	2,882,587
Vermont	8,873	211,289
Washington	11,043	1,383,254
West Virginia	70,389	4,774,292
Wisconsin	1,346,649	64,094,053
Wyoming		20,113
Total other States	64,821,597	1,178,917,054
Foreign	422,763	5,676,659
Total	159,549,158	2,113,601,415

Furthermore, the TVA has stimulated the national economy by creating a great market for new electric appliances. In the TVA area, the purchases of electric appliances are running at the rate of a quarter of a billion dollars a year and since the war two and a half billion dollars worth have been purchased. I can assure you that somewhere around 99 percent of those appliances came from outside the Tennessee Valley.

In view of the above, it is apparent that this legislation is not only vitally necessary to the TVA area, but that its passage will benefit the Nation as a whole.

BILL REPRESENTS REASONABLE COMPROMISE

I want to point out and to emphasize that this bill, H.R. 3460, represents a reasonable compromise of many views after long and detailed consideration and deliberation. The issues of this bill have been debated both in the Congress and outside of Congress for more than 5 years.

No fewer than five sets of hearings have been held in the House and in the Senate on this legislation in the 84th, 85th, and the present Congress. The Senate passed a compromise version in the last session. But, the House in its crowded schedule did not get an opportunity to act on this matter, notwithstanding the excessive hearings and a favorable report on the bill.

Thus, the bill as it has reached us here has had just about all the sharp edges knocked off it and all the most controversial issues have been modified and compromised.

PRESIDENT RECOMMENDS BILL IN BUDGET MESSAGES

I might point out too that this legislation was proposed by President Eisenhower in his budget message of January 17, 1955—and I quote:

The Tennessee Valley Authority is giving immediate attention to the possibilities of financing further expansion of its power system by means other than Federal appropriations. The Authority has been requested to complete its studies in time to permit consideration by the Congress in this session of any legislation that may be necessary.

The requested legislation was submitted to the Congress later in 1955 and hearings were held on it in that year. On January 16, 1956, in the budget for the fiscal year 1957, we find this:

There is pending before the Congress legislation which the administration has proposed for financing steam-power facilities of the TVA through the sale of revenue bonds.

On January 16, 1957, in the budget for the fiscal year 1958 we find the following:

Legislation is recommended to authorize the TVA, subject to regular budgetary review, to finance new generating facilities by the sale of revenue bonds.

In his budget message of January 13, 1958, the President said—and I quote:

In accordance with my earlier recommendations, both Houses of the Congress have had under consideration legislation which would authorize the sale of revenue bonds by the Tennessee Valley Authority. I hope that action on appropriate legislation will be speedily concluded.

In the budget for this year, we find the following:

Proposed legislation will again be recommended to the Congress, its purpose being to permit the issuance of revenue bonds as an additional means of financing needed power facilities.

So Mr. Speaker, the President advanced this idea for this legislation in the first place and he has repeatedly called for passage of this legislation in his various messages to the Congress.

The members of the present Board of Directors of the TVA—Gen. Herbert D. Vogel, Mr. Arnold R. Jones, and Dr. Frank J. Welch—who has, as we know, recently resigned—were all appointed by President Eisenhower. I think it is significant that this Board has approved this legislation. May I quote from the letter written to our colleague, Mr. DAVIS, stating the Board's opinion on this bill:

TENNESSEE VALLEY AUTHORITY,
BOARD OF DIRECTORS,
July 29, 1958.

Hon. CLIFFORD DAVIS,
House of Representatives,
Washington, D.C.

In response to your inquiry we welcome the opportunity to express our deep concern that the legislation now before your committee to authorize TVA to issue revenue bonds be favorably reported and approved by the House at this session of the Congress. Enactment of self-financing legislation is urgently required to enable TVA to meet the growing defense and domestic demands for power in the area. We believe Senate bill 1869 as approved by the Senate last year provides a workable basis on which to undertake this new means of financing. Managerial flexibility commensurate with responsibilities delegated to the Board by law should be retained in bill in order to permit effective and efficient operations, and to insure minimum costs, including those of procurement, design, construction, and interest. TVA's plans, programs, and experience under the new legislation will be fully reported to the President and the Congress each year under existing law, as well as under special provisions for consultation and reporting incorporated in that bill. In addition the ceiling of $750 million included in the bill means that the Congress will have an early opportunity for full review of our initial experience. If the legislation is enacted we pledge our best efforts to administer it effectively.

HERBERT D. VOGEL, *Chairman.*
A. R. JONES, *Director.*
FRANK J. WELCH, *Director.*

H.R. 3460 represents a reasonable compromise of many views. The provisions of this legislation reflect 4 years of very careful analysis and consideration. In that time and in the process of going through the committees and through passage in the other body, this legislation has been changed and amended as no other legislation in my recollection ever has been. There are still some things in here that some people appear not to like. I might say that there are some things in this bill that we who represent the TVA area would prefer to have otherwise. As it stands now before you it is a reasonable bill that offers a reasonable solution to the continuing TVA controversy. As a matter of fact, in the form that it comes before you this bill apparently meets the approval of at least the greater number of the private power companies adjoining the TVA.

In this connection, I want to call your attention to the fact that Mr. Harllee Branch, Jr., president of the Southern Co., which is the parent company of five of the utilities which serve the area adjacent to the TVA, appeared before the committee. During the hearings Mr. Cramer asked Mr. Branch—and I quote:

As far as you are concerned, with the Vinson amendment, which merely provides congressional control over expansion of territories, and the Treasury Department and the Bureau of the Budget review of the actual selling and timing of the bonds, are you satisfied the latter as well as the former is needed so far as Government control of this bond issue is concerned; is that correct?

Mr. Branch replied—and I quote:

With respect to my companies, if there is protection against an expansion of TVA into our territory, my companies, as companies, have no concern:

He added:

The only thing I can speak for them on is to the point, please do not permit an unwarranted and justified encroachment in our territory.

In other words, he said that whatever his own personal opinions as an individual might be as to Treasury or Bureau of the Budget control, and speaking solely as a representative of his companies, and on behalf of the companies, their concern was for a territorial limitation.

It has been 4 years since the President made his first proposal for self-financing the TVA, and 4 years since Congress began to consider this measure. Meanwhile, the TVA has received no appropriations for increasing its power capacity. TVA's ability to meet the power needs of its area is becoming desperately limited.

A crisis caused by a shortage of power would deprive our people of the power needed for normal growth and would severely threaten the ability of the area to enjoy, on equal terms, the opportunity for development with the rest of the Nation.

The people of the TVA area have been thwarted on every hand and from many fronts—appropriations have been denied, opposition has been expressed against any further use of surplus corporate funds; and now sincere efforts to pass a workable and equitable self-financing plan are being opposed.

For years, the opponents of the TVA have been telling us that they are opposed to financing TVA's power operations through appropriations and suggesting that TVA go to the open money market for funds for additional capacity. That is precisely what the legislation now being considered by Congress proposes—to let TVA stand on its own feet. For years the enemies of TVA have been saying that they had no desire to destroy the TVA but merely wanted to remove the TVA from dependence on the Treasury. That is precisely what this legislation proposes. Despite his own expressed misgivings about the TVA, the President has said that he wants to maintain the TVA at maximum efficiency but he insists that he wants to free the Treasury of the financial burden for TVA's power function. That is precisely what this legislation would accomplish.

It is time that we disposed of this problem and faced up to our responsibilities, not only to the TVA area, but to the Nation. I, therefore, urge my colleagues not to be misled by misrepresentations and propaganda about this legislation.

Self-Financing Bill Will Increase TVA Payments to the Treasury

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
May 4, 1959

Mr. EVINS. Mr. Speaker, in connection with H.R. 3460, which we are scheduled to consider this week, one of the points at issue is the matter of the payments which TVA should make on account of the appropriation investment in the TVA power system.

There is much misunderstanding on how H.R. 3460 affects the payments by the TVA to the Treasury. In order to clear up these misunderstandings, I include in the Appendix of the RECORD an analysis of H.R. 3460 in regard to this matter.

The fact of the matter is that under H.R. 3460 the payments of the TVA into the Treausry will be at least 33⅓ percent greater than required under present law.

In this connection, Mr. Speaker, I believe a review of the record of the TVA in meeting its payment obligations under the present law is relevant and significant because it indicates and evidences the willingness and desire of the TVA to go far beyond the strict legal requirements of the statutes in discharging its obligations to the Treasury.

The TVA was required to make payments on the appropriation investment in 1948—a little over 10 years ago—through a rider to the Government Corporations Appropriations Act of 1948. The provisions of this rider are quite complicated. There are two interpretations of the payment requirements—which we may call the minimum and maximum requirements. It is very interesting to note that the payments the TVA has actually made in the 10-year period from 1948 and through the fiscal year of 1958, are greater than either the minimum or maximum requirements. This is clearly indicated by the following table which shows the minimum payment in column A, the maximum required payment in column B, and the actual payments made by TVA in column C.

SCHEDULE C–1.—*Payments to U.S. Treasury from power income under provisions of the Government Corporations Appropriation Act, 1948*

Fiscal year	(A) Minimum required under 1948 law	(B) Maximum required under 1948 law	(C) Actual payments
1948	$10,500,000		$10,500,000
1949	13,000,000	$8,705,981	16,000,000
1950	15,500,000	17,411,962	21,500,000
1951	18,000,000	26,561,589	30,500,000
1952	20,500,000	36,295,559	42,500,000
1953	23,000,000	48,551,875	57,500,000
1954	25,500,000	66,034,351	77,500,000
1955	28,000,000	87,627,219	127,500,000
1956	30,500,000	115,579,248	186,500,000
1957	33,000,000	148,436,909	216,500,000
1958	87,039,810	183,752,757	226,500,000

It will be noted first that the payments made by the TVA each year have exceeded both the minimum and the maximum requirements of the law. It will also be noted that the minimum legal payment required at the end of fiscal year 1958 was $87 million. The TVA has actually paid $226,500,000 or $139 million more than the minimum legal requirement.

Furthermore, it will be seen that under the most generous interpretation of the present law the TVA would have been required to pay $183,750,000 by the end of fiscal year 1958. Thus, the $226,500,000 the TVA actually has paid in that period is $42.8 million more than required by the most generous interpretation of the law.

H.R. 3460, which we will be considering, repeals the present payment provisions and substitutes for them provisions which will guarantee in return to the Federal Government at least 33⅓ percent more than under present law. I call the attention of my colleagues to the following paragraphs in the report of the Public Works Committee on H.R. 3460.

PAYMENTS BY TVA ON ACCOUNT OF THE APPROPRIATION INVESTMENT

Approximately $1,200 million of the total investment in the TVA power system has been supplied by appropriations and transfers of property from other agencies. The bill recognizes the position of the Government as the owner of the Corporation, and provides for a return on that investment in the nature of a dividend equal to the Government's current average cost of money. The Government is thus assured of a return equal to the current cost of the money invested in the past. In addition, there is provision for a payment of $10 million per year in reduction of the appropriation investment.

These cash payments are substantially larger than those required under present law. They represent, of course, only a part of the actual earnings by the Government on its investment. Over the years TVA has earned enough to cover operating and maintenance expenses, including full straight-line depreciation, and to provide in addition an average return on the total investment of 4 percent. That part of the earnings which has not been paid into the Treasury has been reinvested in new power facilities. As a result, the TVA power system is today a Government asset of much greater value than the net amount of the appropriations invested.

Some opponents of the bill have also suggested that TVA's obligation to make payments on account of the appropriation investment be placed on a parity with its obligation to bondholders. This suggestion disregards the fact that the Government is not a creditor of TVA, but its owner and sole stockholder. Bondholders always have a claim prior to that of stockholders, but the stockholders own and control the corporation and share in the equity built up by earnings and the bondholders do not. While the Government, as owner, is thus in a basically different position from that of bondholders, it will be assured of receiving the payments provided for since the bill requires that TVA charge rates for power sufficient to provide for the specified payments as a return on, and in reduction of, the appropriation investment, as well as payments on its bonds. The bill further protects the owner, the Government, as well as the lenders, the purchasers of TVA's bonds, by a requirement that TVA reinvest all depreciation accruals, or use them to pay off bonds or to reduce the appropriation investment.

Let me translate this into dollars and cents. The present Federal investment in the TVA is about $1.2 billion. Under the most generous interpretation of the present law, the TVA would be required to pay about 2½ percent of the investment annually or about $30 million. Under H.R. 3460, the TVA would be required to pay to the Treasury as dividends, an amount equal to the cost of the money to the Treasury. This year this would amount to something over 3 percent. Thus, the TVA would be required under H.R. 3460 to pay $36 million as dividends. In addition, it would have to pay $10 million toward retiring the Government investment. These two items total about $46 million this year or about $15 million more than would be required under present law.

In addition to this, let us not overlook that H.R. 3460 provides that the TVA must use all depreciation accruals either to pay off bonds, to reduce the appropriation investment, or to reinvest them in power facilities.

The fact that the TVA has repaid to the Treasury under present law far more than it was required by the strict legal interpretation of the law, indicates that we may well expect the TVA in the future as in the past to do more than the law requires.

Mr. Speaker, to summarize the requirements on the payments to the Treasury under H.R. 3460 we will be providing for a much greater return to the Federal Treasury than under present law.

TVA has a great record of payment into the U.S. Treasury—ahead of schedule.

Do Our Job in India Today or the Reds Will Tomorrow

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. PROXMIRE. Mr. President, today's newspapers report that two of the outstanding young men in America's political life—the junior Senator from Massachusetts [Mr. KENNEDY] and the Vice President, Mr. NIXON, pleaded eloquently yesterday for assistance for India.

Support for this position was argued emphatically and eloquently by the Milwaukee Journal last Sunday. In doing so they quote the Reverend Ralph Keithahn, who returned last year after 32 years as a Congregational missionary in India. In a recent speech before the Wausau, Wis., Rotary Club, Keithahn, as the Milwaukee Journal said, put the basic issue about as simply as anyone could, as follows:

If we don't do the job in India today, the Communists will tomorrow.

And Keithahn went on to describe some of the encouraging progress India has already made.

Mr. President, I ask unanimous consent that this editorial from the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DO OUR JOB IN INDIA TODAY, OR THE REDS WILL TOMORROW

There will be a big meeting in Washington this week to discuss India and its relationships with the United States. There will be many speakers and thousands of words. It is unlikely, however, that anyone will put the basic issue any simpler than the Reverend Ralph Keithahn did to the Wausau Rotary Club the other day.

"If we don't do our job in India today, the Communists will tomorrow," he said, according to the Wausau Record-Herald.

Keithahn returned last year after 32 years as a Congregational missionary in India.

The speaker emphasized the gains made in India in its few years of independence. He told how 555 separate states have been integrated. Women, children, and untouchables enjoy unprecedented freedom. Hindus, Moslems, and Christians work together. He told how the British had dug but 50 wells in one state in 50 years; free India has dug or deepened 50 wells in that state in 7 years. He said that there was not a blacktop road in Madras state under the British, now every major road is blacktopped.

Some of India's progress was "almost miraculous," Keithahn explained. But there is a long way to go. And the Indians, many of them hungry and ragged, "are going to turn to the people who get the job done," he said.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from the Friday, May 1, edition of the Charlotte Observer newspaper, Charlotte, N.C., entitled "How Stands the Labor Bill?—Stronger Than Many Think," dealing with the Kennedy-Ervin labor reform bill we recently passed in this body.

I believe this editorial best explains the situation the Senate found itself in, and gives credit to a splendid piece of work rendered by the Senate in passing the Kennedy-Ervin bill.

True, this bill does not contain the most that some wanted, or the least that some did not want, but, as the editorial points out, King Solomon and Henry Clay could not have sat down and written a labor bill acceptable to everyone.

I request unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Charlotte Observer, May 1, 1959]

HOW STANDS THE LABOR BILL?—STRONGER THAN MANY THINK

King Solomon and Henry Clay could not sit down together and write a labor bill in 1959 that would be acceptable on both sides of the labor-management fence.

The U.S. Senate has tried, nevertheless. It has put together a bill through the double process of leisurely committee discussion and hectic floor amendments. And out of the pressure cooker has come, we think, a remarkably good piece of legislation.

It strikes hard at the thieves, the racketeers and the irresponsibles who, although a minority, have dragged down the good name of the entire labor movement.

It amends the Taft-Hartley Act to deal with some of the blatant union excesses in labor-management relations.

A very great deal has been said about what the bill does not do. Here are some of the things that it does do as it leaves the Senate and faces a relatively bright future in the House:

1. It requires detailed public reporting of union financial operations, including all income of union officers and loans of union money to officers.

2. It bars persons convicted of serious crimes from serving as union officers within 5 years after completing prison terms.

3. It requires a full public reporting of all trusteeships imposed on locals by national or international unions. It prescribes minimum standards for trusteeships. It limits them to 12 months unless the union can prove they should be continued. (Trusteeships have been a favorite device of the Teamsters Union in promoting top-to-bottom control of local union affairs.)

4. It requires full public reporting of financial transactions and holdings by union officials which might give rise to conflicts of interest. As in the other reporting sections, the Secretary of Labor is given broad investigatory and enforcement powers.

5. It bans unions from paying legal fees or fines of anyone indicted or convicted of violating the proposed law.

6. It requires secret ballot elections every 5 years in international unions, every 3 years in locals.

7. It protects members' rights to nominate candidates in union elections and to vote without reprisal. It bars use of union money to promote any individual candidacy.

8. It gives each candidate the right to have observers present at the balloting and vote counting. It gives each candidate the right to distribute literature to all members.

9. It empowers the Federal courts to direct new elections where improper conduct is found. Union members are declared free to bring Federal suits when they are the victims of serious undemocratic procedures in their union.

10. It bars shakedown picketing designed to extort money from employers. In some cases it also bars picketing to recruit members or to force employers to bargain.

11. It forbids unions to get common carriers to refuse to handle goods of certain firms. This is the "hot cargo" technique used by the Teamsters Union to put indirect pressure on strike bound or nonunion employers.

12. It makes it a Federal crime to embezzle union funds.

13. It places a fiduciary responsibility on union officials who handle funds and requires them to be bonded.

This is not weak, pussyfooting legislation. It may not be strong enough to satisfy Senator GOLDWATER or the National Association of Manufacturers, but neither is it weak enough to satisfy Dave Beck, or Jimmy Hoffa, or the Chicago labor thugs. Most of its provisions are soundly based in the ills and abuses that were paraded, month after dreary month, before the Senate Labor Rackets Committee.

Stronger legislation may still be required in such areas as secondary boycott and shakedown picketing. But the important thing now is to get this law onto the books at this session of Congress.

It would be something of a tragedy if, for the second year in succession, those who want everything prevent the country from getting anything.

Urgent Need for Further Cancer Research

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. NEUBERGER. Mr. President, because the Nation has just marked Cancer Control Month, I ask unanimous consent to have printed in the Appendix of the RECORD a provocative column on the whole general subject of malignancy in disease which appeared in the Oregon Daily Statesman, of Salem, Oreg., on April 27, 1959. The author of the column is Charles A. Sprague, editor of the Statesman, and former distinguished Governor of our State. Governor Sprague effectively describes the insidious nature of cancer as a disease which frequently strikes without symptoms or warning. His column should emphasize to us the importance of not only supporting organizations like the American Cancer Society, but also in voting more generous funds for the National Cancer Institute, which sponsors so many urgently necessary research programs throughout the land.

Mr. President, I ask unanimous consent that the column by Charles A. Sprague be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

(By Charles A. Sprague)

Cancer isn't a pleasant subject to discuss, but April is the month when public attention is directed to this disease. The month's bulletin of the State Board of Health gives a résumé of Oregon's experience with this killer-disease. The most important fact reported is the growing incidence of lung cancer. It has become the principal site of deaths from cancer. Moreover the rate has shown steady and alarming increase over the years. Back in 1940 deaths from lung cancer in Oregon were at the rate of 5.9 per 100,000 population, which is the usual way of measuring frequency. This mounted to 12.3 in 1950 and to 19.3 in 1959.

The division between the sexes is pronounced. Of the 334 deaths from lung cancer reported in 1958, 287 were of males and only 47 of females. The male rate was at a high 33.2 per 100,000. Other leading loca-

tions of fatal cancers for men were prostate, stomach, large intestine, and leukemia; for women, breast, large intestine, uterus, ovary, and stomach.

The report has one hopeful note: Total cancer mortality dropped from 2,462 in 1957 to 2,426 in 1958. The decrease, however, was too small to indicate a trend. In 1950 the overall rate was 136.5 per 100,000, and in 1959, 140.3.

In age distribution the largest number of deaths from cancer occurred among those 65 years of age and older—1,374 or 14 percent. Second in this comparison was the group aged 45 to 54 years—848 deaths.

The fact which calls for relief is the mortality from lung cancer. Many authorities attribute it to smoking cigarettes. If that is a primary cause it looks as though filters have been of no avail. The statistics on lung cancer mortality give notice to males of the hazard of this disease; and they should lend urgency to the researchers who are seeking some means of preventing or curing cancer. It is appointed unto all once to die, but the goal is to have people live out a normal life span, and to be spared the suffering which comes from the ravages of cancer. In view of the testimony of competent scientists who have found cigarette smoking a probable cause of lung cancer the individual should realize the risk he takes if he clings to the cigarette habit.

Friday evening a San Francisco station televised an operation for lung tumor done on a patient in Stanford hospital. The patient didn't know he had a growth in his lung until it showed up in a routine X-ray. An attending physician described lung cancer as "insidious and silent." This points to the virtue of those chest fluoroscopings which aid greatly in detection both of tuberculosis and lung cancer.

Tribute to Gov. Edmund G. Brown, of California

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. ENGLE. Mr. President, I wish to call attention to an article from the Sacramento Bee of April 26, by Herbert L. Phillips, veteran McClatchy Newspaper Service political writer, who points out that Edmund G. (Pat) Brown, on his 54th birthday, has emerged as one of the leading political factors in the Far West.

Herbert L. (Pete) Phillips is one of the Nation's best informed and most experienced political writers. He has been the political editor of the McClatchy newspapers for the past 25 years. In that capacity he has followed closely several presidential campaigns, and is one of the outstanding authorities on California political history. His remarks about Governor Brown take on a significance which should be seriously considered. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BROWN, AT 54, EMERGES AS NEW FAR WEST POLITICAL FACTOR

(By Herbert L. Phillips)

Gov. Edmund G. (Pat) Brown was 54 this last week. He cut his birthday cake with the comfortable realization that he had smashed more political records, upset more political applecarts and caused a greater stir in general during his 54th year than in all the rest of his life put together.

This seems an appropriate time to review the 12 months which have changed Brown from an able but run of the mill state attorney general to the acknowledged west coast strong boy of the Democratic Party.

Just a year ago, Brown, who had been unwilling to try for governor in 1954, was in the early stages of a gubernatorial campaign against nationally acclaimed opposition, backed by a powerful and long entrenched Republican hierarchy. He was hopeful, energetic, and full of fight, but frankly in doubt about where his support was going to come from and how much of it he could count on.

When the shooting was all over, Brown suddenly found himself hailed as a political giant killer.

The country was impressed with his triumph over William F. Knowland, long time Republican leader of the United States Senate who frequently had been mentioned in Old Guard circles for the presidency. It was astounded at his victory margin of more than 1 million votes.

Somewhere along the line there appears to have been a vast miscalculation of Brown's political character. Less than a year ago, a national magazine, undertaking a full dress analysis of the emerging Democratic standard bearer, pictured Brown as a kind of campaign worry wart, unsure of himself, desperately eager to please everybody, jittery about trivialities and hesitant to make decisions.

This is a far cry from the current estimate. Today Democratic politicians are touting the new Governor as an important Pacific coast factor in next year's presidential campaign. And, less than a week ago, Republican leaders were accusing him of dictatorial tactics, of unprecedented and unwholesome exercise of executive power to subvest the legislative process and drive the administration's many sided program through to enactment.

The truth is that Brown, in his first 3½ months in office, has proved to be a much stronger Governor than most of his critics, or even many of his friends, ever dreamed he would be. Given executive power, he has combined friendliness, good nature, and personal charm with an unexpected determination to fight, with considerable organizing skill and negotiating talent, for the things he advocated in last year's campaign and since has recommended to the legislature.

His responsible liberalism legislative programs, now entering the session's crucial stage, are nearly all on the move. Some of them have gone through to final enactment.

He has steered through and signed a State fair employment practices law. He will stump the State for it, he says, if opponents carry it to referendum.

Already he has obtained enough new tax money to offset an inherited treasury deficit from the previous Republican administration. A new California water fund has been established. Progress has been made on Brown's various regulatory, election, consumer protection, and labor reform bills. His parliamentary successes, thus far, have been surprising. His serious setbacks have been comparatively few.

Measures for more than 50 percent of his $202 million budget balancing tax program, to cope with another threatened 1959–69 general fund deficit, are halfway through the legislature.

Far from excessively cautious or indecisive, Governor Brown has evinced a marked willingness to tackle his program adversaries headon. That goes for the special interest lobbies opposing his revenue and other key proposals. Few Governors have stepped so sharply on so many sensitive toes in so short a time.

It is, of course, far too early to calculate accurately whether the Governor's flashy beginning will be climaxed by total victory on the big issues of the present legislature. The session runs until June 19. The really tough days are still ahead.

And it obviously is much too early for the loud tom tom beating which some of the Governor's well-wishers have started in connection with 1960, and their new hero's potential influence as a California favorite son.

Probably nobody realizes these things more keenly than Brown himself. He could land on his political face very easily if, for instance, his budget balancing tax program should fall apart during these next 2 months or his efforts to work out a State water program should fail.

Meantime, there is no denying that Brown's administration has opened auspiciously, that his resolute and progressive approach to State problems has been impressive, and that few figures in modern California politics have leaped into prominence with such rapidity.

The Governor can look back on his 54th year as one of great personal accomplishment and much progress toward governmental achievements as well. He will be a very fortunate man, and an even more potent force in Democratic politics, if the record book reads as well when he is 55.

Loyalty Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. BOLAND. Mr. Speaker, on last Friday, May 1, Americans throughout the world observed Loyalty Day for the first time as a countermeasure to Communist May Day activities.

This past weekend was known as Loyalty Weekend because many of the parades and observances were held on Saturday and Sunday in communities throughout the United States. One of the most spectacular parades and demonstrations of American loyalty took place in South Hadley Falls, Mass., in my congressional district, where the parade was sponsored by the Massachusetts Department of the Veterans of Foreign Wars. More than 5,000 marchers participated, including Mayor Thomas J. O'Connor, of Springfield; Mayor Walter M. Grocki, of Chicopee; and Mayor Samuel Resnic, of Holyoke.

Mr. Speaker, the first observance of America's Loyalty Day was sparked by the Veterans of Foreign Wars who received the cooperation of President Eisenhower and the Congress. Mr. John W. Mahan, commander in chief of the Veterans of Foreign Wars of the United

States, described what loyalty really means in an exclusive article for Parade magazines published Sunday. I had intended to include Commander Mahan's article with my remarks yesterday, but I was pleased to note that Congressman METCALF had it inserted in the RECORD with his remarks.

Balanced Television Programing

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. MONRONEY. Mr. President, a shocking picture of next fall's television offerings is presented by TV Columnist Anthony La Camera of the Boston Evening American and the Boston Advertiser.

He notes that there are three prime night-time hours between 7:30 and 10:30 p.m. 7 nights a week, and 3 networks, so that there are 63 hours of prime TV time each week. Although the Voice of Firestone, after 30 years, has been denied prime time, he notes there is prime time next fall for 18 crime and adventure shows and there is choice time for 27 westerns, which comprise 16½ hours of program time on the networks' schedules.

Mr. President, is this balanced programing? Does any one here believe that all Americans want is violence and murder, either of the long-ago frontier or the current gangster-con man variety. Surely the networks can, without help either from Congress or other outside critics, pry themselves loose from their supine slavery to the ratings which would seem to be ruling our airwaves. Even if—and it is a very "iffy" if—the ratings accurately reflected public opinion, as far as the majority goes, could we not have some attention paid to the minority? We have only so many airwaves, and they must somehow serve all the people.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. La Camera's columns of April 16 and April 19.

There being no objection, the columns were ordered to be printed in the RECORD, as follows:

[From the Boston (Mass.) Advertiser, Apr. 19, 1959]

LOTS OF TIME FOR GUNS

(By Anthony La Camera)

At this moment, it isn't very easy for a TV columnist to follow that cheerful bit of advice which states: If you can't say something nice, then don't say anything at all.

For one thing, it would be extremely difficult to say anything nice about the progressively downward course which television programing has taken. For another, an individual would be remiss in his duty not to say something about the situation.

It is a situation which has been brought into sharp focus by the shocking case of Voice of Firestone and of the disillusioning implications which derive from it. As you may know by now this highly respected musical series is ending its 31-year broadcasting tenure on June 1—despite the desire of its sponsor to keep it on the telewaves in prime evening time.

ABC–TV doesn't want it any longer on Monday nights at 9, or anywhere else within the prime nighttime hours between 7:30 and 10:30. CBS–TV and NBC–TV each offered it a late-afternoon Sunday spot, but the sponsor declined on the understandable grounds that his program deserved a more advantageous showcase.

And so, there is no truly choice time available on network television for Voice of Firestone, even though its sponsor is willing to foot the bill. There is no room for it, even though the three networks are scheduling a shameful, staggering total of 27 western shows in their weekly lineups. Not a single half hour for a weekly good-music series, but plenty of prime segments for the 27 westerns which comprise 16½ hours of program time on the networks' schedules.

ABC–TV, which bumped Firestone off its roster for next fall, carries 10 of these westerns—three of them in the hour-long category. It is also the network which devotes 8 hours a week to Dick Clark and the musical inanities he dispenses to immature audiences. And Clark, who has displayed little talent, wit, or discrimination on his current programs, also will have a panel show on ABC next season—in prime time, yet.

So desperately determined are the networks to outrate each other in every time segment that they seem to have forgotten elementary principles of balanced programing. NBC–TV, which now carries nine westerns, is producing several more for the season ahead. CBS–TV, which now runs eight, has two or three others in the works. The same goes for ABC–TV.

How can there be room for Voice of Firestone on networks which have downgraded their competitive efforts to this ridiculous business of fighting gunfire with gunfire? Even in the nonwestern category, violence and murder have assumed unprecedented importance in programming structure. Although westerns represent the most overemphasized trend in video annals, you may be surprised to learn that the networks' prime evening hours also contain 18 crime and adventure shows.

NBC–TV alone schedules nine of these, CBS–TV runs five, and ABC–TV has four. As in the case of the westerns, there'll be several more crime and adventure entries next fall. The networks have yet to learn the simple virtue of moderation, and then they wonder why they are buffeted on all sides by individuals and agencies fighting for more equitable program operations.

The issue, it should be pointed out here, is not whether you or I personally like westerns. A reasonable number of good westerns is certainly most welcome on television. Nor does the issue revolve around one's personal feedings concerning "whodunits," which also rate reasonable exposure at proper viewing times.

The point of the whole thing is that millions of people who enjoy Voice of Firestone, even if they represent a minority, deserve some network attention on a weekly basis—and I don't mean in the inconvenient Sunday-afternoon strip known as the intellectual ghetto. Nor should they be expected to settle constantly for the fringe benefits which television magnanimously tosses their way.

Let us indulge briefly, in some simple arithmetic. Each night includes 3 hours of prime viewing time, and each network thereby has 21 hours of such time per week. Since there are 3 networks, the total number of prime viewing hours on network television is 63. Is it asking too much, then, for the networks to devote just a few of those 63 hours to weekly quality fare like Voice of Firestone?

It would seem to me that television belongs to all the people, and it would also seem that it is impossible for television to serve all the people merely by glutting its choicest viewing periods with westerns, crime shows and situation comedies. The test of any truly democratic operation, I maintain, is how well it observes the rights of both majority and minority groups.

Television has not always done too well by the minority audiences, I'm afraid, and the case of Voice of Firestone is a most recent and glaring example. Its forced departure may well result in a sizable batch of protesting viewer mail, and may it help to convince the television networks that they have gone too far with their one-dimensional, easy-way-out programing methods.

It is much better, and to their own advantage, that they be convinced in this constructive fashion than be harassed by stronger and more embarrassing pressures. All we can hope, meanwhile, is that they already haven't pushed their luck to the breaking point.

[From the Boston (Mass.) Evening American, Apr. 16, 1959]

FIRESTONE: A LAMENT

(By Anthony La Camera)

This has been a year of righteous wailing and public self-pity on the part of network television executives. Scheming critics are out to get them, some have complained. Congressional investigators are seeking to curtail their freedom, others have cried. They cannot operate properly under such pressures, they have bleated.

As a regular observer of the TV scene, I must confess to being awfully fed up with these embarrassing lamentations. If the networks are criticized, it is because of their own shortcomings and sortsightedness. If they are harassed by threats of Federal interference, it is because of their own inability or unwillingness to cope sensibly with programing problems.

To cite a most recent example, I cannot think of a more disgraceful situation than that which has cut short the 31-year life of the much-admired, oft-cited "Voice of Firestone." This distinguished series, which has brought immeasurable credit to the broadcasting world for three decades, has been kicked out of TV's primetime, evening schedules for next fall. There is no other way to say it.

Although its sponsor wanted to continue the musical show next season on Monday nights at 9, ABC–TV turned down his good money. The sponsor then waited for an ABC offer of another prime evening spot, somewhere between the hours of 7:30 and 10:30. But all that the network could make available, according to the sponsor, was the late Monday spot between 10:30 and 11 p.m.—which is not considered prime time.

The other networks magnanimously offered time to Firestone, too. CBS–TV was willing to sell the now sustaining time of Sundays at 5 p.m. to the sponsor, and NBC–TV came up with two Sunday possibilities, 5 or 6 p.m., neither of which has been very lucrative lately for the network. One certainly can't blame the sponsor for having turned down all these second-hand offers and then for deciding to discontinue the series after June 1. Why, after all, should a class A program have to settle for class C time?

RESPECTABLE RATING HERE

In a medium which provides choice nighttime segments for some 25 westerns, there should be a single, suitable half hour for

"Voice of Firestone," which has been bringing weekly pleasure to millions of loyal viewers. Yes, the program used to be regarded as one which limited its appeal to "long-hair" music lovers, but it has been varying its fare over the past season with gratifying results.

Whatever its ratings in other communities, they have been very respectable in the Boston viewing area. Last month, Voice attained an American Research Bureau rating of 20.9 against the powerful competition of Danny Thomas (26.2) and Peter Gunn (23.1). The junk-ridden Dick Clark Show got a much lower Boston rating of 14.3 for the same period, but I don't see ABC–TV bumping that musical monstrosity off prime time.

Although ABC–TV's president Oliver Treyz has boasted frequently about his network's policy of counterprograming, I would like to know what happened to this policy in the Firestone case. What better example of counter-programing than the slotting of a high-grade musical series opposite a situation comedy and a whodunit?

WRITE TO NETWORK, FIRESTONE

ABC–TV's Monday night schedule for the fall calls for three hour-long films in prime time. One is "Cheyenne," starting at 7:30 and then competing with two other westerns CBS–TV's "the Texan" and NBC–TV's "Restless Gun." A second is "Bourbon Street Beat," a whodunit adventure series starting at 8:30 and then competing with that other whodunit adventure series, "Peter Gunn." A third is "Adventure in Paradise," beginning at 9:30.

So what can "Voice of Firestone" fans do? Well, they might try writing to the American Broadcasting Co. at 7 West 66th Street, New York City, and also to Raymond C. Firestone, president of the Firestone Tire & Rubber Co., at Akron 17, Ohio. Perhaps a few sacks of protesting mail to the network and a few sacks of reassuring mail to Firestone can help to straighten out a frustrating situation which may have far-reaching repercussions.

What Should Be the Aims of the U.S. Foreign Policy?

EXTENSION OF REMARKS
OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. McGEE. Mr. President, on Sunday afternoon I was privileged to be the guest on a television show. I mention it because on the same program were two students, who rendered a particularly able performance. One was William Stall, from the University of Wyoming, a student of mine until this year. The other was a young man from Pennsylvania by the name of Philip Jurus, a 21-year-old senior student at Muhlenburg College. He was there because the League of Women Voters of Pennsylvania conducted a statewide contest among college students on the subject "What Should Be the Aims of the U.S. Foreign Policy?" His was the winning essay. I have read Philip Jurus' essay in that contest. I was so moved by its content that I am confident my colleagues in this body, which has a great deal to do with the foreign policy of the United States, will be as interested in it as I was. For that reason I ask unanimous consent to have the essay printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHAT SHOULD BE THE AIMS OF U.S. FOREIGN POLICY?

(By Philip Jurus)

At the end of the Second War War a newly polarized distribution of power emerged. At the one end was Russia, determined to destroy what remained of the old international status quo. At the other pole was the United States, a firm opponent of Communist power and a reluctant defender of the remnants of England's 19th century hegemony. The United States had inherited Great Britain's role as the pivot of the Western World; it became the main defender of the Anglo-American values. In this paper I should like to attempt to define these values in terms of the aims of the foreign policy of the United States.

We are making foreign policy in a period when the threat of nuclear war is constantly hanging over our heads and we have no alternative but to play our part in foreign affairs wisely and well.

Foremost in consideration of the aims of foreign policy is that every important move is based on one overriding consideration—whether it will advance the security and the wellbeing of the American people. In other words, the basic purpose of all our foreign policy is to safeguard the United States and promote the welfare and security of the American people. In general terms the aims of the foreign policy of the United States should be as follows:

1. To seek an international society in which men, goods, and ideas will flow freely and without obstruction throughout a wide area and in which the opportunity to pursue happiness is open to every man and woman.

2. To attempt to work through diplomatic channels such as the United Nations, and other international and regional organizations in pursuit of peace with justice.

3. To strive constantly to reduce international tensions and the burden of armaments.

4. To willingly share our knowledge and techniques with less developed nations to help provide a healthier and more rewarding life for their peoples.

5. To strengthen the economy of the United States by promoting mutually profitable levels of trade with other countries.

The task of fulfilling these general aims is very complex. George L. Record, unknowingly explained the situation we face today in a letter he wrote to Woodrow Wilson in 1919 stating that we "cannot set up machinery which will maintain justice in international relations among governments which deny justice to their own people." Today, we of the United States face both a great national state—Russia—and an international organization dominated by an ideology alien to our institutions and beliefs.

International communism and Russian ambitions have led to a position of great power rivalry with the West, and particularly with the United States. The challenge is political, military, psychological, and economic. This is not the only challenge that we are forced to meet in our foreign relations; we must also deal with other challenges—economic, social, political, ideological, etc. This tends to make the formulation of foreign policy even more flexible.

In attempting to state somewhat more specifically what the aims of the foreign policy of the United States should be, one must remember the complexity and flexibility of the world situation.

Looking at the free world in the formation of our foreign policy, we must remember that the interdependence of this free world is economic and social as well as military and political. Both of these aspects should be reflected in our American foreign economic and military aid programs. The military assistance should provide a shield against aggression, and the economic aid should help to remove the poverty and despair on which Communist subversion thrives. Our aid programs should in no way be one-way streets, but should be cooperative endeavors designed to help people who are free to remain free.

Our aid programs to Asia and Africa are very important. In these lands there is a growing desire by millions of people to secure more of the better things of life. The Communists are constantly trying to sell them on the idea that there is a short road—the Communist road—to better living conditions and greater political and economic influence. They cite the Russian example of achievement as proof of the validity of their way of life.

We must provide a long-term program designed to make available our economic and scientific know-how to those countries that want to help themselves. We must do so in such a manner whereby these people will feel that what is accomplished is the fruit of their hands.

In our own economic interest and quite apart from our other worthy objectives such as insuring a prosperous and peaceful world, we must keep open the channels of our import trade.

Following World War II, many nations, in order to halt the drain on their hard-currency reserves, drastically curtailed imports, placed strict controls on foreign exchange, and entered into discriminatory bilateral trade agreements with one another. The result was a strict government control over the trade of these many nations.

As a result it is necessary for the United States to meet with other nations of the world in international forums in persistent efforts to untangle the problems arising from these restrictive practices. We must make an earnest effort to have exchange controls, import licensing, and other restrictive practices relaxed.

There are now 21 new nations, and others at the threshold of independence. We must endeavor to assist them to retain genuine independence and to overcome the difficulties and dangers inherent in the early stages of independence when such states are susceptible to being absorbed into the Communist bloc and consequently losing their independence.

Up until this time we have been unable to agree on a workable disarmament plan. But we should not allow our unsuccessfulness to cause us to give up hope or to slacken our efforts. We must go on, inching ahead. We must seize every possible opportunity for genuine accord with the Soviet Union. But too, we must not permit ourselves to be trapped into confusing tempting promises with genuine proposals.

We must make every effort to control the spread of nuclear weapons to other countries. Such weapons in unreliable hands could light the fire of a terrible nuclear war. We should make every effort to develop peaceful uses of atomic power in these countries which are considered to be the "have-nots."

So far as territorial inspection with regard to nuclear power is concerned, we should be willing to start with a more limited zone, such as the area within the Arctic Circle, an additional part of eastern Siberia, Kamachatka, and Alaska. This proposal has already been made and I heartily suggest that the United States support it and make it a part of our foreign policy in this sphere.

Until we have definite proof that the Soviet Union is serious about disarmament,

I feel that we should continue producing and testing the best weapons that we can develop.

The first Soviet sputnik made what was once science fiction a very important reality. Outer space and satellites offer the possibility of many valuable benefits. Radio communications, unhampered by disturbances in the atmosphere and ionosphere, may be possible between the most distant points on earth. A worldwide system of television may be possible. Weather forecasting will definitely be improved. These are but a few of the new prospects that this new age opens up.

As a result of this, we should try to agree with the nations of the world upon certain fundamentals now while our activities in outer space are just beginning. We should attempt to develop some simple rules of conduct for the use of outer space, not only on our own grounds, but those of other nations too. This indeed, will not be a simple job, but such an endeavor should be started now before the complexities become even greater.

We should, in the aims of our foreign policy, hold the United Nations as a forum in which political challenges can be placed in their proper perspective and adjusted on the basis of reasonable compromises. But we should not overemphasize the limited importance of the United Nations in such a role.

The United States is undoubtedly well aware of the Soviet economic challenge to its security. In order to meet this challenge, we must have a greater flexibility and a greater assurance of continuity in dealing with economic aid problems. We must continue and even possibly expand our support for the bilateral aid of the United States and the multilateral aid of the United Nations.

We must maintain our leadership in the specialized agencies of the United Nations, such as UNESCO, ILO, and WHO. This will be very important, I believe, in view of the new Soviet interest in these agencies.

In cooperation with our allies, I think we must continue to strengthen and support regional collective security systems such as NATO and SEATO. We must also remember that these systems are important politically, economically, and culturally as well as militarily.

We need strong allies who can help us repel aggression anywhere, and strong allies need strong economies and stable governments; thus we must increase our aid to help these countries.

In our endless search for agreement with the Soviet Union and other countries, we must never allow ourselves to become discouraged, either with respect to particular foreign policy issues or with respect to the general trend of Soviet policy.

We must watch the dogged persistence of the Russians with equal persistence and determination on our part.

A very important part of our foreign policy should be the support of cultural exchange programs between the United States and other nations of the world. The exchange of entertainers, such as the San Francisco ballet troupe which recently won praise for its performances before the emperor of Ethiopia. Participation in trade fairs and exhibits is likewise of importance in order to let the world see the accomplishments of the United States and the willingness of the United States to participate in friendly relations with other countries.

In consideration of the aims of foreign policy, we must understand the long-range nature of the Communist threat and do our utmost to meet it. We must continue to support the United Nations and the causes it stands for. We must work closely with our allies and continue to avoid working alone. We must demonstrate to uncommitted nations of the world the enduring qualities of democracy and freedom. We must take our stand as a nation on high moral grounds. In conclusion, we must attempt a policy based on the hope of achieving a just peace and on firmness in opposing aggression.

The Jet Age Comes to Main Street

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 5, 1959

Mr. BIBLE. Mr. President, last month the city of Las Vegas played host to thousands of persons at the initial World Congress of Flight. In addition to exhibits, air shows, and other dramatic demonstrations of aviation's rapid advancement, there were many illuminating addresses by leaders in that field. The increasingly important part being recorded by America's feeder airlines was well described by Joseph P. Adams, general counsel and executive director of the Association of Local and Territorial Airlines. I ask unanimous consent that Mr. Adams' address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE JET AGE COMES TO MAIN STREET

(Remarks by Joseph P. Adams, executive director, Association of Local and Territorial Airlines [1])

Mr. Chairman and delegates to the First World Congress of Flight, I wish to congratulate the general chairman, Edward P. Curtis, the Air Force Association, and all other associations and individuals responsible for this significant conference, the success of which is assured by your presence.

Next, on the behalf of Mr. Gwin Hicks, chairman of the board of the Association of Local and Territorial Airlines, I extend the heartiest appreciation for inclusion of the local transport airline industry in this program.

The subject will permit me to discuss in these remarks the many factors that will accomplish the arrival of the jet age in Main Street, the symbol of the smaller community of the United States.

First, we need to focus on the present status of the local transport industry, which in addition to 13 local service airlines, includes 2 local transport airlines in Hawaii and 7 such carriers in Alaska. These carriers serve 516 domestic cities and 283 cities exclusively. To the extent that the jet age arrives in these 283 Main Streets, it will do so only by reason of the operation of local service airlines who serve them exclusively.

Approximately one-third of the total population of the United States is served by the local service airlines operating 35,586 route miles.

[1] Alaska Airlines, Inc.; Allegheny Airlines, Inc.; Aloha Air Lines, Inc.; Bonanza Air Lines, Inc.; Central Airlines, Inc.; Frontier Airlines, Inc.; Hawaiian Airlines, Ltd.; Lake Central Airlines, Inc.; Mohawk Airlines, Inc.; Northern Consolidated Airlines, Inc.; Ozark Air Lines, Inc.; Pacific Airlines, Inc.; Reeve Aleutian Airways, Inc.; West Coast Airlines, Inc.; Wien Alaska Airlines, Inc.

In my opinion, the arrival of the jet age on Main Street will be a triumphant event if three factors are present; namely, (A) a continued constructive regulatory and congressional atmosphere; (B) a continued successful reequipment program; and (C) a continued period of financial stability is maintained.

With regard to a constructive regulatory atmosphere, the air has never been cleaner, healthier, and more invigorating. The Civil Aeronautics Board is presently engaged in certification of many thousands of new route miles while at the same time undertaking to overhaul and improve the entire subsidy mail rate program.

Indicative of the regulatory atmosphere, I believe, is a quote from an address "Local Service and the Jet Age," delivered by the Honorable G. Joseph Minetti, member, Civil Aeronautics Board, before the Association of Local and Territorial Airlines in Honolulu, T.H., November 7, 1958, when he said:

"First, I see a tremendous challenge, and opportunity, which the operation of jets by the trunk carriers will have on local air transportation. I am convinced that the operation of jet aircraft with probably a 500-mile stage length or longer will greatly impove the status of our local service and Territorial carriers in the overall transportation system.

"I believe that, as the trunk carriers phase in their jet equipment there will be a greater tendency to concentrate on the major and long-haul markets. This would furnish the necessity, and opportunity, for local carriers to operate more substantial volumes of short-haul service. The local carriers have successfully performed this type of service when they have been called upon in the past."

How the winds blow in reference to the second factor, that of reequipment, can best be sampled by quoting from an address by the Honorable Louis J. Hector, speaking before an ALTA meeting in Denver, Colo., July 25, 1958, when he said:

"First, there are the proposals for reequipment. This subject has been talked about for years now, and I think we are all gratified that at last through the guaranteed loan programs things are beginning to happen. Of course, until recently even a guaranteed loan program wouldn't have done much good because the planes weren't there to be bought.* * *

"You now have the planes—some new planes and some old planes at new low prices—which seem proper for the job, and you have the financial machinery for buying them."

Further, it is appropriate here to call attention to the fact that the guaranteed loan legislation was sponsored originally and officially by the Civil Aeronautics Board and made requested legislation. For this, ALTA is deeply appreciative.

The subsidy moneys presently appropriated will insure the arrival of the jet age on Main Street. In this regard, it is opportune to state that the subsidy moneys go to the citizens of Main Street and not the airline corporations. As evidence of congressional intent on this subject, I will refer to the remarks of the distinguished senior Senator from our host State, Nevada, the Honorable ALAN BIBLE, who, when speaking here in Las Vegas, Nev., on Friday, April 11, 1958, said:

"The great social and economic strides made by America's smaller communities in recent years can be traced in large measure to the advent of feeder airlines. This convenient, speedy method of transportation broke the back of isolation which had been thrust upon these cities in former years.

"Dedicated to and specializing in service to the smaller communities of the Nation, these carriers have opened new industrial vistas which have contributed greatly to a continuing growth and development. This

ready accessibility of air travel has encouraged a decentralization of industry from the big metropolitan centers to the outlying areas. Your airlines have tied these small communities to their major trading centers and at the same time have brought about a broader based economy that benefits everyone.

"Although these airlines have more than a decade of solid achievement behind them, I believe that the real development of local air service lies ahead, provided the necessary stimulus is provided on the national level. It is my hope that the Civil Aeronautics Board will continue to lend encouragement and support to the industry and will examine and reexamine the needs of the smaller communities for air transportation. There should be no faltering until the ultimate goal is reached—and that goal is a nationwide network of airlines dedicated to local service.

"It should be made crystal clear that the airlines are going to need continual financial assistance during the period of expansion and introduction of new equipment to replace those old, dependable—but certainly outmoded—DC-3's."

The foregoing opinion of the learned aviation authority, Senator BIBLE, goes far in advancing the third factor mentioned in my introduction; namely, a continued period of financial stability.

The continued reequipment of local transport airline fleets is required if the several hundred cities that will never have long-range nonstop jet service are to enjoy the jet age. This reequipment program includes acquisition of larger postwar piston engine planes, the purchase of turbo-prop DC-3 replacements and the conversion of present piston engine aircraft to turbo-prop power. The members of ALTA are presently and successfully putting all three reequipment programs into effect.

The passenger appeal of all types of larger postwar aircraft has been significant in the recent yearly expansion of revenue passenger miles flown by local transport airlines. This annual growth of 10.2 percent in 1958, a poor economic year, surpassed the same measure of growth of the domestic trunk airlines which remained practically static during 1958.

While this satisfactory annual growth has been the result of the addition of larger postwar aircraft, such as the Convair 240 and the Martin 202, I am pleased to be able to give several recent examples of the passenger appeal of the turbo-prop F-27 as used by West Coast Airlines, Bonanza Airlines and Northern Consolidated Airlines, the ALTA member carriers whose statistics are available to me.

Of significance are the number of enplaned passengers by months that have occurred on West Coast's system during the more recent 6-month period compared to a year ago. These figures show an increasing percentage of growth over the corresponding months of a year ago. They are as follows:

	1958-59	1957-58	Percent
October	22,420	22,188	1.0
November	18,700	19,200	(2.6)
December	20,324	18,338	10.8
January	23,040	18,454	24.6
February	22,093	17,317	27.6
March	25,464	19,565	30.1

In comparing specific flights which were operated in October, November, December, January and February with F-27's with the same flights operated in the previous year, for the same months, with DC-3's, West Coast experienced the following increase in passengers per mile:

	Percent
October	39.55
November	42.77
December	48.09
January	47.40
February	50.76

Bonanza Air Lines, a more recent entrant in the DC-3 replacement parade, inaugurating F-27 service on March 29, has some encouraging "first" figures. In the first 10 days with 100 percent performance factor, load factors for the Silver Dart service averaged 63 percent.

Last week in Anchorage, Alaska, I learned that while no comparable figures were available on a route mile basis, Northern Consolidated Airlines had found passenger acceptance reflected in 1 month's revenue of $5,000 for sightseeing trips over and around Mount McKinley, a source of revenue never before available to the carrier.

It is my opinion that a continued successful reequipment program is assured the local transport airlines, thus creating one of the factors I consider necessary if the jet age is to come to Main Street.

The third factor necessary to bring the jet age to Main Street; namely, a period of financial stability for the industry, seems possible of acomplishment at this time.

The year 1958 may prove a memorable one for the local transport airline industry, as it was in 1958 that the Civil Aeronautics Board officially instituted steps that may well revolutionize present subsidy payment concepts as they relate to the public service values of airlines and now the jet age to the Main Street communities of these United States.

In emphasizing this recent favorable development and one having a direct bearing on the third factor listed earlier in these remarks as necessary to assure the arrival of the jet age on Main Street, I refer, in part, to remarks of the Honorable James R. Durfee, distinguished chairman of the Civil Aeronautics Board, speaking here in Las Vegas, Nev., on Friday, April 11, 1958:

"First and foremost, the Board has become increasingly convinced that our present ratemaking methods cannot achieve both financial stability for the carriers and subsidy control for the Government.

* * * * *

"Our present system does not provide the necessary incentive to remain on final rates. It provides no real incentive to minimize expenses under a temporary rate, and no definite dollars-and-cents standards by which carriers can judge their own performance.

"In our review of individual mail rates, and in talks with the managements of various carriers during recent months, we and our staff have become convinced that some drastic revision in approach must be found. You have undoubtedly noticed expressions of this conclusion in recent orders and opinions of the Board.

* * * * *

"By improvements in the ratemaking process, by route improvements that we hope to accomplish in the area cases, and by other regulatory improvements, we hope to create an improved atmosphere to complement the developmental steps that the carriers will be taking in the next few months, the new financing, the introduction of new equipment, the extensions of routes, all the things that promsie to make this 20th anniversary year a memorable one for local service carriers."

Next week, April 23-24, the member carriers of ALTA will hold a quarterly regional meeting in St. Louis, Mo. This meeting will feature the report and results of a research and development program on subsidy mail rate procedures directed by United Research Inc., at the order of ALTA and the ATA. This meeting will be favored by the attendance of senior CAB staff mail rates personnel with whom views on operating and practical considerations of the CAB proposed new subsidy mail rate concept will be explored.

Truly, at this time, April of 1959, the local transport industry is on the threshold of obtaining and realizing a (a) continued constructive regulatory and congressional atmosphere; (b) continued successful reequipment program; and (c) continued period of financial stability, which will insure the arrival of the jet age on Main Street as the dawn comes up like thunder.

In closing, I should like to remark that here today, as delegates of the World Congress of Flight, are assembled all of the Government individuals responsible for regulation and Congressional atmosphere and nongovernment persons responsible for public financial and personal acceptance of local transport airline success. To all of you assembled, and on behalf of the members of the Association of Local and Territorial Airlines, I thank you and request your continued splendid support.

Thank you.

Straight and Narrow

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Lynn Item, of Lynn, Mass., on April 30, 1959:

STRAIGHT AND NARROW

We live in a time of paradoxes. The greatest threat to freemen comes from the practicing extremists in Moscow and Peiping. Yet among freemen themselves this is widely styled as the age of the moderates.

But there is tremendous confusion as to the place and meaning of the moderate approach in Government and politics.

Some men who are fundamentally moderates, in the sense that they eschew the extremes, do not like the term.

Naturally there are degrees of moderateness, and there is always plenty of room for debate as to whether a more moderate or a less moderate course of action is wisest in some aspect of domestic or foreign affairs.

But some who profess a distaste for the moderate outlook (while practicing it in many fields) try to suggest that it represents a lack of conviction. And sometimes that it spells lack of courage.

The implication here is that the farther you are away from center, the stronger are your persuasions and the stouter your will.

In truth, however, in a given situation it may require far more ingenuity and fortitude to cling to a moderate position than to one removed from the center. There are many, many times when the easiest thing in the world is to take what is commonly called a strong position.

It is very easy, for instance, to demand all sorts of remarkable additional services from Government, without facing for a second the hard realities of bringing them to pass or finding the money to pay for them.

Often in such cases the realist, the one who strives for programs that can be ap-

proved by a majority of lawmakers and can be supported, is upbraided for his weakness in espousing moderation.

The way of the moderate is not always the path of conviction and courage. No one approach has a monopoly on these qualities. But moderation frequently is the toughest, sanest course freemen can follow. And those who then take it are the very opposite of weak.

Statement in Opposition to H.R. 1253

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD the statement made by Mr. Wayne G. Smith for the Greenbelt Consumer Services, Inc., before the House Interstate and Foreign Commerce Committee on H.R. 1253:

Gentlemen, my name is Wayne G. Smith and I represent Greenbelt Consumer Services, Inc., with principal offices at 121 Centerway Road, Greenbelt, Md.

We are a consumer cooperative operating super markets, pharmacies, and service stations in the Washington suburban area of Maryland and Virginia, and in Westminster, Md. We have about 18,000 customer-members, and our business is operated in the interest of these members. Based on our experience in operating under fair trade in the State of Maryland, we are very much alarmed at the prospect of the Nation's economy being saddled with a price-fixing law on a national scale.

We have no particular ax to grind in this matter, unless concern with the welfare of consumers in general can be said to constitute a special interest. Much has been said pro and con about the effect of fair trade on business. It is our contention that consumers have the major stake in this controversy, and the voices raised in their behalf are all too few. Consumers, as a group, are relatively unorganized. They must depend upon their elected representatives in legislative branches of government to make sure that laws passed are in the public interest and not contrary to their welfare. Our purpose here today is to state in as simple language as possible, the consumers' case against fair trade.

We are opposed to price-fixing laws on any pretext, and are particularly opposed to so-called fair-trade legislation for the reasons we will discuss. Here are our principal points of objection.

1. Fair-trade limits competition at the retail level:

Our economy has long depended upon active competition to act as a spur to progress and to protect consumers. The dangers inherent in a lack of competition are well recognized and our antitrust laws were enacted to prevent such a contingency. Such laws might be said to constitute the consumers bill of rights.

Competition has provided the real test for business—both large and small. Competition in nearly all lines of business is intense. Any particular type of business that shows even a temporary easing of competition immediately attracts new entries, so the competition gets tough again. This is a continuous process and it is good for the economy. It acts as a spur to progress and efficiency, and discourages inefficiency and waste in business.

Price is a very important element in competition. You can't effectively compete if you ignore price, and to remove the element of price from the competitive picture is to slown down the whole process. Yet a retailer is forbidden by law to engage in price competition on an item that has been price fixed under fair trade.

Let's have a very clear picture of the importance of price competition. It has served as the sparkplug to provide an increasing demand for consumer goods. By exerting a continuous downward pressure on prices, it has opened up new sources of consumer demand. An increase in the consumption of consumer goods is the key to economic and industrial progress.

We have the most highly developed industrial system in the world. That didn't happen by accident. It came about as a result of the incentive provided by price competition.

Fair trade proponents have tried very hard to make a whipping boy out of price competition. They have employed all sorts of catch phrases, such as "Predatory price cutting," "Loss leader selling," "Indiscriminate price slashing," "Chaos in the marketplace," to mention but a few. They have endeavored to sell the idea that price competition as represented by the selling of an item at any point below an arbitrarily established fair trade price is unfair and bad for manufacturers, retailers, and consumers alike. The whole case for fair trade breaks down unless we can safely assume that one simple price is fair to all concerned, under all conditions. It is obvious to anyone even slightly familiar with retailing that such assumption cannot be made.

In all the discussion about fair trade we have never heard a definition of what is meant by "fair." If the word is to mean what it says, it should apply specifically to the conditions under which an item is sold.

The selling price of an item is made up of three principal increments:

1. The cost of the merchandise to the retailer.
2. The retailer's operating expense.
3. The retailer's profit.

For one selling price to be fair to two or more retailers, these three increments must be the same in all cases. For a price to be fair to the consumer, the retailers operating expense must be based on an efficient operation, and the profit increment must be fair and reasonable. It is obvious that no one selling price can satisfy all of these requirements, and there are very good reasons why this is so.

In making a purchase, a customer buys a package, consisting of an item of merchandise and an assortment of services, the cost of which is a part of the retailer's operating expense. These services are many and varied, and consist of such things as salesperson service, charge account availability, free delivery, free gift-wrapping service, free parking, air conditioning in the store, phone order service, and many more. Customers exercise a free choice as to what services they want in connection with their purchase and buy accordingly. To be fair the selling price should vary according to the combination of services involved. For example, a person buying a small electric appliance in a self-service store, who pays cash and takes the purchase with her cannot fairly be expected to pay the same price as a customer who is individually waited on in a service store, has the item put on her charge account, has it gift wrapped and delivered. Yet fair trade proponents ignore this entirely and tell us that one price is fair in both instances. We contend that the customer who purchased under the limited service conditions should not be expected to pay for services she did not get.

In the absence of fair trade, the limited service retailer is free to price his item according to the services that go with it. The fact that his selling price is lower than his high service competitor does not constitute loss-leader selling or predatory price slashing or any of the other derogatory epithets that fair-trade supporters use to cloud the issue. The fact that the price is lower is the simple result of its being based on acutal operating costs.

Even in cases where two stores offer the same services there may well be a justified difference in price, based on operating efficiency. Some people do a better job of running a store than do others. If the efficient operator is permitted to reduce his price to reflect his better efficiency, as he can in the absence of fair trade, both he and the consumer benefit, the merchant through increased sales, the consumer through a lower price. Again, this is not cut-throat competition. There is a sound valid basis for the difference in price. We can call it unfair only if we consider it unfair for a merchant to try to run a better, more efficient store than his competitor. If that constitutes unfair competition, then our retail system is in pretty sad shape.

This is one of the most alarming things about fair trade. It destroys the incentive to progress, and progress is the key to prosperity.

There is another point that deserves attention here. That is the matter of reduced price specials and their place in the competitive system. These are generally referred to by advocates of fair trade as "loss leaders" and we are told that they constitute predatory price competition which will result in chaos in the marketplace. The fair-trade people like to use the term "loss leader" regardless of whether or not the selling price actually represents a loss to the retailer.

The sale price does not necessarily represent a loss. The price is lowered in the expectation of attracting additional volume. If the expected extra volume results, the merchant gains, not loses by reducing his price. The practice of running sales is an old one in retailing, and was being done long before fair trade came along to fix prices. A large part of the newspaper advertising one sees consists of promotions with an appeal through reduced price specials. Such a practice is the very essence of price competition. Without it the promotional punch is lost and an advertisement becomes merely an announcement of availability. There have always been merchants who decried such practices. They were the ones who resented the need for aggressiveness in business. This was not a fight between big business and small business. It was a battle between the dynamic aggressive merchants and those who wanted to maintain their volume without the exertion of active price competition. History has shown that the public has rewarded the aggressive retailer by patronizing his store and enabling him to grow. Thus the small business of yesterday has become the big business of today. The consumer has been the judge, and has decided who shall grow and who shall remain small.

According to fair-trade advocates, loss-leader selling, as they call it, is a vicious practice and should be prevented. They contend that such advertised specials are merely come-ons and that once the customer is in the store she is often switched.

We have shown how it is impossible for one price to be a fair one under all conditions of retailing. The net effect is that the single price selected to be the fair-trade price is the one which will give a satisfactory profit to the retailers with the highest operating

costs. It is immaterial whether the high cost of operation is the result of costly services or inefficiency. The fact remains that the price is high enough to satisfy the high cost operator, and the consumer who wants a lower price, and is willing to accept the limited service that would make a lower price fair, is the one who pays the bill. She pays either for service she didn't want and in many cases didn't get, or she pays for the retailers' inefficiency. In either case, the consumer loses.

There is still another way in which fair trade tends to push prices higher than they need be. The law encourages competition between manufacturers for the retailers business by guaranteeing higher profits. This is a competition to give the distribution system the profit. The distribution system already gets about 50 percent of the consumer dollar. Sound economic thinking would be to reduce the cost of distribution, pass the saving along to the consumer in the form of lower prices, and benefit by the increased sales generated by lower prices.

3. Fair trade has not accomplished its avowed purpose of protecting the small businessman:

Fair trade has been widely billed as being the protector of small business and it is on this basis that proponents of the bill have attracted most of their supporters. If we are to give credence to this claim, then we must assume that what small business really needs is to be protected from price competition. Such an assumption is completely contrary to the economic facts of life.

Most successful small businesses are successful because of their ability to compete—in price as well as in other respects. The point that is sometimes overlooked is that if they are successful, they don't stay small. They grow.

Most aspects of price competition involve nothing that the small retailer cannot do if he has the initiative and the desire. In fact, to deny the small retailer the right to enter into price competition on nationally known brand items, is to deprive him of one of his best competitive weapons. If we doubt that small business can compete in price, we have only to look at the States of Vermont, Missouri, and Texas, and the District of Columbia, which have never been hampered by fair-trade laws. There is no indication that small business in these areas has suffered from lack of fair-trade laws.

In promoting "Fair Trade" as the protector of small business, the public has been given the impression that the problem is that of small business fighting against big business. Since most of us like an underdog, this has been a clever way to make a knight in shining armor out of fair-trade laws.

Actually, the biggest problem facing small business today has nothing to do with "Fair Trade", nor is it a matter of the small versus the big. The problem is how to cope with change. The changes facing retailers today are different from the changes that have faced them in the past, but are no more serious.

Let's look at some examples. Over the years following World War I, many businesses were fighting to solve the changes brought about by paved highways and the automobile. Countless small retailers in country towns were forced out of business because people chose to drive to larger cities. Retailers had to accept this change because there was nothing they could do to stop it. They didn't like it, but most people considered it progress. Any attempt to curtail road paving or automobile production in order to protect small business would have had a hard time getting support.

Let's look at another example, the appearance of the cash-and-carry grocery store in a retail community where the established stores offered credit and delivery. Such newcomers were generally not welcomed by the other business firms for a very basic reason. They were different. They represented change and the old established stores did not want a change, any more than they wanted the change brought about by paved highways and the automobile.

The fact that the cash-and-carry stores prospered and grew was due to general public acceptance of the particular combination of goods, services and prices they offered. From these small stores grew many of our large chains of today, and the combination of goods, services and price was gradually changed and developed into the super markets we now have. It is probably safe to say that the public in general considers that todays super market represents real progress in retailing. That must be true, since the growth of such stores has depended on wide public acceptance.

It is axiomatic that progress involves change, and in our free enterprise economy there will always be change as long as people try to find a way to do things better.

Small business can be protected only by its own ability to cope with change, and not by legislation which eliminates competition and stifles initiative and progress.

4. Fair trade is opposed to the traditional concept of private property ownership.

This objection needs very little elaboration. Under our system of private property ownership, the owner of a piece of property has the general right to the control of that property including disposal as he sees fit. Under fair trade the retailer has bought an item and paid for it, but he isn't free to dispose of it as he chooses. The manufacturer, though he no longer owns the merchandise, still controls the selling price. We are told that this is necessary in order to protect the manufacturers trade mark.

We contend that it is not in the public interest to try to protect he value of a trade mark by law. The only interest the public has is in protection against deception. The protection of the value of the trade mark is the manufacturers problem.

5. Fair trade legalizes price fixing.

Fair-trade laws legalize the fixing of prices at the retail level. The law tries to take the sting out of this fact by specifying that items so price fixed should be in free and open competition with other items of a similar kind. However, regardless of what the law says, it serves to encourage price fixing across the board. With the price on an item firmly established and published, and with no chance of change through competition, it becomes a simple thing for the manufacturers of similar items to just by chance establish the same price for their products. Such administered prices always manage to be high enough to give exorbitant profits to everyone in the distribution system. Everyone profits except the consumer.

There are many more legal and technical objections to fair trade but these have been adequately covered by the Departments of Commerce, Justice, and Agriculture, and the Federal Trade Commission in reports they have submitted opposing fair trade.

We have taken the consumer viewpoint in the objections we have made to fair trade. In closing, our summation is simple. Our stores are operated in the interest of consumer members. We are opposed to fair trade because it places unfair and unwarranted restriction on our ability to operate our stores for the benefit of the consumer.

We strongly urge that your committee vote against H.R. 1253. Thank you for your courtesy and for the opportunity to appear before you. It has been a pleasure.

ICEM and Refugees

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the next two articles written by Mr. Edward P. Kennedy, of the Easton Express, published in Easton, Pa.:

[From the Easton (Pa.) Express, Apr. 21, 1959]

A LOOK AT THE REFUGEE PROBLEM—PRIMITIVE CONDITIONS IN CAMPS FOR ESCAPEES

(By Edward P. Kennedy)

The worst examples of refugee housing in Austria seem on the way out, but there is no guarantee that a new push of escapees from Iron Curtain countries wouldn't bring back a horror of ugly living conditions.

That was the impression I got on a quick trip to Salzburg, Austria, April 11, after attending a meeting of the Intergovernmental Committee for European Migration at Geneva, Switzeralnd. The trip was arranged as a followup to the ICEM deliberations which were partly on ways to speed up refugee movements in the World Refugee Year starting July 1.

The worst of the refugee housing I saw was at the Parsch camp, on the outskirts of the charmingly medieval Austrian city. There, a group of drab, unpainted barracks-like buildings had been partly emptied. The frame structures were to be abandoned by the end of December and probably burned.

The fetid smell in the building was sickening. Small apartments of two shabby rooms led off dark central corridors. Although there were about 40 such apartments in a building, each had only one water spigot, one toilet, and several greasy laundry tubs. The apartments had the most meager furniture of rough lumber, and crude wood stoves.

One such apartment was occupied by a happy and excited family with five children, all born in the 9 years the family had stayed at Parsch. The father is tubercular, probably the reason they have not left Austria. Across the hall lived an elderly woman with her daughter and several children. The woman said her three sons in Milwaukee, Wis., were unwilling to have her live with them. She, too, seemed happy. Their happiness, it was explained, was because they expect soon to leave the dingy camp for new refugee housing going up elsewhere in the city.

We drove to the site of one such project, a colorful, modern building which will house 27 families and 8 single persons. It is being built at a cost of $45,000 provided by the U.S. Escapee Program, according to Paul Kelly, U.S. Escapee Program Chief in Salzburg. The city provided the land and utility connections. The refugees designated by the World Council of Churches, will pay a slight maintenance cost and for utilities and water. This "rent" is expected to be between $4 and $8 a month.

A family of seven like I saw at Parsch will have three rooms and private bathing facilities, a water faucet, a private toilet, place for a portable bathtub and laundry tub and electric heating. Some improvement over the grim camp.

Kelly said that the refugee housing is needed not only because many families remaining in Austria are handicapped, with little income, but also because of an acute

housing shortage in the country. Rents are extremely high and illegal "key charges" before an apartment can be occupied complicate the situation.

In another section of the city, I saw more elaborate housing being prepared under the program of the United Nations High Commissioner. Rents under this program will be considerably higher than at the U.S. Escapee Program project, so may be difficult for poorer families to use.

I saw the refugee selection center, where ICEM gives detailed physical examinations to all refugees, and where there is office space for three "selection missions" from receiving countries. There, a Swedish mission recently chose 50 tubercular refugees and their families in a humanitarian effort to give haven to these "hard core" cases long in Austrian camps.

I saw an old people's home maintained by the Austrian Government for some 300 Russian and Polish refugees. I visited the Pierre Jacobson Center built with U.S. funds, where ICEM has its offices and some refugees are housed. The center is expected to be expanded in a move to centralize in Salzburg all refugee processing in Austria. Up-to-date IBM equipment permits rapid selection of any kind of refugees wanted by a selection mission.

At the center, James Carlin, ICEM Chief of Operations, listed the Austrian refugee caseload as 12,137 "new" Hungarians, 2,785 "new" Yugoslavs, 130 other new escapees and 20,000 "old" cases, those prior to October 1956. About a thousand a month are moved out of Austria by ICEM, Carlin said.

I heard discussion in Salzburg whether the German-speaking groups moved from the satellite countries after World War II are favored by the Austrian Government over more recent refugee groups.

There was speculation whether the World Refugee Year might have some effect in intensifying the problem in Austria by causing some self-supporting refugees to want benefits, and to bring more refugees across the border into the country.

There was some criticism of the Austrian Government policy in turning back Yugoslavs who came across the border because they appeared economic refugees, who seek only to better themselves rather than political escapees fleeing imprisonment or death. Some felt it would be better to aid all who wish to leave the Iron Curtain countries; to foster this protest by those who "vote with their feet" to the fullest extent possible.

It was pointed out that Russia apparently is distressed by the refugee movements. Since 1953, it has conducted "return to the homeland" propaganda which has caused some reversal of the westward trend across the border. Those who oppose the Austrian policy feel that return of Yugoslavs who crossed the border for economic reasons only aids this Russian program.

[From the Easton (Pa.) Express, Apr. 22, 1959]

A LOOK AT THE REFUGEE PROBLEM—TO EXAMINE U.S. CAPACITY FOR ABSORPTION

(By Edward P. Kennedy)

U.S. Representative FRANCIS E. WALTER, of Easton, disclosed plans in Geneva, Switzerland, to hold hearings soon to determine the capacity of the United States to absorb the people who are coming in so rapidly.

WALTER told of the proposed immigration hearings during a press conference held April 9 at the Palais des Nacions—the home of the United Nations in Europe and former headquarters of the League of Nations. The conference was held preceding a meeting by the Intergovernmental Committee for European Migration in the building. WALTER was in Geneva as a U.S. delegate to the ICEM meeting.

The delegates planned, among other things, observance of World Refugee Year starting July 1. The press conference—for the most part about immigration regulations which will affect the movement of refugees from Europe during World Refugee Year—was given by WALTER as a controversial world figure in the immigration field.

As the conference opened, the Easton Congressman was presented to European newspapermen and press service representatives by Marcus Daly, ICEM Director who is from Lincroft, N.J., and at one time was a student at Lehigh University. Daly introduced WALTER as the man known in the world today as Mr. Immigration and as the founder of ICEM. "His wise counsel and guidance have left their indelible marks on the age-old problem of man's desire to move in search for betterment of his worldly lot," said the Director.

WALTER mentioned the proposed hearings after he was questioned about whether he favors abandonment of the quota system set up in the Walter-McCarran Immigration Act of which he was cosponsor. The Easton man said he opposes strenuously dropping the system because nobody has suggested a better formula. He recalled that he said before the act was passed that the numbers entering had to be determined by mathematicians, not politicians.

The Congressman gave his views on the size of the problem by citing that an infant is born every 11 seconds in the United States and an immigrant enters every 2 minutes. With no quotas in effect in the Western Hemisphere, he said, Mexican immigration has increased from 2,500 in 1953 to 80,000 in 1958. There is a still larger immigration from Canada, he said, and more than a million Puerto Ricans live in New York City alone.

Many of these people locate where the housing and school crises are most acute, Walter declared, concluding that immigrant "digestion" is a slow process and "until we determine what our capacity is, it seems to me we have to move along with the old law without increasing the number of people except in regard to family relation cases."

In reply to a question, Walter said, however, that he would be "very much opposed" to placing quotas on immigration from the Western Hemisphere countries.

Questioned about new legislation on immigration, Walter recalled that he recently introduced bills extending for two years permission to tuberculosis sufferers to enter the Nation, and to increase the admissibility of brothers and sisters of immigrants, so families can be reunited.

He said he also is considering proposing legislation to require that 5 percent of money earned by Latin American countries by sale of U.S. surplus agricultural commodities must be earmarked for land settlement purposes. Under present legislation, 20 percent of the sum must be used for erecting facilities for processing the countries' agricultural products. The additional 5 percent, Walter said, would be used to provide housing, land preparation and other facilities for immigrants.

Another query was whether Walter expects to solve the remaining refugee problem in Europe through the parole provisions of the Walter-McCarran Act, as was done with the Hungarian refugees. Walter indicated the problem is not that large particularly since he said many refugees do not want to emigrate. Then he took issue with a statement he said had been made that the Hungarians were admitted through a "loophole in the law." He said that, when the law was written such emergencies were envisaged and the parole provision was not "an accident."

In introductory remarks at the conference, Walter said that the dislocation after World War II, when "upwards of one million people were wandering about the highways and byways of Europe," has been "very largely solved." ICEM now, he said, should "concern itself with problems that continue because of the surplus populations in some areas and the great need for immigration in other areas of the world."

Justice Department May Look Into Egg Price Fixing

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a newspaper article with reference to the present serious egg price situation:

JUSTICE DEPARTMENT MAY LOOK INTO EGG PRICE FIXING

(By C. T. O'Brien)

WASHINGTON.—There is a genuine likelihood now that the Department of Justice may become interested in egg prices—and how they are set.

Two important men on Capitol Hill want to know the facts, and clear suspicions—and they will go to the U.S. Department of Agriculture and the Justice Department to settle the matter.

They are Representative CLARK THOMPSON, Texas Democrat, and now chairman of the Poultry and Egg Subcommittee of the House Agriculture Committee; and Representative CHARLES H. BROWN, Missouri Democrat, who led the Small Business inquiry on the poultry industry a few summers back.

Representative THOMPSON picked up the hint of witnesses this week that perhaps there is price fixing in poultry and eggs on the part of the big buyers. Alabama witnesses explained how buyers for the big grocers just wouldn't pay over certain prices, and would hold out until the price was right and the poultryman glad to sell.

Mayor John Wagner, of Estell Manor, indicated that perhaps buyers got together and talked about prices. (He didn't say that, but many producers did—off the record.)

So Representative THOMPSON said there may be real trouble here. There is every chance that out of the hearing would come the incentive for the Justice Department to investigate.

Later, the Congressman told the Times-Journal he would bring it to the attention of the U.S. Department of Justice.

* * * * *

FATHER POSITANO

The Reverend Father John Positano, of St. Mary's Church, East Vineland, was among the large crowd of delegates to Washington this week, and was given the floor of the committee for a few moments. Father Positano won the compliments of Representative CLIFFORD G. MCINTIRE, of Maine, for his coming to the Capitol to suport the poultrymen of his area.

PEOPLE

The poultrymen who flocked here from many States this week were a quiet group, with little favor for demonstrations. They showed themselves on the steps of the Capitol Hill buildings and expressed views quietly, but there was no decrying of officials or departments as seen in such bus-carried movements of a few years back.

Perhaps it was opportune that the first poultryman witness in the subcommittee on poultry and eggs was quiet, mild, lucid John Wagner, mayor of Estell Manor. Wagner, conservative in his black suit, was obviously not a man who would lead demonstrations, and committee members sensed it. (The evening before the hearing, Mayor Wagner even looked up friends here to get a refresher course in committee decorum—to make sure Capitol etiquette was covered.) The attitude and action of the poultry delegation were important in winning the complete sympathy of the committee.

The Exploration of Space: a Challenge to America

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD portions of a significant address on the exploration of space and what it means to America, delivered at Texas A. and M. College, College Station, Tex., on April 22, 1959, by Dr. Charles S. Sheldon II, the technical director of the Committee on Science and Astronautics.

As chairman of the former Select Committee on Astronautics and Space Exploration, and as a member of the Committee on Science and Astronautics, I regard the issues Dr. Sheldon discusses as extremely important to the Nation. We are in a struggle for the minds of men, and we cannot overlook that in the world of today our military defense interests are of paramount importance to our survival. At the same time, outer space affords wonderful opportunities for the benefit of men everywhere in peaceful applications. The excerpts which follow are concerned with these points:

THE EXPLORATION OF SPACE: A CHALLENGE TO AMERICA

(By Dr. Charles S. Sheldon II)

To some people, the gradual unfolding of the vast scale of creation and man's miniscule size has led to a philosophy of retreat, introspection, and passivity. To others, although these discoveries are sobering, they represent a challenge, and a feeling that man's destiny is to gain first hand acquaintance with increasingly large parts of this universe. First comes the goal of free fall in orbit beyond the atmosphere; then the exploration of the Moon; eventually the occupation of bases on Mars, and possibly other planets or satellites in this solar system; and in the ultimate future, travel to and colonization of other worlds remote by today's standards from our own solar system.

Some of these developments may seem so distant as hardly to come within the realm of serious discussion. But this is inaccurate in the context of our present headlong pace, snowballing progress in science and technology. Many wise men are being proven quite mistaken by the overconservatism of their judgments on what is possible. Perhaps it would be unkind to identify the famous who doubted that man would ever build a heavier-than-air flying machine, that the atom would be split, that rockets could reach the vicinity of the Moon. * * *

All of this scientific knowledge is necessary in successful combination with all our technological and engineering prowess, to achieve practical results in space travel. But more than this is required. There also has to be a willingness to channel our interests, attention, and resources in directions which will translate possibilities into actualities. And as I shall attempt to show before I finish, this is not a free choice open to us to follow or to disregard with impunity. Mankind has already made the choice, and America must share in this adventure, or be left behind to wither and indeed to be destroyed. * * *

In the face of a national will to return to peace and normalcy, military budget cuts of the postwar period held down the overall level of support for missile development in the United States. We had the atomic bomb and aircraft which we felt could deliver it. This deterrent was believed sufficient to keep the peace. The weight of early nuclear weapons ruled them out as practical warheads in long range rockets anyway, according to the best paper calculations. We did learn something about guidance for pilotless aircraft which could save our aircrews from heavy losses on raids, and we saw that missiles could also replace many antiaircraft guns. These observations helped to provide components which at a later time were to aid our space program.

Nobody really knows why the Soviet Union decided to go ahead with the development of long-range ballistic missiles at so early a stage after World War II. We had equal access to the German plans for building the A9/A10 intercontinental missile. But we felt it could not be pointed with sufficiency accuracy over great distances, and that its warhead would not deliver sufficient punch to be worth the cost for such a delivery means. We felt that air-breathing missiles, eventually with ramjet power and supersonic speed, were a more logical course. Intricate inertial and radio guidance, celestial reading instruments, and terminal radar map reading and infra-red homing seemed to be what would pinpoint such devices at their ultimate targets thousands of miles away.

This American decision, with some dissent, was our general policy until the thermonuclear breakthrough in 1953–54 gave us the possibility of building high-yield warheads at a moderate weight to offset ballistic inaccuracy. What had made sense earlier was revolutionized and outmoded by the new technology. So by 1954, our course was changed, and work undertaken on the present group of long-range ballistic rockets. * * *

The story of what has happened since is pretty well known to everyone. There were delays in the Vanguard program. The Soviet scientists at international meetings acted coy about their plans. Actually, anyone who read the New York Times carefully in the months before the first sputnik could find most of the parameters given which described its time of launching, weight, orbit, instrumentation, and even radio frequencies—many of these facts coming as surprises to both the lay public and scientists as well.

Sputnik I had a weight of 184 pounds, and was accompanied by a carrier rocket of unstated but considerable size which also stayed up for some time. A month later Sputnik II with Laika went up with a weight of 1,120 pounds, remaining attached to a carrier rocket in the weight range of 4.4 to 6.6 tons. An immensely heavy geophysical rocket was launched early in 1958 to sample data from space and the upper atmosphere in a vertical shot. A variation on this fully equipped automatic space laboratory was launched in May 1958 as Sputnik III. It is still circling the Earth, over 2,900 pounds, although its carrier rocket of many tons reentered the Earth's atmosphere a few months ago. Sputnik III apparently broadcasts data on command over the U.S.S.R., solar cells supplying the necessary power. Mechta, the Soviet planetoid, is circling the Sun, with over 3,200 pounds of weight. Although most people assume that it was intended to hit the Moon, some scientists make a case for its being a deep space probe which on remote command can still send back data. It may be designed to establish interplanetary distances with greater accuracy, in preparation for a Venus shot in June of this year. Only time will tell us who is right in these speculations. In listing the Soviet accomplishment, one should not overlook the shot to 280-some miles of a 3,700-pound stabilized rocket containing two dogs who were returned safely to Earth after their ride. All of this adds up to an impressive record of accomplishment. No talk belittling use of "brute force," or joking about use of German scientists or hidden failures can hide the fact that there have been substantial accomplishments and that the program has a momentum behind it which must be gravely considered.

The Soviet Union has not let us visit launching sites; it has not given out particulars of launching vehicles; its release of data has been slow and probably incomplete. But this much seems true: The Soviet Union has available boosters of great power, quite possibly an engine with an output of 250,000 pounds of thrust which can be clustered in two, three, or four-unit groups. The Soviet Union has guidance sufficiently good that all three sputniks had virtually the same perigee of orbit, and, despite a northern launch site, was able to send a lunar probe close to the vicinity of the moon. The Soviet Union has not needed to miniaturize instruments to the same degree we have, but even so claims to have packed thousands of transistors into Sputnik III, and uses solar cells to keep them working. The Soviet Union in Sputnik II demonstrated a capacity to put up a working biocapsule which required years of advanced study and experimentation. The Soviet Union has sufficient tracking and computing equipment that it was able to prepare detailed timetables of orbits very soon after launching. The Soviet Union in Sputnik III alone mounted all the experiments planned for a whole series of American IGY satellites, including most of the programs planned for the year following the IGY. Even if it is argued that some of these experiments interfere with each other, the fact remains that synoptic data on many phenomena were provided, and that these all became available for analysis to support later experiments months in advance of any possibility of obtaining such information in any Western program of sattelite launchings.

All of this adds up to a very serious challenge to the technical supremacy of the Western World.

Now there are many people who jump to false conclusions about the nature of this challenge and also about any comparison between the United States and the Soviet Union. With regard to the comparison, it does not degrade the U.S. effort to admit the reality of the Soviet accomplishments. This has little to do with the Communist versus the capitalist system, or comparative intelligence, or the wisdom of leadership. It is not a matter of domestic partisan politics either. It is perfectly consistent to laud the achievements of our own country, and at the same time to recognize the dangers of not doing more in the future. Now with this prelude, let us review our current position.

In full public gaze, we have had many launching attempts. The marginal Van-

guard program in nine shots has managed to put up a 3-pound test device which in an eccentric orbit still broadcasts a signal using its solar cell power source. The only full-scale 20-pound Vanguard sent cloud cover data while its batteries lasted, and it remains to be seen whether the computers can reconstruct the first crude maps of cloud cover.

More data has been returned from the Explorer series of satellites, including the important facts about the Van Allen radiation belt, and the propagation effects of the Argus experiment. The Air Force and Army lunar probe attempts revealed the existence of two layers of radiation above the Earth, and Pioneer IV sent 15 pounds into an orbit around the Sun after a distant pass at the Moon. Its radioed signals were heard longer than those of any other manmade object so far as we know. The Atlas of Project Score achieved another first, with its 150 pounds of instrumentation for relaying voice and teletype messages around the world. The first Discoverer seems to have gone into a polar orbit, and the second Discoverer has almost certainly accomplished the first successful return of a capsule from orbit, as well as representing the largest U.S. payload yet put up.

All of this represents a solid record of accomplishment. In weights, we still lag far behind the Soviet Union, which lag is related to the limited amount of thrust we have been able to assemble for space experiments. We cannot say which country is ahead in guidance and in communications, even though many individuals are quite willing to offer opinions on this subject. We cannot say positively which country has learned more from its experiments. The Soviet scientists should have, but they have published less, and we have been extremely skillful in our use of instrumentation.

It would be a mistake to think of space experiments as the exclusive interest of the United States and of the Soviet Union. It is true that these are the only two countries which to date have attempted to put devices into orbit, but this is only a part of the picture. Over a longer period of time, British and German study of space technology has been at least as sustained as that in the United States and the Soviet Union. The fundamental knowledge on which all space flight will be based is of course a universal heritage of the studies conducted in many lands. More specifically today, there are many nations making countributions to space technology, and many which would like to do more. * * *

What satellite projects lie ahead of us? Developments are coming so rapidly that any prediction is hazardous, but several have been programed, and they will have far-reaching consequences. There will be a continuing program to explore the characteristics of near space, to map the radiation belts, to learn more of the magnetic field of earth, to study the input into and output of energy from Earth, to study cosmic rays, and otherwise to complete the work started under the IGY.

Communications satellites will become a regular and important part of our system of transmission and relay. * * *

Other satellites will supply navigational information to all ships and aircraft, free from the problems of weather. The first of this work will come within the next year or so.

Within 2 or 3 years, we should be ready to obtain fairly good cloud cover information from satellites, as a follow-on from the present Vanguard II experiment. Within 10 years we can expect to have very complete weather reporting from space, with detailed maps of all the clouds and storms on earth. Estimates presented to the House committee are that the United States alone should realize annual savings to the economy of at least $4 billion, once these data are flowing in regularly, and are combined with other weather prediction research results using big computers. This should be more than enough to pay for the entire space program. It also represents a necessary first step to any future program to control climate, a development of sweeping implications for mankind.

The Department of Defense is understandably reluctant to talk about future military satellites, but open testimony before committees and news articles made clear that within a few years we should have very sophisticated reconnaissance satellites in orbit. These will be capable of photographic and television scanning of the surface of the Earth. Pictures with a degree of definition far in excess of anything seen on commercial television can be returned in live form, or returned from time to time in facsimile. Some will come back in recoverable capsules containing either magnetic tape or photographic film. In time, the world will be thoroughly mapped, and it will be possible to observe industrial changes, or troop concentrations. Corresponding civilian uses will include the preparation of position charts for all ships, and the carrying on of iceberg patrols.

Perhaps of particular significance, such satellites will relay reports instantly of any surface, airborne, or space nuclear activity and any launching of missiles. Such satellites will not only see visually, but will scan other parts of the radiation spectrum, such as cloud penetrating radar and as infrared. Various combinations of inspection satellites will afford us maximum warning, and we hope therefore safety, in an age when surprise attack could destroy our Nation. * * *

My discussions of emerging space capabilities have only indirectly implied the urgency which surrounds endeavors in this field. Certain important conditions should be clearly understood. There is no way that space technology for peaceful purposes can be distinguished from that for military purposes. Those who possess it can use it for either end, given a decision to do so.

A second point, which is implicit in my narration, is that any early ability to put payloads into space rests on military rocketry. Thus only the United States and the Soviet Union have a current capability to put up meaningful satellites or space probes, with the British coming along in this direction. * * *

Why is there urgency to space development? In the debates about space, differences in definitions are part of the reason for dissension. If the ballistic missile is regarded as a space weapon, then most people can understand that it must have a very high priority. At the present time, the ballistic weapon is virtually unstoppable and even 15 minutes warning of its coming would be fortunate. This leaves very little time for countermeasures, although we should be able to get part of SAC off the ground. But if antiaircraft defenses continue to improve, the deterrent power of SAC aircraft will tend to decline although there are ways of extending their usefulness. I think one can recognize the grave consequences for this Nation if the time should ever come when the punishment the Soviet Union would have to absorb were to fall to less than the benefits they feel would accrue from destruction of the United States. Our best assessment is that this time has not arrived yet, and the best proof would seem to be our escape from attack. What causes great concern is that decisions made today with regard to our defense will affect our military posture 5 and even 10 years from now. All of this means that the most serious attention must be paid to our missile programs, including all the supporting systems. Every effort must be given to study of various countermeasures as well.

But then there are those who distinguish space research from work in missiles, and see no urgency in the work done on satellites and space probes. I have already sketched for you commercial and scientific reasons for being interested in space. I think I have also indicated some of the military reasons, too. It is hard to imagine projects of greater priority than the reconnaissance satellite and the infra-red detector satellite in a time when even minutes of warning are so precious in saving the Nation. These systems are integral parts of our evolving defense. If we are fortunate enough to be able to arrive at workable agreements for disarmament and inspection, such devices will continue to be important. * * *

Let us look ahead not too far into the future. Suppose that more and more satellites are put into orbit by a number of countries, and that this is done without international inspection. Probably many will be reconnaissance devices, often with anti-radar paint, and remaining radio-silent except when triggered over home territory to give back information in short bursts on frequencies not previously announced. Some will be labeled scientific satellites whose batteries have gone dead. Many could be cheap balloons, used as passive reflectors. In other words, any anti-ICBM radar system might have a lot of material in space which would have to be spotted, and assessed as to its significance. And some of the supposed derelicts in space could actually be satellites with thermonuclear warhead capsules, riding in orbit, waiting for the day when they are commanded to reenter and to strike preselected targets. Some of the experts say that a satellite or a space station is too vulnerable to be a military weapon because once its orbit is established it could be blasted to bits by a missile, even though the debris would not fall to earth. But what would be the cost of shooting at every decoy in space, and what would be the consequence of destroying the manned space stations of another nation? Only the ability to send up a manned, maneuverable device, capable of approaching, inspecting, disarming if need be, and attaching retrorockets to return the satellite to earth would seem a feasible way of protecting the national security. This makes the man-in-space program much more than a circus stunt.

The studies of space are so interrelated with other advanced developments in military technology that our committee, after hearing all the testimony, has concluded that a well-developed space capability is extremely important to the Nation for military as well as scientific and commercial reasons.

A second way in which space technology affects the national security relates to the shifting, complex, but no less real field of political and psychological war, a prominent part of the cold war. The thesis has been advanced, and it may have some validity, that when the great powers have reached an uneasy balance of terror, related to their deterrent capabilities, the war will be fought in other areas. And one of the chief of these may be the struggle for scientific supremacy in the eyes of uncommitted nations. Absolute proof of the importance of these things may not be easy. But many serious students believe that the position of the free world in the Middle East was definitely worsened by Soviet successes with sputniks in the fall of 1957, when our satellites would not go. Certainly every successful Soviet launching seems to have been calculated to extract the maximum propaganda value. But we must also remember that successful propaganda usually requires substantial real accomplishment to make it believed. * * *

It is quite important to recognize that space exploration is not the only challenge. Every part of our scientific and technical

heritage has contributed to our space abilities and our space work should return dividends to many other fields of endeavor. For example, there are those who say, "We have enough problems here on Earth. Why waste the taxpayer's money on space?" But space research may solve problems of photosynthesis, food supply, and controlled thermonuclear power, helping people here on Earth. * * *

This is the briefest introduction to the topic of space exploration and the challength it offers. I hope it represents a personal challenge to some of you. For it is your efforts in the next decade or two which should carry us successfully across space to explore our solar system. And your children, if you give them the opportunity, should carry man across the void to the stars.

Red Cloud's Children

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. MUNDT. Mr. President, the plight of the American Indian is without question one of the serious problems confronting the people of this Nation. The difficulties of our Indians have not been given the full attention which they deserve.

Perhaps this is a partial result of preconceived ideas and notions which too many people hold in regard to our Indians. Too often I have had the reference made to me that the Indian refuses to help himself.

Anyone remotely acquainted with our Indians recognizes that an assertion of this type is as unfair as it is untrue.

There is no question in my mind that the American Indian—given half a chance—is fully competent to assume a conscientious, dedicated role in sharing the duties of good citizenship. Unfortunately, too many of our Indians have never even had that half a chance.

But there are striking examples of what the Indian can do for himself when even a minimum of opportunity is presented. As one excellent instance of this, I am happy to invite attention to a fine report on one of the mission schools in the Oglala Reservation in South Dakota. This is the largest of the Sioux Indian reservations.

Mr. President, I ask unanimous consent that the article, "Red Cloud's Children," from the May 1959 issue of the Columbia magazine be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED CLOUD'S CHILDREN

(By John M. Zwach)

If I were to tell you that you'd get an emotional thrill, a sense of excitement, and a spiritual stimulation you'd carry with you a long time, simply by visiting a school, you'd probably think I was having a pipe dream. But that is exactly what I do tell you, and it is no dream. For this school is different.

Far out on the extreme western plains of South Dakota, just 4 miles north of a little Indian town called Pine Ridge, is Holy Rosary Mission.

Holy Rosary is a boarding school—the largest mission boarding school for Indian children in the Nation—located on the great Oglala Reservation, the Nation's largest Sioux Indian reservation.

These are the vast, wide-open spaces, under the "big sky." Students come from a radius of 100 miles. Many live as far away from the mission as 300 miles. There are more than 500 Indian boys and girls who come here to learn the white man's books. They are as young as 6, and as old as 18. They go from the first grade through high school.

"Well and good," you may say, "but there are many Indian schools in the Nation. There are many Indian missions. What is so different about Holy Rosary at Pine Ridge, S. Dak."

As one who has spent the most of his life in education, I would say the great, important difference is this:

Of those students who graduate from Holy Rosary High School, the number who go on to college or other higher learning such as nursing, is twice the national average of all high school students.

These are Indian children. These are children whose great-grandfathers were literally born in the stone age. How does Holy Rosary do it? What is their secret?

Part of the answer, of course, lies in the children themselves and their wonderful eagerness and ability to learn. Part lies in the fact that the Jesuit fathers and Franciscan nuns recognize the great potential of these noble people and with infinite patience and understanding have learned how to develop it.

Let me tell you of my visit, as an educator, interested in education.

My first impression was one of well-scrubbed poverty.

The buildings and the facilities are a far cry from what one would term modern. In fact, for the most part they are old, very old. But everything is neat, clean, and in order.

Much of the equipment is ancient, superseded material which was donated by other schools who thought it was worn out. But thanks to the ingenuity of the Jesuits and Franciscan Sisters—with this equipment, with limited funds provided almost entirely from charity—they are literally working wonders.

The meals are simple, but they are good, thanks to Franciscan cooking. The farm, the dairy and the truck garden operated by the Jesuit Brothers provide a large portion of the food. And, on these sandy, rocky, plains and hills, this is no easy accomplishment.

It is a well-known fact that in many of our modern, tax-supported schools, with all of their magnificent equipment, discipline is an increasing problem. I wish you could see the atmosphere of friendly, happy discipline at Holy Rosary. All day long, activities are going on all over the place. Groups of girls are working in the domestic departments—preparing meals, readying dining rooms, washing dishes, sweeping dormitories. Boys are helping in the blacksmith shop, the carpenter shop, the dairy, and various work projects. By a system of relays all of this work is accomplished during the boarding school day, with no sacrifice of class or study time. During my visit and in my chats with students, I noted no feeling on the part of the pupils that their daily schedule is a bit more rigorous than that of other schools. For them it is all normal routine, taken for granted. At tasks, which many white pupils would do only under compulsion, and not with the best of grace, these Sioux Indian boys and girls sing.

But the main purpose of Holy Rosary is not just to teach these children how to work (which, in my opinion, should be an important part of any child's education), nor simply to keep them well fed, clothed, and housed. It is to give them an academic training which will enable them to go on to university or some other form of higher learning. It is to equip them to be able to make their way in our technological, specialized, competitive world.

This takes on greater significance when you realize that on all of our Federal Indian reservations there are only a few high schools which are accredited by the universities. This includes high schools operated by the Federal Government. The rigid academic training at Holy Rosary could well be emulated by some of our regular schools.

The program for all students includes 4 years of foreign language, 4 years of English, 2 years of science, 2 to 3 years of mathematics, and 2 years of history. In addition, girls get 2 years of typing and shorthand, and boys who wish to do so can also take typing.

On the strictly vocational level, but in addition to the academic courses, girls are trained in cooking, sewing, planning meals, and social events. The boys get training in the blacksmith shop, the carpenter shop, the garage, the dairy, the farm, the bakery, the shoe repair shop, and the poultry yard.

This is far cry from what one finds in so many schools for these forgotten and neglected Americans. For years now, many Indian schools have stressed simple manual arts, such as basketmaking, woodworking, weaving, and the like—straight through so-called high schools.

This is certainly not the case at Holy Rosary. Here a first-class education is paramount. All else is pushed far, far into the background. It is working—almost like a miracle.

Graduates from this poverty-stricken school on the windswept plains are doing well in a dozen colleges and universities. Many have been honor students. A number of kind people in various parts of the country are helping make this great work possible by taking young Sioux into their homes to attend local colleges and universities.

Today we find Sioux teachers training white pupils; Sioux nurses caring for white patients; Sioux officers commanding white troops. There are Sioux Franciscan sisters and Sioux Notre Dame sisters. One young Sioux recently entered the Jesuit novitiate. These are the great grandchildren of Red Cloud, Crazy Horse, Black Elk, learning to live in this new world, learning to live as their reservation-born fathers and mothers were not permitted. All they need is a chance, and Holy Rosary, as best it can, is giving it to them.

But that best is not good enough. This magnificent school is in dire need. Some of the buildings in use have been there since 1888. A program of replacement and enlargement is imperative. Government support, in the form of educational grants to children, has been cut back to such an extent that it is now but a small part of the entire operation.

In spite of all its obstacles and difficulties, Holy Rosary is the most remarkable school I have ever visited. No institution I have ever seen is more deserving of our Christian and American help.

The Passport Office

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. ANDERSON. Mr. President, for several years I have been telling the

Passport Office of the wonderful job they do for the people who need their help, and the fine treatment my office has always had from them. I am happy to see that other people feel that the Passport Office is rendering excellent service, and have seen fit to write about its activities.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'New Look' at the Passport Office," which appeared in the May 1959 issue of Reader's Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW LOOK AT THE PASSPORT OFFICE

A friend of mine in Washington, D.C., pulled out her brandnew, crisp green passport and showed it to me with a look of wonder. Having heard that it took up to 5 weeks to get such a document processed, she had applied 2 months early. "But the Passport Office came through in just 4 days," she said.

The new, brisk efficiency of the U.S. Passport Office is due largely to its Director, Frances G. Knight, a slender, bright-eyed woman of 52 who looks 10 years younger. Like a housewife with the spring-cleaning urge, she has cut redtape, thrown out sacrosanct procedures, speeded up service and, in the past 4 years, saved U.S. taxpayers more than $2 million.

In May 1955, when Miss Knight moved in, Americans, responding to the lure of travel in unprecedented numbers, were swamping the office with half a million passport applications a year. With its limited budget and insufficient personnel, the agency was unable to cope. There were delays of 5 weeks or more in the issuing of passports, and a backlog of 182,000 unsorted applications had accumulated.

In her 15 previous years with the Government, Miss Knight had earned a reputation as an eager beaver with a passion for eliminating waste and inefficiency. Now, bypassing three State Department echelons (the Passport Office is a branch of State), she paid personal calls on the Chiefs of the Civil Service Commission, General Accounting Office and General Services Administration (the Government's housekeeping agency). "We need a complete reorganization plan," she said. "Can your experts help us?"

Although surprised by her unorthodox approach, the agencies responded with enthusiasm. Teams of specialists swarmed through the Passport Office, investigating its procedures, studying its work-flow system. They found some surprising anachronisms.

For one thing, though it handled several million dollars a year, the office had no up-to-date accounting machinery: receipts were recorded on long, handwritten worksheets. For another, there was one 5-day period during which 5,000 phone calls could not be handled because of inadequate switchboard facilities. And, during that July and August, 10,400 man-hours (worth approximately $22,000) were lost because it was too hot to work in the overcrowded, poorly ventilated building.

The experts made sweeping recommendations for improved methods of handling mail and money, more rapid filing and work-flow systems. Miss Knight herself, stopwatch in hand, studied each of the 150 separate operations in processing a passport. Then, armed with hard facts and a definite plan, she stumped Capitol Hill. Impressed with her convincing presentation and worried by complaints about passport delays, Congress granted her a $600,000 emergency appropriation—to cover the cost of hiring more people, getting automatic equipment, and moving into better quarters.

Space was found in an air-conditioned building. To furnish it, Miss Knight trudged through Government warehouses, picking out used pieces which could be inexpensively reconditioned to look like new. Then, with modern machines installed, the new work pattern was set up.

Instead of being processed through eight separate sections on four different floors, passports are now channeled through two sections on one floor. In place of the six separate typings previously involved in issuing a passport, one now suffices. A change to shelf filing released 1,700 cabinets (for a net saving of $49,000 in space and equipment), and a new file system enables clerks to handle 1,300 documents a day instead of 300. Because it was found that there were about 100 questions a person could ask about passports, the answers have been put on forms—thus reducing individual replies by 75 percent.

Since the GSA experts discovered that only half the space in the 32-page passports was ordinarily used, Miss Knight had the booklet cut to 20 pages, saving $48,000 a year. And because another study indicated that only one out of 200,000 pieces of regular mail is lost, she discontinued sending out passports by registered mail—thus saving an additional $150,000 annually.

With these and other economies, savings were effected despite the investment in new equipment, added personnel and higher salaries. The office continues to be a money-maker for the Government: Last year, on an operating budget of $2 million, it took in $4,852,000 from passport fees.

Increased efficiency is only part of Frances Knight's policy. She believes that the public is also entitled to comfort and the personal touch. The results are visible in the more cheerful surroundings at the six field agencies: Boston, New York, Chicago, New Orleans, Los Angeles, and San Francisco. For years passport applicants in New York City—20 percent of the Nation's total—had sweltered during the rush season in long lines at two small offices. In 1956 the two agencies were consolidated into one enlarged, streamlined, air-conditioned office in Rockefeller Center. At all field offices Miss Knight installed Teletype machines so that applicants could get special rush service at a low fee.

Two new field agencies will be opened this year—in Miami and Seattle. Half of all passport applications are still filled out in court clerks' offices. When Miss Knight learned that these clerks have to spend a lot of time simply answering questions, she supplied counter cards detailing the requirements for completing a passport application: proof of U.S. citizenship, identification, two photographs and a $10 fee ($5 for a renewal).

Miss Knight recently had a go-around with Government lawyers about the regulation requiring a passport applicant to bring along an identifying witness, and got the requirement lifted for those who could supply adequate documentary proof of identity. Not only is this more convenient for the applicant but the traffic at passport offices is cut in half. Until recently, persons traveling to foreign countries on private business were required to furnish letters stating the reasons for their trip. Miss Knight said to her legal counsel, "That's unnecessary, and none of our business anyway." The requirement was eliminated.

Miss Knight—in private life Mrs. Wayne Parrish, wife of an aviation-magazine publisher—maintains a pace that would wear down most men. After putting in a 10- to 12-hour day at the Passport Office, she leaves orders that all emergency calls be referred to her home. The secret of her continuous energy is an eagerness to dig into a variety of new problems that sprout each day. It may be a Sunday call from a Congressman concerning two constituents stopped at the gangplank, their passports declared invalid because they had cut them down to fit their wallets. (She allowed the two travelers to sail and arranged for new passports to be issued by the U.S. consulate in Liverpool.) Or it may be a dispute concerning the citizenship of a baby girl born to a British woman on a Dutch airliner flying over Poughkeepsie, N.Y., en route to Canada. (The child was eventually ruled to be an American citizen.)

Frances Knight's occasional bypassing of "channels," plus her outspokenness, has aroused some opposition. Her boosters are in the majority, however. Says Senator CLINTON P. ANDERSON, of New Mexico, "Miss Knight's is the most satisfactory office to deal with in the whole Government." The Senate Committee on Government Operations has suggested that other executive agencies might well imitate the Passport Office's pattern of reorganization to improve their own operations.

Although pleased with the progress to date, Miss Knight keeps a constant eye on the future. With the advent of jet airliners, it is estimated that the already burgeoning tourist boom will lead to more than a million Americans' applying for passports in 1961. So, Miss Knight has a new mechanization and streamlining operation under way right now—with a goal of 48-hour processing time in view for this summer.

Father Positano Practices Musical Medicine on Unfortunates

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a very interesting article about Father John Positano, formerly of Lawrence, Mass., who is now pastor of St. Mary's Church in East Vineland, N.J.:

PRIEST PRACTICES MUSICAL MEDICINE ON UNFORTUNATES

(By Maggie Lieberman)

VINELAND.—The Reverend John Michael Positano, O.S.A., pastor of St. Mary's Church in East Vineland, is a priest who plays his prayers.

For the past 16 years, this former professional musician has scouted, trained and organized talent from among lay persons to bring "musical medicine" to hospitalized veterans, shut-ins and prison inmates.

"To visit the sick and the imprisoned, bringing along a little musical gift with the visit, are corporal works of mercy," noted "Father John," the name which has been fondly bestowed upon this friendly priest.

Father John came to East Vineland 8 months ago and has already delivered a dose of his tonic to the Leesburg State Farm twice and to the New Jersey Memorial Soldiers' Home in Vineland.

FORMS GROUP

"I was here only a few weeks when Howard Yeager, superintendent of the State prison farm, called, saying he understood I had some entertainment. I don't know where he heard of me, but I took a flyer on it," he said. "I couldn't refuse—I've never refused anyone. I took a chance; picked up some parish talent and contacted some of the pro-

fessional musicians with whom I've worked and we went to the State farm."

Ever since then, in line with his many pastoral duties at St. Mary's Church and two mission churches, St. John's in Mizpah and St. Joseph's in Richland, he has been visiting the shut-ins, wounded servicemen and prison inmates as an activity of the Apostolate of Good Will Branch of the Confraternity of Christian Doctrine—which is only one of the many activities he has organized at St. Mary's Church.

A native of Freeland, Pa., he is a former professional musician who specialized on the clarinet and was the leader of the Pennsylvania Bellhops, a group which played in most of the Pennsylvania coal region cities. Then he went to New York City and worked with radio before ending his 9-year professional career to enter the seminary.

DID USO WORK

After his ordination in 1942 by Archbishop Francis Spellman in St. Patrick's Cathedral in New York City, Father John was assigned to south Philadelphia. It was during his 11 years there that he first organized his musical group to do USO work.

He scouted among the youth, teenagers, Boy Scouts, adults, policemen, taxicab drivers, firemen—anyone with talent—and trained and organized them to form a group which performed for the USO, the Jewish welfare board, the Salvation Army, the Red Cross, and other agencies that were working for the men in the armed services.

"We covered the whole Fourth Naval District, playing in the Navy Hospital, numerous veterans' hospitals and on the battleship *Wisconsin* just after it was commissioned in the Philadelphia Navy Yard," the priest reminisced. "I took the troupe any place where there was a need and request to entertain our soldiers from anyone—regardless of creed or color," he continued.

"Now, my work is done primarily as an act of charity, but during the war it was my contribution to the war effort," Father John remarked.

Father John, like Pope John XXIII, boasts of "being in prison," where he took his musical remedy.

He also appeared on television. In 1951 when the USO was going out of existence, his reputation was such that ex-president Harry Truman's Committee on Religious and Welfare in the Armed Forces urged him to make a national appeal on the "We the People" program, asking communities to pick up where the USO left off.

Ordered to take a rest in Florida for about 3 months after his assignment in Philadelphia, the ambitious priest, who does all his musical work during his free time and on a voluntary basis, began to organize a group there because he "noticed there was a need for it."

He then went to Europe for the same length of time where he visited USO centers and as an "unofficial advisor" shared his ideas for entertaining the soldiers, particularly the Sixth Fleet which was stationed in Naples.

For the next 5 years, Father John who had become known as the "Benny Goodman of the Cloth," was stationed in Lawrence, Mass., in the first naval district. No need to say what he continued to do. It was there that the term "musical medicine" was first applied to his "free prescriptions" by veterans who drew an analogy between Father John's cough syrup, a patented Massachusetts-made medicine, and Father John Michael Positano's "musical medicine."

PRESIDENTIAL PRAISE

While in Lawrence he received three letters of commendation from the White House for his work.

Paging through a huge scrapbook, the priest showed citations which he received from Rear Adm. John H. Brown, Jr., in 1953 and Rear Adm. J. L. Tinney in 1945, both of the Fourth Naval District. In 1946 he received a citation from the then Secretary of War, Robert P. Paterson and from the American Red Cross.

The priest also received the USO gold medal and the Italian Star of Solidarity from the Italian Republic in 1952. He also holds national citations from the Catholic War Veterans Auxiliary and the Italian-American Veterans who have named him national honorary chaplain.

Father Positano lists as one of the top awards a gold engraved card certifying his honorary life membership in the American Federation of Musicians Union. He received this in 1953.

In addition to receiving letters of recommendation for his work, Father John was instrumental in getting over 20,000 pieces of mail sent to servicemen in the hundreds of hospitals he visited. He has worked with more than 400 talented persons and numbers many successful professional musicians among his host of personal friends including Perry Como, Jodie Sands, the Jaye Brothers, Jerry Veale and Lou Monty.

PLAYS HIS PRAYERS

He is master of ceremonies for all the variety shows he presents in hospitals and prisons. The programs range from classical and jazz music to song and dance teams.

"God gave me a talent which I have put to use even after my ordination," he humbly said. "There's no use letting it lie idle."

But there is more to it than just using his talent. Father John spreads good will without making any discrimination.

"As a professional musician I realize the effect of music on the minds of people—it gives them a lift and boosts their morale. It shows them they still belong and that we have an interest in them," he said.

In a way, Father John is actually playing some of his prayers.

Big Union Leaders Versus Rank-and-File Workers

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. MASON. Mr. Speaker, COPE, the political arm of AFL–CIO, preaches democracy and civil rights, yet big labor bosses deny their rank-and-file members the basic right to a secret ballot and to an accounting of union funds. "By their deeds shall ye know them."

President Eisenhower, with the help of Secretary of Labor Mitchell, proposed labor legislation to curb the abuses of labor that have been spotlighted by the Senate Labor Rackets Committee. The President proposed to deny tax exemption to the funds of any labor union whose officials deny their members the right to a secret ballot or who refuse to give an accounting of union funds.

COPE opposed the President's proposal and offered in its stead the Kennedy proposal—a bill that purports to give the rank-and-file their basic rights but provides no adequate means of enforcing those rights.

Mr. Speaker, the following editorial from the Richmond (Va.) Times-Dispatch of Saturday, May 2, 1959, states so well the problem and the situation confronting this House in connection with the so-called Kennedy labor reform bill that I include it as a part of my remarks. I am in complete accord with the editor. He expresses my views much better than I can:

UNION LEADERS VERSUS THE PEOPLE

If smart politicians were better statesmen, they'd be better politicians as well. They would stop cringing before organized minorities, and appeal for support to the great, unorganized majority, which includes the more intelligent members of labor unions.

Reelection of the late Senator Taft, of Ohio, by a record-smashing majority, despite bitter opposition from union leaders, clearly demonstrated the truth of this political axiom.

The majority will vote for a candidate it can trust, but will stay away from the polls rather than make a choice between wishy-washy partisans who have tried to outdo each other in angling for the support of minority blocs.

We feel certain that millions of union members were shocked, humiliated and angered by the racketeering, corruption, malfeasance and underworld tie-ups unearthed by the McClellan committee.

We feel that a majority of the rank and file consider themselves primarily Americans, as well as members of the AFL–CIO syndicate. No decent, law-abiding citizen likes to be affiliated with any form of dictatorship. We may assume that they are anxious for a labor law with teeth in it.

Unless they are far less intelligent than we believe, they must realize that laws proposed to curb abuse of power within the unions are opposed principally by AFL–CIO top brass, anxious to perpetuate the incumbent hierarchy.

Union members desirous of democratic procedure within all unions must therefore look for leadership outside their own organization—among candidates willing to risk defeat at the polls by championing needed reforms.

The jockeying for position by Democratic presidential aspirants is not an inspiring spectacle. They are proceeding on the assumption that they cannot hope to be nominated or elected without labor support.

They forget that the AFL–CIO is not a political entity, but represents some 16 million individual citizens, who will cast a secret ballot for the candidate they trust—not necessarily the one their leaders tell them to vote for.

It speaks well for the statesmanship and political courage of President Eisenhower and Vice President NIXON that both have denounced the inadequacy of the Kennedy labor bill, despite its 90-to-1 passage in the Senate (with Arizona's GOLDWATER casting the lone dissenting vote).

The President has asked for a stronger bill, specifically House amendments banning secondary boycotts and blackmail picketing, and the settlement under State authority of no-man's-land disputes outside the purview of the National Labor Relations Board.

These amendments would effect relatively minor reforms. The basic threat of union monopoly power would not be lessened by much. Yet they could be a step in the right direction, which seems to be about the best we can hope for from a congressional majority intimidated by fear of reprisals at the polls.

Senator KENNEDY and bipartisan liberals, with an eye on 1960, are hoping for final passage of a watered-down labor bill which would be acceptable to union leaders and the general public. Such a bill would be innocuous.

If a House majority can be made to realize that basic reforms and curbs of monopoly power are demanded by the majority of voters, we may still hope for passage of a bill to meet Senator MCCLELLAN'S minimum requirements.

Where Is Free Competition Under the Fair Trade Laws?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Charlotte (N.C.) Observer of March 30, 1959.

That editorial entitled "Where Is Free Competition Under the Fair Trade Laws?" chronicles some of the reasons why the fair trade bill, H.R. 1253, now pending before the House Interstate and Foreign Commerce Committee should be defeated.

WHERE IS FREE COMPETITION UNDER THE FAIR TRADE LAWS?

Eight years ago the U.S. Supreme Court knocked the props from under the fair trade laws—those laws that say a dealer is obligated to sell a manufacturer's products at a certain price even though he has made no agreement to that effect.

This, said the Court, is "price fixing by compulsion."

Since then the courts of 15 States, plus those of Hawaii and Puerto Rico, have held similarly. There is little doubt that the trend is running against such laws, and for the very best of reasons. It is because of this trend that the effort is now directed toward a national law of blanket application.

In the eyes of the Justice Department, such a law would be "an affirmative approval by Congress of the elimination of competition. * * * The bill would suppress competition at the manufacturing level and at all levels of distribution. * * * [It] would enable price rigidity by proprietors which would not necessarily take into account the changing economic conditions of a free competitive system."

To the Federal Trade Commission it would pervert the letter and spirit of the antitrust laws, prevent the healthy backwash from consumer to producer which keeps prices from getting out of hand—in short, make it a crime to give the public a bargain.

To the Commerce Department, it would amount to Federal endorsement of the right of manufacturers to set prices at all levels, a dangerous precedent contrary to current concepts of property rights.

To the Agriculture Department, it suggests the maximum that "price competition is healthy throughout the distributive system and should be encouraged rather than prevented."

Justice sees also "an unwarranted encroachment on the sovereignty" of the States. Congress has no business imposing trade restrictions that the States have just rejected, the Government's lawyers contend.

The Justice Department says it made a survey 3 years ago of eight cities not covered by fair trade laws. It checked the prices of 132 common drug, houseware, appliance, and similar articles. It found the prices for these commodities averaging 19 percent below the fair trade prices fixed for other areas.

We can readily understand the inclinations of a manufacturer who has build up a brand name and wishes to protect both the name and the price he thinks should match it. Neither is it hard to understand the views of many retailers who handle such merchandise and see themselves undersold or discounted.

Their views, while understandable, should by no means become the public policy of the country, adding to the rigidities that already beset the pricing and merchandising structure.

If something is wrong with competition, the answer is more of it and not less.

District of Columbia—An Island Possession?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MULTER. Mr. Speaker, on February 17, 1959, I introduced H.R. 4630 to provide local self-government to the District of Columbia. Many of our colleagues introduced similar measures.

In this connection I commend to the attention of our colleagues the following article which appeared in the April 1959, issue of the National Voter, a publication of the League of Women Voters of the United States:

DISTRICT OF COLUMBIA—AN ISLAND POSSESSION?

Congress has agreed to admit Hawaii with its civilian population of 578,000 to the Union. Last year 167,000 Alaskans became full-fledged citizens. But 825,000 people who live in the District of Columbia are still stranded on a 69-square-mile island—the only part of the United States of America where local residents have no vote for anything and no control over the local government under which they live.

Recently a Member of Congress, during a floor debate, called Washington "a city and yet not a city; a political entity and yet not a political entity." This is perhaps as good a definition as any of the city's status.

Washington is in reality two cities: One of stately buildings and green vistas which thousands of tourists see when they come to visit their National Capital; the other of mostly middleclass homes, many shabby side streets, and some appalling slums. It is beset by all the problems of any community where many families are moving to the suburbs in search of space for growing children.

It is this second city, second-rate by almost any municipal standards, that supports the beautiful and impressive Federal facade. Eighty-eight percent of the operating and maintenance expenes of the whole city this year came out of the pockets of Washington residents. Even the fascinating zoo, owned by the Smithsonian Institution, is operated and maintained by District of Columbia taxes.

Fifty-three percent of the District's land area is tax exempt, including land owned by the Federal Government, foreign embassies, and many national organizations. Unlike other cities of its population class, Washington can collect no tax from its major industry and largest employer: the Federal Government. The Federal Government makes a contribution to the local budget, but whether this is in lieu of taxes Congress is reluctant to say. The amount of this contribution varies from year to year. In fiscal 1959 it is $20 million, or 12 percent of the budget. The House proposes making it $25 million next year, under a continuing authorization for $32 million. The 85th Congress authorized a salary raise for District of Columbia employees but did not appropriate money to pay for it.

Because of the uncertainty of the amount Congress will agree to contribute each year it is no easy matter for the three Commissioners—the District's "city managers" (appointed by the President) who must present the budget to Congress—to plan annual expenditures. If the Senate agrees to the appropriation bill recently passed by the House there will be a $9 million gap between what the Commissioners believe is needed and what they can spend next year. Congress suggests that District of Columbia taxes be raised.

Local taxes paid by Washington residents, including the District of Columbia income tax (comparable to a State income tax) go into an earmarked fund in the U.S. Treasury and must be appropriated annually for the District's needs.

The District of Columbia tax structure is a hodge-podge of what in other communities would be municipal, county, and State taxes. District of Columbia rates are now about equal to those in the surrounding metropolitan area where Washington spills over into Maryland and Virginia.

WHO'S IN CHARGE HERE?

Washington has the largest city council in the world—the 534 Members of Congress. In the House of Representatives 2 days a month are set aside for District affairs, the second and fourth Mondays of the month. Mondays are the days most Congressmen consider the least important of the legislative week and Monday sessions are often poorly attended since the extra day allows Members to take long weekends in their own constituencies. When the House passed the fiscal 1960 appropriation for the District of Columbia budget March 16—a Monday—there were 28 Representatives on the House floor.

District matters are screened by four congressional committees with a combined membership of 109 Representatives and Senators on the House and Senate District of Columbia committees and appropriations committees. There was some difficulty this year in getting Members to serve on the District committees but most of those who do serve give a great deal of time and devotion to their duties.

Before the Commissioners present the District of Columbia budget to Congress they consult with many citizen groups about what should go into it. Most of these same groups also appear before the District committees when hearings are held. The District of Columbia League of Women Voters has done this for years. Other groups which appear regularly are the PTA, the citizens associations, and, possibly the most influential, the board of trade. But there is not much civic leadership in the city. Why worry about conditions which you cannot control? After all the evidence is in, Congress decides how and how much money may be spent.

Congress also takes up many local matters, such as the garnishment of wages for debts, bus fares for school children, and increased benefits for widows and orphans of firemen and policemen, which have been occupying the House committee intermittently since the beginning of the current session.

THE DISFRANCHISED

Washington residents were not always as helpless in relation to the solution of local problems as they are now. Before 1870, residents of the District elected their own mayor and city council. They were represented in Congress by a nonvoting elected delegate. Between 1871 and 1874 the President appointed a governor, members of a legislative assembly, and a board of public works, and the people elected a 22-member house of delegates and a nonvoting delegate to the House of Representatives. Before and during that time the city had contracted a

debt for needed improvements, chiefly streets and sewers. A citizen group appealed to Congress to take over the local government, relieving residents of the responsibility of the debt. So Congress provided the form of government in force today, disfranchising District of Columbia citizens in the process.

Since 1946, bills have been before Congress to give Washington some form of self-government. The Senate has passed such bills four times, but the House has never had an apportunity to vote on such a bill.

The bill on which home-rule supporters are pinning their hopes this year would provide a territorial form of government—a governor appointed by the President, an elected legislative assembly, a board of education created by the assembly, and a nonvoting delegate to the House of Representatives. Congress and the President would retain the right to overrule assembly decisions, thus satisfying the constitutional requirement that "Congress shall exercise exclusive legislation in all cases whatsoever, over such District * * * as may * * * become the seat of the Government of the United States." The Supreme Court has ruled that this power may be delegated.

This is the form of government that Alaska and Hawaii have put aside in becoming States. Can the District now move up the ladder a rung and inherit the mantel of government which they have cast off? Maybe, if there is enough understanding of the District of Columbia problem in the States to convince individual Members of Congress that it is time for Washington residents to assume their civic responsibility.

Law Day, U.S.A.

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. LEVERING. Mr. Speaker, in connection with the observance of Law Day, U.S.A., on May 1, I am inserting in the CONGRESSIONAL RECORD, under leave granted to me, a statement by the Honorable Charles B. Holtsberry, judge of the court of common pleas, Licking County, Ohio. Mr. Speaker, it has been my pleasure to know this distinguished jurist for a number of years. This article appeared in the Utica (Ohio) Herald on April 30, 1959, and is well worthy of the consideration of my colleagues.

The statement follows:

LAW DAY, U.S.A.

(By Hon. Charles B. Holtsberry, judge, court of common pleas, Licking County, Ohio)

On May 1, we celebrate Law Day, U.S.A. Today, the law is the concern of the average man as it never was before. It is the mortar which unites men into a social order. In America the county courthouse is the symbol of a free judiciary where inside its doors the dignity of the individual will be respected and his equality of equal rights protected.

Our heritage comes from the toil, strife, wisdom, and foresight of our ancestors. We observe, therefore, Law Day, U.S.A. to renew our faith in the rule of law as the guarantee for happiness in organized society and for peace and harmony in a troubled and anxious world.

At a recent midwestern World Peace Through Law conference in Chicago, I was pleased, as your Licking County judge, to be the Ohio delegate. Our program, under the leadership of the American Bar Association, is aimed at substituting throughout the world the rule of law instead of a rule of terror.

The new approach, which demands the support of every American citizen, is through international law. This seemingly complex term really boils down to something quite simple. It means merely the effort to express and write out the rules of ordinary decency among nations. Its spiritual fuel is the belief that certain universal concepts can be brought together into the fabric of law.

Never in our history has there been a time so balanced between danger and opportunity. Conflict in the past meant killing each other, now it means killing the future, too.

Therefore, let us today proclaim and rededicate ourselves, each in our own way, to that solemn task to preserve and pass on to the citizens of tomorrow the heritage of liberty under law which is rightfully theirs.

Let us proclaim and stand firm to establish the rule of law among the nations of the world in this age of the atom and of outer space. Let us be proud in our community that every church is a monument to freedom of religion; every newspaper a fulfilment of the promise of freedom of the press; every courthouse a symbol of equal justice under law.

John A. Scott Reports: An Analysis of the Proposed Cutbacks in Army and Marine Forces

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BRADEMAS. Mr. Speaker, the U.S. Senate last week voted unanimously to halt a reduction in the Marine Corps which had been ordered by Pentagon leaders in defiance of Congress, and the Senate also directed that the Army maintain its personnel at 900,000 rather than reduce our military manpower as urged by the administration.

These votes reflect a concern on the part of many Americans that our country may not be adequately prepared to deal with so-called limited-war situations. Lacking limited-war capacity, we may be confronted either with being nibbled to death by possible aggressors or forced to fight only an all-out nuclear war. Either of these alternatives obviously poses grave danger both to our national security and to the maintenance of world peace.

On April 26, 1959, over Station WSJV–TV, South Bend-Elkhart, Ind., Mr. John A. Scott, vice president of the Truth Publishing Co., a Marine Corps officer with a fine record of combat service and a former mayor of the city of South Bend, gave a most interesting talk in which he expressed his own deep concern over the proposed cutbacks in Marine and Army forces.

Because I believe Mr. Scott's discussion an intelligent and penetrating one, I should like to include the text of his remarks in the CONGRESSIONAL RECORD:

Some years ago Rudyard Kipling paid tribute to the British Tommy, the faithful fellow down in the ranks of the British Army whose courage defended the Empire.

Remember how Kipling put it? He said, "It's Tommy this, and Tommy that, and 'cuss him out, the brute.' But it's 'savior of 'is country when the guns begin to shoot'."

In a number of wars, the United States has had reason to thank our GI's—our soldiers, sailors, and marines—for preserving our own liberties.

Meanwhile, the science of warfare has made fearful strides. Now the headlines tell of missiles and rockets and space ships. We are constantly torn by fears that Russia may be gaining on us in these weapons.

The Senate's emphatic and unanimous approval of Christian Herter as Secretary of State showed the determination of Americans to stand together against Russia, however we may differ on domestic issues. And certainly the immense faith of Americans in the military wisdom of President Eisenhower is a major factor in this unity. In fact, the President's enormous prestige has actually reduced to a minimum any criticism of his defense program. But this may be dangerous. Too many people may be assuming that the next war, if ever it comes, will be simply a matter of pressing buttons, and of whom presses enough buttons first.

We are referring to the "men-versus-missiles" question that now confronts Congress. The President's program reduces the strength of the Army to 870,000 men, and of the Marine Corps to 175,000 men.

Is a reduction of this nature safe? Have we actually come to the time when the foot soldier—the GI in the field like the British Tommy of old—is no longer "savior of 'is country when the guns begin to shoot?"

Tonight let's examine exactly what this reduction in force will mean to the Marine Corps and to the defensive position of the United States. Because, in order to maintain three divisions of Marines, 200,000 men are required—25,000 more than the President's program will provide. These three Marine divisions are forces in readiness. One of them is poised for action on the East Coast, one on the West Coast and one is stationed overseas in the Pacific area. As recently as a year ago, the President considered it necessary to commit one of these divisions to action in the Middle East, and Marines landed in Lebanon.

We keep hearing about nuclear push-button warfare and about missiles which will go thousands of miles, and even about space platforms. But since the end of World War II, there have been 18 limited, or brush-fire, wars. And in none of these wars was the nuclear bomb employed as a weapon. Nor, we may add sadly, did the fact that we possessed nuclear bombs deter the aggressor from starting to shoot.

Just where do we stand? There are so many conflicting reports. For instance, a major news source reported the other day: "From the military standpoint, Russia has lost the edge on the European front. * * * Allies now have combat forces on the ground to match Soviet forces in Germany." However, when you read on you discover there is a fateful catch. You find that "Allied strength cannot expect to hold an allout Russian attack on the ground and would have to use allout nuclear war." So, if Allied strength on the ground must have all-out nuclear support, is our ground strength enough?

And Europe is by no means the whole story. How about the other danger spots at far corners of the earth? In the whole world, according to Gen. Nathan Twining, Chairman of the Joint Chief of Staff, the allied troop strength is 6 million men, while the U.S.S.R. bloc has 7.8 million men. Is it safe to be

reducing our U.S. troop strength when the allied forces already have 1.8 million fewer troops?

Of course we could become sentimental about what the foot soldier has meant to the United States. We could recall how the marines went to Iceland in 1941 when no other troops were available; how the marines were first to spearhead the Guadalcanal offensive; how the marines turned the tide at Pusan in Korea. Or we could recall some of the heroic actions by the Army on D-day in Europe, or in Italy or in South Africa. But sentiment is not our purpose. We are thinking not so much of the past as of the future. What makes some of us so sure that the Russians will choose nuclear weapons when they make a major bid to take over the world? Maybe the Russians will be crafty enough to realize that nuclear war could be as hard on themselves as on us. Such a belief on their part might actually be behind the current indications that the Kremlin may be ready to talk about nuclear disarmament—perhaps even with inspection, who knows? After all, it might be easier to check up on whether bombs are being exploded than upon how many troops a nation has. And with the immense population in the entire Communist world, they have more potential to draw upon for troops in the field.

Instead of blowing us to bits all at once, who knows but what it may be Kremlin strategy to nibble us to death, a piece at a time—a little aggression here, a little aggression there, each successful because we don't have enough troops to prevent it—and because in each case we are reluctant to risk the retaliation which nuclear arms would bring?

Obviously we are making a case tonight for preserving the present manpower levels of Marines and Army. And we fully understand that cost is a vital factor. As much as anyone, we are concerned about the size of the Federal budget, and all that Federal deficits can mean to our economy.

Well, congressional experts estimate that $150 million is the amount involved in maintaining both the Marine Corps and the Army at levels their top officers consider necessary. That is about the cost of three intercontinental ballistic missiles.

Are we, then, suggesting that the United States needs fewer missiles and more men? This suggestion actually has been made by top leaders of both the Army and of the Navy. A startling revelation came last March 30 when Congress made public a censored transcript of a secret hearing before the Defense Subcommittee on the House Appropriations Committee. It was revealed then that both Gen. Maxwell Taylor, Army Chief of Staff, and Adm. Arleigh Burke, Chief of Naval Operations, believe that we have more atomic retaliatory power than we need. Said Burke, and this is a direct quote: "I think we should put more money into limited (war) capability." Furthermore, General Taylor revealed that the Joint Chiefs of Staff had never specifically approved or disapproved of the proposed Army cutback from 900,000 to 870,000 men and had never reached complete agreement on force tabs, setting forth the precise military forces that would be required to execute strategic plans.

We do not specifically defend any particular branch of the service in this matter; it is the philosophy and the strategy of defense that concerns us. And General Taylor's remark raises the question whether the Joint Chiefs are showing the leadership we should expect. Defense Secretary McElroy expresses confidence in our overall military position. But can we ignore these expressions of concern from top men in uniform about the sheer number of troops we can count on in case of crisis?

The day may again come when the GI's will be called upon as "saviors of their country when the guns begin to shoot."

We only hope enough of them will be there to answer the call.

Sol Hurok Contributes to International Understanding Through Exchange of Artists

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. NEUBERGER. Mr. President, I believe that one of the great opportunities for understanding among the peoples of the earth is for an exchange of talented performers in the fields of the theater, the ballet, athletics, music, dance, art, and many other activities.

The Bolshoi Ballet, presently performing in New York City, is helping to acquaint Americans with the artistry of Russians in this difficult and intricate art. It is my hope that Americans with similar skills can demonstrate them to the plain people of the Soviet Union. In this way, a bridge may be painstakingly forged between two different realms.

The Bolshoi is currently in America due to the determination, contacts, and energy of a man who has brought many great artists to our shores—Sol Hurok, himself an immigrant. I wish there were a counterpart of Sol Hurok in Russia, so that Russia's people could learn at first hand of the talent and skill of Americans in the theater, ballet, and related activities.

I salute a man who has been able to narrow, if only slightly, the chasm between the Soviet world and the free world. In the April 1958 issue of the Reader's Digest appeared an excellent portrait of Sol Hurok, written by Gerald Goode. Its title was "S. Hurok Presents." In tribute to Sol Hurok, I ask unanimous consent that this article, as condensed from Mayfair Magazine of Toronto, Canada, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"S. HUROK PRESENTS"—THE UNSCHOOLED IMMIGRANT WHOSE LIFE'S GOAL HAS BEEN TO BRING THE WORLD'S GREATEST ARTISTS TO THE PEOPLE OF AMERICA

[Condensed from Mayfair]

(By Gerald Goode)

During a rehearsal in a New York theater a Spanish dancer inadvertently whirled under a ladder left on the stage by a hapless electrician. Terrified by superstition, the dancer lunged at the stagehand, who darted for the wings. The pusuit led over the footlights and up the aisle of the empty theater to the rear. Suddenly both men stopped short—and burst into laughter. Before them stood a squarely built man of middle height, impeccably dressed in striped pants and oxford gray coat. With quiet and leisurely dignity, he was manipulating a yo-yo.

This was Sol Hurok, whose trademark, "S. Hurok Presents," has made him known throughout the United States as one of our few genuine impresarios. For the past 40 years Hurok has "presented" to America the most opulent ballet and classical drama, the world's greatest singers and finest pianists and violinists. As impresario he not only finances and books the concerts of the great performers but guides their careers. Wise in the ways of artists, Hurok's manner exudes calm amid the volcanoes of temperament that surround him. He has used the yo-yo to soothe the jitters of many a high-strung star.

Hurok will go to any lengths to keep his performers happy. Before a ballet engagement in Chicago, he discovered that the name of a petulant director had been erroneously reduced in size on the advertising posters. New strips with the director's name in proper size were hurriedly printed, but not a man could be found on a Saturday to paste them up. So Hurok and I, his publicity manager, mushed through snowy streets, he with paste pot and I with brush, until every poster in the city was altered.

I first met Sol Hurok in 1930. He was 38, a shrewd-eyed man with a fringe of thick brown hair rimming his bald dome. Sitting in the cramped windowless office he occupied on Times Square, the walls solidly lined with photographs of musical greats, he told me of his life's goal: to bring the world's outstanding artists from the four corners of the globe to all the people of America, particularly those of modest means. If he, an unschooled immigrant unable to read a note of music or play a single instrument could thrill to classical music and beautiful ballet, why not everyone else in America?

He spoke in middle-European accents, in sentences that telescoped and tumbled every which way without apparent grammatical joints. Though his syntax faltered, his enthusiasm never did. He was a man with a mission who, said the New York Times, "has done more than any other man toward the building up of the countrywide American audience of music lovers."

Hurok's admiration for great talent amounts to unashamed hero-worship and he can divine a master performer much the way a dowser finds underground water. He has managed such famous personalities as Marian Anderson, Artur Rubinstein, Jan Peerce, Patrice Munsel, Isaac Stern, Roberta Peters, and most of the finest ballet companies and theatrical importations of this generation, including Britain's Old Vic and France's Comédie Française. Today he manages the supreme favorite of the ballet world, the Sadler's Wells—recently renamed the Royal Ballet of Britain—the first company to hold a television audience of 37 million persons for 90 minutes of wordless ballet. This was a surprise to the television industry but not to Hurok. He had been proving for years that culture pays, if it is the best.

One of Hurok's greatest assets has been an uncanny faculty for sensing the mood of the people. At the start of the depression he launched Mary Wigman, exponent of the modern dance movement facetiously called the soul-searching or flat-footed school. Before he signed her, I hinted to Hurok that perhaps something gayer, like the Folies-Bergère, might be more diverting in distressed times. Hurok disagreed, declaring that what misery really wanted was company. He was right. Wigman's dances of grief and darkness seemed to arouse a self-identifying response in her audiences. They shouted for encores and went out into the gloom purged and happy. For three successful seasons the box office throve.

Then Hurok rediscovered the ballet. Again his timing was magical. Classical ballet had been forgotten for years in this country. After prohibition's repeal something in the air suggested that audiences were ripe for

more gracious forms of entertainment. From Monte Carlo, Hurok imported an expatriate Russian ballet company and, with a glittering society premiere, ballet was officially reborn. Although it took a little time for Americans to accept athletic males dancing in white, blue, and purple tights, within a few years ballet became vastly popular.

More recently the impresario proved again that he is the perfect barometer of that public known as the Hurok audience. On a visit to Britain he attended the Edinburgh Festival in Scotland and was excited by the pomp and pageantry of a group called the Scots Guards and Massed Pipers. He signed them for an American tour.

His associates shook their heads in shocked disbelief. "Why would anyone pay to see a parade of uniformed guardsmen and kilted bagpipers?" they asked. Hurok persisted, and the guards proved to be a sensational success. In four performances in Madison Square Garden, each of which Hurok attended, a sellout audience thrilled to the marching maneuvers, the skirling bagpipes, the crimson uniforms with their bearskin headdresses. Throughout the country the guards were so popular that last winter Hurok repeated the tour with another spectacular marching group, the Black Watch of Scotland.

No musical background propelled Hurok into his career. If he heard echoes of music, they were the sounds of balalaika bands playing for country dances in the small Russian village where he was born, the son of a hardware merchant. He came to this country in 1906, a youth avidly curious about America. When he landed at Ellis Island he was wearing two suits of clothes and three sets of underwear and totaling a goose-feather pillow. His total capital was $1.50. He got a job as a streetcar conductor but was fired for calling out the names of streets in a gibberish only remotely resembling English. Later, while selling hardware at $8 a week, he began going to the opera. One evening after he had heard Caruso from the top gallery of the Metropolitan, he said to himself, "Someday, S. Hurok, you are going to manage people like that."

He began by carving a niche for himself as chairman of the entertainment committee of a workers' lyceum in Brooklyn. As a sideline he formed a musical society for managing concert artists. With the awe of a stricken fan and the brass of an autograph hunter, he won his first client, the violinist Efrem Zimbalist, who agreed to give a workers' concert in Brooklyn at dollar-top prices. The concert was a success and Hurok quit cutlery to hang out his shingle as a concert manager.

First he announced that concert prices were too high; he had felt the pinch in his own purse. In 1915 he engaged the New York Hippodrome, an elephantine hall of rococo and red plush, and presented such top stars of the times as Tetrazzini and Schumann-Heink for a series of Sunday concerts. The admission price was $2 top. Because many of his prospective concert-goers had never been out of their local neighborhoods, he advertised detailed instructions, with diagrams, on how to reach the hall by subway, elevated, and streetcar. The seats could be bought at drugstores in the Bronx and Brooklyn. Thus, for perhaps the first time, working folk heard the same great stars as the well-to-do.

Today nearing 70, Hurok leads a simple life in the modest New York apartment where he lives with his wife, a former Russian actress. But there is always vodka and caviar on hand for friends who drop in. And at the inevitable party following one of his premieres Hurok may be seen dancing a conga or an old-fashioned waltz with members of the company. When he leaves, he will be wearing the rakish beaver fedora and carrying the silver-tipped ebony cane which together with "S. Hurok Presents" have long been his trademark.

Countless honors have been showered upon Hurok for his work as a one-man agency for international cultural exchange. Yet with the artists he admires he still retains a worshipful manner. Whenever one of his attractions is performing within striking distance, he invariably attends. Standing at the back, he can be seen—and heard—beating his palms together with machine-gun-like reports.

Hurok has been called the Mahatma of Music and the Barnum of the Arts. But to millions of people he is best known as the man who has brought a richer life to Americans of all classes.

Where Fortunes Are Being Made Again

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. PROXMIRE. Mr. President, last year I offered an amendment to the major tax reform bill to require executives receiving stock options as compensation to pay a regular, full income tax on it. The bill passed. The amendment was defeated. At that time I pointed out that the Federal Treasury is losing many millions of dollars through this loophole. Because top management can avoid taxes in this way, the ordinary taxpayer has to pay more to make up the Treasury loss.

Recently U.S. News & World Report ran an excellent article describing just how this loophole benefits the top executives of America's biggest corporations. The article also shows how widespread this practice has become. Because I intend to push for this tax reform once again this year, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection the article was ordered printed in the RECORD, as follows:

[From U.S. News & World Report, May 11, 1959]

WHERE FORTUNES ARE BEING MADE AGAIN

A great many officials of U.S. corporations suddenly are becoming very wealthy—at least on paper.

At a time when other investors are paying record prices for stocks, these executives are getting bargains. They are buying large blocks of stock in their own firms at prices set several years ago, when stock prices generally were much lower. In some cases, the "insiders" are paying one-half or one-third of what the stocks are worth on the open market.

Thanks to the bull market stock options are proving a windfall for thousands of management men, big and small. A whole new wave of plans is being promulgated in the hopes that stocks will go still higher, so that today's prices, taken as the basis for new options, will be bargain prices a year or two from now. Stockholders already have been asked to ratify scores of option plans, similar to those shown in the table.

HOW OPTIONS WORK

The charts at the end of this article explains how stock options can lead to riches in a bull market. The following is an actual example from the records of one of the Nation's largest manufacturers:

In January 1953, this company offered key executives a large amount of stock at a price of $315 a share, the market value of the stock at that time. One vice president received the right to buy 4,000 shares at this price at intervals until 1963. In the first 3 years, he bought 1,200 shares.

Then, in January 1956, the stock was split 15 for 1, and the option price was adjusted accordingly to $21 per share. By that time, the split stock commanded a price of more than $60 a share.

In the next 2 years, the vice president bought 6,000 shares of split stock at $21. Then, when stocks were depressed in the summer of 1958, he sold 6,000 for $42 per share. His profit on these stocks came to $126,000. On this, he paid a capital-gains tax of 25 percent, leaving a profit after tax of $94,500. He still had 18,000 shares purchased at $21.

In February 1959, the market price of the stock had moved back up to $54. The vice president again became a buyer to the tune of 12,000 shares at $21.

At last report, this official held 30,000 shares for which he had paid $630,000. Their value on today's market, where the company stock has gone still higher, is nearly $2 million. If the vice president sells his holdings 4 months from now and if the market price of the stock does not change in the meantime, he will have a profit, after taxes, of nearly $1.1 million, counting the $94,500 cleared earlier.

A CHANGE IN SENTIMENT

The same experience, usually on a smaller scale, is being repeated in many firms. A year ago, when stock prices were low, after the sharp break in 1957, option plans were viewed with less enthusiasm. Some officials found their stocks were worth less than they had paid for them. It became clear that purchases on stock options do entail risk. Not many new plans were being proposed.

Today, the situation is reversed, because of the skyrocketing of stock prices to record levels. For many firms, the plans now coming out represent a second round. Earlier plans, introduced after Congress liberalized the tax treatment of options in 1950, have run out and are being extended and in most instances greatly expanded. They have proved attractive. Here is why:

So far as the official is concerned, the price he pays for the stock is fixed from the time the option is granted until the stock is purchased. Very often there is a small discount—up to 5 percent of the market value—in the setting of the option price initially.

If the market price of the stock rises above the option price, the holder of the option stands to make a clear profit. If the market price falls, he sits tight and lets the option go. He may put off buying for as long as 5 years.

In short, the company executive has some of the advantage of owning stocks, without the usual risk, until he actually buys.

When he decides the time has come to buy, he has a windfall that is not counted as taxable income until he sells the stock. Says he pays $50,000 for stock worth $100,000. He is richer by $50,000, but without any increase in taxable income, provided the option price was set originally at 95 percent or more of the market value then prevailing. If he holds the stock 6 months, he applies the capital-gains rate, a maximum of 25 percent, to the profit. This means that profits from stock options usually are worth a great deal more, in income after taxes, than the same amount of salary.

You can see why many officials are at least as interested in stock options as they are in pay raises.

A BUSINESS INCENTIVE

Now, how does all this work out from the company's point of view?

The chief idea behind options is that they encourage company officials to work harder, since they stand to gain when increased earnings are reflected in higher market prices for the stock. Buying stock also is supposed to give key personnel a greater interest in the firm and make them less likely to leave.

Many companies feel it is cheaper to use stock options than it would be to pay salaries high enough to attract and hold keymen. Some stockholders have argued, however, that there are two ways of looking at the cost.

Money paid by the company in the form of higher salaries would be deductible for tax purposes. In giving stock options, on the other hand, the companies are selling stock for less than they could get in the open market, and these discounts are not deductible as business expenses. It is also contended that the sale of stock dilutes the equity and profits of the shareholders.

In practice, stockholders almost never refuse to approve a stock-option plan proposed by management.

VARIETY OF PLANS

Some plans are tailored for one or two top executives. Others cover hundreds of key employees. A number of big companies have plans for purchase of stock by all employees, in addition to the special options for executives. Some have salary-deduction plans enabling employees to accumulate the required funds over the years.

Some officials find they have to sell stock obtained on old options in order to pay for stock available on new options. Companies do have rules to discourage the quick resale of optioned stock for profit taking. Yet, stock market authorities contend that a large proportion of the optioned shares are not retained as permanent investments.

This year, in the bull market, attention is on the advantages of the stock options. The opportunity to buy shares at what may later appear to be bargain prices is being sought eagerly by management. The evidence to date suggests that 1959 will see a new record for the number of companies and shares involved.

NEW OFFERS OF STOCK TO COMPANY OFFICIALS

Some option plans recently submitted to stockholders for approval:

American Can: 30,000 shares for officers and key employees.

Carrier Corp.: A reduced option price of $49.03 per share on 21,022 shares.

Chrysler: 256,486 shares at $52.49 per share for 66 officers and employees and 53,440 shares at $49.94 for 23 officers and employees.

Douglas Aircraft: 190,840 shares for officers and key executives.

Gillette: A 5-year extension of present plan; increase of 100,000 in number of shares available.

Island Creek Coal: 80,000 shares for management employees.

Minneapolis-Honeywell: 75,000 shares for executives and key personnel.

Republic Aviation: 150,000 shares for officers and other executives.

Revlon: An additional 60,000 shares for executives.

Rexall Drug & Chemical: An additional 150,000 shares for key employees.

Sinclair Oil: 750,000 shares for 200 or more key employees.

Thatcher Glass: 10,000 shares at $32.19 per share for one official.

Thompson Ramo Wooldridge: 150,000 shares for officers and key employees.

U.S. Gypsum: 400,000 shares for officers and key employees.

Westinghouse Electric: 500,000 shares for about 400 executives.

(Source: Standard & Poor's Corp., and individual companies.)

July 1954: XYZ company gave its president, John Doe, an option to buy 25,000 shares of XYZ stock at $30 a share. This was the market price at that time. Under the option, he could buy the stock any time within 5 years.

July 1956: XYZ stock was down to $25 on the market. President Doe held off, delayed exercising his option to see what happened to the market.

April 1959: XYZ, having caught fire in the market, had bounded up to $75. President Doe, still well within his 5-year period, exercised the option, bought the entire 25,000 shares at $30. Total price: $750,000. Paper profit: $1,125,000.

Now: President Doe has a choice: (1) Sell the stock immediately, realize his gain, and pay taxes at the full income tax rate; or (2) take the risk of a market decline, hold the stock for at least 6 months, until October 1959, or later, and then pay a capital-gains tax of no more than 25 percent.

October 1959: If President Doe sells his 25,000 shares at $75, he will realize a net profit, after capital-gains tax, of $843,750.

Conservation and Development of National Forests

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. DIXON. Mr. Speaker, I would like to briefly comment on a report received from the Secretary of Agriculture on March 24, 1959, entitled "Program for the National Forests." It is a report which I think is long overdue and one which deserves our thoughtful attention. It has been referred to the Agriculture Committee, of which I am a member, and hearings have now been scheduled for May 14 and 15.

The program as outlined in the report provides for a marked increase in all national-forest activities, including the necessary research. It is a sound long-range program designed to make these public properties produce a maximum of public benefits under a system of multiple-use management.

I have a deep and sincere interest in the seven national forests in my State. This interest stems from my close association with the administration of these valuable lands and from my activities over many years in helping to get some of the most important watershed lands in Utah placed under Forest Service protection and management.

The national forests in Utah play a unique role in the economy of my State. Besides attracting thousands of tourists, campers, fishermen, and big-game hunters, they are the high rugged mountain ranges which intercept the moisture-laden clouds from the Pacific Ocean and cause them to dump their precious load of rain or snow, and then release it slowly throughout the year into our parched desert valleys. Without this water, Utah could support only a fraction of its present population. Water is one of the scarcest and most valuable resources we have. Most of the water we use comes from national forest watersheds.

The wisdom of protecting and properly managing these important watershed lands is nowhere more dramatically illustrated than along the Wasatch Mountains just north of Salt Lake City. Before these lands were placed under the Forest Service they were burned over and damaged to such an extent that summer storms caused several serious floods which took many lives and caused millions of dollars in damage to personal property. Under Forest Service protection and management these lands have been rehabilitated, the floods have stopped, and the water can once again be used for irrigation and domestic purposes. We have found out through experience that flood prevention is practical and can be accomplished. Unfortunately we still have many watersheds in the national forests of Utah that need similar treatment. This new program for the national forests recognizes this and similar problems and provides for an intensified plan of corrective action.

In Utah, watershed conditions are closely associated with the grazing of livestock. The high mountain ranges in the national forests furnish summer grazing for thousands of ranchers and livestock producers. The improvement of these key range areas to sustain high-yield forage production is urgently needed to stabilize this important part of our economy. For example, there are over 600,000 acres of national forest land in Utah which is suitable for grazing and which can be greatly improved through revegetation. Although some progress is being made, the work is not being accomplished as rapidly as it should be. If the revegetation work in Utah is continued at the present rate it will take 30 to 40 years to complete the job. We cannot afford to wait this long.

In reviewing the report it was reassuring to learn that the program provides for accelerating these activities; also that it sets forth a balanced and positive program of development and management for all the renewable resources of the national forests, including water, forage, recreation, wildlife, timber, and other land uses. All of these resources are needed for a growing America.

Polish Constitution Day

SPEECH
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. CANFIELD. Mr. Speaker, the Poznan revolt of June 1956, was but another demonstration of Poland's deep-seated dedication to democracy and freedom, a dedication which was first evident on May 3, 1791, when the Polish people proclaimed Europe's first written constitution. And today, as we watch the rulers in Poland tighten their hold and repress human rights, we are sad-

dened, for this, too, has been the lot of Poland for hundreds of years.

The country was partitioned throughout the 19th century, yet the national image was kept alive by the continuing fight for freedom, a fight, incidentally, accompanied by a significant intellectual development. In 1918 independence was once again achieved, but 20 years later Poland again became an unwilling pawn in Europe's power politics. We will not forget that Poland in 1939 was the first nation to take up arms against violence and aggression.

Present-day Poland is living through an uneasy period. The freedom promised in 1956 lasted less than a year. As many of us feared, the Communist leaders grew impatient with the toleration of rights and freedoms, and they reverted to the traditional pattern of Communist rule—subservience to the party. We in the United States salute Poland on the 168th anniversary of Constitution Day, and we sincerely hope that one day soon it may again enjoy real freedoms.

Poland's Constitution Day

SPEECH
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. MORGAN. Mr. Speaker, I need not recite on this floor the long history of friendship and association between the Polish and American peoples, a history which goes back to the very foundation of this country. Nor need I recite, Mr. Speaker, the proud achievements of our Americans of Polish descent who have played such a prominent role in the development of our country. As I look around me here in the House of Representatives, I see living and convincing proof on that score.

Mr. Speaker, 168 years ago Poland secured her Constitution. I only wish that Poland had been as fortunate as was the United States in having had an opportunity to develop its resources and its institutions without partition, dismemberment, and without the more recent enslavement by the Red tyranny of Soviet aggression.

Poland was not to be so fortunate for, following World War II, the Red wave engulfed the Polish nation. A few years ago we were heartened by the sudden resurgence of the Polish national spirit and the Polish love of freedom. When the Polish people rose up and endeavored to throw off their Soviet yoke, we felt a thrill at their bravery and we were hopeful that a new day had dawned for our friends in Poland. We still have that hope. There is no doubt that the lot of the Polish people has improved but there are serious doubts as to the future course of the Polish Government. We only hope and pray that the Polish people will ultimately have their full freedom and independence so as to realize their full capabilities and their dignity as a completely independent nation.

The Best State of the 50

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the celebrated naturalist, Donald Culross Peattie, entitled "The Best State of the 50," which was published in the New York Times magazine section of Sunday, April 26.

Mr. Peattie is one of the ablest and most scholarly naturalists in the country. He is the author of such famous books as "An Almanac for Moderns," "Green Laurels," "Singing in the Wilderness," "Audubon's America," "The Record of a Naturalist," and many others of recognized quality. Along with Edwin Way Teale, Mr. Peattie is a naturalist of the John Burroughs school. He is an observer who has traveled in all parts of this country and in many areas of Europe.

It is very interesting to note that he has selected Illinois as the best State in the Union. Illinoians are not boastful, but we are naturally pleased that he should think that our State merits such recognition. We hope that we may justify the high opinion which Mr. Peattie holds of us.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BEST STATE OF THE 50
(By Donald Culross Peattie)

From the original 13 these United States have expanded to 50—States, chiefly, which the Founding Fathers never dreamed of admitting to our shoestring Republic. Furthermore, these lands belonged then to Spain, France, England, Russia. To acquire them the Founding Fathers would probably have predicted nothing but war with the great powers, or purchases beyond our dreams in the days of a financially tottering treasury. In any case, there would be ferocious Indian warfare.

Now we have rounded out our half hundred of States, and today any American can travel about in the 50 of them with the wonderful feeling that it is all part of home. At least that is what I have found, and I have visited all but five. It has been asked of me which of them all I consider best.

I could make out a case for many of them and must hesitate in choosing. California? California is the State I have, in recent years, elected to live in. There's nothing wrong with it; the trouble is too many people have the same idea. More than 500 people a day enter the State, not just as tourists who expect to depart, but as permanent residents. But still I love it, with its miles of misty blue lupine and orange poppy under great old oaks, its enormous trees in the redwood and the giant sequoia belts, its deserts and snowy Sierra Nevada.

Arizona or Wyoming? I bow before the Grand Canyon and I salute the sagebrush, but even with such grandeur and magenta-mixed beauty, I cannot make them my choices. Massachusetts, Connecticut, Maine and Vermont? They, like the Golden State, have enthusiasts enough.

Why not pick Virginia, which still has so many beautiful homes in the tidewater region that it is sometimes known as the chateau country of America? Everywhere it speaks of history—colonial times, the Revolution, the Civil War. These are memories no longer bloody and hate-filled; only the courage lingers on.

Or Kentucky? I have never met a kindlier people than the Kentuckians. I have heard the eastern meadowlark sing there, and seen the spring lambs gambol; and if the bluegrass and the mint juleps are not really native, Kentucky has the credit for them.

Then, turning westward, there's Colorado, with more high peaks in it than any other State in the Union. I love even the old buffalo plains, with their whistling sagebrush and downbending grasses. How magnificent is the Front Range of the Rockies, see from that plain. And the famous Spanish peaks—ancient volcanoes, it is said. I love the snow-fed cirques, like icy gems scattered on the foot of the peaks. I love Aspen, after the cultured people have gone and before the skiers have arrived, when the aspens are all atremble with golden fire.

But not of these is my choice. I shall choose, as amends from a son to a neglected mother, a State I was born in but left long ago.

I'll call Illinois the best.

I don't expect anyone to agree with me except several million suckers (natives of this State, so-called for the ugly-faced fish that feed at the bottom of its sluggish streams), and in Washington, D.C., my friend Senator PAUL DOUGLAS, and—wherever he is—Adlai E. Stevenson.

I hear cries of protest and ridicule: "What's good about Illinois?" "Chicago has the worst crime rate in the world." (It hasn't, not any more. Several cities excell it, including Los Angeles.) And then there's always the trite one: "It is a good State to come from." That last could be a blade turned against me, for at 20 I left the State. I did not come back to it and stayed for years, but now live in California because my work as a naturalist takes me to that so-various State with its forest and deserts, mountains and long seacoast.

Why, then, do I say Illinois is best? It has no gorgeous scenery, no stately antebellum mansions, no hallowed customs and no true cosmopolitanism like New York City's. In fact, just the opposite. Illinois is the best State precisely because it is so American.

More, it is heartland. As Castile is of Spain, as the plain of Beauce is the granary of France, or Tuscany of Italy, so Illinois is core America. Yes, even in the large number of the foreign born in Chicago. It is American in its unappreciated beauty of plainness—something that Thoreau would have understood perhaps, something that the three poets of the State who really sound to me like Illinois give voice to—Sandburg all the time, Vachel Lindsay sometimes, and Edgar Lee Masters in the one truly great book of poetry that he produced, "Spoon River Anthology."

Illinois is beautiful, it seems to me, as only a great fertile plain can be beautiful. If I cannot have a range of snowy mountains, then give me a great teeming plain, and not mere hilliness, which shuts off rather than provides a view. In Illinois you can see right down to the horizon. You have 180 degrees of an arc of sky, be it the aching blue of spring, when meadowlarks and bobolinks throw the twinkling gold of their songs into your ear, or a sky with vast moving clouds, castle-in-Spain clouds, in the days of summer thunderheads.

A tree, too, on the prairies, has meaning for me as mere woodsiness never has. When in Illinois you need a tree, for shade or the vertical breaking of the horizontal lines, there is a tree. In the Atlantic Coast States, for example, such a tree as a cottonwood is just another tree, short lived and too tall

for you to back away and look at it because of the woodsiness around you. But in one of the first accounts of the Prairie State, "Waubun, or the Early Day," by the wife of a captain at old Fort Dearborn, the single beauty of a far-off poplar is described, now near and clear, now mistily distant on the prairies. So with me, a cottonwood is a short-lived queen whose last golden raiment falls from her smooth body in the hour before the little death that is winter.

"Yes," I hear some saying, "I have been to Illinois several times. I motored across it as fast as I could." Or, "I took a train, pulled down the curtains against the sheer monotony of the State, and went sound asleep until I was well out of the place.

Goodby, stranger; next time take a faster train; step on that accelerator; my State is not for you. I'm sorry you didn't have the time to drink from Ganymede Spring, the best, the coldest water I ever tasted, as it comes rushing, crystalline, from the base of a famous bluff, Eagle's Nest. Spring and bluff were both named by that fearsome blue-stocking, Margaret Fuller, who said of the view from the top of the bluff: "Florence and Rome are suburbs compared with this capital of Nature's art."

And I am sorry for you if you had no time to go to Starved Rock with its wild primroses, the true subarctic mistassini primrose with pale lavender petals and yellow throat. Francis Parkman found it worth his while to go there in the days when travel was difficult, to see the spot where, on a high natural castle of rock, La Salle established a French fort in 1682 and, according to legend, a band of beseiged Illinois Indians later met starvation. They would not be dislodged and stayed, in their pride, till death overtook them.

Yes, and I'm sorry that you could not see the lofty and murmurous virgin white pine groves. You didn't know we had such places? No; how could you? These spots don't advertise on billboards, they don't charge admission. Ilinois is the least touristical of States. Nobody comes to Illinois for the climate, heaven knows; nobody comes to see the sights unless in Chicago. Illinois is just itself, soliciting nobody. Yet the French soldier-explorer, La Salle, and the Jesuit priest, Marquette, said of it, over and over, "Beautiful, beautiful."

Typically Illinoisan, it seems to me, was the canteen set up in a station on the Santa Fe Railroad during World War II. Where other cantens had long, official-sounding titles, or were members of some alphabet-soup organizations of that period, this kitchen was called simply the Parent's Canteen. You saw it at all hours staffed with middle-aged women belonging to no organization but their own, waiting to serve the uniformed sons of other parents.

Corny? If you like. You could call Florence Nightingale corny, or Clara Barton, or Walt Whitman in his letters and poems as a male nurse in the Civil War. Illinois is corny. It produces the best corn grown in this country, or anywhere in the world.

I never heard a place where bird song and the spring song of the frogs sounded so sweet. If you camp out on some hillock where swamp and orchard and prairie grass meet, you will hear full more than half of the species of land birds of eastern North America—the wild telegraphy of crows, the "flick-up wick-up" of flickers (called high-holers in Illinois), the golden rolling call of orioles, the jingling doorbell cry of redwings. And there is always the raucous call of herons (farm boys call them cranes) and the warning cries of king rails to their tiny coal-black chicks.

And the frogs. What I still hear in my dreams is the rising, bubbling sound of the swamp tree frogs, a thin "pee-yee-yeep." And the trilling tree toads who, like the stuttering black-billed cuckoos, prophesy rain.

The State flower is the modest violet, and it is a good choice, for there are scores of species—the butterfly, the sister, the hooded, the larkspur, the longspur. What some call dogtooth violet is a member of the lily family. And that flower called shooting star, with its upward-and-backwardly flaring petals, like some pointed comethead rushing to earth, is really a close relative of cyclamen.

In early spring, when the plum thickets fume with snowy blossoms on the dark, gnarled old finger-twigs, comes the moment when millions of spring beauties spread a carpet under the thicket. In autumn, the prairies change like the colors of the sea, with the rough purple of ironweed, the royal purple of Liatris, the purple and mauve of joe-pye weed, the smoky drift of asters through the woods.

For there are woods, of course—the prairie groves and, in every county, a strip called "the river woods." But there are three completely characteristic trees besides the cottonwoods: The bur oaks and the red haws (we called them thorn apples) that lean old elbows on the ground, making a perfect playhouse for every Illinois country child and, towering above, the shagbark hickories that, like Homer's soldiers who fought naked in their leathern armor, stand soldier-straight in their long strips of bark that is forever being sloughed off and replaced.

I love, too, the old-timeliness of Illinois towns, with their streets deep-shaded in vaulted elms and their yards never fenced against neighbors so that the children run in and out of each other's frame houses or play those favorite dusk games all over the block, while the June bugs bang against the screens.

I like the typical county courthouse of an Illinois town, be it Boomtown, Byzantine, Catfish Corinthian, or bearing some faint mansard-roof resemblance to the Paris Opéra. I even like the bad statuary—the blackened greenish copper of a Civil War soldier standing on a granite pedestal, with his kepi and cape, and the pyramids of cannonballs which do not look as if they would ever fit the long-nosed cannons beside them.

Some of the towns are true gems. I'd pick St. Charles on the Fox River, for simple and mellowed beauty. I'd call Galena a positive museum piece, redolent of times when hopes were high in the now-abandoned lead mines.

I sometimes wish I lived in one of the old towns on the Mississippi where the gulls make it seem like a seaport and the houses rest low on the ground, the long grass almost on a level with the old porches to which only lilacs or clematis give a partial privacy. And fondly I remember Grand Detour, with its unpaved streets, its two famous rival hotels where the Negro cooks tried to outdo each other with luscious chicken and custard pie.

Most antique of all Illinois' settlements is the carefully restored hamlet of New Salem. Photographs show that the last of it was tumbling downhill into the Sangamon River when it was saved from final disaster by the State parks system. Here Lincoln clerked in that famous store, read law, and here, fond tradition holds, he loved the girl Ann Rutledge, the real love of his life.

I never saw a better job of restoration than that of New Salem. Every last bit of pewter, every account book is there, every house. They even have the right weed growing around the privy. It's pokeweed, with its inky berries, edible "greens" and poisonous roots.

You can go, too, to the Lincoln House in Springfield, where he lived most unhappily with his wife, Mary Todd Lincoln, who, for reasons no one knows, recognized the future President of the United States when she saw him as a small-time lawyer.

Then follow up the towns that lie on the path of the Lincoln-Douglas debates. They fought in Ottawa, in Quincy on the Mississippi at Alton, at Galesburg and in Freeport, where 15,000 came from all about to hear these two, and stood in a light drizzle or sheltered in their wagons.

These towns are still there, not totally changed from the days of the great debates. Only in Chicago are Lincoln's quiet traces obliterated. Elsewhere his greatness marches invisibly across the wide, plain land. For there are mighty footsteps in the prairie grasses as they bow before the wind—footsteps of a brave and simple past, leading to a confident tomorrow.

Politics in the Marketplace

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the American Banker of April 15, 1959, is worthy of the attention of our colleagues:

POLITICS IN THE MARKETPLACE—IS IT STUNTING OUR BANKING GROWTH?

We find in Barrons Weekly, which apparently believes that progress in finance can be made only by making the big banks bigger and the little ones disappear, a woesome wail that politics must not interfere with effective competition.

The editorial of April 6, which is being mailed around in reprint form, entitled "Hobbled Banking," calls the laws that govern banking antiquated, and notes that in California, the Department of Justice is attempting to rule over a merger, while in New York State, legislators voted down a bill which would have overhauled the State's banking system for the first time since 1914.

These actions, Barrons charges, will stunt the growth of banks, retard their technological progress, entrench local monopolies, and inflate the cost of lending and borrowing.

WHAT—NO GROWTH?

Them's serious charges, pardner.

It is as though there has been no growth on the part of American banks, and those stunted multibillion dollar unit banks in Chicago, and the citywide branched banks in New York with their multibillion assets, are just dying on the vine.

It is as though there is no competition except where some down-river banks spread their branches far and wide.

It is as though the whole progress made by the United States under its system of thousands of independent banks somehow lacks luster in comparison with the progress made by those great countries like England, France, Italy, Spain, and other lands where branch banking, directed from a few central cities, has been the historic pattern of banking service.

It is as though borrowers in the smaller cities and towns of the United States were being gouged by their local bankers, as though all that is necessary to save them is for them to surrender their local financial independence to the far-away management of some branch banking system.

The charge is also made that small banks cannot equip themselves for the new electronic age in accounting. According to a recent Barrons estimate hardly 500 of the 14,000 banks in the United States can equip themselves with today's computers. Thus,

preserving smallness for its own sake delays technological advances that would enhance efficiency and lower costs. Of today's computers, this is undoubtedly true. Of tomorrow's computers, simplified, standardized, and miniaturized, it will not be true, and solutions can even be found for interbank cooperation in the use of more expensive machines.

The conclusion drawn by Barrons from the unwillingness of the legislators to write the death knell of unit banking, and the tendency of some authorities to suspect that branch banking may lead to worse monopoly situations than may exist under unit banking, is that all these struggles between the savings banks, commercial banks, savings and loan associations, have "thrust politics into the market place," and that this is bad. It has resulted in an "artificial barrier to expansion" of the New York City banks, and "harmed the smaller institutions" which may be ready to sell out to the city banks. And then it cites "the wider damage done to the system as a whole by freezing the status quo."

REFERS TO LONG ISLAND

Getting down to cases, the Barrons editorial charges that branch banking in Long Island has given control of two-thirds of one county's banking to two banks (if that is bad why give possible control of them to Wall Street banks?) and that failure to enlarge the New York City banking district has "deprived the Long Islanders of local banking conveniences and services they want and forced them to pay more than necessary for some they do get" (which seems to belie the argument previously voiced that branch banking brings lower costs to the public).

The net of the Barrons editorial is that "in this jet age, the United States hardly can continue to plod along with horse-and-buggy laws," and "neither legislatures nor courts should try to decree which bank ought to grow and which should be hobbled. * * * The basic decisions as to how to compete most effectively for the favor of customers should be left to those in the executive suite."

Such is the argument for the unlimited expansion of branch banking in the United States.

It would apply just as aptly to the concept that all U.S. banks should be branches of a few big ones located in New York City, Chicago, or San Francisco. It ignores the fact that it was not politics that defeated the New York State omnibus bill for enlarging the branch banking districts, but the determined effort of people who believe that unit banking contributed sufficiently to the national growth to have a right to be heard against the arguments of the branch banking proponents.

Self-Financing Bill Maintains Congressional Control Over TVA

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. EVINS. Mr. Speaker, as we all know, H.R. 3460, the TVA self-financing bill, will soon reach the floor for consideration.

In order to clear up some misunderstandings regarding congressional control, I am inserting in the Appendix of the RECORD, under unanimous consent, an analysis of the effect that H.R. 3460 will have on congressional control over the TVA.

Mr. Speaker, I have examined this matter carefully. I have studied the analysis of the bill made by both the proponents and opponents. I believe it is clear that this bill does not reduce congressional control but increases control over the TVA.

Let me make clear at the outset that in this matter of congressional control there is one very great difference between the TVA and most of the other Government corporations covered by the Government Corporation Control Act. Unlike most of the other corporations, the TVA comes to the Congress each year for appropriations for its nonpower program. It will continue to do so even after the passage of this bill.

As a member of the Subcommittee on Appropriations that hears the TVA budget requests each year—I want to report that over the years during which I had had the distinction of serving on this committee I have observed and can testify that the TVA has been subject to more intensive, grueling and close budgetary scrutiny than perhaps any other agency of our Government.

With that in view, let us see what this bill provides in the way of congressional control.

First. This bill does not exempt the TVA from any of the budgetary procedures normally applicable to Government corporations.

Second. The TVA would still submit to the President and the President would still submit to the Congress not only TVA requirements for appropriations, but also TVA's budget for its power operations.

Third. Thus, when reviewing the appropriation budget of the TVA, the Congress would continue in the future as it has in the past to look over the corporate budget and the budgets for its power operations.

Fourth. I can assure you that in this Appropriations Subcommittee the members of the subcommittee look over the power budget very carefully and I can assure you that if ever the TVA should propose to do anything in regard to its power program that required action by Congress, that fact would be called to the attention of the Congress in the hearings of the Appropriations Committee and during the consideration of the appropriations bill on the floor.

Fifth. TVA will be required to include a detailed statement of its revenue bond financing operations in each of its annual reports to the Congress. That report would also be available for review by the Appropriations Committee and other committees of the House.

Sixth. Furthermore, the General Accounting Office would continue to audit all of TVA's operations, including those under the bond program and to file an annual report of such audits with the Congress. This, too, would be available to the Appropriations Committee and other committees of the House, as well as to the membership as a whole.

Seventh. In addition, TVA could not begin construction of any new power producing projects—whether it was to be financed from bond proceeds or power revenues—until Congress and the President were notified of its plans and 90 days of a single session elapsed without passage of a concurrent resolution disapproving the project.

Eighth. Finally, this bill authorizes the TVA to issue only up to a total of $750 million worth of bonds outstanding at any time. This will call for an early and orderly review of TVA operations under this bond authorization. And the Congress will have the opportunity to review this whole program and make any changes it finds desirable.

Ninth. I should like to recall also that TVA is completely a creature of the Congress. The Congress may at any time repeal the TVA Act or make any changes it desires to make in that act. As a matter of fact, that is precisely what we are about to do this week.

Tenth. Finally, I might remind my colleagues that there is one other aspect in which the Congress exercises far greater control over the TVA than it does over any other government agency to my knowledge. I refer to the fact that the Congress may remove any director or all of the directors of the TVA at any time by a joint concurrent resolution. This is provided in the TVA Act.

So, Mr. Speaker, this is ample control. I cannot see how any reasonable person could say that the TVA is not properly under the control of the Congress. All these controls give to the Congress the power to formulate the policies of the TVA, but they grant to the board of directors of the TVA the power of decision over the purely detailed business operations which any corporation, performing a business function, must have to operate efficiently and economically. I am very much afraid that those who propose more stringent control are far more interested in hindering and hampering the TVA then in preserving proper controls by the Congress.

The fact is that those who are criticizing the lack of control by the Congress are really objecting to the fact that this bill does not give the Budget Bureau and the Secretary of the Treasury complete control over the TVA.

I might point out that the history of the TVA legislation all along the line from the beginning makes clear that it has always been the intent of Congress to maintain the independence of the TVA from the executive branch—so that it would be removed from politics and political considerations.

It is alleged for example that this legislation would exempt the TVA from operations of the Government Corporations Control Act. A careful reading of the legislation and of the Government Corporations Control Act makes clear, as the report of the Public Works Committee develops, that the TVA will receive precisely the same treatment under the Government-Corporations Control Act as other Government corporations that have the same authority to sell bonds to the public. For example, the Government Corporations Control Act does provide that the Secretary of the Treasury will have control over bonds issued by

Government corporations which sell the bonds directly to the Treasury or which are guaranteed by the United States—but it exempts from Treasury control the bonds of other Federal corporations which are not guaranteed by the Federal Government and sold to the public. The bonds of the TVA will not be guaranteed by the Federal Government and they will be sold to the general public. They, thus, fall into the same category as the bonds of the Federal intermediate credit banks, Federal land banks, and the banks for cooperatives, which are all exempt from control.

I believe we all agree that Government corporations should all be treated the same way depending on their functions and responsibilities. This bill provides that the TVA will advise and consult the Secretary of the Treasury before issuing any bonds. By doing this and giving the Treasury adequate control over the timing of TVA bond issues, this bill actually gives the Treasury more control over the TVA bonds than it now exercises over the bond issues of other Federal corporations.

In this connection, I might point out that our colleague, Mr. AUCHINCLOSS, made a very significant comment during the hearings. Mr. AUCHINCLOSS, as we all know, has had some experience in the financial world and during these last hearings on this legislation he said:

> It would appear to me that if the Secretary of the Treasury does not give his approval to the offer of these bonds, it would be very difficult to sell them. For instance, if these bonds were to be issued, and the Secretary of the Treasury asked for a deferral for 45 days for certain reasons, and those reasons were not acceptable to the Corporation, I think the Corporation would have a great deal of difficulty in marketing the bonds with the Treasury Department's objection still standing.

And I further quote:

> Do you think that the general public would buy these bonds, if there were an outstanding objection on the part of the Treasury Department with regard to them?

In other words, Mr. AUCHINCLOSS points out that whatever is or is not written in any bill, if the Secretary of the Treasury announced publicly that he did not approve of some bonds offered by some Government corporation, it is very unlikely that there would be a market for such bonds. In view of this, there is no necessity to give the Secretary of the Treasury power that he does not need. Our history makes plain that if we give somebody the power to do something—and in this instance we would be giving the Secretary of the Treasury the power to intervene and even veto the plans of the TVA—that power eventually wil be used, and probably used contrary to the policy of Congress.

If we in the Congress want to maintain control of the TVA it would be highly inconsistent to give control to the Secretary of the Treasury who has no knowledge of the problems of the TVA. The bill maintains and insures, not Budget Bureau, but congressional control.

What's Behind the Smear on the FBI?

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 5, 1959

Mr. MUNDT. Mr. President, the battle against the Communist conspiracy is a struggle which is carried on continually, day and night, throughout the four corners of the world.

Contributing immeasurably to the efforts being made to meet the challenge of the Kremlin leaders is the vigilant, determined program of the Federal Bureau of Investigation, headed by J. Edgar Hoover, one of this Nation's great patriots.

It is not unusual, therefore, to find that this great investigative agency is subject to the harassment and attack of the Communists. The Communists know that the FBI has been in the forefront in protecting the security of this Nation.

A valuable contribution to understanding some of the attacks on the FBI is contained in an article "What's Behind the Smear on the FBI?" carried in the May issue of the Columbia magazine.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S BEHIND THE SMEAR ON THE FBI?

(By James C. G. Conniff)

Like most Americans, you probably sleep better just knowing we have an FBI. It is a 50-year-old Federal instrumentality which is responsible to the President, the Attorney General, the Congress, the Bureau of the Budget and, ultimately, to the courts and press of a free Nation governed by law. It protects us against enemy agents, kidnapers, white slavers, bank robbers and such, in more than 140 different crime categories. It does all this through a field force of over 6,000 brave, quiet individuals known popularly as G-men. Everyone is proudly aware that their Director is a legendary figure named J. Edgar Hoover.

Everyone is aware but, for the umpteenth time in FBI history, all of a sudden it seems that not everyone is as proud of our G-men and the job they do as you might reasonably expect a law-abiding patriot to be. There is a decidedly vocal segment of our citizenry that feels very much other than proud of Hoover and the FBI, as a matter of fact, and it has lately been reinvigorated to say so. Almost as if somebody threw a switch and a recording began to play, John Edgar Hoover and his G-men are anything but popular with this wedge of robots, and their tape-recorded braying has only one purpose: to delude the rest of the country, if it will hold still for the gas pipe, into believing that it is not the criminals they pursue who pose the gravest threat to our freedom and safety, but the Honorable J. Edgar Hoover and his special agents of the FBI.

For almost a year now, these practitioners of the durable pastime of FBI-baiting have been at their vicious sport with unmatched virulence. By lie, halftruth and innuendo they have tried with mounting vigor to undermine and besmirch the accomplishments, not to mention the motives, of our Justice Department's high-principled, disciplined investigative arm. What's more, they have launched their attack in precisely those areas where long ago J. Edgar Hoover decided his Federal Bureau of Investigation should excel: Fidelity, Bravery, Integrity.

That is the motto the letters FBI spell out on the Bureau's blue and gold shield. That is the code under which its people consistently operate. Yet in the past twelvemonth those keystones of human decency and sound democracy have been zeroed in on with unprecedented malice. Dazed and angered, the average loyal American has only one question: Why?

Make no mistake, there is only one answer: Moscow wants it that way.

The latest smear campaign against our FBI got off to a smashing good start on May 4, 1958, with a televised Mike Wallace interview of 74-year-old multi-millionaire Cleveland industrialist Cyrus S. Eaton. This Eaton is the same longtime friend of the Soviet Union who this past winter played host to the Kremlin's murdering road-agent Mikoyan and through him happily accepted a gift of Trojan horses from Khrushchev.

Said sly Cy in part to Mike Wallace, "I always worry when I see a nation feel that it is coming to greatness through the activities of its policemen. And the FBI is just one of the scores of agencies in the United States engaged in investigating, in snooping, in informing, in creeping up on people. This has gone to an extent that is very alarming."

When Wallace asked him what about convictions won on FBI evidence against "Alger Hiss, atom spies Julius and Ethel Rosenberg, Harry Gold and David Greenglass, as well as Russian spy Rudolf Abel," Eaton deftly sidestepped. Before millions of televiewers he continued to harp on his "worry" and his "alarm," not about commie-lovers and Red spies, but about American security measures. In arrogant disregard of the facts, this accommodator of Soviet objectives maintained that internal security practices among us have been carried to such extremes that "we have even praised the FBI for violating the rights of free men."

In this country, by due process of law, free men are publicly proved to have abdicated certain aspects of their personal liberty when they conspire actively to destroy freedom for all men. However, that is a consideration of logic which will never budge the likes of Cyrus Eaton an inch from monomaniacal certainty that no matter what the evidence to the contrary, Russians don't play dirty pool but, in prudently helping them avoid temptation, we do.

The old tycoon, who can spot a dollar anytime at the end of a maze of holding companies or commissars but can't smell a rotten political campaign for world conquest when it is under his hooked nose, stubbornly insisted to Wallace that "Hitler in his prime, through the Gestapo, never had any such extensive spy organizations as we have in this country today."

You can read most of the relevant excerpts from this perilous farce in a two-page leaflet titled "Is Criticism of the FBI Un-American Activity?" There are also reprints of some bend-over-backward editorial comment when Eaton thereupon conferred with the House Un-American Activities Committee to kind of clarify, if clarification were needed, his political sympathies. But the really interesting bit is on the back page. Under the tip-off title "You and the FBI," it is a seven-paragraph manual of instruction, piously pegged to the Bill of Rights, on passive resistance to lawful authority—specifically when, as the FBI must, it is trying to do its job of guarding our internal security.

Where can you get this interesting leaflet? From the Emergency Civil Liberties Commit-

tee, as I did. And what is this outfit with the frightening oompah of crisis in its name? By a 1956 definition of our Senate Judiciary Committee's Internal Security Subcommittee, it is nothing but a Communist front. The definition is worth quoting for the light it throws on this lethal shenanigan of our would-be Red destroyers:

"To defend the cases of Communist lawbreakers, fronts have been devised making special appeals in behalf of civil liberties and reaching out far beyond the confines of the Communist Party itself. Among these organizations are the * * * Emergency Civil Liberties Committee. When the Communist Party itself is under fire these fronts offer a bulwark of protection."

These fronts do more than that. They aggressively perpetuate and reinforce in print lying solemnities like Cyrus Eaton's phoney concern for our freedoms, and thereby do a service to the Soviets in misleading many who were lucky enough to miss the original cloud of Red ink squirted on their TV screens by this guileful old cuttlefish-pawn.

These fronts also have organized help. And not just from deluded industrialists like Eaton, who followed up his FBI blast to let himself be quoted in the Cleveland Plain Dealer for October 8, 1958, as blaming world tension and mistrust of Russia on "the misconception of the people of the United States about the Soviet Union, its people, resources, and present government," and claiming to believe of the Red leader who has threatened to bury us, "I am confident that in Khruhchev we have a man with whom we could deal."

In the recently snowballing Red campaign to sandbag the FBI from behind by ruthless distortion of the facts, the Communist fronts are being massively aided and abetted by publications like the Nation. This is a liberal magazine and cannot accurately be described as Communist. But the California Senate Factfinding Committee on Un-American Activities puts its finger on the crux of the problem as long ago as 1949 when it pointed out that periodicals like the Nation have over the years become so infiltrated with the Communist Party policy that they serve the interest of the Communists and confuse liberals on many issues, much more than do some of the Communist publications.

The editors of the Nation proved this resoundingly with their October 18, 1958, issue. They devoted its entire 58 pages to an alleged objective appraisal of Mr. Hoover and his Bureau smeared soberly on the cover in black as "The FBI by Fred J. Cook" and hooked artfully into Cyrus Eaton's constitutional right to attack the FBI on TV. The article is a dull, spuriously learned rehash of misrepresentations and doubletalk about the FBI since its inception, a hack-and-hatchet job which has been magnificently exposed and cut to ribbons, point by untruthful point, in the crackling prose of straight-talking journalists like George E. Sokolsky, Edward J. Mowery and Westbrook Pegler.

Fred Cook, the Nation's hireling for this vicious attack is a New York World-Telegram and Sun rewrite man who has lately been playing closer and closer footsy with the Nation and its Moscow orientation. Any good newspaperman will check his facts with the source but for his smear job on the FBI—as you might expect—Fred Cook never went near the Bureau. Unhappily, young people reading the October 18, 1958, issue of the Nation in college libraries will have no way of knowing that.

Our tax-exempt Fund for the Republic might face up to its vaunted patriotic purposes by airing the truth about the FBI among those same young people, however, since it did not boggle at taking a full column advertisement in the issue of the Nation which smeared it. The only other ads were a second column of eight squibs, one a plug for articles of Communist Party interest in Political Affairs.

The anti-FBI barrage continued with increasing savagery via a six-part series which began early in December 1958, in the Militant—official weekly publication of the Socialist Workers' Party—and ran through mid-February 1959. A sampling of titles ("J. Edgar Hoover, Chief of Thought-Police," "FBI's Files 75 Million Under Watch," "J. Edgar Hoover's Flock of Stool Pigeons," "The FBI Is Persecuted") will give some faint idea of the devotional tone adopted by writer Henry Gitano.

Before this issue of Columbia sees daylight the New York Post may have begun the multi-part series of articles in which it has been promising/threatening for months to present a "balanced report" on Hoover and the FBI. How "balanced" this continuation of the all-out smear attack on the FBI will be may be inferred from the fact that reliable sources have disclosed the existence of "Operation Gumshoe," a Post reportorial device for unearthing dirt about the boss G-man and his Bureau, and nothing but dirt. Under FBI-hating Post Editor James A. Wechsler, this series is expected to be the most corrosive set of lies ever put together. Among people who don't know the facts, it may conceivably have more harmful results than just boosting Post circulation.

What are the facts? Are they facts only because the FBI says they are? Is the FBI a snooper outfit spending our tax money as it pleases to "creep up on" loyal, law-abiding Americans? Does its Director actually run a national thought police-trained and deployed strategically to take over this country the minute a dictator-minded strong man enters the White House? Are the FBI and its corps of special agents a steadily mushrooming menace to civil rights? Should you, as a good citizen, do all in your power to thwart FBI men when they approach you for legitimate information? Are you, indeed, an informer when you go to the FBI with well-founded suspicions, observations or facts about threats or actions inimical to civil rights or national security?

For this writer, who in years past has been privileged more than once to report on the inner workings of the FBI and the performance of its Director, the American answers to these questions are as familiar as the workings of his own conscience and as reassuring as sunrise. When, therefore, the G-men and Mr. Hoover become victims once again of the old Red-inspired squeeze play in a small but potentially subversive fragment of our free press, when they are given a hard time because they have done well their job of keeping the pressure on those who would betray this Nation, it is a great satisfaction to expose the Kremlin's lying mouthpieces by telling the truth about the FBI.

Perhaps the first thing to get clear about the FBI is the kind of assignment it has. It is exclusively an investigative agency for the Department of Justice. It goes after the facts—all the facts and only the facts. When it has them, it neither evaluates them nor makes recommendations for or against prosecution. It simply turns them over to the Department of Justice. Whether they warrant presentation to a Federal grand jury is then up to the Attorney General of the United States, and not Hoover.

The type of investigation the FBI conducts will also allay fears that our Constitution is in danger of being dumped by a Gestapo boss and his goons. Since J. Edgar Hoover began in 1924 to shape the FBI into a precision tool for a highly specialized task within the checks and balances of constitutional democracy, there has never been an FBI investigation of the "shotgun" or all-embracing variety in which many innocent people are clobbered in hopes of nailing one or more guilty parties. Each FBI investigation is painstakingly concentrated on an individual against whom some charge has been made serious enough to bring him within FBI investigative jurisdiction. No matter what the dupes and fellow travelers of the Communist Party and its fronts may allege to the contrary, therefore, the FBI is not free to snoop at random. Its special agents may not drop in on you to brighten a dull afternoon with probing questions about your own or your neighbors' private affairs. By law, FBI men may not go among their fellow citizens to "fish" for information unless they are specifically authorized to do so.

Furthermore, J. Edgar Hoover keeps exceedingly close tabs on where each one of his 6,000-plus special agents is or should be at any given time. Through a lightning-fast, rigidly organized chain of command, he can contact anybody in the Bureau whenever the need arises. So if, hypothetically, some fellows claiming to be FBI men are grilling you or roughing you up somewhere, be sure of these few facts: (1) if they're really special agents of the FBI, you will have been shown and allowed to identify their credentials: a card with picture, signature and Bureau seal, and/or a leathercased badge; (2) in which case, a letter, telegram or telephone call to J. Edgar Hoover personally, citing time, names, and circumstances, will get immediate action.

The reason for such close supervision and stern sanctions is that Hoover is well aware how flawless in fact and reputation the FBI must be at all times if it is going to succeed in its delicate but crucial assignment. Hence he sees to it that the training of agents, chosen in a ratio of the best 1 out of 100 topflight applicants, bears down heavily on courtesy, nonviolence and tact. Word of an FBI man's having roughed up a citizen, therefore, would demand and get investigation without delay. It is significant that no such charge has ever been validated on being looked into—and as Hoover points out, you can be sure that if this were a cover-up pattern of the FBI in its own interests, sometime, somewhere, somebody would have gotten the facts to the newspapers and/or the courts and successfully hobbled or caused the disbanding of what would then certainly seem to have become the nucleus of a conscienceless, musclebound Gestapo.

But Hoover's training program goes further than just teaching agents to keep their hands off law-abiding citizens. It even goes beyond the deep-seated ritual courtesy of every special agent. An FBI man is carefully trained not only in the techniques of effective investigation, but also—particularly in loyalty checks for people seeking sensitive Government jobs—he is schooled in phrasing his questions so that by no possible misinterpretation could the person answering get any idea that the man or woman under discussion is not a loyal American citizen. The protection of the individual's good name is one of J. Edgar Hoover's chief concerns. It ties in closely with his constant hammering on two basic facts about the FBI: (1) It must fulfill its duty to protect our internal security at all costs except (2) the cost of the individual citizen's civil liberties.

Hoover has consistently maintained that civil liberties and law enforcement are coextensive manifestations of the government by law, not by men, which our Constitution provides. "Law enforcement," he will tell you, "is a protecting arm of civil liberties." The FBI Director conceives that by enforcing the law, the policeman and the courts join hands to make meaningful the rights guaranteed in our statutes.

To make sure that this fundamental American outlook is part of every special agent's equipment, Hoover sees to it that in the 13-week training period his men undergo they receive intensive instruction in Constitutional law and the Bill of Rights, among other things, and that they study Federal criminal procedure, the law on searches and seizures, interviews and confessions, and above all the moral and ethical reasons behind the need to protect without exception the rights of the individual. The rules of evidence are also gone into thoroughly, along with laws governing matters over which the FBI has been given jurisdiction by Presidential directive, Act of Congress, or ruling of the Attorney General.

One of many ways in which lawful authority insures that the FBI practices its own preaching is control over the wiretap. The smear-alarmists would like you to think FBI men can listen in on a phone conversation at will. Actually, each and every use of a wiretap must be authorized in writing by the Attorney General.

Among the many truths about the FBI's concern for civil rights which Communist fronts like the Emergency Civil Liberties Committee will not share with you is the way it conducts special civil rights schools for those special agents who deal with civil rights cases. The Bureau regards these cases as of the greatest importance. A special Civil Rights Section at the FBI's Washington headquarters supervises the extensive field work involved, the interviewing of often hostile witnesses, and even the accumulation of evidence against law enforcement officials who may at other times have worked hand in hand with the FBI.

For J. Edgar Hoover the matter of civil rights is so vital that he is and always has been an outspoken foe of anything like a national police force. Especially in times of emergency, highly placed men in our Government have urged this measure to protect our security. Even when they have offered to let him handle such a police force the way he's run the FBI, Hoover has always opposed them because he feels that that is indeed the beginning of a police state.

Instead, he has developed, since 1935, the FBI National Academy to share FBI criminology and investigative know-how with local law enforcement officers throughout the Nation, and to train them as police administrators and instructors. With two sessions a year, the National Academy now has some 3,500 alumni. These have returned home to share their new knowledge with brother officers who chose them to attend. Says J. Edgar Hoover, "We estimate that over 100,000 local law enforcement officers have benefited, directly or indirectly, from the National Academy." To Communist troublemakers who try to undermine our whole law enforcement setup by claiming that the FBI is a glory-grabbing outfit hated by local police departments, the good relations and improved police work brought about by the National Academy are an effective rebuttal.

To prove innocence as well as to determine guilt is behind everything the FBI does. More than one suspect has been exonerated by an FBI Laboratory or fingerprint check, and oftener than they realize, on the local level, citizens can be thankful their police have studied at the National Academy such subjects as "Ethics in Law Enforcement," "Laws of Arrests, Searches, and Seizures," "Rules of Evidence," and "The Constitution and the Bill of Rights."

Smears by the Kremlin's playthings notwithstanding, our FBI is remarkable among 18 Federal investigative agencies (revenue, postal, narcotics, immigration, etc.) for having walked the tightrope of its internal security assignment not only without infringing civil liberties but even at a financial profit. The economy-minded FBI drives its fleet of 3,000-odd cars 6 years or 60,000 miles each, for example, and while this year its budget is a record $102,500,000 chunk of the roughly $1 billion it has cost us since J. Edgar Hoover became Director in 1924, the Bureau's work in that time has brought into the Treasury over $1½ billion in fines, savings on cases that did not have to go to court because FBI evidence was so airtight, and recoveries of funds. Little items like the FBI's 96 percent-plus conviction record, in other words, have in the last 35 years made for us taxpayers over half a billion dollars more than the FBI cost us.

But that is not why robots like Cyrus Eaton, Fred Cook, Henry Gitano, and James A. Wechsler are hurting like blazes to get Hoover and disperse our principal means of keeping track of the borers-from-within. They hate him and the FBI because he will not stoop to their methods, will not utilize illegal means even to protect our free institutions, but continues to insist that we can do the job within the orderly framework of our American system of government. How? In two ways: (1) by seeing to it that without hindering its work we keep the FBI under control through annual reviews of its performance by the Congress, the Bureau of the Budget, and the Attorney General, as well as through direct supervision by the executive and the judiciary, and (2) by recognizing that since loyalty is mainly a moral rather than a legal obligation, every citizen has the moral duty not to hold back from duly constituted authority factual information about activities or threatened activities which menace the peace and security of us all. "Especially," says J. Edgar Hoover, "where his information pertains to national security."

Hoover's greatest disappointment, I learned on a recent trip to Washington, is the apathy of the American people to the extent and power of Communist infiltration among us. We are doing so much to combat the Reds overseas, he feels, but so little to balk their progress here at home. On the other hand, the FBI Director is thankful there are so many patriotic organizations, like the Knights of Columbus and the American Legion, that are trying to fight the good fight, no matter how much they too are hooted at.

The resistance and indifference which militant patriots run into may be dissipated somewhat, Hoover thinks, by this quiet peek at the facts about an old favorite among complaints by the smear artists. It involves the charge that the FBI may take us over without warning, in spite of there being only 1 special agent for every 29,000 Americans.

For every special agent of the FBI, however, a recent count shows there are at least 5 Communist Party members in the United States, and an estimated 50 fellow travelers. How about that, Cyrus? Fred? Henry? Get rid of Hoover and the FBI and who do you think will be taking over who?

Reclamation and Development of the New Jersey Meadowlands

EXTENSION OF REMARKS
OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony which I gave before the House Appropriations Committee, Subcommittee on Public Works, requesting funds for New Jersey's meadowlands, May 1, 1959:

The refrain from George M. Cohan's old song made a great point in being only "45 minutes from Broadway." Broadway points up the fact that New York City is perhaps the world's most expensive piece of real estate. The heart of the New Jersey Meadowlands is not 45 minutes from Broadway, it is but 5 minutes away.

This close to the world's largest city lie upwards of 35,000 acres of barren swamps that challenge the imagination of city and industrial planners and engineers who see in these wasted acres, land upon which could be built great industrial and transportation facilities which are needed for the future development of metropolitan New York as the world's greatest manufacturing and shipping city.

Indeed, the challenge has captured the imagination of some of our youthful student engineers, several of whom have developed plans in which they envision beautiful and extensive residential housing standing on reclaimed meadowlands. One such student has fully developed comprehensive plans for construction of vast apartments which would house some 600,000 people. Imagine what relief such a project would bring to the desperately overcrowded residents of New York City.

The Port of New York Authority is aware of the great potential of the meadowlands and they have appropriated large sums for piecemeal reclamation of certain areas. But their entire planning considers eventual development of only a very small portion of this total of wasted acres.

This tremendous area of swamp, surrounded by some of the world's most valuable real estate is a huge cancer in the world's greatest shipping and industrial area. It is a vast tract sodden with raw sewage, this garbage and refuse of the cities, which produces nothing for man, but a few bales of salt grass.

The reclamation of this tract, which extends for some 20 miles or more and is from 2 to 8 miles wide would provide a badly needed backup area for the operation of the great port of New York, including the hundreds of piers on both sides of the Hudson River and, the waterfront shipping and industrial plants as far south as Elizabeth, N.J.

The full reclamation of this wasted meadowlands, or reclamation of even a substantial portion is too staggering a project for any group of interested municipalities, counties or the State of New Jersey. All of the communities bordering on the meadowlands and Bergen and Hudson Counties, however, have made joint studies reaching back many years.

Reclamation and development of any sizable portion of the New Jersey meadow is too great an undertaking for even the big Port of New York Authority. The leadership is so vast and challenging, an undertaking must come from the Federal Government, and this is just, considering that the benefits that would be derived would accrue not alone to the communities in the area and business and industry of New York, but would benefit the commercial and industrial development of the entire eastern seaboard.

The metropolitan area of New York and New Jersey has long suffered while great attention has been given to the other areas of our Nation. Down through the years the amount of Federal assistance for this area has been one of inverse proportion to the amount of Federal taxes paid. The higher the Federal contribution from the metropolitan area has been, so inversely has the amount of Federal assistance decreased in this area.

The area that I represent has long been considered a distressed labor district.

Reclaiming the New Jersey meadowlands would completely revitalize New Jersey. It

would create thousands of jobs, reduce local taxes by creating new rateables. It would greatly increase Federal income by stimulating our entire economy in this area.

I sincerely feel that no investment by the Federal Government could reap greater returns from the Federal Government and the people of the metropolitan area.

Once the reclamation is a reality there would be a thousand-fold return to the Federal Government for every dollar that went into making it possible.

I am sure the committee is aware that although substantial public funds are required t oget a full-scale reclamation and development project underway, there would follow tremendous private investments in the building of the great industrial plants, storage facilities, and shipping terminals—and even the vast residential apartments which our young and inspired student engineers envision.

The whole idea of reclaiming this vast tract of swamp and making of it a useful and productive area is too vast a project to be discussed before this learned committee in any detail. The possibilities are almost beyond the imagination of man.

I urge the distinguished members of this committee to favorably consider the proposal that there be included in the fiscal year 1960 appropriations bill funds to get started an engineering study that will lead to the realization of a full reclamation and development of the New Jersey meadowlands.

Mr. Chairman, I would like to make as part of my testimony, the attached letter from the Assistant Chief of Engineers for Civil Works of the Department of the Army.

I wish to express my thanks to you, Mr. Chairman, and to the other members of this committee for the privilege of presenting my views.

What's Fair About It?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the March 23, 1959, edition of the Pittsburgh (Pa.) Post.

That editorial describes fair trade as price fixing, not in the public interest and as being inconsistent with the enterprise and is contrary to the public policy expressed by Congress in the antitrust laws since 1890.

WHAT'S FAIR ABOUT IT?

New efforts to enact legislation to permit manufacturers of branded products to fix retail prices began last week in Washington. We hope they will be brief and unsuccessful.

Congress began hearings on a national so-called fair trade bill which would operate everywhere, without regard to State laws and without the approval of distributors. It would permit manufacturers to set prices below which their products might not be retailed.

That might be considered fair to certain retail merchants who fear competition, but it isn't fair to 175 million consumers who would be put at the mercy of a market rigged a la European cartel.

This country has been fooling around with fair trade laws since several States enacted them in the depression 1930's. In order to keep those laws from conflicting with Federal antitrust regulations, Congress in 1937 passed the Miller-Tydings Act which said, in effect, that the fair trade laws were exempt from antitrust provisions. Thus encouraged, retailers obtained such laws in 45 States by 1950.

But the Supreme Court held in 1951 that retailers who did not sign pricing agreements with manufacturers could not be forced to charge specific retail prices. Thus the Miller-Tydings exemption did not apply to nonsigners. Then came the McGuire Act of 1952, which legalized contracts specifying both minimum and maximum prices. It also authorized States, under their fair trade laws, to make the fixed prices binding on wholesalers and retailers who did not sign contracts with manufacturers.

Since 1952, however, courts in Hawaii, Puerto Rico, and 15 States have declared the nonsigner provisions of fair trade laws unconstitutional. Several big manufacturers, recognizing the trend, abandoned fair trade practices.

We must say that we agree wholly with the Federal Trade Commission and the Department of Justice in their opposition to fair trade laws. Chairman John Gwynne of the FTC has summed up the issue neatly in this language:

"The fixing of retail prices is inconsistent with the American system of free competitive enterprise and is contrary to public policy expressed by Congress in the antitrust laws since 1890."

Manufacturers should be free to charge whatever the trade will bear for their products. But they have no business telling retail merchants what they, in turn, should charge. That destroys initiative and undermines the competitive system which is the foundation of a free American economy.

If Congress has faith in the free enterprise system, it will reject fair trade legislation.

The Rule of Law—America's Contribution

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks I include in the RECORD an address by the distinguished gentleman from Ohio, the Honorable FRANK T. BOW, delivered before the Stark County Bar Association, Canton, Ohio, on the occasion of Law Day, USA, May 1, 1959. Mr. Bow, an eminent attorney in his own right, is superbly qualified by training and by his fundamental concept of the relation of the law to the individual to speak with authority on his topic, "The Rule of Law—America's Contribution." The address follows:

THE RULE OF LAW—AMERICA'S CONTRIBUTION

(Address of Hon. FRANK T. BOW, Member of Congress, 16th District, Ohio, before the Stark County Bar Association, Canton, Ohio, Law Day, USA, May 1, 1959)

One of the most significant and hopeful developments of recent times is the increasing interest everywhere in the development of the rule of law as opposed to the rule of force in the world.

In observing Law Day, USA, we are taking a leading role in this development and today I want to speak of the significance of Law Day, USA, in a broader sense than its impact upon the people of our Nation. I ask you to think with me about the impact of this tribute by Americans to the rule of law upon the people of the world.

I sincerely believe that Law Day, USA, has helped create a new public image of the United States of America in the minds of many people in other nations. In a day when military victory has been rendered an obsolete concept, our national security depends as much upon winning and keeping friends in other nations as it does upon weapons. Law Day, USA, has won us friends by focusing worldwide attention upon the foundation of our greatness—the rule of law.

Ideas, ideals, and moral standards are all important in our all-out contest with communism for survival in this shrunken world. Law Day, USA, has made many in other countries realize that underneath our economic and social progress, and primarily responsible for that progress, is a way of life which only the rule of law can guarantee.

Law Day, USA, spotlights liberty, equality and justice as our most precious possessions. These are ideals which all men cherish. But before Law Day, USA, their meaning to Americans, and the part they play in our daily lives, were never made clear to those of other lands who looked at the surface, or end results, rather than the underlying basis of our system.

In the world of ideas, perhaps the most significant development of our time is a gradually evolving reliance upon the rule of law as a major weapon to defeat the evils of communism. At first blush this may appear to be an overambitious goal for the rule of law. But let us think it through together.

The rule of law is the antithesis of communism. It recognizes that men have rights as individuals and that both the individual and the Government are subject to the law. The rule of law means order, stability and the greatest possible degree of human freedom. Communism, on the other hand, enthrones society rather than the individual. Under communism in practice the state is all-powerful. Communism by its very nature creates and thrives upon constant conflict, turmoil, fear and a lack of individual freedom. Where the rule of law prevails, freedom of man exists. Where communism prevails, freedom of man is nonexistent.

The challenge to act lawfully is one of the most potent we can throw at the Kremlin. In his famous speech to the 20th Congress of the Soviet Communist Party in 1956 Khrushchev spent 7 hours denouncing Stalin for violating Soviet law and promising that he—Khrushchev—would obey it. Seemingly Khrushchev feels a need for some obeisance to the idea of law and evidently he is sensitive to charges of illegality. One thing is certain, the Soviets have a profound desire to be considered a modern, enlightened, civilized, law-abiding nation.

Communism and our rule of law must be constantly contrasted. Law Day, USA, and the ideas, ideals, and programs it encompasses constitute one of the most meaningful ways of keeping that contrast before the eyes of the world.

While it has not occurred with the dramatic impact of an atomic explosion, or the blast-off of a satellite or an ICBM, one needs but to follow the record in recent months to see that President Eisenhower has made the worldwide rule of law the central core of our foreign policy. Since Law Day, USA, May 1, 1958, every major foreign policy statement of the President has contained a reference to the necessity of replacing the rule of terror with the rule of law in the world community. In his Law Day, USA, address he said:

"The world no longer has a choice between force and law; if civilization is to survive, it must choose the rule of law."

In his state of the Union message to the Congress in January 1959, he said:

"All peoples are sorely tired of the fear, destructions and the waste of war. As never before, the world knows the human and material costs of war and seeks to replace force with a genuine rule of law among nations."

In his broadcast on Berlin the President referred to the rule of law as a replacement for the rule of terror and said:

"Indeed, this is the peace policy which we are striving to carry out throughout the world. In that policy is found the world's best hope for peace."

On April 4, in his Gettysburg College speech the President said:

"Another fact, basic to the entire problem of peace and security, is that America and her friends do not want war. They seek to substitute the rule of law for the rule of force."

Not only President Eisenhower but other leaders of his administration have urged the same idea.

Secretary of State Dulles on January 31, in his last address before his unfortunate illness, said to the New York State Bar Association:

"In the swift flow of daily events it is easy to lose track of the broad strategy of our foreign policy. We seek peace, of course, but we seek it in what seems to us the only dependable way—the substitution of justice and law for force.

"This is a relatively recent concept and even today many do not accept it."

Vice President NIXON, in an outstanding address on the rule of law in world affairs to the Academy of Political Science, said:

"I am now convinced, and in this I reflect the steadfast purpose of the President, and the wholehearted support of the Secretary of State and the Attorney General, that the time has now come to take the initiative in the direction of establishment of the rule of law in the world to replace the rule of force."

There is also an ever-rising tide of support abroad. Prime Minister Nehru, Chancellor Adenauer, Chief Justice Tanaka of Japan and many of the other great men of the world have endorsed the rule of law as a peace policy for the free world.

We do not always realize that the eyes of the world are upon us constantly. Our pushbutton homes, our automobiles and gaudy gadgets are the envy of many who have yet to reach our economic status but desire it. We so-called rich Americans are not always pictured as people with deeply felt moral principles and ideals in the Hollywood movies, books and other export items which portray life in America. Portrayals in books, magazines and movies of gansters and high living in our country lose us friends. But now in Law Day, USA, we have moved to the center of the stage of public attention in our country a picture of what Americans believe in and the real substance our country is made of in the field of ideas and ideals. Thus through Law Day, USA, other peoples see us as we really are—a people deeply wedded to the highest ideals and principles ever adhered to by any nation since the dawn of civilization.

Despite contrary beliefs, the world largely runs on ideas and ideals. Nothing is as powerful as an idea—not even an atom. Especially is this true in our srunken world where rapid communications and transportation cause almost instantanteous contact between Akron and Accra, New Delhi and New Haven. The idea and ideal of a world operating under the rule of law is fast becoming more and more powerful as more and more people comprehend the potential of a lawful world.

The ever-rising trend of education in formerly underdeveloped nations contributes further to the importance of ideas in the current battle for the minds of men between the free world and the international Communist conspiracy. We have long espoused "freedom" and "justice" for man as the free world's promise. We must now espouse the rule of law as a constructive and creative means to achieve and maintain freedom and justice between nations as well as within nations.

The rule of law within a nation is made up of constitutions, statutes, customs which grow into legal rules, and the legal procedures and judicial tribunals by which all of these hundreds of legal rules are applied, interpreted, and enforced. In essence the rule of law means all of these; it means also what is fair and reasonable under the moral standards which have come down to us in the accumulated wisdom of the ages.

A new world is being born in this century. If it is to be a lawful world thoughtful men must make it so. It will not just happen. Who better than lawyers can realize and project the potential of law in the world community? We are a profession dedicated to public service. Certainly no greater public service can be rendered than developing the formula whereby law will replace weapons in the control of the fate of humanity.

While we of the free world speak many different languages and have many diverse forms of government, the rule of law is a universal idea and idea which all men have in common. By placing governments under law nationally we have brought about order and stability within our nations. We should now offer this great idea for adoption as a new standard of decency in international relations. There too it would, if applied, create order, stability, and peace by placing nations under law internationally.

Law Day, USA, has already had an incalculably significant impact upon the thinking of the people of the world. It has stretched the minds of lawyers and laymen to new possibilities and new approaches to a problem that has troubled man since the dawn of civilization—the establishment and maintenance of peace. We must make its effects this year both within and without our Nation even greater than last year.

Supremacy of the rule of law achieves and maintains freedom for man within nations. Supremacy of the rule of law can achieve and maintain freedom of man from the dread scourge of war.

Law Day, USA, spotlights what the rule of law can do for man if but put to work in the world community and thus renders a great service to our Nation and to the peoples of all nations. In this great program we lawyers have as our client civilization itself. And while our goal may seem ambitious it is certainly a goal which is not beyond the capacities of our client—the people we represent, if they but want it bad enough. Let us therefore work and strive to create that want through law days and in other ways so that the people will demand and get a world rule of law. A world in which law will grow so strong it will tower over fear and prevail throughout the entire world.

Some of my friends have expressed to me the fear that we may go too far too fast in this effort; that our zeal and enthusiasm may cause us to sacrifice basic principles of American freedom and sovereignty.

I recognize that danger and I think it is well that a word of caution be raised at this time. We do not want to, nor do we need to, fall into the pitfalls of the world federalists. Sovereign nations can develop the rule of law without sacrificing their individuality, and that must be our goal.

We lawyers must prove that law can succeed where other ideas have failed in man's age-old quest for a formula for peace. In the preparation, trial and presentation of this case we have a responsibility greater than we have faced in generations.

By training and tradition lawyers are leaders in public affairs. From time immemorial lawyers have performed the functions of leadership in the discussion and clarification of great public issues and programs. This we have done nationally, in States and in local communities. Here we must lift our eyes to encompass a greater area and a greater issue than any we have yet coped with in the past. We must do it because there is no other professional group which has the know-how, the training and the capacity to do the job that must be done. If there was ever lawyer's work this peace through law program is it. We cannot expect doctors, or dentists, or scientists, or any other professional group to assume leadership. Either we do it or it is not likely that this task will be done at all. That is and should be a most sobering thought for each one of us as we face up to the work required to build a "lawful" world.

Some say that peace through law in the courts is an idealistic dream which cannot be realized. But in doing so they deny the facts of history. America was built on idealism. Idealism burned fiercely in the breasts of Washington, Jefferson, Madison, and all of those other great forefathers of ours who founded our Nation as a government under the rule of law. They utilized law and the courts to make our rulers subject to the ruled. Such a plan was pure idealism when adopted, but it has worked. If we ever reach the stage when idealism is a curse rather than a virtue, our Nation will have lost the ingredient which has made it the greatest the world has ever known. Woodrow Wilson said: "The world is run by its ideals. Only the fool thinks otherwise."

No greater challenge exists in the world of our time than that of creating a formula to prevent a war no sane man could ever want. We of the law know the rule of law is such a formula. Creating a workable plan to make this formula a success is our challenge, our obligation, and our opportunity. We must stretch our minds to create the legal rules, the legal procedures, and the courts which will do this in the world community. We could make no greater contribution to justify our heritage and to fulfill our destiny than to have inscribed large in history that we gave the best we had to bring into being a world where all men can live under the rule of law and thereby walk in freedom, in dignity, and in peace.

Drain on U.S. Gold Cuts Hoard by $2.3 Billion

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. BERRY. Mr. Speaker, I have requested permission to extend my remarks for the reason that this Nation is drifting into a serious situation on gold, as is pointed out by Elmer Roessner in his article released by the McClure Newspaper Syndicate. He directs attention to the fact that American imports last year were $3 billion in excess of our exports. This is probably due to

the reciprocal trade program, and it has resulted in a reduction of more than $2 billion in our gold supply because of foreign demand for gold to compensate for the difference in trade balance.

Mr. Roessner's article is as follows:

DRAIN ON U.S. GOLD CUTS HOARD BY $2.3 BILLION

(By Elmer Roessner)

The drain on the U.S. gold hoard continues.

Between February 26, 1958, and April 22, 1959, a total of $2,291 million was withdrawn by foreign nations. That left us $20,409 million, the lowest holding since February 26, 1947.

How? And more importantly, why?

The "how" is easy. Foreign governments are entitled to get gold for their American credits. Foreign citizens can't get gold directly for their credits, but they can turn the credits over to governmental banks which can convert them to gold.

A French exporter, for example, may sell 400 small autos to an American distributor for $1 million. He turns the dollars over to a government bank, getting francs in exchange. The bank can get American gold for the million.

Foreign governments hold perhaps $8 billion of American credits now and foreign citizens hold slightly less than $7 billion. These consist of American currency, bonds, checks and deposits on American banks. Foreigners also hold several billion dollars worth of American securities and real estate which could be turned into currency, and then into gold.

Therefore, foreign governments could conceivably demand all the gold in Fort Knox, where half our gold supply rests, and in the other depositories.

They wouldn't do it all at once, because if they tried Congress would embargo gold shipments. Besides, as long as foreign governments have faith in the dollar, American credits are just about as good as gold in their own vaults would be.

Reasons why foreign governments have claimed more than $2 billion in gold in the last fourteen months are somewhat more complicated.

IMPORTS EXCEED EXPORTS

One important reason is the decline in exports. Last year the United States imported about $3 billion more in goods than it exported. This built up foreign holdings by that much. For various reasons, some traders and governments wanted to exchange some of their credits for gold. One reason might be to balance their assets, holding part in gold, part in currency.

Another reason is a slight weakening of confidence in the dollar. Coupled with fears that the dollar may be devalued. The London Financial Times said, "There is no doubt that some foreign holders of dollars have felt that recent developments in the American economic situation have brought the danger of a devaluation of the dollar in terms of gold so much nearer that it would be a good idea to convert part of their balances into gold."

If the United States devalued the dollar, such as by raising the price of gold from $35 to $70 an ounce, it would wipe out half of foreign credit holdings.

Related to the decline in exports is the rise of investments abroad. When an American company spends $100,000,000 of its United States money to buy a plant in, say, England, the money eventually flows into British central banks, who can demand gold for it.

Treasury officials, for the moment, are not worried. They feel that the outflow is temporary and that the inflow, which has prevailed over most of the years since 1929, will soon resume. In fact, some say that the outflow is evidence that the economies of friendly nations are strengthening, thereby building up the total might of the democracies.

Statement of Adm. Arthur W. Radford Before the Committee on Foreign Affairs

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement before the Committee on Foreign Affairs, House of Representatives, by Adm. Arthur W. Radford, U.S. Navy, retired, former Chairman of the U.S. Joint Chiefs of Staff:

Mr. Chairman, members of the committee, it is a privilege and a pleasure to appear before your committee in support of the proposed Mutual Security Act of 1959.

I appeared before the Committee on Foreign Affairs a number of times prior to my retirement from active military service, and on those occasions discussed various aspects of our foreign policy and related military implications.

I found it always to be an interesting and refreshing experience.

My last appearance before your committee also was in connection with our mutual security program. That was in June of 1957.

At that time I testified as Chairman of the Joint Chiefs of Staff.

Today I am testifying as a private citizen serving at the request of the President on his Committee To Study the U.S. Military Assistance Program.

That Committee, as you know, for the past several months has been engaged in an independent, objective, and bipartisan analysis of the military assistance program and, necessarily, of the several economic assistance programs.

I know that you have discussed our Committee's work with our able chairman, the Honorable William H. Draper, Jr., and that he has presented to you the unanimous conclusions of the Committee and considerable information about its procedures in arriving at those conclusions.

So I propose to avoid repeating what Mr. Draper has presented to your committee.

I am in agreement with the views that he has presented, and I would like to lend whatever support to those views that I can.

To that end, I will highlight several aspects of the military assistance program, hopeful that this will be of help to your committee.

Some 10 to 12 years ago, the United States became faced with the stark reality of the Communist objectives of worldwide domination, and with the Communists' willingness to use military power to achieve those objectives.

At that time we chose to assist in maintaining the freedom of all countries in the world which had the desire to remain free.

And we made that choice a basic facet of our foreign policy.

We recognized our own need for allies.

We recognized our allies' need for us.

We recognized further that only through a mutuality of effort could the free world be prepared to meet adequately the threat of Communist aggression and at the same time avoid the risk of a shattered economy within a United States standing fully mobilized and waiting on its own shorelines.

The success of this course of action depended to a large degree upon the strength of our allies.

Our allies' strength in turn relied in great measure upon the military assistance we could provide.

Thus a vital part of this basic facet of our foreign policy has been to provide military assistance to those free world nations faced with the threat of Communist domination either from within or from without their borders.

It seems reasonable to assume that U.S. foreign policy supported by our military assistance program and combined with the umbrella of American military power has played a dominant part in putting the brakes on Communist expansion.

I think it is not necessary for me to expand upon the importance of military assistance as an instrument of our present foreign policy.

I would like to comment, however, upon what I consider to be one of the most important aspects of our military assistance program—its relation to the U.S. military posture and its bearing upon that posture.

The military assistance program is an adjunct to our own Armed Forces.

In fact, it is an extension of our own Armed Forces.

And it should be considered to be just that in all of our national thinking.

There is no doubt that U.S. military forces would have to be expanded at greatly increased cost were it not for the military forces of other free world nations supported by our military assistance program.

And I would say emphatically that if those other military forces were not available we would have to revise radically not only our entire military program but also our present strategic concept.

Consider the many countries around the periphery of the Communist bloc, particularly those which are in direct contact with the Communist military threat and thus more directly vulnerable.

Unless we propose to abandon these nations, we must help support their military forces or be prepared to add forces of our own.

The impossibility of substituting our own forces is apparent immediately when you consider the magnitude of the friendly military forces—more than 5 million men—that we support directly or indirectly through the military assistance program.

The United States alone simply does not have available the forces necessary to match the Communist bloc in manpower at every point of possible aggression around the world.

Nor could the United States alone afford to maintain such forces on active duty for an indefinite period.

Our committee during its study has been impressed continually by the fact that nothing has changed over the past 5 years to indicate any lessening of the military threat posed to the free world by the Communist bloc.

On the contrary, the Communist military threat actually has increased.

This increase is due to the shrinkage of the world in time and space, a shrinkage brought about by advancements in technology.

It is due to improvements in weapons and in weapons systems available to the Communist bloc.

And it is due to the Communist bloc's expansion and improvement of its own military forces.

Considering this, there is no valid basis which would warrant any curtailment in our military assistance program.

In fact, Mr. Draper pointed out to your committee that our study found that the present military assistance program and the program proposed for 1960 have slipped somewhat below the actual requirements.

The slippage, gentlemen, is at the very time that the Communist military threat has increased.

And it is at the very time that the Communist bloc, these past few years, has launched its own economic offensive against the free world.

The economic offensive means that the Communist bloc was able to maintain and increase its military threat and at the same time develop and expand its collective economy to become able to make substantial economic assistance available to nations outside its orbit.

This in no way involves any lessening of the military threat.

It represents a relatively sudden increase in what had been a fairly limited capability of the Communist bloc to extend economic assistance.

Thus we are faced, in effect, with the serious added problem of a Communist economic offensive.

Our committee believes that this and other factors mean that the proposed budget for fiscal year 1960 for economic assistance is the minimum required and that, by fiscal year 1961, loans for economic development will probably be needed at a rate of at least $1 billion a year.

But increased economic assistance cannot and should not be accomplished at the expense of the military assistance program.

In my view we cannot afford to scale back our military assistance program to any substantial extent, at least in the foreseeable future.

The only alternative to continuation of the military assistance program that I can see is one based upon a political-military withdrawal to what is referred to as "Fortress America."

I am sure that this proposal has been examined many times in the deliberations of your committee.

In my opinion, such a political-military withdrawal could lead only to chaos and catastrophe for the free world.

I outlined by views on such a withdrawal in my last appearance before your committee, and I outlined them this way:

I am convinced that adoption of any such policy would lead inevitably to the surrender of most of our allies and to the isolation of the Western Hemisphere, surrounded by the vastly-increased strength of the Communist bloc. Further, I am sure that the United States, as we know it, cannot long exist in a Communist-dominated world.

I should say that the execution of the military assistance program by the Military Establishment is a task which requires a great deal of hard work. It is a task that has no glamor.

I would be the first to hope that we could get out of the military-assistance business at an early date.

I would like to believe that this is possible.

Unfortunately, I see no hope at the present time of any such possibility.

Military assistance is much too vital a part of our overall efforts to sustain the free world against the threat of Communist domination.

I can perceive no realistic alternative or substitute.

The scope and level of our military assistance program is of vital importance in any consideration of the program.

At this point, the initial round of military assistance to those countries participating in the program has been just about completed.

Now the problem becomes essentially one of continual modification, one of continual modernization of these forces to keep them abreast with the development of military art.

This is becoming increasingly costly, unfortunately.

In summary, Mr. Chairman, and members of the committee:

I believe that the Communist military threat to the free world is greater today than ever.

I believe that the Communist economic threat and its capabilities are expanding.

I believe that nothing has changed within the past 5 years which would permit the U.S. military assistance program to be reduced.

I believe that more funds should be provided to military assistance for fiscal year 1960, rather than fewer funds.

I believe that the economic assistance request for fiscal year 1960 is the minimum needed.

I believe that greater assistance probably will be required in the future.

I believe that the assistance programs should be put on a long-range basis.

And I believe that both programs—the military and the economic—are essential to our national security.

Reduction of Wheat Surplus Means Reduction of Taxpayers' Burden

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. DEROUNIAN. Mr. Speaker, the following editorial, which appeared in the Washington Post on May 1, sheds some sensible light on one phase of the farm problem:

MOUNTAINS OF WHEAT

Congress ought not to delay any longer its attack on the country's mountainous surplus of wheat. Some observers say that the legislators will not dare to go home this summer until they have done something to relieve this glut. It is estimated that at the end of this season the Government will be holding 1,150 million bushels of wheat—enough to supply all domestic requirements for nearly 2 years. Storage costs alone on such a vast supply are enormous. It is incredibly shortsighted to go on piling up additional surpluses while these unwanted stores remain a burden on farmers and taxpayers alike.

The Agriculture Committees of both the House and Senate are trying to cope with the problem, but it seems to us that they are moving in the wrong direction. A House subcommittee has voted to cut wheat acreage 20 percent and increase the price supports from 75 to 85 percent. The net result might be even more wheat instead of less. Experience has shown that when farmers are required to trim their acreage they pour on the fertilizer and produce more from a smaller area.

In the wheat-control system, moreover, there is an enormous loophole that accounts for a large share of the increased production in recent years. Any farmer may grow up to 15 acres of wheat without regulation or penalties. This has encouraged many farmers who never grew wheat before to plant up to 15 acres, thus greatly expanding the total crop. The subcommittee would reduce uncontrolled acres to 12 on each farm, but at the same time it would increase the incentive to plant by sharply boosting the support price.

No tolerable reduction of acreage quotas is likely to shrink the surplus as much as it should be shrunk unless Congress is willing to reduce its props under prices. The most reasonable course would be to lower supports and ease the acreage restrictions. That would minimize the incentive for every farmer to plant up to 15 acres of wheat. Incidentally, 78 percent of the farmers responding to a recent poll in the Farm Journal favored lower price supports and fewer controls and only 7 percent voted for high supports. More than half (55 percent) urged that the Government get out of agriculture entirely.

We do not think such a precipitate move would be wise. But surely Congress ought to move toward freer market prices that would permit some wheat to be used for animal feed and thus hasten reduction of the surplus. It is difficult to see anything but disaster in the regressive squeezing of quotas and artificial lifting of prices to a point where utilization of the surplus becomes virtually impossible.

Tribute to Daniel A. Reed

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. COOLEY. Mr. Speaker, nothing I may say could possibly add dignity to the life nor splendor to the spirit of our departed friend, Daniel A. Reed. He by his own life enriched the lives of all who felt the tolerance and kindness of his great heart.

In paying this brief tribute to this great man I am prompted by sincere human affection.

For 25 years, during the entire time that I have served in Congress, I have enjoyed the friendship of this Christian gentleman, who by the nobility of his soul, the courage of his manhood, and the magnificence of his manner endeared himself to all his colleagues.

Although Dan Reed was a statesman in the true sense of that word, he knew that the greatness of a Nation is not built by the crafts of statesmanship nor by the arts of artisans. He knew that the greatness of a nation must be built upon the moral fiber and fabric of people. He held fast to the verities of true religion and to the finest virtues of patriotism. He was dedicated to the immutable principles of justice and to the ancient institutions of freedom. He was devoted to the high and holy ethics of our civilization. He by his life built many grand monuments in the hearts of his countrymen and made many contributions to the welfare and happiness of the people of the world.

For many years I worked with him in the Interparliamentary Union, the oldest and the largest peace organization on earth. By his work in the Interparliamentary Union, he endeared himself to men and women around the world. He walked always in the paths of righteousness and he sought to find the pinnacles of peace and to lead mankind to the altars of liberty.

I happened to be with him in Rome when he was first stricken. He was a picture of magnificent manhood, strong, robust, and dynamic but always gentle and kind.

The tender sweetness of his genial manner was a living inspiration to his colleagues in Congress and to all who had the privilege of his friendship. He possessed all of the splendid virtues and fine sensibilities of true greatness. He rose to the full stature of mankind and he died in the faith of his fathers. He left his name without blemish, a heritage of honor to his children and his children's children. I knew of his great and true devotion for his lovely wife and I extend to her and to all the members of his fine family my very warm and sincere sympathy and express the hope that the Lord of mercy may sustain them in their hours of bereavement.

Eulogy Delivered by Hon. Daniel J. Flood, of Pennsylvania, at Memorial Service Honoring Walter Harrison Hitchler

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eulogy delivered by Hon. DANIEL J. FLOOD, Member of Congress, at a memorial service honoring Walter Harrison Hitchler, in Dickinson School of Law, Carlisle, Pa., Saturday, May 2, 1959:

We have come together this afternoon to pay our heart's tribute of respect to Harry Hitchler. Here, truly, was a gentleman; and here, too, was a distinguished citizen, a valiant soldier, a wise administrator, a renowned educator, and a great scholar who wove many threads into that endless fabric we call the law, and added fundamentally to man's understanding of the problem of living with his fellowmen.

Walter Harrison Hitchler, whose passing has been so widely mourned in legal circles not only in the Commonwealth but throughout the Nation as well, has crossed the bar and has seen his Pilot face to face. He stands before the great Dean on High, his dignified bearing proclaiming the Patriot dedicated to his country's cause and the scholar and administrator maintaining and enhancing the high stanards of legal education with which the Dickinson School of Law came to be known under his able direction.

No words of eulogy, I feel sure, can enhance the great record of the career of Walter Harrison Hitchler, our late beloved friend, teacher, and dean. His own deeds of a lifetime in themselves have built a memorial which will be long lasting.

There is even a question in my mind whether, with characteristic modesty and reserve, he would have approved a formal ceremony such as today's for the purpose of honoring his memory.

Nevertheless, it is fitting that we should take this occasion to pay tribute to one who played such a vital role in the history of Dickinson School of Law over a span of years covering a half century and whose whole life was devoted to service.

Service to the law, which he loved.

Service to this school.

Service to the State of Pennsylvania.

Service to the Nation as a soldier in World War I and in civil capacities.

Service to the community of Carlisle and to numerous causes in its welfare.

And, above all, service to God and his fellow man.

His charities were like the man himself, quiet, unassuming, without affectation. There are many today who do not know that scholarship funds that helped put them through their law courses came from the dean's own pocket.

Dr. Hitchler possessed in abundance that unusual combination of legal knowledge and the facility to impart it to others which makes a teacher great.

Anatole France has written that "the whole art of teaching is only the art of awakening the natural curiosity of young minds for the purpose of satisfying it afterward."

Dean Hitchler stirred that curiosity in young minds, and he not only satisfied it but, even more, he developed in his students that earnest and entire devotion which the law, as "a jealous mistress," demands.

And he imparted not merely a knowledge of specific codes and statutes but the spirit and principles of the law, and the lore and traditions of the profession.

Today the seeds which he planted over the years in these Halls are bearing fruit in courts all over this land—both on the bench, before the bar—in legislative halls of State and Nation.

It was a rare gift he possessed and he shared it with others. He gave of himself, to this institution and to his students who imbibed of his knowledge.

His career at our law school covered a span of half a century. Yet his devotion to the school and to his students never flagged. As a great legal scholar, his presence added stature to the Dickinson School of Law. As an humble man, however, he always sought to give without thought of reward. Thus his colleagues remember him as a quiet, but inspiring man, who set high standards for them by his amazing fund of knowledge, his ability to transmit it, and his exemplary behavior in all situations. His students remember him as a brilliant, but demanding preceptor, who encouraged them to levels of academic endeavor, and reward, that they had never before attained. How well they could understand the feeling of Cicero when he wrote: "Not only is there an art in knowing a thing, but also a certain art in teaching it." The dean had that art.

All admired and respected him, and all developed a warm affection for him, as a man who served unceasingly the causes to which he was dedicated.

I think these verses from a poem by Stephen Vincent Benet might also apply to Dean Hitchler:

"Thomas Jefferson,
What do you say,
Under the gravestone
Hidden away?

"I was a giver,
I was a moulder,
I was a builder
With a strong shoulder.

"I liked all learning
And wished to share it
Abroad like the pollen
For all who merit."

In the years he was among us here he was indeed a giver, moulder, and builder.

With all his great public responsibilities, he never hesitated to extend his efforts down to the community level. The people of Carlisle remember him as a tireless worker in local Red Cross drives, in establishing USO facilities, and in other community projects. His expenditures of time and effort were unquestionably enormous.

Nor were his interests limited to the classroom and to public service. This many-sided man loved athletics, and was a formidable opponent on the tennis court, as well as a respected instructor of tennis for the college teams. He was an unofficial adviser in basketball, and rarely missed a football game. As a great master in the classroom, he often appeared swinging a baseball bat, which he used to illustrate points his students were never to forget. It was with nostalgia that I learned recently that there are still some of these old baseball bats in his office.

Modest as he was, Dean Hitchler could not escape commendation for his many extraordinary efforts. His writings in the field of criminal law, articles that often appeared in the law review, were recognized as products of an authority in the field. Happily, his own beloved Dickinson College was one of the first to bestow honors on the man, by awarding him a doctor of civil laws in 1932. But other schools also recognized his merit. In 1939 he was awarded a doctor of laws from St. Francis Xavier College of Loretto. Muhlenburg College in Allentown and Albright College in Reading also presented him with honorary degrees.

I think one of the tributes that pleased him most, however, and this is because he was so firmly devoted to his own law school, was the decision of the board of trustees to name one of the dormitory wings in his honor. Hitchler Hall will long remain as testimony of the respect and warmth with which he was regarded by those most intimately associated with him. As a friend and dedicated servant of the Dickinson School of Law, he would want no more.

Through an act of his great generosity, the school of law will continue to see the proof of his dedication to his students, the school, and the law. I am sure you all know that he bequeathed the bulk of his estate for the benefit of the Dickinson School of Law. Students who are in need will thus continue to feel the munificence of this man, who even after his death will be responsible for paying the tuition of worthy scholars. Truly, the generous influence of Dean Hitchler will continue to be felt by all who have or will be connected with the school.

I think it not too bold a statement to call him a great man. He, more than most, embodied the qualities of greatness we cherish most because of their rarity. I think of the words of Matthew Arnold, who said: "Greatness is a spiritual condition worthy to excite love, interest, and admiration; and the outward proof of possessing greatness is, that we excite love, interest, and admiration."

Those of us who knew Dean Hitchler saw this proof of his greatness. Who among us can remember him without love, interest, and admiration?

Dean Hitchler was a native of Plymouth in beautiful Wyoming Valley—that seedbed which has produced some of the most outstanding lawyers, jurists, and educators in the entire vibrant history of our Commonwealth. He was proud of his native heath and despite his long residence outside the valley, he was well known there, having spent many summers at his cottage in Harvey's Lake. It is fitting that he rests where he was born. But a proper share of his spirit will surely stay here at Dickinson, where so much of his work was done, and where his influence was so great.

It was nearly 53 years ago that Harry Hitchler came to Carlisle to teach at the Dickinson School of Law. He had graduated from the University of Virginia in 1905 and thereafter spent a short time at the beginnings of a private law practice. But his abilities and natural inclinations led him to a career in law teaching. He was a member

of the law school faculty for 48 years, half of which period he served as dean. It was in June of 1954 that he retired, of his own choice. Yet even in retirement he continued his active work, and served as adviser to students and members of the faculty at the law school, who had not yet come to think of him as retired.

Dr. Hitchler was a great lawyer and law teacher. For a number of years he taught courses in equity and carriers. But like most of his former students, I remember him best as a teacher in criminal law, a highly technical subject to which he had made extensive and important written contributions. He was the author of "Hitchler on Criminal Law," and there is nothing in Pennsylvania legal writing that exceeds this opus in quality. His countless law review articles were distinguished by their penetrating legal analysis, cogent reasoning, and clarity of expression. It is no exaggeration to state that Dr. Hitchler's teaching brought enlightenment to three generations of students, and stimulated the minds of a large number of the most brilliant lawyers and judges in Pennsylvania. Dean Hitchler loved the law, and he was superb in analyzing and explaining it. The depth of his knowledge, his vigorous standards of scholarship, and his command of clear and graceful English, spoken as well as written, made him a great teacher, respected and admired by thousands of students now practicing throughout the Eastern United States.

But he also entered another and perhaps larger and more important area, that of public service. Four Pennsylvania Governors, W. C. Sproul, George Earl, Arthur H. James, his boyhood friend, and John S. Fine, all turned to Dean Hitchler to carry out commissions in this field.

He was editor of Pennsylvania Statute Laws, 1919–23, and was named in 1937 one of the eight men to study changes in the Commonwealth criminal procedure. In 1948, he was made a member of an advisory committee to aid a legislative group studying modernization of the penal laws of Pennsylvania.

In April 1939 Dean Hitchler was named by Governor James to a post on the Pennsylvania State Liquor Control Board. Shortly after he was sworn in as a member of the board, he was designated as its chairman. Dr. Hitchler held the post, which he described as "the toughest job I ever held," until May 1940 when he resigned to devote full time to his position as dean of the law school.

Though primarily a scholar and teacher, Dean Hitchler was above all a patriotic American, and in both World Wars he served his country with distinction.

In 1917 he answered his country's call to the colors and was a second lieutenant of infantry. Later he was a first lieutenant in the Officer's Reserve Corps and subsequently was promoted to the rank of captain. During World War II, he served as chairman of the Alien Enemy Hearing Board for the middle district of Pennsylvania.

I have spoken of Harry Hitchler as a scholar, administrator, and public servant. But he was also a man, a friend. He possessed qualities which, at first sight, appear contradictory, but in his life complimented one another to form his character of rare uniqueness. He was spiritual, but never sanctimonious. He was high-minded yet always human. He was distinguished in the affairs of men, but essentially modest and humble. His sense of humor was keen, but he was never flamboyant.

Whether in war or peace, Dean Hitchler believed in discipline, but even more important, he believed in and he practiced self discipline. He never demanded of another what he would not glady do himself.

He was a gentleman to the core, a man of impeccable integrity to whom honor was never merely a word, but life itself. He was a great and wonderful human being.

God's greatest gift vouchsafed to man is a full and rich and productive and useful life. Harry Hitchler, through his talent, his energy and his character has left his blessing on us and on all his fellow men. We shall think of him as not having died, but as having lived—usefully, vibrantly and blessedly.

And for that life, though our hearts are saddened through its translation into the eternal realm, all of us are profoundly grateful.

"I can not say, and I will not say,
That he is dead; he is just away.
With a cheery smile and a wave of the hand,
He has wandered into an unknown land,
And left us dreaming how very fair
Its needs must be, for he lingers there.
And you, O you, who the wildest yearn
For the old time steps and the glad return,
Think of him as faring on as dear
In the love of there and the love of here.
Mild and gentle as he was brave,
When the sweetest love of his life he gave
To simpler things, where the violet grew
Kindly as the eyes they were likened to.
Think of him as still the same, I say,
He is not dead; he is just away."

The Mutual Security Bill—Technical Cooperation Activities in Education

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mrs. BOLTON. Mr. Speaker, ever since the inception of the point 4 program, the United States has cooperated with underdeveloped nations in working toward improvement of existing educational programs. Considerable progress has been achieved, but vastly more remains to be done.

The problem of widespread illiteracy is a major concern in the newly developing countries of the world. While the estimated percentage of illiteracy for the world as a whole is just under 50 percent, the percentage runs as high as 98 percent in some of the underdeveloped areas. As the rate of national progress is generally believed linked to a country's educational system, there is a growing desire for educational improvement.

The rapid industrialization and urbanization of hitherto backward countries adds to the necessity of educating their citizenry. They find their educational systems, which lag from 50 to 80 years behind those of the more developed countries, suddenly faced with the problems of modern living. All of these countries have serious deficiencies in their educational systems, deficiencies which pose critical problems for the future.

Moreover, leadership needs in these areas will require a broader educational base. If the educational system of a country is inadequate to train its leaders, the country must do without the quantity and quality of leadership essential to its progress, or depend upon institutions in other countries to provide such training. This situation not only handicaps the nation in meeting its leadership requirements, but also prevents the mass of people from participating intelligently and constructively in the democratic process.

As the needs may vary from country to country, every effort is made to adapt our assistance to the local exigencies. In some instances the reorganization of some phase or phases of the national education system is necessary. In others, introduction of a whole new phase such as trade or industrial education where none previously existed is urgently required. All too often teacher preparation is inadequate; in some countries the average elementary school teacher in rural areas has had no more than 4 to 6 years of elementary schooling. Instruction in the classroom is usually by rote memorization, without the use of instructional materials on any satisfactory scale.

Our technical cooperation programs recognize the diverse needs, and seek to work out a plan whereby those needs can best be achieved with the available resources. Underlying all ICA education programs is the thesis that training and demonstration are uppermost in the thinking and planning of United States technicians serving abroad. While programs run the gamut of educational problems in developing countries, the foremost project efforts are in teacher education — vocational, agricultural, trade and industrial, home economics and leadership training. Rapidly rising in importance is the area of English language training, which becomes increasingly significant as broader avenues of knowledge and information are made available.

Much of the training provided under our technical assistance programs is the responsibility of American colleges and universities. This development is emphasized by the fact that approximately 25 percent of ICA's present college contracts with American universities are in the field of education. Participants in the program may be brought to the United States for training and observation purposes, many of whom will have major responsibilities for carrying on some part of the program on their return. The ICA programs are carefully coordinated with the International Education Exchange activities of the Department of State, and the cultural exchange programs of USIA.

The teacher education program has already recorded some outstanding accomplishments in various areas of the world, a few of which I shall mention at this point.

Jordan, for instance, had no teacher education facilities prior to the inception of the U.S. Operations Mission in 1952. Today she has four teacher training institutions and teacher training classes in two other schools offering instruction to over 400 full-time students. Inservice education classes train yearly about 400 additional teachers who have had no prior professional teacher training, and a summer-school program for teachers has grown from a 10-day session catering to 200 teachers to a full 6 weeks' session for 500 teachers. Jordan is even now expanding her physical

facilities to permit increased enrollment and in addition has admitted day students for the first time.

In Iran, the ICA education program has expanded rapidly and soundly. In 1952, only 17,000 teachers were available to cope with a school population of about 5 million. Today over 40,000 teachers are serving the country and over 70 percent of these have received summer school training through the assistance provided by ICA.

The National Teachers College in Tehran, the only teacher training institution of college rank, has been upgraded in curricular offerings and staff. Demonstration or laboratory school facilities for the 22 normal schools in the 10 provinces of Iran have been developed at the request of the Iranian Government and through this medium newer educational practices are taught.

Nigeria is receiving assistance in teacher education from ICA through the provisions of a contract with Ohio University. Ten staff members are engaged in training the instructors of elementary teacher training colleges. This project, serving about 100 college instructors, is assisting the Ministry of Education to upgrade its instruction, develop new materials, train commercial teachers, and improve the general teaching environment. Thirteen weeks are spent at a center of instruction and then the Ohio University team goes out to the colleges for the next 13 weeks where they work closely with the instructors in their classrooms.

One of the most striking examples of education program achievements in the Asia and Far East area is found in the results of the regional teacher training program involving Thailand and Laos. By this program teacher training facilities in Thailand are made available to trainees from Laos which has completely inadequate facilities for training teachers. During the first year of operation, 30 Laotian teachers were trained in Thai facilities. During the current year, 83 Laotian prospective teachers are in training in Thailand.

In reviewing the success of the program at the end of the first year, Laotian and Thai Ministry of Education officials were so pleased with the program that they commenced discussion of possibilities of a cultural treaty between the two countries to cover all aspects of educational exchanges. Prior to this project, organized with ICA assistance, no cooperative activity between the two ministries had ever been carried out. Not only is an impact being made on the critical teacher shortage in the region, but a definite contribution toward improved intercountry relationships has been made by the project.

The southeast Asian regional English project is another well-received activity in this area. It is working toward the development of English as a common bond of technical and high-level communication in the region.

Teacher training schools have been built and are being operated with ICA assistance in Laos and Cambodia where only highly academic French écoles normales existed previously with graduating classes of 10 to 12 students per year. The new institutions will graduate 100 teachers each year.

Large-scale technical education programs have been developed in the Philippines, Thailand, Pakistan, and India to help these countries meet critical manpower shortages.

Hundreds of Asian educators have been trained in the United States for technical and professional responsibilities in their home countries through ICA's participant training programs.

Vocational industrial education assumes major importance for countries which are moving suddenly and rapidly into the industrial age and this is true of all the less developed lands in some degree or other. The problem must be attacked in a variety of ways, depending on the stage of industrialization already reached and resources and needs of the country. A striking example of the diverse approaches required is furnished by two neighboring countries in Latin America, Brazil and Paraguay.

Brazil is already developing rapidly in industry, but found her system of training skilled workers inadequate for her needs. Under the technical cooperation program, improved curricula and teaching methods have been introduced into Brazil's 23 federal industrial training schools and many of the apprentice training and state industrial schools. About 2,000 teachers and supervisors have been trained in Brazil, and some 200 in the United States. Textbooks and other teaching materials have been prepared, produced and distributed. One of three important regional trade schools for the training of teachers and supervisors for vocational schools has been established at Curitiba and is in full operation. The others are at La Paz, Boliva and Lima, Peru; a fourth will soon be in operation in Guatemala. In cooperation with Brazilian industrialists, a widespread and well-supported system of training-within-industry course has been established and is in operation directly in the industrial plants, and under it, over 300,000 foremen and supervisors have already been trained.

By contrast, Paraguay had no school for trade and industrial training, and no technicians sufficiently trained in their own crafts or in education to provide an administrative or teaching staff for one. Here, even after a school was built, under American supervision, all courses were taught at first by American technicians, and an American with a Paraguayan associate administered the school. As rapidly as possible, however, Paraguayans were trained to take over. Within a few years, the school was being completely staffed and administered by Paraguayans, and in addition to the training of technicians in the school, measures had been adopted to provide for a steady flow of trained industrial teachers. The Paraguayan Union of Industrialists was quick to recognize the value of the school, and took it under their protection and partial support. Largely through the Union of Industrialists, graduates of the school can confidently expect immediate employment. The ninth graduating class, this year, should bring the number of graduates thus far substantially over three hundred. Branch schools have been established, or are in process, in four other centers throughout the Republic. Here is an example of an entire vocational education system for a country being created under the program, and now operating on its own steam, with American help reduced from full operation to advisory services.

The great economic paradox of Bolivia is that it has immense resources in minerals, lands and forests but a population that is largely unproductive. Indians make up over 60 percent of the people of the country, and they are over 80 percent illiterate, with all that this implies in the way of being unprepared to create wealth and contribute to a modern economy. Bolivia needs more and better agriculture and a variety of small industries, but first of all her people must become literate and acquire the skills needed to become producers. Since the population is largely rural, the responsibility rests upon the rural schools.

The International Cooperation Administration is assisting the Bolivians in the development of a school program which will meet the specific needs of the rural population and make the schools more influential in the lives of the people. To reduce illiteracy is only the beginning. U.S. technicians, working with their Bolivian counterparts, are training teachers—both pre-service and in-service—in more modern teaching methods, introducing a more functional curriculum, and developing more effective teaching materials. And the schools are reaching the adults, too, teaching them to speak Spanish as well as their Indian language, to read and write, how to make simple home and farm improvements, and introducing them to the basic principles of better agriculture practices and health habits. It is estimated that some 60,000 rural people are constantly benefiting from the ICA rural education program in Bolivia.

The Bolivians are proud of their new rural school program and they appreciate the part that ICA has played in bringing it about. An eloquent and unexpected note for the ears of U.S. technicians was struck by a village priest who celebrated a field mass at one of the rural normal schools during the "Day of the Indian." He told his audience that many people are carried away by the idea of communism, thinking that it would give them everything they wanted. "But what," he asked them, "has Russia ever done for us? Not one crumb of bread have we got from Russia. But from the United States we get not only material bread but also spiritual bread and intellectual bread."

This incident, Mr. Speaker, illustrates the profound impact of our education assistance program to the developing countries. While this activity comprises only a part of our technical cooperation program, it is invaluable in terms of the friendship and goodwill created.

Rural Development

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. TRIMBLE. Mr. Speaker, Madison County in my district is one of the leading counties in the Arkansas rural development program. In order to inform my colleagues of the fine work which is being done in Madison County, and the outstanding cooperation of all agencies and groups, I ask leave to include in the RECORD an article from the March 1959 issue of the magazine Rural Arkansas:

DAIRY EXPANSION NO. 1 GOAL IN MADISON

HUNTSVILLE.—Just about everyone got in the act when the Madison County Rural Development Committee decided that its first priority goal would be to strengthen the county's dairy program, says County Agent Howard McCartney. This decision followed a survey which indicated that over 70 percent of the commercial farmers in the county depended on dairying for part of their income, and that dairying was the main source of income for 35 percent of these farmers.

The county has taken some long steps toward its goal in this field. Holstein heifer calves were imported from Wisconsin and distributed among farmers who wanted to expand their dairying operations. The joint efforts of the subcommittees on agriculture and on credit helped accomplish this. The local bank cooperated by loaning money at a reduced interest rate to farmers buying these heifers.

The agricultural committee was also successful in getting a graduate veterinarian to settle in Huntsville. Previously there was no veterinarian in the county.

The subcommittee on public facilities was successful in getting a telephone line run to the home of the technician for the local dairy breeders association, which has strengthened the artificial breeding program.

The county has other ambitious ideas in mind, and McCartney predicts that real growth will be seen within the next few years as this effort continues.

More than 750 additional rural telephones are being installed in Madison County as a result of the efforts of the rural development subcommittee on public facilities, according to County Agent McCartney.

Mr. McCartney says that plans are under way to install telephones over most of the county in the next 5 years. This is being made possible through REA loans for telephone expansion. The public facilities committee in rural development has encouraged local telephone companies to obtain such loans in order to extend service to rural areas not now being served. The committee has also worked on a publicity campaign to encourage rural people to want telephones in order that lines which are built will be practical and economical from the standpoint of the telephone companies.

The county is served by the White River Telephone Exchange which until recently had 80 phones in the county, and the Madison County Telephone Co., which has increased from 315 to 450 phones in the past year. Future plans of these 2 companies call for more than 1,200 telephones. Already many old phone sets have been replaced with new ones. Old central switchboards have been replaced with new ones, and within the next 18 months all telephones will be dial. Just a year ago they were all of the old-fashioned crank type.

The committee is working now to inspire the Hindsville area, which is served by another company, to improve their service and extend it to the entire area.

The work on telephones is just one of the many projects which the public facilities committee is working on. It is also working on road improvement, a sewage system for the county-seat town of Huntsville, electric service to all rural families, and many other projects.

Federal Aid—Fact or Fiction?

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. GRIFFIN. Mr. Speaker, under permission to extend my remarks I include an editorial from the Leelanau (Mich.) Enterprise and Tribune of April 30, 1959, which sets forth very cogent reasons for questioning support of H.R. 22, the so-called Murray-Metcalf bill, as a solution to the problems of school construction and teachers' salaries:

FEDERAL AID—FACT OR FICTION?

Michigan Education Association leaders, who have expressed their approval of a plan to provide so-called Federal aid to education should take 5 minutes to read a recent statement on this subject by Congressman GERALD R. FORD—then an hour to reexamine their position.

Congressman FORD, now serving his sixth term in Washington as representative from Kent and Ottawa Counties in Michigan, is recognized by men of both parties as one of the ablest leaders in Congress. This is what he thinks of the Federal aid to education bill:

"The Federal aid to education bill (H.R. 22) is in trouble in the House Committee on Education and Labor, where it is currently being considered. It is reported that those who have been vigorously supporting the bill are seeking ways to save some of its provisions. A compromise may be effected which would made the Federal assistance a temporary measure rather than a permanent policy, and it is hoped by some that as a minimum the bill may be amended to include a need and demonstrated effort test.

"As written, H.R. 22 authorizes an appropriation equal to $25 for each school-age child for the fiscal year 1960, $50 for 1961, $75 for 1962, and $100 for each year thereafter. The total cost of the fiscal year 1960 would be $1,025 million, in 1961 the cost would go up to $2.2 billion, in 1962 to $3.3 billion, and in 1963 to over $4.7 bifilon. The amount thereafter would increase as school population increases.

"Federal funds would be allocated to the States solely on the basis of school population with no reference to the State's need for assistance nor with any consideration to the State's efforts to meet its own needs. Within each State, however, priority for school construction is to be given to those local districts where the need is greatest.

"The bill, as written, authorizes a State to use the Federal money either for school construction or teachers' salaries or both. However, there is nothing in the bill to assure that any teacher will receive an increase in salary because of the enactment of this legislation nor is there any assurance that a single classroom will be constructed in a given State. Moreover, there is nothing in the bill as written to guarantee that the sum total of all moneys, local, State, and Federal, spent on education will be increased by the passage of H.R. 22. There is nothing which requires a State to use the Federal funds as a supplement to its own; there is nothing which prevents a State from using the Federal funds as a substitute for its own.

"H.R. 22 obviously needs general revision. Major consideration should be given to assisting those areas in our country which have demonstrated that they desire to meet this educational need but lack the economic basis for doing so. If we are to have Federal aid to education, it should be solely restricted to those areas. There can be no justification at this time for further Federal taxation to dole out funds to those States which are financially able to meet their own educational needs."

Poison in Your Water—No. 71

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Daytona Beach (Fla.) News on October 9, 1958, entitled "Pollution in Indian River."

The article follows:

HEALTH UNIT REPORT: POLLUTION IN INDIAN RIVER

Discharge of raw sewage into the Indian River at New Smyrna Beach has resulted in gross pollution of the stream from the foot of Crawford Road to the south city limits.

The entire river * * * especially the western side * * * shows gross fecal contamination," David B. Lee, director of the State health department Bureau of Sanitary Engineering, reported following analysis of water samples taken during a continuing health unit pollution survey.

"This area should not be used for bathing or other recreational purposes and the removal of shellfish for human consumption should be prohibited," Lee said.

Lee, in a letter to New Smyrna Beach Mayor Robert L. Arnau in reference to the city's sewer lines, said:

"It has been brought to our attention that new connections are being made, from time to time, to the existing sewage collection system of New Smyrna Beach.

"As you are aware, the sewage is discharged without any treatment into the Indian River.

"These waters grossly are polluted and constitute a potential health hazard. It has been the policy of this agency that no sewer extensions should be made without adequate sewage collection and treatment facilities.

"Further connections to the system can result only in making a bad situation worse.

"We have worked with the city of New Smyrna Beach for more than 10 years in an attempt to provide sewage treatment facilities.

"Our records show that plans covering certain treatment facilities were approved by this office several years ago, however, due to the circumstances no such facilities have been constructed.

"Further pollution of the receiving waters through lack of sewage treatment will result in denying the city its full opportunity to expand and grow.

"We urge that the city take all possible steps to construct suitable facilities so that the growth of your city will not be hindered by lack of such a necessary utility," Lee wrote.

The pollution survey will continue through the winter and spring in order to secure data on pollution during periods of lower temperature and seasons when the population is higher.

In the meantime, County Sanitary Engineer George Scott said today, the river pollution survey, which eventually will encompass all of Volusia's coastal waterways, will be expanded to include Ormond Beach.

Work on the Halifax River in Ormond Beach will begin in the near future, he said, although the results virtually are a foregone conclusion.

An earlier survey showed gross pollution in the Ormond Beach sector due to discharge of raw sewage into the river from the city's Granada Avenue sewer line.

The line still is in operation and no treatment facilities have been provided.

U.S. Center Shifts

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. ULLMAN. Mr. Speaker, I have always been proud to consider myself a far westerner. However, the commendable action of Congress in admitting Alaska and Hawaii to the Union has given my district a new prominence in being the geographical center of the 50 States.

The change in our geographical center to Baker County, Oreg., has been noted in an editorial first appearing in the Santa Rosa, Calif., Press-Democrat and reprinted in the Baker Democrat-Herald. Under unanimous consent I respectfully request permission that it be reprinted in the CONGRESSIONAL RECORD.

The editorial follows:

U.S. CENTER SHIFTS

(EDITOR'S NOTE.—The following editorial is reprinted from the Santa Rosa (Calif.) Press-Democrat.)

If you were brought up believing that Smith County, Kans., is the geographical center of the United States, you'll have to forget it and learn something new.

The geographical center of the United States is in Baker County, Oreg.

Nothing's happened to Smith County, Kans. It's still there. But with Alaska and Hawaii becoming States, the western boundary of the United States is now the Aleutians and the Hawaiian Islands instead of the Pacific coasts of Washington, Oregon, and California.

And Baker County, Oreg., only a few hundred miles from the Pacific coast, is right smack dab in the middle of the new boundaries of the 50 States.

We have nothing against Smith County, Kans., but Baker County, Oreg., is a lot more interesting.

It's a county of towering mountains and fertile valleys, rich in agriculture and forests, and one of the best fishing and hunting areas in the country. In its early days it was gold-rush country. Like the mother lode of California, it is still rich in minerals, but cost of production is greater than the artificially low price our Government has set on gold. And, like the mother lode, it produces far more in agriculture than it did in the more spectacular days of gold.

Not only is it the new geographical center of the United States, but Baker County seems destined to become a year-round vacation playground for the West. Its potential as ski country is tremendous, its unspoiled wilds are being discovered by sportsmen and summer vacationists, and it is the gateway to the spectacular Hells Canyon area. Its location is only a drive of a day and a half from either southern or northern California.

"Brand of a Man," the western novel by Santa Rosa author Thomas Thompson, which we recently ran as a serial, was laid in early day Baker County.

Summit Meetings

EXTENSION OF REMARKS
OF
HON. J. EDWARD ROUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. ROUSH. Mr. Speaker, Mr. Carl R. Leiter, social studies teacher, Central Junior High School, Kokomo, Ind., has sent me an essay, entitled "Summit Meetings," written by one of his students, Kendall Crook, 13 years of age, eighth grade, living at 137 South Forest Drive, to acquaint me with the type of work some of his students do over and beyond their regular assignments.

You read a great deal in the newspapers about juvenile delinquents, but very little about the youngsters who typify and represent the youth of America. More should be printed about our outstanding young citizens to encourage and stimulate them to utilize their talents and ability. I am so impressed by the research, understanding and lucid thinking exhibited by young Kendall in his composition that I am including it in the RECORD, as follows:

In this essay, I intend to relate my feelings toward the proposed summit conference later this year, I have done a little research into the field of summit meetings and conferences of the past.

The first major conference in recent years, the Cairo Conference, was held on November 22–26, 1943, during the height of World War II. The three great powers, the United States, Britain, and China, met there to discuss certain pledges to "bring unrelenting pressure against their brutal enemies by sea, land, and air." The members pledged to receive from Japan certain territories gained in 1914, Formosa, the Piscadores, and that Korea in due time should become wholly independent. Their main objective for the moment though, was to "persevere in the serious and prolonged operations necessary to procure the unconditional surrender of Japan."

Before we go on I would like to extend back into history to the Treaty of Versailles in 1919. This treaty was instigated by the "Big Four," represented by Orlando of Italy, Lloyd George of Britain, Clemenceau of France, and Wilson of the United States. This treaty, which officially ended World War I, was signed by almost every significant nation on earth except the United States. It later made a separate treaty with Germany in 1921.

After the Cairo Conference of 1943 came the Teheran Conference of November 28–December 1, 1943. The "Big Three" in the European war; the Soviet Union, the United States and Britain. In this Conference, most of what was said was about the "maintenance of the independence, sovereignty, and territorial integrity of Iran." The Allies realized the heavy economic burden forced upon Iran and promised to protect and assist her. This treaty was violated by the Soviet Union. How? And why? Because in 1946, after the war had ended, Russia refused to withdraw from the Iranian province of Azerbaijan. Iran appealed to the United Nations and Russia immediately withdrew. But this incident was a forecast of things to come from Russia. Russia had done this just to show off her military strength and touch off a series of crises to plague the world.

During February 4–11 the Yalta Conference was held at Yalta, in the Soviet Union. This meeting was called for two special purposes; the occupation of Germany, and terms under which the Soviet Union entered the war against Japan. The "Big Three" (U.S.S.R., the United States, and Britain), were to divide Germany up into sectors and invite France to take over a sector. Each nation was to keep its sector open to inspection. Violated. As you know, Russia set up a puppet government with a typical communism government in her sector. Russia entered into the war against Japan only weeks before it ended. In reward for this, she occupied North Korea and Manchuria. She also occupied certain Japanese territory and Outer Mongolia. Russia repudiated a pact with China after the war by supplying the Chinese Reds with firepower.

The last World War II conference was held at Potsdam, Germany, on July 26, for the expressed purpose of outlining the terms by which Japan would be allowed to surrender. In the declaration the terms were numerous and relating to the surrender of certain Japanese territory, the punishment of war criminals, etc. Russia was not represented. The nations represented were China, the United States and Britain. Fortunately, Russia was not represented at this conference or this might have led to more concessions to her for her meager part in the Japanese war.

In 1955, the Geneva Conference was held at Geneva, Switzerland. The representatives were Eisenhower (United States), Bulganin (U.S.S.R.), Eden (Britain), and Mendes-France (France). They met to discuss certain international disagreements, among them (1) negotiations on the Indochina War and (2) an agreement on the truce line of Korea. This was not violated to any great extent by any party. All in all, though, this conference settled nothing.

Also, this should be mentioned: In a conference after World War II, Russia agreed to let the Allies have free access to Berlin. In 1949, as you know, Russia cut off all western routes to Berlin, resulting thus in an airlift in which millions of tons of goods were transported by air to the besieged city of Berlin.

As to the proposed summit meeting, I may seem like a pessimist because of my views on the subject. I think that the proposed summit meeting will be like the Geneva Conference, solving almost nothing. Some are even more pessimistic by saying this will be another Munich. Some optimists say that this meeting will lead to a peaceful and more prosperous world. But, as for me, I think, for one, that the various series of contemporary crises will not be halted. Nor do I think that Germany will ever be unified. I think that soon Iraq will become almost

totally Communist and this will stir up increasing tension in the Middle East. About the crisis in the Far East, I think that this crisis has come to a head and will gradually subside. But tension will continue in the Far East and all over the world indefinitely.

Reserve Officers Incentive Act

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. FISHER. Mr. Speaker, under leave to extend my remarks, I include a speech I made last evening before the Reserve Officers' Association and their guests at an annual banquet held at the Bolling Field Officers Club in Washington. The address is as follows:

Mr. Chairman, distinguished guests, it gives me great pleasure to be with you tonight and I feel signally honored at being given the opportunity to speak to you.

As many of you know, my interest in Reserve matters goes back many years. As a Member of Congress and member of the House Armed Services Committee I have witnessed the slow but nonetheless inevitable recognition by the Congress of the important role played by our Reserve Forces in the total defense of our Nation.

Prior to World War II and for a few years thereafter, our legislators looked upon our various reserve organizations as quasi-military groups whose primary role was to insure the availability of a trained militia in event of war or national emergency.

This concept, in its simplest form, therefore meant that the Congress, and indeed most of our citizenry, did not contemplate any significant use of Reserve personnel on active duty except during periods of armed hostilities.

Unfortunately, international events which have transpired since World War II have demonstrated that this concept is indeed fallacious.

After World War II our Nation attempted to return to its traditional military posture, that is, a small active duty force composed, for practical purposes, solely of Regular personnel and a large inactive Reserve organization. However, we soon discovered, to our dismay, that because of the precarious international situation we were forced to augment the size of our active duty forces in a manner commensurate with the degree of international tension that existed. The result, of course, is that today our active duty forces are composed of large numbers of both Regular and Reserve personnel.

We have approximately 2½ million men on active duty with the defense establishment today. In order to maintain necessary flexibility in our personnel strengths, a significantly large percentage of this number is necessarily Reserve personnel. For example, at the present time over 180,000 of the 322,000 officers on active duty with the Armed Forces are Reserve personnel.

I have made these points simply to set the stage for my next observation. Because of the traditional concept, which had become accepted by our legislators, that our active duty forces will, in peacetime, be composed almost exclusively of Regular personnel, our personnel legislation has failed to contemplate any career status for Reserve personnel on active duty.

Thus, although we have maintained since World War II large numbers of Reserve personnel on continuous active duty, we have given scant recognition to the necessity of providing some element of career security to such individuals. True, our personnel legislation developed since World War II includes statutory authorization for the retirement of Reserve personnel who complete 20 years of active duty, but no significant or adequate provision has been made in the statutes to provide for the interim period of active duty during which our Reserve members may, for one reason or another, be involuntarily released from active duty.

I am happy to say, however, that on March 20, 1959, the House of Representatives, recognizing this problem, passed legislation which for the first time provided equitably for Reserve personnel on extended active duty regardless of whether or not they will be permitted a full or limited military career. This legislation which is entitled "The Reserve Officers' Incentive Act of 1959" was originally developed by the subcommittee of which I am a member. The subcommittee's actions were subsequently unanimously approved by the full Armed Services Committee, and the House of Representatives passed this legislation without a dissenting vote.

Now, let me briefly explain what this legislation will do.

H.R. 5132, the Reserve Officers' Incentive Act of 1959, has a twofold objective: First, to raise the critically low rate of retention of Reserve officers beyond their obligated tours of active duty with the Armed Forces and, second, to provide for more equitable treatment of those Reserve officers who supplement the Regular corps but who may not be continued on active service long enough to qualify for retirement. Stated simply, these objectives will be realized by providing a substantial increase in the amount of readjustment pay made available to Reserve officers involuntarily released to inactive duty.

The Reserve Officers' Incentive Act of 1959 has five main features as follows:

First, it makes contracts mandatory rather than permissive for Reserve officers on active duty after the first 2 years of commissioned service, but eliminates the present one-half of 1 month's pay for these first 2 years.

Second, if he completes a contract, a Reserve officer would receive 2 months' basic pay for each year served under that contract, whether he is released involuntarily or not. Under present law he receives one-half of 1 month's basic pay for each year served, but receives nothing if he leaves the service at his own request.

Third, if the Reserve officer, while rendering satisfactory service, is involuntarily released during the term of the contract, he would, under this proposal, be paid 2 months' basic pay for each year that he has served under contract. In addition, he would receive 1 month's basic pay and allowances for each year of the uncompleted contract. Under the present law, if he is involuntarily released during the term of a contract, he can receive only one-half of 1 month's basic pay for each year served, or 1 month's basic pay and allowances for each year of the uncompleted contract, but not both.

Fourth, as a transitional measure for those presently on duty who would be eligible for a contract under this proposal and who may be separated involuntarily, the bill would provide more equitable treatment for those who have served on active duty for more than 10 years by increasing the present rate from one-half of 1 month's basic pay per year to 2 months' basic pay per year beyond the 10-year mark.

Fifth, finally, this legislation would provide that if a Reserve officer has rendered satisfactory active commissioned service for a period of 14 years, he will either be given a Regular commission, be released from active duty with appropriate readjustment pay, or given a contract that will carry him to retirement eligibility. Such a Reserve officer who has served 12 years under contract would, if released, receive the equivalent of 2 years' basic pay as would a Regular officer with 14 years of service if involuntarily released.

I have only briefly outlined the major portions of the act, but, as you can see, it provides statutory recognition for the Reserve officer who is released involuntarily to inactive duty prior to retirement in approximately the same manner as is provided by statute for the Regular officer similarly situated. Therefore, the importance of this significant change in the history of Reserve legislation lies in the fact that it provides a "magna carta" or "bill of rights" for Reserve personnel on extended active duty and assures them that in event they elect to continue to serve their country, come what may, their unselfish contribution to the national defense will be appropriately recognized.

Anniversary of Polish Independence

SPEECH
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. VANIK. Mr. Speaker, on Sunday, May 3, Americans in communities throughout the Nation celebrated the 168th anniversary of Polish independence. I join my colleagues in paying special tribute to the framers of the Polish Constitution of 1791. The people of Poland and those Americans of Polish descent can be proud of this rich heritage of freedom which stemmed from the adoption of their constitution. This document was inspired by the American Declaration of Independence and it included within its framework the fundamentals of freedom written into the U.S. Constitution several years earlier. It is fitting and proper that we remember each year this sister document of freedom which symbolizes with our own the will of man to achieve liberty for himself, his family, and his community.

While the people of Poland have been less fortunate than we in preserving their freedom in their homeland, they have persevered in their efforts to regain liberty each time it was taken from them by war and political partitions. In addition to their brave resistance to tyranny at home, they have sent to our own shores their sons and daughters who have made a major contribution in our own struggle to maintain the institutions of democracy. Americans of Polish descent who live in Cleveland as well as in every other American community have been stable, prudent, and reliable citizens. They have contributed in every line of endeavor. They have been a part of the greatness of our country.

It is to be hoped that a relaxation of artificial barriers which exist in Europe will permit greater communication between citizens of the free world and Iron Curtain countries. Communism cannot long survive in its present tyran-

nical form if it is thus exposed to the free exchange of ideas which would result from increased personal contacts between citizens of our countries.

Freedom or Control

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. BAUMHART. Mr. Speaker, I wish to submit at this time a reprint of a letter written by Mr. Dudley White, Jr., editor of the Sandusky Register, Sandusky, Ohio, relative to the situation of my constituent Mr. John Donaldson, of New London, Ohio. I wish to also bring to the attention of the Congress the text of the reply to Mr. White's letter, from Jack Z. Anderson, Administrative Assistant to the President, The White House, dated April 22, 1959. I am sure many will find these letters, and the reprint of Mr. White's editorial which appeared in the Sandusky Register and in the Norwalk Reflector-Herald, of interest:

SANDUSKY REGISTER,
April 14, 1959.

Maj. Gen. WILTON B. PERSONS,
The White House,
Washington, D.C.

DEAR GENERAL PERSONS: Never before this time have I ever traded on my father's name. I am deliberately breaking that rule now.

Enclosed please find an editorial. I can only say that I wish that I had written this piece myself, but I must give the credit to the publisher of a small weekly paper in my home county—Huron County, Ohio.

I believe the editorial to be self-explanatory and it concerns itself with a case that is probably all too familiar to you. Our farm situation is hodgepodge and I, no better than anyone else, know the answer.

I am hoping however, that this editorial can be shown to President Eisenhower. The general theme of the editorial clearly shows the breakdown of an American principle—dignity of the individual—that concerns many Americans throughout this Nation.

I realize that I am undoubtedly imposing on past friendship and I know how busy you all are, but I must say that I feel that the content of this editorial is of great import to every American citizen. It is thought provoking, to say the least.

I thank you most sincerely for taking time to read this note.

Very truly yours,

DUDLEY A. WHITE, Jr.

THE WHITE HOUSE,
Washington, April 22, 1959.

DEAR MR. WHITE: In General Persons' absence from the city I am replying to your letter of April 14 with which you enclosed an editorial which had been run originally by the New London Record. I share your feeling that the writer of this editorial touched upon a fundamental principle in our national life, raising a clear warning about trends which could weaken the freedom and dignity of the individual.

As you know, this administration has been deeply concerned about the straitjacket regimentation which is imbedded in the farm program. The basic legislation authorizing this program was passed under a Democratic administration in 1938. It was continued and supported by Democratic administrations as long as they were in control.

The programs developed under this legislation were part of the legacy inherited by the Republicans in 1953. The President and his Secretary of Agriculture promptly called attention to the weaknesses and dangers of the mandatory programs and asked Congress for legislative changes which would permit more flexibility and less control.

There has been some progress, but it has been slow. Only a small part of the corrective legislation requested has been adopted. Democratic majorities in the Congress have consistently declined to accept recommendations from the administrative branch of Government. Instead, they have upheld and continued high-level price support and related programs which may have had some justification during depression or wartime emergencies but which had long outlived their usefulness.

These are the programs which lead to regimentation and loss of individual initiative. They are the programs responsible for Mr. John Donaldson's troubles. They are the programs which the administration, again this year, has urged Congress to amend and correct.

We have checked with the Department of Agriculture about the wheat program and the situation regarding Mr. Donaldson's operations in 1957, the year mentioned in the editorial. Under the law, wheat marketing quotas—with their penalties for exceeding farm acreage allotments—are, in general, binding on all wheat producers when quotas are approved by at least two-thirds of the eligible producers who vote in a national referendum.

This is true for an individual farmer, even if he did not vote for the quotas and did not take advantage of available price support programs. There are two exceptions. Quota penalties do not apply to any producer who does not harvest more than 15 acres of wheat, or to a producer who harvests not more than 30 acres and obtains a feed wheat exemption—feeding all the wheat on his own farm, and selling none.

Department of Agriculture records show that measurement by Government agents put Mr. Donaldson's 1957 wheat at 23 acres, as compared with his farm allotment of 11 acres. All producers are notified of their rights of appeal under administrative procedures when they feel there are errors in the operation of the program. Mr. Donaldson apparently did not take advantage of his rights of appeal under these procedures.

We understand that when the case went to the U.S. Court of Appeals, the court ruled that because Mr. Donaldson had not used the right to appeal under the administrative procedures he was not in position to reopen the determination of basic facts about his wheat acreage. In other words, he did not exhaust his appeal rights under administrative procedure before coming to the court.

We, of course, greatly regret the incident which has caused so much difficulty for Mr. Donaldson, but feel that under the controlling laws the Department of Agriculture had no other course but to proceed with mandatory enforcement action. This administration will continue to seek changes in legislation which will lessen mandatory controls and give farmers more freedom of initiative in producing and marketing.

Sincerely yours,

JACK Z. ANDERSON,
Administrative Assistant to the President.

[From the Sandusky Register, Apr. 16, 1959]

SWEET LAND OF LIBERTY

A week ago Thursday John Donaldson said he is going to move out of the United States. He is going to sell his farm out on Fitchville River Road and move his family to a farm he plans to buy in Canada.

Almost everybody around here knows John. We know he is no hot-head. We know he is far from being a screwball crusader.

Stop practically anybody on the street and they'll tell you that John is quiet, gentlemanly guy with an above average amount of considered judgment.

So why is John doing this?

Is he mad at the Government?

Is he unpatriotic?

Is he a poor loser?

No, it isn't any of these things. The basic reason is very simple.

John has always held his head up and he wants to continue to do so.

He is a man who believes self-pride is indispensable in a well-balanced individual.

And he believes in man as an individual and feels very strongly that every man is entitled to enjoy the dignity of his position as a person.

The loss of these basic human rights of self-determination, John believes, make him less than a man and not much more than a statistic, properly filed and numbered, in the records of the U.S. Department of Agriculture with cross references in the U.S. Department of Justice.

All this is pretty strong language. Is it really this bad?

Let's look at the facts.

John owns 389 acres of land down the road from Barrett's Chapel. His family has owned this property since the American Revolution.

He has farmed here since 1937, except for 4½ years during World War II when he served with the 37th Division in the Pacific.

The family has always used this land to earn a living for themselves.

The family has always determined how the land could best be used, year after year, to provide a livelihood.

Now John feels that if a man cannot determine how his land or machine or store should be used, he does not own that property.

This, he feels, is especially true if his use of this property in no way affects his neighbors or his country and especially if he has never accepted a nickle's worth of wheat subsidy from anyone.

For the past 2 years John has not been permitted to vote in the wheat referendum because his allotment from the Department of Agriculture has been under 15 acres.

In the year 1957, the Department of Agriculture said John planted 23 acres of wheat.

That year John employed a certified surveyor to measure his wheat. In a sworn statement, the surveyor stated that John's wheat measured 14 acres, plus or minus one-half acre.

John was not permitted to offer this evidence in his defense in court.

According to Clarence May, John's attorney, the Government offered no evidence whatsoever to back up their claim that he planted 23 acres.

John asked for a jury trial, citing his rights under the Constitution. This was denied him by the court.

This left John with no choice. Either pay the fine and shut up or seek another solution to a situation he knows in his own heart is unjust and unfair.

John wants to continue to farm. He has a family to provide for. Should he continue to pay fines year after year, with no chance to defend himself or should he seek a place where he will be permitted to do this?

The answer to this must come from each of us.

How we answer it or if we don't bother to answer it at all, will determine the kind of future each of us will have in this country for years to come.

As it is done to any one of us, so can it be done to each and every one of us.

"Fidel Castro: Liberator or Dictator?"—The Critics Review Jules Dubois' New Book

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following book reviews which appeared in the New York Times for April 5, 1959, and the Washington Daily News for April 7, 1959:

[From the New York Times, Apr. 5, 1959]

FROM THE SIERRA MAESTRA TO HAVANA, THE IDEALS NEVER CHANGED

(By Herbert L. Matthews)

Jules Dubois, the Chicago Tribune's noted correspondent for Latin America, has performed a remarkable tour de force in this book. He himself says it was written in 20 days, which is almost incredible—for it is a full, solid, well-documented work that will stand up. The haste with which it was written means that there are errors and lacunae, but the errors are minor, the omissions few.

One must expect that the books written about Fidel Castro during these first months of his power will be either adulatory or critical. There can be no such thing as an "unbiased," "impartial" study because no one can write intelligently about the revolution unless he was somehow identified with it. Dubois is a sincere admirer of Fidel's but a man who at least knows him, knows Cuba and knows the historic background out of which he came.

There is a typical letter from Fidel Castro to Jules Dubois printed at the beginning of the book. The letter concludes: "Should your book contain errors and should your opinions expressed therein be mistakes or unjust, I shall not hesitate to express my own opinions about the contents of the book when it is published."

Errors there are, but not of a sort that the rebel leader need care about. The opinions are neither "mistaken nor unjust," and if Fidel does not find this book to his liking he is hard to please.

Dubois' book is at the same time a biography of Fidel Castro and a history of the revolution. He does the latter job better because there is considerable documentation available and he personally covered a great deal of the war. He was obviously handicapped in getting information about Fidel's early youth.

The book picks up authority and importance with the famous incident of the Bogotazo. This was the uprising in Bogotá, Colombia, during the ninth Inter-American Conference in April 1948. Fidel took part in it as a visiting student delegate, and Jules Dubois was there as correspondent for the Chicago Tribune.

The next big incident came more than 5 years later—the attack on the Moncada Barracks in Santiago de Cuba on July 26, 1953. Mr. Dubois' account of the assault is sketchy, but the story of the trial of Fidel Castro afterward is excellent and much the fullest yet available in English.

The incident was a peak in Fidel's life and in the revolution and it was later to give the July 26 movement its historic name. The eloquent self-defense of Castro before the court was circulated clandestinely during the last few years of the Batista regime and the trial already figures as one of the most important and dramatic in Cuban history.

Mr. Dubois is right to devote a number of pages to this defense. Anyone who reads it carefully will understand much that is happening today in Cuba. Fidel proclaimed in that 5-hour speech the ideals of the social revolution he is now trying to put into effect: to restore sovereignty to the people, to achieve a more equitable distribution of land and profits from industry and agriculture, the confiscation of all of the property of all the malfeasants and other measures affecting housing, education, and employment.

Other documents, many of them unconscionably long—for there has seldom been a Latin American hero so overflowing with words as Fidel Castro—bolster the picture with their consistent theme of social revolution. Fidel has never wavered or changed in that respect. He misjudged his own future role so completely as to say: "I have renounced beforehand every post after the triumph." That was naivete, not hypocrisy. The ideals, however, never changed.

The detail piles up excitingly and copiously as the revolution progresses. Here are some of the dismal facts of the Ambassadorships of Arthur Gardner and Earl E. T. Smith, the blindness of the State Department, the frightening callousness of the Pentagon.

Mr. Dubois prints a photograph of Ambassador Gardner hugging Gen. Francisco Tabernilla, Batista's chief of staff, which was truly symbolic of the warmth shown at all times by Mr. Gardner to General Batista and his associates. Ambassador Smith was blamed by Cubans mostly for his refusal to face the facts and his failure to grasp what was happening. This led him into policies that played the Batista game, as the author shows.

The turning point in the rebellion came in July–August 1958, when the hard-pressed Batista made his last serious offensive and was badly beaten. This coincided with the unity pact of Caracas (July 20, 1958) and the creation of the Civilian Revolutionary Front. The unity pact finally brought together all the leaders and all the parties of the opposition in an agreed program. A failure of the opposition to unite had been one of the major reasons for the inability to overthrow the Batista regime. It was at that time that anyone knowing what was happening in Cuba could say with confidence: "Fidel Castro is going to win. One cannot say when or how, but the defeat of Batista is certain."

In most cases Mr. Dubois wisely allows the facts and documents to speak for themselves. It is a brilliant job of digging and collating, even to the confused pattern of events at the time Batista fled and the dramatic 6 weeks that followed.

[From the Washington Daily News, Apr. 7, 1959]

DICTATOR OF THE LEFT?—BOOK PROVIDES BETTER UNDERSTANDING OF CASTRO

(By John Hoover)

Jules Dubois' book on Fidel Castro (just published by Bobbs-Merrill) ought to be required reading for every American shocked and outraged by recent evidence of anti-U.S. feeling south of the border.

All the principal sources of Latin distrust and dislike of us can be found in these pages. On them is told the story of the Cuban premier's campaign to break the brutal Batista dictatorship.

In the telling, is revealed the ignorance and misunderstanding (on both sides) which are, of course, at the bottom of much of the trouble between Latin America and North America.

Take as a point of departure the widespread North American attitude toward Castro: Suspicion that a dictator of the right has been supplanted by a dictator of the left; a lukewarm good will overlayed with apprehension that communism has gained a toehold on our flank.

These feelings have been engendered by—

The summary drumhead trials and executions of "war criminals."

The quick assumption of power by Castro and delay of elections.

The rather coy disavowals of communism and the presence in positions of influence of leftists reputedly more sympathetic to Moscow than to Washington.

The quick redistribution of land and threatening moves against big business, much of which is heavily capitalized from the United States.

Continual saber-rattling toward the remaining hemisphere dictators.

Mr. Dubois' account of the Castro revolution provides a context within which these suspicions can be viewed in better understanding. With such an understanding one still has room to judge Castro, either as a wholesome development in American politics or as a hemispheric disaster. Mr. Dubois doesn't pretend the issue is settled.

THE TRIALS AND EXECUTIONS

Latins often point out that seldom has there been a period in which U.S. citizens lived without the benefit of constitutional rule. Terror and brutality of despots is something completely outside our experience. Our indignation at the savage treatment of prisoners of war and subjected people by the Axis nations was one reason for the war crimes trials after World War II and the United Nations' anti-genocide pacts.

One of the first laws decreed by Fidel Castro after he had invaded the Sierra Maestra in December 1957, was provision for quick trial and punishment of the principle agents of Batista's cruelty. Partly, at least, this was done to prevent mobs from dealing with their tormentors in kind; the purpose was to make such summary justice as humane as possible.

Mr. Dubois points out that Castro was astounded when the trials had the effect of antagonizing the free world and the author speculates that if there had been no trials the world might have excused the killing of many more as inevitable revolutionary zeal.

Mr. Dubois does not gloss over the fact that justice was severely abused in some trials—particularly in those of the airmen accused of bombing towns and villages which were not military objectives.

This is the case in which the verdict freeing most of the pilots was overthrown by Castro who ordered retrial and conviction.

But for most of those shot, Mr. Dubois says, there was ample documentation of extreme brutality.

CASTRO AND POWER

Throughout the revolutionary period Castro always disavowed any desire for civilian power. He said he would not take an executive post.

But, as Mr. Dubois points out, he deliberately made a long triumphal march across the island as soon as victory was won, relishing the public plaudits and making sure that control was in the hands of friends wherever he went.

He had dictated the acceptance as provisional president of Manual Urrutia Leo, a respected judge who had been persecuted by Batista for insisting on the rule of law.

The "revolutionary junta"—composed of all anti-Batista forces—had a far abler candidate, Senor Felipe Pazos, a distinguished financier and statesman. However, it deferred in favor of Castro's choice. Then, when the government teetered in the early days of 1959, Castro accepted the role of premier after it became apparent that contradictions were arising from the separation of powers. Castro obviously was the law. The cabinet was then headed by Premier Jose Miro Cardona. It would make decisions that were countermanded by Castro. For Castro

to accept the title of premier was only to make fact of fancy.

Castro has said that he would like to be elected president under fully constitutional means.

But, he has also said that as of now there is no party in Cuba but the 26th of July movement and that if elections were held soon he would be elected president.

He has stated he wants political parties to have time to organize and present their programs to the public so that any election will reflect the will of the Cuban people, but right now there is a sort of "truce" on; there is little or no criticism of Castro from political oppositionists. They simply don't want to take a chance.

CASTRO AND COMMUNISM

Castro has a definite program he has outlined again and again in his long-winded public appearances and in equally long-winded manifestos.

Castro has denied repeatedly that he is a Communist. He has also refused to describe himself as militantly anti-Communist. His brother, Raul, heir apparent who is considered further left than Fidel, when asked his political affiliation usually replies, "If I were a Communist I would belong to the Communist Party. The only party I belong to is the 26th of July." During Raul's formative years he went to Prague and to Moscow for political indoctrination.

The next closest Castro associate, Ernesto (Che) Guevara, who has been officially declared a "native" Cuban, although he was born in Argentina, is also vague about his politics. He was in Guatemala during the leftist regime of Jacobo Arbenz Guzman and has expressed great admiration for that government.

He says he was denied a position in Guatemala because he would not join the Communist Party. Others doubt that given reason.

Mr. Dubois details Fidel Castro's program at great length. It includes rather drastic redistribution of land from large holdings, both governmental and private, to the campesinos, or farm workers. It includes low cost housing for the poor, and rollback of electric and telephone rates. Castro declares he's still for private enterprise but against exploitation. He says he seeks to wipe out the chronic unemployment of something more than 1 million of Cuba's 6 million population.

SOCIAL REFORMS

Citizens of the United States are prone to forget that many of the social reforms sought by Latin American politicians have been reality in the United States for generations.

Our own homestead laws insured that most of the North American land was owned and controlled by the men who developed it and worked it. Since most of the States were organized before the great migration to cities, the political power has customarily been held by small farmers.

Organized labor has been growing ever stronger since the turn of the century and has forced ever improved working conditions and wage standards.

Since the days of Theodore Roosevelt big business in the United States has been restricted by antitrust laws; the limiting force of graduated income taxes has been placed against great wealth.

None of these reforms have got very far in Latin America and in many places laborers, both industrial and agricultural, have been virtually enslaved to owners of property under a colonial enterprise system that is a far cry from what we know as free private enterprise (which is not so private and certainly not absolutely free these days).

According to Castro's program, as detailed by Mr. Dubois, more private foreign investment in Cuba will be encouraged. But Castro wants the profits to remain in Cuba, and he wants Cuban workers to get a better share of the income.

THREATS TO DICTATORS

Castro could hardly be expected to love Rafael Leonidas Trujillo who supplied Batista after the United States cut off shipment of arms in March 1958, and who now provides haven for the deposed Cuban. Fidel has also made threatening gestures toward the Somozas of Nicaragua who also sent military supplies to Batista.

Mr. Dubois does not think the Castro regime will intervene directly in the affairs of those dictatorships and indeed his Government has already recanted some early extreme remarks. At one moment, Castro threatened withdrawal from the Organization of American States if the dictators weren't tossed out. His Government quietly backtracked on that one, and got him off the hook.

On the other hand, it is felt likely that Cuba will provide comfort for exiles and will encourage "homegrown" revolutions against her dictator neighbors.

Latins have found it hard to understand why the U.S. Government, cherishing stability, has often been able to stomach the worst despots. They cannot reconcile our reverence for democracy and civil rights with our willingness to pay off the dictators and reap huge profits under an economy that exploits low standards.

They often feel we have more real respect for property than for people.

Unfortunately, all too often the only citizens of the United States Latins ever see are the wealthy who can afford to take luxury cruises and stay at high-priced hotels. These people tend to find more in common with the feudal overlords whose burden of wealth is borne by the poverty-stricken multitudes throughout South America.

This helps explain much of Castro's tub thumping.

All these points are made clear in Mr. Dubois' story of the 9-year fight of Fidel Castro against Fulgencio Batista.

There are documents galore. They all attest to Castro's attitudes. There is also documentation of the crimes of Batista against the Cuban people.

Few people are better able to put the material into perspective than Mr. Dubois who has been a topflight Latin American correspondent for the Chicago Tribune for many years. And he is a reporter who goes out in the streets to get the news instead of waiting for government handouts.

Unfortunately his accounts of the action of the revolution are a bit sketchy, but it is remarkable that he could have got out any sort of an account in the short time that has elapsed since the Batista empire crumbled on January 1, 1959.

May Day, Law, and Youth

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent editorial which appeared in the Bayonne Times, May 1, 1959, entitled "May Day, Law, and Youth":

MAY DAY, LAW, AND YOUTH

Today is Youth Day for the Elks and Law Day for the New Jersey Bar Association and May Day for all of us; it's time to do some cheering on all counts. The Elks are placing talented young people in positions of prominence all over town, and the bar association has been sponsoring an essay contest on "Law Day, U.S.A., What It Means to Me" among high school students of the State. They're both excellent activities, because they bring young people into contact with politics and political philosophy—a fancy way of saying what makes democracy tick.

Democracy depends absolutely on the quality of the people it places in office, and on the political understanding of the community. Both the Elks and the bar association are trying to draw the attention of young people to politics, what it means locally and what it means internationally. Locally it makes so great a difference that almost everything that takes place in a municipality for good or ill traces back to politics. This is true whether we begin with education or housing or prosperity of local business or job opportunities or attractiveness of general plan or anything almost else. In international affairs, which is where the bar association's emphasis lies, politics is the difference between tyranny and freedom. Dictatorship by definition is government in the absence of law; the dictatorships have laws by way of window dressing for their own people and as propaganda fodder, but the very essence of dictatorship is government untrammeled by law. The bar association in its essay contest prompted hundreds of New Jersey students actually to think about their country's government by law and the Communist countries' government by dictatorship. May Day is a time for youth, for fun and frolic, and it's also a time to think of springs to come. The Elks and the bar association are helping all of us to do just that.

Our Airline Worked—Our TVA Hasn't Yet

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I am placing in the RECORD the last of three articles on Afghanistan written by the editor of the Nashville Tennessean, Mr. Coleman A. Harwell, who is on a world tour.

This article concerning the establishment of the airline by our country and its value to the West, as well as the observations made about the Helmland River project, will be of extreme interest to you and I commend it to your reading.

The article follows:

OUR AIRLINE WORKED—OUR TVA HASN'T YET

(By Coleman A. Harwell)

KABUL, AFGHANISTAN.—Some boners have been pulled on this strategic cold war front.

Consider, for instance, the time back in 1956 when Russia's traveling salesmen, Bulganin and Khrushchev, dropped down out of a murky sky and "presented" Afghanistan with $100 million in credit.

Western influence hereabouts hit a low point. Anyone making book would have had to give the stable entry including the United States a very poor chance in the running at that time.

OUT FOR AN AIRLINE

Soon thereafter someone—probably the Afghans, but it isn't easy to determine just

who—decided that Afghanistan should have an airline. We are not certain when Russia came into this particular picture, but the record is clear that there was considerable exchange between U.S. officials here and in Washington. Delays occurred, as they usually do in such important matters. The Afghans said it seemed to them the United States wasn't much interested.

Then 1 day, and rather quickly, too, for a project of this size, the United States said OK, it was ready to see to it that Afghanistan did have an airline, and a good one.

Two hours later, the story goes, the Russians advised that they were ready to provide an airline. But an agreement had already been made with our people. And so it seems that the men in Moscow made a mistake.

There may be ample room for argument as to the value of the airline project to us and the West. But it seems to me to have lots of merit.

RED WINDOW DRESSING

Russia has done a number of dramatic things in Afghanistan, things that have window-dressing appeal. Such as oiling a few streets in Kabul. (Incidentally, they are beginning to show wear and tear rather soon, but they still are strong talking points.) On our side, the airline project has been the one hot sales item.

Ariana Airlines is now flying regular schedules from Beirut to Tehran to Kabul, and from Kabul to Karachi, Pakistan, and New Delhi, India. It connects Kabul with Kandahar in the south and Herat in the southwest. It has two trim DC–4's and four good old workhorse DC–3's. During 1958 Ariana averaged 2,000 passengers per month, in 1959 it will do better. This includes the popular special runs to Mecca for the great annual pilgrimage of Moslems.

Afghans love to fly; they are proud of flying on their own line. Our flight in was packed with them.

There are 26 Americans here developing the line and 50 to 60 Indians, skilled pilots, mechanics and accountants. As Afghans learn the jobs, they take over. Many are in mechanical and office jobs now. Ten young men are training as pilots in the United States, five at Park Air College, St. Louis, and five in Texas. They are reported making good progress.

But a thing that its American sponsors think is especially important is that the airline is a private enterprise. That is, the American portion of it. And it is being operated like one, with cleanliness, punctuality and good bookkeeping all stressed.

Roger Lewis, vice president of Pan-American Airways, came in on the same plane with us, for the annual board meeting being held here. He said that Pan-Am put in $200,000 and owns 49 percent of the stock. Afghanistan owns the rest. Pan-Am has three of the seven directors.

The United States is putting up $14 million to provide the American personnel under the U.S. technical aid program, as well as airport navigational equipment and training. He said the operational report at the meeting showed the line making good progress. If it continues, he said, Pan-Am will be able to illustrate the efficiency of private enterprise.

IT'S A TOUGH JOB

It stands to reason that no private firm could be expected to go into such an unchartered and remote operation as this without Government aid. Unless and until other American airlines show they were denied a chance to compete for the job, it seems logical to assume that Pan Am was handed a tough job, rather than a bonanza. Regardless of this aspect, it looks like a good operation.

One thing is certain. Lewis made good on his plan to get back to New York Saturday, after arriving here Tuesday and attending meetings through Thursday. The airport, flooded when we came in, was dry by Friday. Ariana service resumed that day; he caught Pan Am's round the world flight somewhere down the line and, with the benefit of an 8-hour time gain, was on the dot in New York. That puts Kabul mighty close to us, and the people here know it.

SOME SETBACKS, TOO

It would be nice to report that all our undertakings here are as encouraging. But that is not the case.

The Helmland River project has been hanging over our heads for several years. Afghanistan started an ambitious reclamation project in 1939 to put thousands of desert acres into cultivation. They spent heavily, bogged down.

In 1946, the American contractors, Morrison-Knudsen, came into the picture.

Four years later, the United States took a hand with loans through the Export-Import Bank. In all, we have put about $39 million into this big irrigation-reclamation-hydroelectric job, which has often been called their TVA and which is in fact, named HVA.

Benefits are already available in the valley. Thousands of acres have been drained of floods; others assured a satisfactory year-round water supply.

But one big trouble seems to have been that we boosted the HVA too high; people were given the impression they would have a program rivaling TVA's in a short time. When the program did not materialize, HVA became a target of abuse.

Afghans often remind you that thousands of acres expected to be made productive proved to be salty and thus hopeless.

And one Afghan at least is still peddling this old story from the early Morrison-Knudsen days. He said that in the past when Americans on the job came into town to shop or to make a business call, they left their cars running burning precious gasoline. He went on to explain that this was because the contractors had a cost-plus-10-percent contract with the Government; thus, the more the job cost, the more money the contractor made.

Whether there is any basis of fact in this isn't the point. The point is that we need to get this job straightened out. Lots of good work has gone into it, lots of progress has been made. Many people here—Afghans and Americans—have confidence in it. But apparently we do not have a complete, thorough engineering plan for the job, after all these years.

It is reported that the subject is under consideration in Washington now. With all the engineering skill we have for such projects, with all we have invested thus far here, with the urgent necessity of (1) removing Helmland from the area of hostile scorn, and (2) turning it into a bright spot of American achievement in this important area, it is to be hoped that positive action will be taken. We need a solid survey and plan for Helmland. And without further delay.

A PLAN FOR EDUCATION

Another big element in our work here is in the field of education. A team from Columbia University is working with the Afghanistan Government on building up a school system that will assault the country's big illiteracy problem, probably 90 percent.

A team from the University of Wyoming, suitably chosen in view of its climate and soil, is helping in the agricultural field. Both are well regarded by the people they are working with. Education is democracy's greatest force.

Very real competition is being waged in the propaganda field. Some subtle, some not very.

All embassies are permitted to issue information bulletins, with limited circulation. Bulletins are issued by the United States, Britain, United Arab Republic, India, Pakistan, and, of course, Russia and Red China.

They're all four-sheet, mimeographed affairs.

OURS IS HELPFUL

Ours is not a bad news sheet—certainly very helpful to Americans who have no source of news but a 15 minute daily English news program over Radio Kabul, or the local government press, in case you read Persian or Pushtu.

Russia's is, as expected, a dreary propaganda effort. One day's issue, with no typographical relief, covered these juicy news items: Soviet statement on NATO's 10th anniversary; a report on industrial output in the state of Kirghiz; the forthcoming 7-year plan.

Unhappily, there is no Western news service coming in here. United Press International has a contract to serve the local national press service, but has had wire trouble for a year. Meanwhile, Russia's Tass gets its service and UPI hopes to solve its problems soon.

Also, unhappily, there are no Western newsmen here, UPI has a local newsman, who files an occasional piece, which must clear his superiors. The news here may not make headlines every day, but it is worth more attention than it is getting from the West.

Operation of the New York State Bridge Authority

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. STRATTON. Mr. Speaker, important in the successful operation of our Government is the functioning of those governmental administrative organizations known as authorities. These are traditionally operated on a bipartisan basis and with a view to technical achievement rather than political accomplishment.

One of these authorities which has achieved great distinction in my State is the New York State Bridge Authority, which has recently submitted its report for the year 1958 to Governor Rockefeller. The bridge authority, which is under the chairmanship of Hon. John S. Stillman, of Cornwall, N.Y., administers the important transportation functions involved in crossing the Hudson River in my State.

Although the bridges which the authority controls are not located in my congressional district, these important river crossings play a most significant part in the life and economy of millions of people in the State, including those living within my district.

For that reason, it is a pleasure to include in the RECORD a fine editorial commenting favorably on the bridge authority's annual report which appeared in the Catskill (N.Y.) Examiner Recorder on March 19, 1959:

MORE ABOUT OUR BRIDGES

The New York State Bridge Authority has presented to the Governor a report on its operations for the past year. It contains interesting facts. Incidentally it proclaims that the authority's objective is "A Greater Hudson Valley." That alone rates congratulations to authority members John S. Stillman, of Cornwall; Ernest M. Happner, of Kingston; Dr. John L. Edwards, of Hudson, and William Haas, of Coxsackie, who serve without pay. They have well demonstrated that objective. And again, incidentally, we wish the throughway authority would adopt a similar objective, which certainly would include an interchange at Coxsackie.

Established by act of the legislature in 1932, the bridge authority is an independent public benefit corporation responsible to the traveling public, river communities and authority bond holders—but is not a part of any department of State government.

The authority has a staff of 159 persons contributing to the economy of this area, and its service also contributes—providing river crossings for some 99 million cars since its organization. The authority has devoted considerable attention to maintaining and improving the bridges and their facilities. During the past year, $88,040 was sent in repainting the Rip Van Winkle span which now has the benefit of a new 2.2-mile highway connection with Route 9 on the east. The Bear Mountain bridge roadway was repaved and the structure repaired at a cost of $90,365. At Poughkeepsie headquarters grounds around the administration building were graded and improved at a cost of $35,000; the toll plaza widened, a fourth lane installed and a toll booth completed. That cost $185,000. The authority's 1.3-mile road linking Route 9-W and Route 32 with the Kingston-Rhinecliff span, costing about $1.3 million, is expected to be opened later this year.

These and other facts of the 1958 report indicate the progressiveness and good service of the bridge authority members and the excellent investment the public made in Hudson River crossings.

U.S. Schoolboy Brings Aid to Korea Orphanage

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I should like to bring to the attention of my colleagues in the Congress the story of Richard Adams, the student body president of the Pacific Grove, Calif., High School. Richard recently traveled to Korea with gifts of clothing from Pacific Grove to the children of Korea. This outstanding operation of international good will would never have been possible without the fine help of the Navy's Military Sea Transportation Service, which took Richard and the gifts to Korea on one of its ships and arranged the program for his visit. The story is told in the following article from the May 1959 issue of the magazine MSTS and the official report of Lt. Comdr. A. W. O'Leary, the commanding officer of the MSTS office in Pusan, Korea:

U.S. SCHOOLBOY BRINGS AID TO KOREA ORPHANAGE

The warm-hearted crew of the refrigerator ship USNS *Bald Eagle*, which unofficially supports the Chong Duck Wan Orphanage at Pusan, Korea, recently got an unexpected assist.

Seems a former engineer aboard the Pac ship mentioned the project to his daughter, Rosalin Knowlton, a student at Pacific Grove High, California. Rosalin, vice president of the student body, started a campaign which netted 5,000 pounds of clothing for the tiny tots.

On February 23, the *Bald Eagle* sailed from Alameda with the precious cargo aboard. With it, to make the delivery to the orphanage in person, went 17-year-old Richard Adams, student body president.

Arrangements for Richard to travel aboard the MSTS ship were handled by the Monterey Peninsula Council of the Navy League and the U.S. Naval Postgraduate School in Monterey.

Pusan is a regular stop for the *Bald Eagle*, and the Chong Duck Wan Orphanage a regular stop for the crew while in port. Donations from friends and charitable organizations supplement those made by the crew.

REPORT CONCERNING VISIT OF RICHARD ADAMS

At 0800 on March 21, 1959, Richard Adams debarked from the USNS *Bald Eagle* and was greeted by a reception committee including Lieutenant Commander O'Leary, Miss Lim, director of the Chung Duk Wan Orphanage, representatives of the local press, and schoolchildren, who presented Richard with the traditional welcome of flowers.

All persons then embarked in a procession of assorted vehicles which made its way out of Pusan, following the coast some 12 miles to Su Yong, a tree-covered neck of land looking out over sea and mountains. Here the children and officials of Chung Duk Wan Orphanage were on hand to greet Richard, who had traveled some 5,000 miles to personally present some 3 tons of clothing collected by Pacific Grove High School for the children of Korea. The official presentation ceremony was held in a small hall festooned with flags and flowers, and highlighted by speeches by Richard and local notables, including Mrs. Kim Son, wife of the Governor of Kyong Sang Nam Do Province. The Governor's small son was also present, and began the series of presentations by shyly placing a large wreath of flowers about Richard's neck. Mrs. Kim also added to the traditional exchange of gifts with a lacquered photography album sent from the Governor. Mr. Lim Chang Nam, father of the director, graciously thanked Richard for the orphanage and also sounded what was to be a keynote of his Pusan visit when he stressed that though the people of Pusan had had many contacts with American military and government officials, that this was the first time they had been visited by an American student. The popping of flashbulbs and whirring of newsreels, later shown throughout Korea, were eloquent testimony to the interest aroused by Richard's visit. The ceremonies were further enhanced by a presentation from the orphanage to Captain Rhoads of the *Bald Eagle*, whose crew members had felt that they also should "get in the act" with a spontaneous donation of their own gathered while underway to Pusan. After the benediction by Rev. Kim Hyun Kyu, the proceedings received their final touch when Richard went outside to a point overlooking the bay and planted a tree commemorating his visit.

The afternoon ceremonies opened at Tung Ju Commercial High School where Lt. (jg.) Clayton, executive officer of this command, has been donating his spare time as a teacher of English for the past several months. A huge banner proclaiming "Welcome Richard Adams" placarded over the front of the school, met the eyes of the visiting party as they arrived in MSTS vehicles. After a short meeting with school officials, they proceeded to an assembly hall already filled to overflowing with students, teachers, and reporters from the Pusan area. To begin the festivities, chosen students performed songs and dances in Richard's honor. Then after some remarks by Mr. Chang Chin Kwon, who acted ably as interpreter throughout the proceedings, and by Lt. (jg.) Clayton urging his students not to be bashful, a question and answer period began. As it turned out, this admonition was hardly necessary as the students, who had been carefully chosen for the honor of attending his meeting, displayed a tremendous curiosity about American schools and customs. Richard answered their many and varied questions with considerable ability and even when seemingly stuck for an answer showed a sincerity and humor which obviously won the hearts of his listeners. When asked by a shy eighth grade girl what American teenagers did on dates, he hesitated and then with a smile replied, "I'm afraid that's confidential." During the entire proceedings reporters were seen busily jotting down notes for articles that subsequently appeared in the local papers. Technicians from two of Pusan's radio stations taped the discussion for later presentation. Finally after the last speech had been made, Richard and his party, laden with gifts, departed amid a confusion of farewells and congratulations.

Finally, last but not least, Richard enjoyed one of the high points of his visit, an inerview at the Governor's mansion. Governor Kim Kyoo Jin and his wife provided a most gracious reception, serving tea to their visitors and entertaining them with great kindness. The Governor inquired about Richard's experiences in Pusan, noting that he had been following his experiences in the local newspapers with great interest. The interview lasted for over half an hour and ended with mutual thanks and goodbyes.

MSTSO, Pusan feels that Richard Adams' visit was an unqualified success. All the work, interest, and expense devoted to bringing him to Pusan and arranging activities for him here were more than justified by the results of his stay. Not a single untoward action marred what must have been a singular adventure in his life, and what was both an exciting and educational experience for all naval personnel concerned.

Reclamation of New Jersey Meadowlands

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD the testimony of Mr. Ben Schlossberg, the director of the department of industrial and real estate development of Hudson County, before the House Appropriations Committee on behalf of reclamation of New Jersey meadowlands. The following also concurred in the testimony of Mr. Schlossberg: Board of Chosen Freeholders of Hudson County; Patrick Mullane, president, Hudson County Building Trades Council; Joseph Quinn, president, Hudson County Central Labor Union; Irving Zeichner, president, Hudson County CIO Council; Albert Handel, chairman, New Jersey Association of Real Estate Boards; Mr. Samuel G.

Sutphen, president, Jersey City Real Estate Board.

The testimony follows:

TESTIMONY OF BEN SCHLOSSBERG

The county of Hudson urges this committee to recommend an appropriation of $500,000 for the purpose of conducting a survey affecting the streams and river basins as outlined on page 22 of Public Law 85-500.

As the result of many conferences, we are convinced that the Army Engineers have the ability and facilities to conduct this survey. Proper reclamation of the wasteland of the meadows is a necessity which only the Federal Government can initiate.

The success of this endeavor will lead eventually to thousands of millions of dollars in new ratables and give employment to thousands of people in our area.

We are pleased to have you read nine issues of the Sunday Newark News of New Jersey, which brilliantly gives the history of the meadowlands affecting our area. It was written by John T. Cunningham.

The Jersey meadows extend about 28 miles in length and 4 miles in depth through the counties of Hudson, Bergen, Essex, Union, and Middlesex.

Dutch engineers, viewing the marshes in the shadow of the Empire State Building, declared "only in America could it happen." Thus, do Europeans regard our waste of a treasure.

It is estimated there are 30,000 acres of marshes, a fifth of which has been reclaimed.

The reclaimed portion gives an inkling of the value of this land when it is considered that built on it are massive electrical generating stations as heavy as a 50-story building; railroad marshaling yards through which 30 million tons of freight pass annually; two airports, heavy industrial plants, some of the largest truck terminals in the world; ship terminals; refineries and petroleum distribution centers.

These developments are industrial proof that the marshes can be conquered and put to profitable use.

This conquest of the meadows, however, has been piecemeal and different methods of reclamation have been used, and the cost per acre is about the same as upland acres.

What is needed at this time is a survey which would be the basis for overall reclamation of the meadows with a view toward planned development.

From the survey, we would find the real extent of the poorly chartered marshes; basic soils and engineering data.

Without this survey, the marshes will remain a wasteland in the midst of overoccupied land. The survey should tell us where to erect dikes and locks and pumping stations without regard to geographical borders.

Then, with the land reclaimed, industry would have a place to expand, municipalities would receive new tax ratables and our people would have more job opportunities as the overall economy was given a boost as the last frontier of the metropolitan area opened up.

Incentives, Not Subsidies, Meet Human Needs

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. BOSCH. Mr. Speaker, I have just read an editorial in the May issue of Nation's Business which strikes me as being one of the most logical and concise evaluations of the road we are treading toward socialism that I have seen in a very long time. I hope that all my colleagues will read it, and I wish that every taxpayer could read it.

Under leave to extend my remarks, I include the editorial to which I have referred:

INCENTIVE, NOT SUBSIDIES, MEET HUMAN NEEDS

The day's most costly question is:

"Don't you believe in meeting human needs?"

Only the wicked can answer "No".

This permits those with schemes for spending Government money to smear with a nasty stick anyone who dares to challenge their proposals.

So long as an ounce of emotion outweighs a pound of logic the Government can thus be embarked on all sorts of adventures calculated to meet human needs that the people or their State Governments have been unable or unwilling to meet.

Presumably the needs are genuine and urgent. Presumably the plans for meeting them are well intentioned.

The misfortune of our country—and of other benevolent countries before us—is that economic forces are not swayed by good intentions. The evidence of this is on clear view in dozens of places:

Thirty years ago the Government undertook to meet the human needs of farmers. Today the farmers' needs are only slightly less but the Government's problem is monumental.

Twenty years ago Government attempted to legislate a balance of power between working men and employers. Today we have a labor despotism that dares threaten Government officials who fail to carry out its orders.

More recently, in an effort to build up stockpiles while meeting the needs of a war economy, Government artificially stimulated production of strategic metals at home and abroad. Today, with the stockpiles overflowing, we are using, among other things, quotas, tariffs, and subsidies in an effort to stabilize the metals industry.

Government dabbling in other economic fields has been equally disillusioning. The benefits are either less than expected or overbalanced by the resulting complications.

Human needs are not met by complications. They are met by an economic system strong enough and versatile enough to support jobs. Jobs, in turn, produce the goods by which needs are satisfied.

Fortunately, our economy as originally set up had a great deal of built-in equilibrium. It has always managed to straighten itself after every push to the left. It has been able to do this because it offered rewards and opportunity to those who were willing to work. Each new Government effort to meet human needs reduces those rewards and opportunities a little.

Oppressive taxes and controls impede private effort. So Government must shoulder additional responsibility, reducing further the field for individual action.

Subsidies to a group or community require, in fairness, subsidies for those with whom they compete. Eventually the subsidies become a right to which the beneficiaries are encouraged to believe themselves entitled.

When the Rural Electrification Administration was created 24 years ago it was authorized to lend money at 2 percent interest to speed electrification of farms. Now, with farms 95 percent electrified, the President has suggested that the interest rate be raised to equal Government's borrowing cost.

This caused Senate Majority Leader LYNDON JOHNSON to urge the borrowers to "fight with beer bottles" if necessary to keep their advantages. House Speaker SAM RAYBURN asked, "Why not a little subsidy for the millions who, until a few years ago, were the underprivileged?"

With equal logic we can continue unemployment benefits to those who were recently unemployed, sickness benefits to the recently ill, depressed-area aid to communities recently depressed, educational benefits to the recently illiterate.

We can, and in truth are, building an increasing group that depends on Government rather than ambition for advancement.

In Michigan and Pennsylvania, unemployment remains high, though in those and nearby States jobs are available for skilled people. Employment agencies observe: "Unemployment benefits are very attractive."

Apparently they are less attractive in West Virginia. CLEVELAND M. BAILEY of that State urges aid for depressed areas so that "100,000 unfortunate West Virginia boys can come home." The 100,000 left their native State to find employment. What Representative BAILEY wants to stop is the spirit that kept this country from remaining a narrow band of States along the eastern seaboard.

Even where that spirit still exists today, Government intervention is working to erode it. A young man who recently started his own business reports sadly, "I was determined to get along without Government help—but all my competitors were getting it. Now I'm getting it, too—every bit I can."

It is time to consider if this is the sort of society we want. Shall we force individuals to accept Government help, or shall we encourage them to be self-reliant and ambitious?

How Congress acts on the subsidy measures urged in this session can go a long way toward setting our course.

We can depend on the individual to meet his own human needs by offering incentives, giving him room to grow and prosper.

Or we can so conduct ourselves that Khrushchev's statement, "Your grandchildren will live under socialism," becomes a prediction rather than a threat.

Address of Mr. Justice Felix J. Aulisi of the New York State Supreme Court in Connection With Naturalization Proceedings for New Citizens Conducted at the Plattsburgh Air Force Base, Plattsburgh, N.Y., April 20, 1959

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. STRATTON. Mr. Speaker, in these days few things are more precious than the privilege of United States citizenship. For that reason, those occasions when people complete the procedures which are necessary to become naturalized as United States citizens are tremendously important and mark a high point not only for them personally, but also for our Nation. It is highly important that the presiding justice in charge of these proceedings should make clear to those taking on the responsibilities of citizenship something of what is not only a great privilege but also a great obligation.

Mr. Speaker, I was especially moved the other day to read some remarks that were made at one of these naturalization proceedings by one of the outstanding justices in all of New York State, a close friend and a constituent of mine, Mr. Justice Felix J. Aulisi of the New York State Supreme Court, who resides in my district in Amsterdam, N.Y. Justice Aulisi was presiding at proceedings held, most appropriately, at one of the great bases in New York State designed for the protection of our people against Communist aggression, the Plattsburgh Air Force Base. The remarks of the justice are some of the most moving which I have ever had occasion to read, and I believe that they deserve the careful attention of all Americans.

Incidentally, the great American jurist who made these remarks came to this country himself as an immigrant, as he points out in his remarks, and, therefore, not only understands the meaning of citizenship acquired in this fashion, but also is himself living evidence of the continued operation in our country of the great American dream and the important debt which we in America owe to persons who have come to our country from other lands across the sea.

Under leave to extend my remarks in the Appendix of the RECORD, I include not only the remarks of Justice Aulisi, but also a press account of this precedent shattering occasion which appeared in the Plattsburgh Press-Republican of April 21, 1959:

ADDRESS TO NEW CITIZENS BY HON. FELIX J. AULISI, JUSTICE OF NEW YORK SUPREME COURT, AT NORTH STAR SERVICE CLUB, PLATTSBURGH AIR FORCE BASE, PLATTSBURGH, N.Y., APRIL 20, 1959

Friends, I am always greatly moved on these occasions when we welcome our new citizens. It is a time when we all appreciate anew what it means to be an American and reminds us of the many blessings and privileges we enjoy on this continent and particularly in this country.

The same small beachhead for freedom that was established when the Thirteen Original Colonies broke away from the mother country has now been enlarged to become freedom's greatest bastion and bulwark; and people in many lands, who are not able as we are to enjoy the God-given rights man was meant to enjoy, long to come here and live among us and be one with us.

It is particularly appropriate that these ceremonies be held here at the Plattsburgh Air Force Base, for the Strategic Air Command is indeed freedom's first line of defense, and we owe immeasurable gratitude to the men who stay here ever on the alert to meet the awesome challenges of today. As we hear them flying above us night and day, we might do well to consider how great their effort really is, the intensity of their mental and physical application to the techniques of modern aviation, and remember, friends, that this mighty flying force is made up of men, human beings, and in many cases they are quite young, some not so young, but all of whom must at times exert great tenacity and coax an extra ounce of effort from tired muscles and weary minds, for such has always been the demand of military excellence.

There is reason for dwelling on these matters as we extend the hand of welcome to our new citizens, to consider that along with the privileges that we enjoy as Americans go responsibilities: The responsibility to keep informed so that we may vote intelligently on the issues that confront us, the responsibility to obey the laws of our country, and today, with America occupying as it does a position of world leadership, we must carry freedom's banner high and set an example worthy of emulation by the rest of the world.

Being a real American is more a matter of heart and mind and spirit than it is of being in a particular geographic location. Those who live in this country and flout our laws or deceive and manipulate other human beings to their advantage are not real Americans. They live here and enjoy the privileges of being Americans but they have never really become Americans, for the real America is an ideal more than it is a place.

So very often our newly naturalized citizens put the rest of us to shame when it comes to devotion to this country and in maintaining high standards of citizenship. Therefore, we welcome you with enthusiasm, for, as we may be of some help to you, you, likewise, and sometimes to an even greater degree, strengthen and renew us.

Despite the fact that our country today is subject to criticism at times in various quarters of the world, the world's people are not deceived as to the true nature of America. For if this, our country, be the land of oppression, why do the fugitives of East Germany and elsewhere always run west instead of east? This fact must be, and I am sure is, a thorn in the side of communism.

And we are proud that not only individual citizens like yourselves come to join us, but now we have two whole new States willingly and enthusiastically becoming part of the United States of America, and the whole world knows these are States, and not satellites.

Friends, let us keep in mind and adhere to the terms and principles enunciated in the oath of allegiance just sworn to by these new citizens. If we do that, there will be no doubt about our individual happiness and success, for we will thus insure the future greatness of America, with equal opportunities for all citizens. We are limited here only by our own capabilities and by our desire to go ahead.

There are no first- or second-class citizens in this country. We believe in the dignity of man, we are not concerned with racial or religious background or from what land the individual migrated.

Fifty-seven years ago, a little Italian boy was born in Salerno, Italy. At the age of 12 years his shoemaker father brought him to the United States. Through the generosity of the American way of life and its institutions, many honors have been bestowed upon him, among which was to be a major in the U.S. Army during World War II. That little Italian boy is the presiding judge of this court today.

May God continue to bless America. May it also bless all of you.

[From the Plattsburgh Press-Republican, Apr. 21, 1959]

TWELVE WIVES OF AIRBASE SERVICEMEN BECOME CITIZENS AS COURT BREAKS PRECEDENT

Twelve young foreign-born wives of Plattsburgh Air Force Base servicemen and one airman took the oath of allegiance which made them citizens of the United States of America in an onbase ceremony, Monday at 11:30 a.m.

The naturalization proceeding was believed to be the first of its kind ever to be held on a military installation.

Supreme Court Justice Felix J. Aulisi administered the oath of allegiance to the new citizens. He spoke briefly on the meaning of citizenship, narrating his own immigration from Italy as a boy some 57 years ago.

The long-awaited certificates of citizenship were distributed to the group by Col. George W. von Arb.

Wives receiving certificates were Mrs. Billie Budd, China; Mrs. Wesley Rhodes and Mrs. Carl Hast, Ireland; Mrs. Jerry Workman and Mrs. Russell Schneider, Germany; Mrs. William Macomber, Italy.

Mrs. Wilson Cal, Japan; Mrs. John Kulp, Mrs. Wayne Moneymaker, Mrs. James Lockbaum, Mrs. Clyde Parrish and Mrs. Carl Hagge, England; and A-1C Helmut Machate, Germany.

After a luncheon held at the North Star Service Club, the new Americans proceeded to the Clinton County Clerk's office, Margaret Street, where 26 residents of Plattsburgh and the surrounding area were assembled for naturalization.

In the words of smiling Mrs. Danielle Oosterbaar, French-born wife of Alberte Oosterbaar, Chazy, this second naturalization ceremony was very impressive.

Before the ceremony we worried about the big responsibility and the duties of citizenship, but the Justice made us feel completely at ease and as though we were already one of the family. It was an unexpected and wonderful welcome, Mrs. Oosterbar continued.

Immediately after the new Americans received their citizenship papers at the county clerk's office they and their families were guests of honor at a tea sponsored by the local Saranac Chapter of the Daughters of the American Revolution.

PRESENTED FLAG

At the informal gathering, which was held in the DAR rooms at 56 Cornelia Street, each of the wives was presented with a miniature American flag.

Those who became citizens at the county clerks' office were: Vera Doreen Kulp, Dannemora, and Beryl Joy Parish, 10 North Main Street, natives of England.

Isabele Seiden, 66 Elm Street; Mary Anna Madigan, West Chazy; Alberte Oosterbaar, Chazy; O'Brien Benis, Tupper Lake; Rita May Brunelle, Chazy; Euphemia Sandy, Chateaugay; Denis Bedard, Mooers; Judith Ann and Gerald Dayhaw, Tupper Lake; Marcel Joseph BarGregor, 13 Lorraine Street; Micheline and Lucie Patenaude, 120 East Sharron Avenue; Ewart Strange McLennan, Peru; Josephine Aubin, Keeseville; Delima LaPlante, Mooers; Ida May Sherry, Malone; Howard Coombs, Saranac Lake; former residents of Canada.

Joseph and Joanna Detry, Dannemora, natives of Belgium.

Ginette Wood, Wolfe's Trailer Court; and Jacqueline Pleus, Ticonderoga, natives of France.

Daniela Katzinstein, Ticonderoga, native of Israel, and Svein Hvamb, Schenectady, N.Y., a native of Norway.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Congressional Control of TVA Maintained

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. EVINS. Mr. Speaker, in view of the great interest in the effect that H.R. 3460, the TVA self-financing bill, might have on the control of the TVA by the Congress, I request unanimous consent to insert in the Appendix of the RECORD the following analyses of this legislation in regard to this matter.

Some time ago I requested the Board of Directors of the TVA to prepare an analysis on this point. Such an analysis was transmitted to me on April 16 in a letter signed by Mr. Arnold R. Jones on behalf of the TVA Board of Directors. I might recall to my colleagues that Mr. Jones was formerly an assistant director of the Budget Bureau, and I think we may safely presume that his concurrence with this analysis is evidence that it is an accurate and objective analysis.

Director Jones' letter and analysis follows:

TENNESSEE VALLEY AUTHORITY,
Knoxville, Tenn., April 16, 1959.

The Honorable JOE L. EVINS,
House Office Building,
Washington, D.C.

DEAR MR. EVINS: As requested in your letter of February 26, we are transmitting herewith a statement concerning the major points raised in the remarks of Representative BEN F. JENSEN, of Iowa, which were printed in the CONGRESSIONAL RECORD for February 24 at A1364.

We hope that the facts set out in the statement will be of help to you.

Sincerely yours,

A. R. JONES,
Director.

CONGRESSIONAL CONTROL OF TVA UNDER THE REVENUE BOND FINANCING LEGISLATION

TVA is a creature of Congress, and subject at all times to legislation Congress may enact. Accordingly, Congress always has had control of TVA and would continue to have such control under the revenue bond financing legislation.

The purpose of H.R. 3460 and similar bills is to authorize TVA to finance the electric generating and transmission capacity required to meet the increasing demands on its system by issuing revenue bonds. These revenue bonds would be payable solely out of the power revenues received from TVA's consumers. Payment of the bonds would not be guaranteed by the United States. The proceeds of the bonds would, in effect, be considered as part of the corporate funds of TVA. Their proposed use by TVA would remain subject to the same continuing review by Congress as presently exists with regard to use of TVA's power earnings.

H.R. 3460 does not exempt TVA from any of the budgetary procedures normally applicable to Government corporations. These would still require TVA to submit to the President, and the President to present to the Congress, estimates of TVA's financial condition and operations for the current and ensuing fiscal years, together with the facts concerning TVA's actual financial condition and results of operations for the last complete fiscal year. The annual review of these budgets would bring to light any actions of TVA which might call for action by Congress.

H.R. 3460 contains additional safeguards against loss of congressional control over TVA. Under its provisions, TVA would be required to include a detailed statement of its revenue bond financing operations in each of its annual reports to the Congress. The General Accounting Office would continue to audit all of TVA's operations each year and to file annual reports of such audits with the Congress. TVA could not begin construction of any new power-producing project until Congress and the President were notified of its plans and 90 days of a single session of Congress elapsed without passage of a concurrent resolution disapproving the project. TVA would be authorized to issue bonds only up to a total of $750 million outstanding at any time. According to present estimates, TVA would have to have additional authorization within 5 years. This would present Congress with an opportunity for any review of TVA's past actions and future plans that might be desirable.

I should like also, Mr. Speaker, to insert herein the portion of the report of the Public Works Committee on H.R. 3460 which refers to congressional control:

PROVISIONS FOR CONGRESSIONAL REVIEW

Under H.R. 3460, TVA's bond financing operations will be subject to continuous congressional scrutiny. The bill provides no exemption from the budgetary procedures normally applicable to Government corporations. TVA's annual budgets will be submitted each year, and will include a report of TVA's anticipated use of bond proceeds just as its past budgets have always included reports of anticipated use of revenues.

The hearings on this and previous bond financing bills have revealed considerable misunderstanding of the budgetary procedures applicable to Government corporations under the Government Corporation Control Act. Under sections 102 and 103 of that act, each corporation is required to submit to the President, and the President transmits to Congress as part of the annual budget, a full report of the corporation's financial condition and the results of its operations for the last completed fiscal year. Estimates of its operations for the current and ensuing fiscal years are presented at the same time. In the case of a corporation whose statute permits it to issue bonds or utilize its revenues for specified purposes, the presentation includes its anticipated use of such bond proceeds or revenues. When its actual use of revenues or bond proceeds varies from the estimates so presented, the corporation must be prepared to furnish an explanation of the variations when it presents its estimates the following year.

The authority to issue bonds and use bond proceeds and revenues (as distinguished, in the case of most Government corporations, from use of funds for administrative expenses) is not granted by annual appropriation acts but by the corporation's basic statute. Section 104 of the Government Corporation Control Act, which provides for congressional review of the budget programs of Government corporations, expressly states that its provisions "shall not be construed as preventing Government corporations from carrying out and financing their activities as authorized by existing law, nor as affecting the provisions of section 26 of the Tennessee Valley Authority Act, as amended" [under which TVA is authorized to use its revenues for purposes connected with its power program]. Accordingly, restrictions on issuance of bonds or use of bond proceeds or revenues as authorized by a corporation's basic statute requires substantive legislation. The annual budget presentation and appropriation committee review, however, bring to the attention of Congress any actions of a corporation which may call for such substantive legislation.

TVA will also be subject to two additional reporting provisions which will keep Congress fully informed of TVA's actions and plans. One of these is a requirement, written into H.R. 3460, that TVA include a detailed statement of its operations under the bill in the annual report which it files with the Congress in December of each year. The other is the existing requirement, which will not be affected by the bill, that the General Accounting Office audit TVA's operations annually and file a report covering each such audit with the Congress.

In addition, the bill contains a special provision under which, except with the approval the the President during a national defense emergency, no bond proceeds or power revenues may be used to begin construction of a new power-producing project until Congress and the President are notified and 90 days of a single session of Congress have elapsed without the enactment of a concurrent resolution disapproving such construction.

Apart from these specific provisions, the committee is aware that the limitation in the bill on the maximum amount of bonds outstanding at any one time to $750 million will mean that TVA can finance under the bill only those new power facilities that will be required over the next 5 to 7 years. Before the end of this period, TVA will have to return to Congress with a request for new legislation increasing the amount of bonds which can be outstanding. This will furnish an occasion for an exhaustive review by Congress of the whole subject.

Some opponents of H.R. 3460 proposed amendatory provisions which would have limited TVA's use of bond proceeds and power revenues to the exact estimates contained in the annual budget submitted to Congress as modified in appropriation bills. Amendments such as this are often described as making TVA subject to the Government Corporation Control Act. In fact, they would have the contrary effect. With respect to TVA's use of its power revenues, such amendments would actually change the existing provisions of the Government Corporation Control Act as quoted above; and with respect to the use of bond proceeds, such an amendment would subject TVA to a far more inflexible procedure than the Government Corporation Control Act now makes applicable to other Government corporations authorized to issue bonds, even including

those issuing bonds directly to the Treasury or bonds which are guaranteed by the United States.

Successful revenue bond financing will necessitate efficient management. To call on TVA to finance needed new capacity by this method, and at the same time deny it such essential management tools as the flexibility in the use of its revenues which it has had in the past, or the flexibility in the use of bond proceeds which the discharge of its responsibilities will require and which other corporations have at the present time, would defeat the whole purpose of the bill.

In this connection also, I would like to call the attention of my colleagues to the remarks made by Mr. Charles J. McCarthy, general counsel of the TVA, during the hearings on this bill, as reported on pages 66, 67, 75, and 76 of the hearings:

This bill submits bond issues to the same type of budgetary controls as the revenues of the Tennessee Valley Authority, and the bond issues of other corporations.

If you will bear with me for a minute, I think it would be helpful if I take just a couple of minutes to discuss the Government Corporation Control Act.

That act was enacted back in 1945. At the time it was enacted there were some 40 different corporations. Some of them were incorporated under State law without any express authority from Congress. Congress was seeking some way to bring their operations under congressional scrutiny.

The Government Corporation Control Act recognized the fact that corporations had been created to do special jobs that required greater flexibility than was available under the procedures applicable to Government departments. It did not provide that the expenditures of Government corporations might be controlled by the appropriation process. It provided a special procedure for corporations. A corporation is obligated under section 101 of the Government Corporation Control Act to submit to the President its estimate of expenditures during the current and ensuing years. The President includes estimates in his budget which goes to the Congress. That budget is presented to the Appropriations Committee. But the Appropriations Committee does not have to include a provision in the bill authorizing the expenditure of corporate funds. Those funds can be spent in accordance with the basic authority of the corporation.

The corporation may exceed those estimates if necessary, explaining each year. There is a special provision as to the Tennessee Valley Authority that nothing in the control act shall affect the rights which the Tennessee Valley Authority has under section 26 of the TVA Act, which section authorizes it to use revenues.

In 1947 an attempt was made to amend the Government Corporations Control Act, so as to put the expenditures of corporate funds under the appropriation process. That proposal was defeated and instead a provision was adopted which authorizes inclusion in the Appropriations Act of limitations applicable to administrative expenses. The act says in the administrative and operating expenses but the legislative history makes clear that the term "operating" was not intended to make the requirement any broader than the normal administrative expenses of the corporation. So any corporation can use its funds to carry out its statutory programs without getting express authority, and an attempted limitation on that authority in an appropriation act is subject to a point of order.

I might add that the limitation as to administrative and operating expenses is not applicable to the Tennessee Valley Authority, because section 26 of the act expressly authorizes the use of revenues for those purposes.

Far from providing for getting out from under Budget control, this bill retains and preserves Budget control over bond proceeds, in the same way that Congress exercises that control over the programs of other corporations.

There are other provisions in this bill for congressional control. The Tennessee Valley Authority is required in its annual report filed in December of each year to advise Congress fully of the operation of this section. Its accounts are subject to audit by the General Accounting Office, which files a report each year with the Congress. In addition to that there is a $750 million ceiling which, as Mr. Wessenauer points out, will require that the Tennessee Valley Authority come back to Congress in a very short time for a review of its operations under this section.

There is a further provision that no new project can be undertaken until the Tennessee Valley Authority notifies Congress and 90 days have elapsed during a single session.

* * * * *

I would like to say just a word about this question of control again; to say that Congress is losing control over the Tennessee Valley Authority seems to me to be a very odd statement. Congress could not lose control over the Tennessee Valley Authority if it wanted to. The TVA is a creature of Congress. Congress can repeal the TVA Act tomorrow. It can amend the act, or do anything it wants to with it.

As indicative of the tightness of control, there is even a provision in the Tennessee Valley Authority Act which permits the Congress to remove the Directors by concurrent resolution.

The question is not—and I am perhaps getting into a philosophical discussion here rather than a legal one, but the question is not whether the Congress is going to lose control over the Tennessee Valley Authority; the question is how that control is going to be exercised—what control devices are appropriate to the relationship that we have here to the task which Congress has entrusted to the Tennessee Valley Authority?

When Congress passed the Tennessee Valley Authority Act it set up a corporation and gave it a certain degree of flaxibility, because it recognized that the program that it wanted the TVA Board to carry out could not be carried out by one of the old-line Government departments. That flexibility was necessary.

It gave the Tennessee Valley Authority Board responsibilities, it gave it the tools that it needed to carry out those responsibilities.

Congress said to the Tennessee Valley Authority Board, We are going to keep an eye on you. We are going to keep you accountable, but we are going to give you a reasonable degree of flexibility and hold you accountable for the results.

The Tennessee Valley Authority is the sole source of power supply for an area of about 80,000 square miles. The utility business is a natural monopoly, as Wendell Willkie himself testified back in 1939 on the bill to authorize the Tennessee Valley Authority to issue bonds to buy the Tennessee Electric Power Co. properties.

The Tennessee Valley Authority has an obligation to produce the power that is necessary to serve the needs of its customers. Congress has told it to do that. The question now is, what controls do you need?

Well, the market itself is the basic control. There is no reason for the Tennessee Valley Authority to build any plants beyond those needed, but when there is a question of how many kilowatts of capacity should be installed, or where a plant should be located, that should not be a political question. That is an engineering and economic question. And the Tennessee Valley Authority Board has to make that decision on the basis of the studies made by its staff.

If you say to the Tennessee Valley Authority Board, finance capacity you need by issuing revenue bonds, but you have to come to Congress and get what amounts to an appropriation authorizing you to put in so many kilowatts before you can issue any bonds, you are taking that control over engineering and administration out of the TVA Board, and you are putting it in Congress. If that is where Congress wants it, that is one thing; but if Congress is going to exercise that type of control, then TVA cannot operate a power system.

So, Mr. Speaker, it is clear from the TVA Board, the General Counsel of the Authority, and the committee that ample congressional controls are incorporated in this legislation.

The Post Office Department's Commemorative Stamp Program

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, the Post Office Department is conducting an effective commemorative stamp program that is making an unique contribution to the national effort for better worldwide understanding.

Under the leadership of Postmaster General Arthur E. Summerfield this program is attracting widespread favorable endorsement as it disseminates information about the ideals and aspirations of this Nation.

The latest evidence of the effectiveness of this program is reflected in the action of the National Philatelic Museum of Philadelphia. This leading philatelic authority has just awarded its Man of the Year trophy to L. Rohe Walter, Special Assistant to the Postmaster General, who is in overall charge of the Department's stamp program.

Mr. Speaker, under unanimous consent I include in the RECORD a newspaper report about this well merited award by Belmont Faries, Star Stamp editor, which appeared in the Sunday Star of April 26, 1959:

[From the Washington (D.C.) Sunday Star Apr. 26, 1959]

WALTER IS HONORED AS MAN OF YEAR

(By Belmont Faries)

L. Rohe Walter, special assistant to the Postmaster General, was honored here last week as "Man of the Year in Philately."

Mr. Walter, whose public relations assignment includes responsibility for the Post Office Department's stamp program, received the silver trophy given annually by the National Philatelic Museum in Philadelphia to the person who did most for philately during the year.

Norman Haac, president of the museum, made the presentation at a dinner meeting of the Washington Philatelic Society Wednes-

day night at which Mr. Walter was guest of honor and speaker.

Mr. Walter, who has worked with the Stamp Advisory Committee in a broad program designed to make the most effective use of stamps in propagandizing American ideals at home and abroad, accepted the award as one given for a team effort by a group of dedicated, able people.

Most of the members of the advisory committee were on hand for the dinner at the Arts Club, which drew a capacity crowd including philatelists from New York, Philadelphia, and Chicago.

Cuba Called Communist Beachhead

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in the Washington Post and Times Herald of May 4.

Mr. Stuart Novins is well known to many Members of Congress as he has acted frequently as moderator on the CBS "Meet Your Congress" program.

Mr. Novins' frank and intelligent reporting of what he found in Cuba is very refreshing after the ifs, buts, ands, and whitewash that have been showered over the whole question.

Mr. Novins may have had his last trip to Cuba, for the time being, but at least he has brought back some useful information:

CUBA CALLED COMMUNIST BEACHHEAD

NEW YORK, May 3.—Cuba is a dictatorship and is rapidly becoming a Communist beachhead in the Caribbean, a Columbia Broadcasting System correspondent declared tonight.

"The inescapable fact is brutally simple," Correspondent Stuart Novins said in the CBS-WTOP television program, "Studio 56." Novins returned recently from a 2-month stay in Cuba.

Under Premier Fidel Castro power is being taken over by the "best organized Communist apparatus in the Caribbean," in the opinion of Western diplomatic sources, Novins reported.

Communists have moved into key spots in the army, press, radio, schools, and unions, the correspondent added.

"There is no evidence to support the charge that Fidel Castro is a member of the Communist Party," Novins said. "It is most probable that he is not."

Despite this, Novins said, "he has provided and supported a climate for Communist expansion. He has provided and supported an open expression of anti-Americanism that is spreading fast."

Novins said the head of the Cuban Confederation of Labor was a Communist underground worker, and that a television and radio network taken over by the government, now called Rebel Radio, is run by a Communist.

With the Government cracking down on opposition newspapers, "there is, for practical purposes, no free press in Cuba today," he reported.

Novins said that "Raul Castro, brother of Fidel and named by Fidel as his successor as head of the revolutionary movement, denies he is a Communist.

"The record shows that in 1953 Raul went to Vienna for a Communist-front congress and then disappeared in Bucharest, behind the Iron Curtain, for several weeks," the correspondent said.

With Communists popping up everywhere, "many Cubans believed that Castro may already be too deeply enmeshed in Communist support to pull out. All are agreed that if anything happens to Castro physically, Cuba would be plunged into the worst blood bath of its history," Novins said.

He expressed fear that a blood bath may come anyway, because anti-Communists "feel they have now no course to take but violence."

The only solution is free elections, Novins concluded, but elections seem a long time away. He said Castro repeatedly promises free elections but changes his mind about when they will be.

ICEM and Refugees

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two further articles written by Mr. Edward P. Kennedy of the Easton Express, published in Easton, Pa.:

[From the Easton Express, Apr. 23, 1959]

A LOOK AT THE REFUGEE PROBLEM—ITALY ASKS INCREASED IMMIGRATION TO UNITED STATES

(By Edward P. Kennedy)

Italian representatives in presenting a decoration to U.S. Representative FRANCIS E. WALTER in Rome April 3 suggested that the United States open a little wider the links of the chain of immigration into this country.

The decoration of Commander of the Order of Merit of the Italian Republic was pinned on the Easton Congressman by M. Carmine de Martino, under secretary of state for foreign affairs. The award was made at a sumptuous luncheon attended by Italian and U.S. Embassy officials in the Palazzo restaurant on a hill high above Rome. The restaurant is in a building built by Mussolini for his mistress, Claretta Petacci.

The Italian delegation was one of the most active at the meeting of the Intergovernmental Committee for European Migration April 7-11 at Geneva, Switzerland, reflecting Italy's position as the most important export nation of surplus populations. WALTER stopped in Rome on the way to Geneva, where he was a U.S. delegate at the ICEM meeting.

At the Rome function, de Martino cited unemployment in Italy and pointed out that the number of unemployed is almost the same as the number of Communists in the country. He said he believes that reducing unemployment will reduce communism.

He pledged that Italians sent to the United States will have decidedly anti-Communist feelings and will be trained so as to be useful citizens. He urged legislation to bring in more easily collateral relatives—brothers and sisters—of Italians now in the country, as well as skilled workers.

Accepting the decoration for the American Congress and people, WALTER said he has introduced legislation to increase the preference for collateral relatives. He reminded, however, that some trained in Europe as skilled workers so they could be accepted by countries needing populations had decided after training to stay in their home nations.

De Martino spoke through an interpreter but understood English well enough so that WALTERS' reply did not have to be interpreted.

The Italian official made one of the principal addresses at Geneva, stressing the work of ICEM in transferring people from overpopulated countries to those needing more residents. Overpopulation such as exists in Italy, he said, means in social terms "a high level of unemployment and under-employment and it is not too much to say that in this evil may be seen the principal cause of the persistence in our country of important extremist elements." ICEM's help in the fight against unemployment, he declared, "is a contribution to our efforts to consolidate democracy in Italy."

Mentioning the vast movement from Italy over the years, De Martino said that emigration in the last century was an individual matter and early this century a state function. Henceforth, he declared, it will be "of an international character which should be the subject of multilateral arrangements." He called for transforming ICEM into a permanent organization with a new conception of its functions, one in which it will initiate its work in the countries of surplus population, and conclude it only when the emigrant has been firmly and satisfactorily resettled with all his family in the country of emigration.

The speaker cited some social problems which have arisen in migration, such as shortage of housing, the inadequacy of social insurance systems in some nations, and fluctuations in exchange rates affecting remittance of savings. He suggested that ICEM, although constitutionally limited in its activities, should promote a more intensive and decisive action for the protection of the basic interests and human rights of the migrants.

In his speech, De Martino made a strong plea to the committee to hold its meeting next spring in Naples. "By that time," he said, "ICEM will have moved its one-millionth migrant, more of them from Italy than any other country." He said "that the idea of ICEM first was conceived at Naples in 1951, although the organization was formed later that year at Brussels, Belgium."

The Italian delegation was nearly the largest at the meeting, exceeded in size only by that of the United States. It held a large cocktail party one evening—the largest of any delegation—in what was interpreted as part of their drive to bring the spring 1960 meeting to Italy, and to obtain an expanded ICEM program.

There was considerable discussion during the Geneva meeting of the Italian and other proposals to place the organization on a firmer and more permanent basis and to expand its activities farther beyond its original function as an agency to transport both refugees and surplus populations.

Some expressed the feeling that voluntary refugee agencies and individual governments should carry on most of such expanded activities. However, the ICEM Council approved expansion of the program of pilot projects being set up to show the way to facilitate resettlement. Two such projects are being set up this year, one to train emigration and immigration officials of various nations in Canada at cost to ICEM of $60,000. The other, costing $298,000 in Italy, will provide vocational training for 300 migrants selected for emigration overseas.

As other phases of this kind of activity, ICEM missions help in preselecting candidates for particular immigration schemes; in many they aid in assembling the documents needed before a visa can be issued to permit migrants to enter a country. ICEM fre-

quently provides or arranges for medical preexamination, preliminary clearance, and other assistance to the selection missions of receiving countries. These services are designed to speed the processing of a potential migrant as well as to ensure the more effective matching of a European worker with an opportunity available in an oversea country.

ICEM also provides orientation and vocational and language training for many migrants to facilitate integration in their new land. In most receiving nations the committee provides, in close liaison with the interested governments, services ranging from reception of ICEM-assisted newcomers to the establishment of job-placement networks.

All these programs either prepare migrants for life in new countries before they embark or after arrival and thus are considered legitimate parts of the work of ICEM.

[From the Easton (Pa.) Express, Apr. 24, 1959]

A LOOK AT THE REFUGEE PROBLEM: VAST RESETTLEMENT TASK IS FACED BY ICEM

(By Edward P. Kennedy)

Deliberations on the international level are not much different than those of the lowliest local governing body. This was one of the conclusions I drew from attendance at the ICEM meeting April 7 to 11 at Geneva, Switzerland.

The nearest local analogy to ICEM, I thought, was the Eastern Area Regional Planning Commission. Both it and ICEM are made up of representatives of autonomous governments—national governments in the case of ICEM and municipal governments locally. Both organizations are hampered by the complete autonomy of their members, and must depend on cooperation to get anything done.

There are surprising similarities in financing. Countries receiving immigrants are supposed to pay some of ICEM's transport costs, but the amount they will pay varies. For instance, Argentina pays $87 a person and Venezuela, but $40. As a result, ICEM always has a deficit in transport costs. All the 28 member nations theoretically should join in meeting this continuous deficit, but in practice less than half do. At the recent Geneva meeting, it was reported that only seven had contributed to this special fund. In practice, much of the deficit has been met by the United States.

Similarly, the effort in the regional commission has been to obtain per capita contributions from all members, but traditionally less than half the municipalities made the payments. For years, most of the financing was done by the city of Easton.

Some protests were heard because Great Britain was not a member of ICEM, although Australia and Canada belong. Neither, it was reported, has England paid for transportation of her Hungarian refugees, taking the position that she had done her share by maintaining them after they arrived.

Some criticism of the ICEM staff for failing to reach decisions and to improve programs had a familiar local government ring. The administration was accused by some of being too busy carrying on liaison and discussing procedural details to step up actual migrations.

Some clashes on the Council floor were amusing. One concerned the question of validating as official observers the representatives of a relief agency. A Canadian delegate asked why the Council need take such action when the meeting was public, and the agency men could sit in anyway. The action was taken over the Canadian's objection. It was suggested later that the relief organization could use its official observer status at the meeting in a drive for funds from the public, perhaps explaining why it made the request.

The surroundings of the meeting were interesting. It was held in one of the smaller meeting rooms at the Palais des Nacions, which was equipped with headphones such as are used in the United Nations Building in New York. The phones gave each speech direct and also translations in English, Spanish, and French.

One unresolved conflict at the meeting was on the pronunciation of the abbreviation ICEM. Some called it "ickem," others "ice-em." One explanation was that the first pronunciation is most frequently used in the United States, the second in Europe.

An interesting question was posed to me by a South African delegate. He wondered if the Pennsylvania Dutch area here would be especially willing to receive immigrants from Holland or Germany, because of the ethnic similarity. It was uncertain of the answer.

Generally, my impression of the ICEM program was that it is advancing into a field where, besides transporting migrants, it will pay increasing attention to preparing them for resettlement in other countries, and to getting them well started in their new homes. Stronger commitments by member countries would give the program more stability, it appeared, and launch it more firmly on such an expanded program. Some danger was posed in indications of a recent decline in numbers moved by ICEM, pointing to a need for recruitment of more migrants and arrangement for their placement.

It appeared that the number of political refugees to be moved by ICEM in Europe is dwindling rapidly, and—barring new floods of escapees from behind the Iron Curtain—this phase of ICEM's activity should taper off. This would leave it freer to handle the movement of surplus populations depressing the economies of Italy and similar countries to Australia and countries in the Western Hemisphere needing more people.

If, as appears likely, an unusual effort is made for European refugees in the World Refugee Year starting July 1, most of the drab European prison camps may soon be closed. Even without WRY efforts, the program to get the refugees into better, healthier housing is well underway, at least in the Salzburg, Austria, area, I observed.

Still remaining will be the vaster problems of the European refugees escaping Red China and huddled in far worse conditions in camps at Hong Kong, and those of the Arab refugees in the Near East, and newer escapees from fighting in Algeria. Some perhaps dramatic effort to aid these unfortunates seems likely in the refugee year linked with the admission of additional refugees into the United States to help ease the problem.

Tribute to Sid Simpson

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. COOLEY. Mr. Speaker, mysterious are the vicissitudes of human life. Frail and precarious are our best holds upon human happiness. A brief while ago our friend and beloved colleague, Sid Simpson lived and labored with us. Heaven has now crowned his life. In the golden hours of his grandest achievements his soul slipped through the curtain of stars to the place we call "The Great Unknown." He has gone across the Crystal Sea to receive the full reward and the glorious fate which he by his strong faith so richly merits.

Many long years I cherished Sid Simpson's friendship. By his intelligent devotion to duty, his unswerving fidelity to truth, his great integrity and the honest and courageous manner in which he discharged all of the vital functions of his high office, he distinguished himself in the service of his country and endeared himself to all of his colleagues in Congress. He was a good, a great and a gentle and modest man.

I express my deep sympathy to his charming wife and lovely daughters and to all of his loved ones, all of whom can take just pride in the life he lived. To Sid Simpson's loved ones may I say that my earnest prayer for them is that the Light of Heaven will illuminate their pathway and be the Master Light of all their seeing and may the Lord's blessing rest upon them.

The Speed and Depth Records of the U.S.S. "Skipjack" Reveal Progress in the Development of the Navy's Task Force of Nuclear-Powered Ships

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. VAN ZANDT. Mr. Speaker, on Saturday April 11, 1959, at 8:15 p.m., eastern standard time members of the Joint Congressional Committee on Atomic Energy were guests of the U.S. Navy on board the U.S.S. *Skipjack*, the worlds fastest atomic-powered submarine when it traveled faster and deeper than any submarine before it.

During the recordbreaking speed and depth cruise, members of the Joint Congressional Committee on Atomic Energy held an official session of the Committee, and the witnesses before it were Vice Adm. Hyman G. Rickover, "father" of our Nation's atomic submarine, Capt. E. P. Wilkinson, U.S. Navy, former commander of the U.S.S. *Nautilus* and now commander of the Submarine Division 102, and Cmdr. W. W. Behrens, U.S. Navy, commanding officer of the *Skipjack*.

The 18½-hour cruise of the U.S.S. *Skipjack*, during which time it established a speed and depth record, is another accomplishment of the Navy's program of the design and development of a group of nuclear propulsion plants in a wide range of its ships, from submarines to the largest aircraft carriers.

So that the average American can appreciate the military might that the Navy is building for the security of the seas and of this Nation, I wish to call attention to the following summary of nuclear-powered ships which have been authorized by Congress to date.

Nuclear-powered ships authorized by Congress

SUBMARINES

	Type	Launched	Started sea trials	Builder
SSN 571 *Nautilus*	Attack	Jan. 21, 1954	Jan. 17, 1955	EB Division.[1]
SSN 575 *Seawolf*	do	July 21, 1955	Jan. 21, 1957	Do.[1]
SSN 578 *Skate*	Small attack	May 16, 1957	Oct. 27, 1957	Do.[1]
SSN 579 *Swordfish*	do	Aug. 27, 1957	Aug. 9, 1958	Portsmouth.[2]
SSN 583 *Sargo*	do	Oct. 10, 1957	Aug. 2, 1958	Mare Island.[3]
SSN 584 *Seadragon*	do	Aug. 16, 1958		Portsmouth.[2]
SSG(N) 587 *Halibut*	Regulus missile	Jan. 9, 1959		Mare Island.[3]
SSN 585 *Skipjack*	Fast attack	May 26, 1958	Mar. 8, 1959	EB Division.[1]
SSN 588 *Scamp*	do	(4)		Mare Island.[3]
SSN 589 *Scorpion*	do	(4)		EB Division.[1]
SSN 590 *Sculpin*	do	(4)		Ingalls.[5]
SSN 591 *Shark*	do	(4)		Newport News.[6]
SSN 592 *Snook*	do	(4)		Ingalls.[5]
SSN 593 *Thresher*	do	(4)		Portsmouth.[2]
SSN 603	do	(7)		New York Shipbuilding.[8]
SSN 604	do	(7)		Do.[8]
SSN 605	do	(7)		Portsmouth.[2]
SSN 606 *Tinosa*	do	(7)		Do.[2]
SSN 594 *Permit*	do	(4)		Mare Island.[3]

Mr. Speaker, in commenting on the above summary of nuclear-powered ships, I should like to call attention to the fact that while the nine Polaris submarines under construction or authorized could place more than a hundred million tons of nuclear force on targets behind the Iron Curtain, yet, I am disturbed by the fact that there is not included in the program a sufficient number of fast attack submarine vessels. With that thought in mind, on April 16, 1959, I introduced a bill, H.R. 6483, which authorized the Secretary of the Navy to undertake the construction of 100 nuclear-powered attack submarines at the rate of 20 per fiscal year, starting with the fiscal year which begins July 1, 1959, to augment the 20 already authorized or under construction as mentioned in the above summary.

Mr. Speaker, the best way to destroy a submarine is with another submarine. Since our nuclear submarines have no peer, I strongly urge that H.R. 6483 receive early and favorable consideration so that the Navy will immediately begin construction of the 100 attack submarines as the answer to the Russian submarine threat.

Another point I would like to make is that failure on the part of Congress to authorize immediate construction of the attack submarines provided for in my bill, H.R. 6483, will amount to a national admission that we do not intend to protect the lead we now have in the nuclear submarine field. Frankly, as I see it, we have no recourse in the light of the Russian submarine threat but to immediately construct these additional nuclear-powered attack submarines.

Greece

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including two additional articles by Mr. Coleman A. Harwell, editor of the Nashville Tennessean, which were written during his recent travels in Greece.

Mr. Harwell is accompanied by Prof. Kenneth E. Olson, Northwestern University School of Journalism, on a world tour under the auspices of the State Department's exchange program.

The articles follow:

[From the Nashville Tennessean, Apr. 3, 1959]

GREEKS OFFER GLORY FOR TOURIST GOLD

(By Coleman A. Harwell)

ATHENS.—We have seen the beautiful harbor where Paul first landed to bring Christianity to the West and the prison believed to be the one from which he was sprung by an earthquake.

We have viewed the narrows inside the Bay of Salamis where one of the most dramatic naval battles of history was fought and the hills from which the confident Persian, Xerxes, saw his expected triumph turned into bitter defeat.

We have walked through the grove whose name is the most famous in sports history, Olympia; have seen modern young Greeks sweating in the sun as they toiled to reconstruct the natural stadium where other youngsters vied for honors 2,500 years ago in events that are still being reenacted throughout the world today.

We have stood where Plato and Socrates unshackled men's minds; where Aeschylus and Aristophanes created drama; where architecture was given form, where sculpture reached its zenith; where political life was explored so thoroughly by Solon, Themistocles, Pericles, and others that we can still learn from them today. (You can say that again.)

THE BEAUTIFUL LAND

In 2 weeks of walking, motoring, and flying, we have covered hundreds of miles in a beautiful and hospitable land and have witnessed the scenes and sensed the atmosphere in which Western civilization began.

Returning then to Athens, after a northern excursion, we sought to make a local phone call from our hotel room. It took 45 minutes to get it through.

We cite the telephone delay, not as a complaint against this attractive and pleasant hotel, but to indicate the Greek dilemma on tourism today. The Greeks aré well aware of it and are striving mightily to overcome it.

There is at hand another golden age for Greece, different from that of Pericles, but very real, if the country can take advantage of it.

The floodtide of Americans who have enjoyed Italy's offerings—ancient and modern—would take to Greece with equal relish. Northern Europeans—English, German, French, and others—who have often found reason to come to Greece for warlike purposes also have not failed to find its sunshine and blue waters, as well as its history, reason enough to come to peace.

The attractions are ample; the handicaps almost as numerous. Chief among the latter are the lack of hotel space, personnel to man the hotels, and inadequate roads. The Grecks are beginning to apply themselves to these with gusto.

SEVEN MILLION DOLLAR HOTEL

Ground has been broken on the Conrad Hilton here on Queen Sophia Avenue. Original plans for 400 rooms have been increased to 500—all air-conditioned of course. The $7 million cost will be financed in half by the Greek ship owner, A. Pezoz, who lives in New York, and half by the Greek loans. Hilton will operate it. Profits can be exported without limit.

The deluxe Athenee Palace Hotel is spanking new. The elegant Grande Bretagne has

added 200 rooms, has air-conditioned and renovated the rest; the deluxe King George has added a floor.

Our hotel is a good example of tourist development. It is the Alexiou, or Alex, and is a modern, eight-story, white stucco and blue shuttered structure, with a first floor lobby visible through glass trimmed with brass. The 100 rooms are compact but ample, with good-looking, useful modern chests and wardrobe. The restaurant and some rooms are still under construction, and should be ready by June.

The staff is as gracious and willing as could be. The manager speaks Greek, English, Italian, French, German, and Spanish perfectly, is studying Russian. His pretty German wife, whom he married while working for a hotel in Germany, learned Greek in 2 months, speaks English and French too. Several other deskmen and bellboy-elevator operators speak English as does the telephone operator. But this happened to be her day off and the man substituting needs a few more months to polish his English.

The staff of the Alex could not be more eager to please or, for that matter, more successful in doing so. Our cheery little bellhop, about 17, was even able to teach me to say "evdomo," which means seventh, my floor. And the maid and I were able to communicate in an odd mixture of English, Greek, German, and Italian concerning laundry which, more importantly, came back promptly and clean.

The young owner of the hotel, who started from scratch as a builder, made use of Government loans which have been created to encourage tourism. He says, however, the saving in interest isn't worth all the restrictions and red tape.

Throughout Greece, the Government is financing small 30- to 50-room hotels. We stayed in two of them, had lunch in another, and found them all enjoyable. But many more are needed. Our hotel in Salonika reminded me of the Maxwell House before it was renovated. Yet it was full, even in March.

Passable roads lead to all parts of Greece, but extra caution is needed. There isn't room to pass a big truck at a sharp turn, and, as in America, that's where you meet them. Make way. And don't try roads under construction. We took the cutoff from Larissa to Salonika and were rewarded with some beautiful views of the Aegean, and of the spectacular Vale of Tempe along the Pinios River, where Venus used to bathe. Even these, however, failed to compensate for the delays at numerous construction points, where Greek Army engineers and civilian workers were building a fine new highway.

The countryside in early spring is beautiful. In southern Peloponnesia the fields are turning green; almonds and apricots and apples are in bloom. Olympia was warm enough for a half-hour nap in the shade of big pines, and the view from ancient Sikyon, which was a Greek Florence high upon a hill, is a thrilling panorama.

PLAINS OF THESSALY

North of Athens, the scenes are even more spectacular. The plains of Thessaly, overlooking at one point the scene of the battle of Thermopylae, recalls part of the Northwest. You come out of rugged mountains, with corkscrew roads, onto the flat, rich plains, constantly passing shepherds and their flocks of sheep being fattened for the Greek Easter in May.

The Aegean is its own shade of Mediterranean blue, paler but vivid too. And Olympus, completely clad in snow, with a vast cloud barely touching the top as though Apollo were returning from a venture, is a rare treat.

The city where Paul landed in Macedonia, Neapolis, is now Kavalla, which is one of the most beautiful harbors of the world. The area north of Salonika is replete with reminders of Paul, especially nearby Phillippi, where the famed prison stands as part of the interesting ruins unearthed by French archeologists.

The future of Greece is highly speculative. My optimism for the country is based largely on the prospect of a thriving tourist development. Not only does tourism produce income, it creates an openmindedness almost certain to result in economic progress.

[From the Nashville Tennessean, Apr. 10, 1959]

HOW WILL WOMEN AFFECT GREEK POLITICS?

(By Coleman A. Harwell)

KAVALLA, GREECE.—The other evening in this coastal city of northern Greece, we were discussing weighty matters in a small dinner group of Greeks and Americans. Someone raised the question as to whether women's votes in Greece, recently granted, will benefit the leftists or conservative political parties.

The conversation revealed sharply divided opinions along these lines:

In the cities, men and women vote together, so it will be hard to judge the effect of the feminine vote. But in the rural areas, where women's votes will be recorded separately, their influence can be clearly determined.

ACCORDING TO ORDERS

In a country where men have always been dominant, especially in central Thessaly and northern Macedonia, women will vote as told.

Women are more conservative than men. They are more inclined to let well enough alone, rather than risk something worse. So they'll usually stick to the status quo while men, the more adventuresome sex, are registering a protest. Therefore, women will vote conservative while men are tending to the left.

Not so. When a woman's husband is unemployed (there are 13,000 unemployed of 25,000 peak workers in tobacco processing plants here) and when her children are hungry, she is going to protest. Like other animals, the mother is ferocious when aroused.

BUT LOOK—

Women's votes have had little effect in other countries, notably the United States. Some people said they would clean up politics in America, but look.

Yes, do look. Political machines are having rougher going. Political ideals are higher. The candidate with sex appeal goes further today. Credit, or blame the women.

Perhaps, but none of this applies to Greece. No woman ever invades the all-male cafeneion (coffee shops, where men settle and unsettle the world's problems twice daily).

At this point, one of the group said that of course it would be impolitic for a visitor to comment on an internal problem of a country, but that something had come to his attention the day before which he felt he should mention to his Greek hosts.

In a city not far away, he said, he was having dinner at an attractive place, which was described to him as a bridge club. He said the thought occurred to him during dinner that in America a bridge club can't exist without women, and he was eager to ask if women came to this club. He hesitated to ask, however, because he was afraid that such a question in Greece might be like asking an American if he took his wife to the pool hall. But just then, he said, he heard a sudden burst of bright conversation, pitched at a nonmasculine key, and a group of four women, accompanied by four men, entered the room. Two tables of bridges, no less—plus conversation.

Now, he went on, he did not want his hosts to think he was commenting on the political situation in Greece, but he did feel there was a certain obligation between the male element of the world which crossed international barriers. And he felt he should warn his Greek friends that just such a thing had happened in America some years ago, and now look at it. No place in America is safe for men today. Even the saloons in some cities have been turned into cocktail bars.

A GOOD LAUGH

The visitor wasn't certain how his little story would be taken. It was thus very pleasant—and reassuring—to hear the interpreter laugh and, when he'd told the story in Greek, the others joined heartily.

When the session ended and we were saying goodnight, one of our Greek friends laughed and said, "Now I go to surrender to my wife."

A delightful evening, but informative, too. These people are concerned about the vote of the pro-Communist EDA Party. They well may be. Their vote in this distressed area is as high as 50 percent and they fear it may grow in the coming municipal elections.

Unhappily, the liberal center parties are suffering because of poor leadership. The hope is that the conservative government of Premier Karamanlis will become more liberal, do more for distressed areas, especially here where the Communists are winning votes of people who basically hate everything the Reds stand for but who hearken to their promises of work and food.

The women's effect on this? Your guess may be as good as anyone's.

NOTES IN PASSING

The hospitable abbott in the monastery overlooking Salonika had his housekeeper serve us in a traditional way. She passed a tray with a bowl of jelly and glasses of water with a spoon on top of each. You take a spoonful of jelly, eat it slowly, drink some water and then put the spoon in the glass. Afterward, strong, thick coffee. Prices here are not cheap but better than in France or Italy. A single room in a first-class Athens hotel will be about $4.50 to $6, compared with $6 to $10 in Rome. Some Americans living here say when they take family vacation trips they stay in second-class hotels in small towns and the rates are about 60 cents each. Sorry I can't recommend these to the average U.S. tourist who wants a soft bed and private bath.

A nice meal in a modest family restaurant, including a glass of wine, can be had for 75 cents. Had my first steak in Greece at elegant Floca's Restaurant in Athens. Delicious filet was $1.35. Most Greek taxis are new U.S. cars, many sent by relatives in United States. Taxis are given special tax status, make good investments. Some owned by whole family; some used as dowry.

American Protestants in Athens hold nondenominational services in beautiful St. Andrews, high on hill overlooking city. Crowd filing in looked like any U.S. church group. Shiny-faced little boys tugging at one another, little girls with flat straw hats, teenagers making talk.

My introduction to Greek hospitality: Taken to wedding of U.S. Greek employee and local girl in small town. We three Americans ushered into little home, served meatballs and retsina wine which tastes of rosin. Little girls danced about in circle. Then some grownups, including the bride, danced. Wedding was in jam-packed village church. Everybody stands. Solemn rites intermingled with crowning ceremonies, smiling, circle dance, rice throwing. Favors for all—sugar-coated almonds wrapped in starched cheese cloth.

Passage of TVA Self-Financing Bill Vital in the Public Interest

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. EVINS. Mr. Speaker, in connection with our consideration of H.R. 3460 which is expected to reach the floor this week, I am sure that many Members of this body would welcome a review of the need for this legislation and a brief legislative history; therefore, under unanimous consent, I am inserting it in the Appendix of the RECORD.

The purpose of this bill is to relieve the Federal Government of financing additions to the TVA's power system by appropriations. Instead, it will permit the TVA to sell revenue bonds for building additional generating capacity.

The general provisions of this legislation are summarized in the report of the Committee on Public Works on this legislation, and I quote:

PURPOSE OF BILL

H.R. 3460 would authorize the Tennessee Valley Authority to finance needed additions to its power system by the issuance of revenue bonds in the maximum amount of $750 million outstanding at any one time. The bonds will be secured solely by the revenues of the TVA power system. They will be neither obligations of, nor guaranteed by, the United States.

The bill contains provisions essential for effective use of the bond financing authority. It permits TVA to fix the terms and conditions of the bonds and to enter into appropriate covenants with bondholders and trustees. It requires TVA to charge rates sufficient to operate the system, service the bonds, and meet obligations specified in the bill with respect to the appropriation investment in its power system. Under the bill, these obligations will include (1) payment to the Treasury of an annual cash return to be calculated by applying to the appropriation investment the average interest rate payable by the Treasury on its total marketable public obligations as of the beginning of the fiscal year, and (2) an annual payment of $10 million in reduction of the appropriation investment itself.

The bill does not change the basic provisions of the TVA Act governing the manner in which the TVA Board of Directors shall perform its statutory duties. Under the bill, the Board will continue to have sufficient flexibility to enable it to discharge its responsibilities efficiently and to enable Congress to hold it fully accountable for results. The bill does include a number of special requirements to insure that Congress will be kept fully informed of the use being made of the bond issuing authority. It also contains a provision limiting the area within which TVA power may be sold.

I know there are those who want no bill at all on this general subject. I know that there are those who feel that, if we are to have any legislation on this subject, it should be the most restrictive and most repressive possible legislation that this Congress could enact into law.

There are others who regard this bill as the most vital and important piece of legislation that this Congress will consider. It is most important to many of us because what we do here this week will affect the lives of the people of a great section of our country—an area of 80,000 square miles, comprising parts of seven States, for the TVA service area embraces parts of seven States and has a population of 6 million people.

Today, more than 150 municipally owned power systems and REA cooperative distribution systems in this area have an investment of $781 million, including the great steam plant being constructed by the city of Memphis, Tenn., which is now nearing completion and will go into service in a few months.

There are more than 1½ million power customers in the TVA area who, last year, purchased 19,000,900,000 kilowatt-hours of electricity. The TVA is the sole source of power for these 150 distributing systems with their 1½ million power consumers.

Therefore, I repeat, what we do here this week vitally affects the 6 million people of this great section of our country and these 6 million people are necessarily interested and concerned in this legislation and what we do about it. Our people need this legislation to finance their future power needs because as we all know the TVA has been denied any appropriations for necessary additions to its power capacities for the past 6 years. We are all aware of the continuing repressive actions and climate toward the TVA which has existed during those years. We know that no appropriations at all have been made for TVA's power needs in the past several years.

During these last few years, TVA has been using portions of the profits from power sales to make some needed additions to its power system. But, we all know that no utility can possibly keep up with the demand for power in its area if it is limited to using only the revenue from its own power operations. The additional capacity the TVA has built and is building with its power revenue will not be enough to meet the growing demand for TVA power inside its present service area. Its margin of capacity over the demand is getting narrower and narrower. Unless it is able to find other funds, this great area of our country is certain to suffer a power shortage in 2 or 3 years.

What we will consider this week is an alternative method of financing—self-financing by the TVA and by the people of the area. A good portion of the bonds that will be authorized by this legislation will be sold to the people of the TVA area—and I assure you that they will buy them. They will be gilt-edge bonds which will be paid off by the TVA from the power sales to the people of the TVA area.

Surely, at this time, when we are so concerned with the need for reducing appropriations, the Congress will permit the people of our area to finance their own progress through enactment of this self-financing legislation. The bonds are taxable. They are not tax exempt bonds and they will thus produce revenue for the Government and yet the bonds will not be obligations of the Government and will not increase the national debt.

In short, this bill will permit the self-financing of the TVA—it will permit a great agency of our Government to meet its needs and obligations—and the local people who purchase the TVA power will not only pay the entire eventual cost, but they will purchase a large proportion of the bonds when they are issued and thus themselves finance the cost of the power they need.

Mr. Speaker, in our discussions on the TVA—a subject on which almost everyone has a most pronounced point of view—I sometimes think that we become so concerned with "fear" that one region of our great common country may make progress at the expense of another area, that we lose sight of the great contributions to the welfare of the entire Nation that the TVA has made and continues to make.

I am continually surprised to discover that many do not realize that well over 50 percent of the power produced—52 percent at this time—by the TVA goes to meet national defense needs in Federal establishments—in other words to the Federal Government itself. Among the great Federal agencies which obtained great blocks of power from the TVA are the Atomic Energy Commission plants at Oak Ridge and Paducah, Ky.; the great Arnold Engineering Development Center with its jet windtunnel testing facility at Tullahoma, Tenn. in the district which I have the honor to represent. There is also the great Red Stone Arsenal at Huntsville, Ala., where Dr. von Braun and other brilliant scientists are developing, improving, and perfecting the Thor, the Jupiter and our overall rocket and missile potentials and capabilities.

The savings in the cost of power to the Government as a result of the above direct service to Federal agencies are in themselves enormous. For several years now, the Federal Government has used more than 30 billion kilowatt-hours of TVA power annually. A saving of just 1 mill per kilowatt will represent a saving of $30 million a year but this is not the entire saving. As we know, the private utility industry has constructed two large powerplants that also serve the Atomic Energy Commission—EEI in southern Illinois and OVEC in Portsmouth, Ohio. The contracts under which this power is delivered were designed in such a way so as to come as close as possible to the TVA rate and in fact they are almost identical. In other words, these plants were built to meet the challenge of the TVA rates. Now these plants supply AEC with about 20 billion kilowatt-hours annually. And here a difference of only 1 mil per kilowatt would make a difference of $20 million a year in the cost of this power. Of course, nobody can tell what the AEC would have had to pay for power if the TVA had not existed, but in any event it is not at all likely that it would have been able to buy power as cheaply as it now does. So that the savings to the Federal Government in the cost of the power it uses itself, in its own defense establishments, are enormous—I would venture to guess in the area of $150 million a year.

There are many other ways in which the TVA has benefited the whole Nation. I think it is beyond argument that by providing a yardstick of power costs it has held down the cost of electric power

throughout the country. It is notable that although we have suffered inflation costs in almost every other field, the cost of power throughout the United States has risen very little.

The TVA has also helped to develop more efficient means of generating electric power. The giant steamplants which it has been constructing have served as guinea pigs in engineering new and better steam generators which have been installed not only in the TVA area but through private utilities throughout the country.

In addition, the TVA has also helped the national economy in the purchases by TVA—and the 150 TVA power distributors—of materials and equipment. Over the past 12 years alone the TVA has bought $1,700 million worth of equipment and about $1 billion of that was purchased from States outside the TVA area.

Mr. Speaker, I should like to insert in the RECORD at this point a list of TVA procurement sources showing the amounts of purchases made in the various States of the United States last year and for the entire 25-year period that the TVA has been in existence. This table shows clearly that some portion of the funds expended by the TVA has gone to every State in the Union and that, indeed, most of the TVA money has been spent outside the TVA area:

TVA procurement sources

	1958	Total (1934–58)
Alabama	$4,085,918	$136,282,777
Georgia	1,080,134	31,255,106
Kentucky	42,470,818	221,187,036
Mississippi	231,017	9,452,169
North Carolina	245,815	14,524,458
Tennessee	40,253,475	486,824,250
Virginia	5,937,621	29,481,906
Total Valley States	94,304,798	929,007,702
Arizona	13,143	142,940
Arkansas	11,932	1,240,729
California	826,645	12,030,849
Colorado	22,730	1,197,154
Connecticut	369,385	8,384,414
Delaware	5,738	19,287,650
District of Columbia	71,234	2,574,982
Florida	164,716	8,472,350
Idaho		2,302,188
Illinois	13,027,423	149,059,385
Indiana	3,978,114	28,664,361
Iowa	79,542	1,760,898
Kansas	35,449	639,819
Louisiana	963,677	12,103,501
Maine	15,514	620,277
Maryland	892,084	7,564,450
Massachusetts	1,830,759	42,347,587
Michigan	1,305,356	22,339,208
Minnesota	71,615	8,482,668
Missouri	1,917,398	30,074,369
Montana	259	166,084
Nebraska	8,405	514,269
Nevada	187	139,108
New Hampshire	83,908	1,805,847
New Jersey	1,631,610	45,926,147
New Mexico	3,688	59,219
New York	20,822,877	189,965,956
North Dakota		54,009
Ohio	4,364,384	137,947,812
Oklahoma	1,203,828	5,606,991
Oregon	133,485	1,805,890
Pennsylvania	8,378,664	348,918,170
Rhode Island	226,072	2,526,362
South Carolina	43,971	1,935,643
South Dakota		708,660
Texas	820,065	8,172,520
Utah	786	2,882,587
Vermont	8,873	211,289
Washington	11,043	1,383,254
West Virginia	70,389	4,774,292
Wisconsin	1,346,649	64,094,053
Wyoming		29,113
Total other States	64,821,597	1,178,917,054
Foreign	422,763	5,676,659
Total	159,549,158	2,113,601,415

Furthermore, the TVA has stimulated the national economy by creating a great market for new electric appliances. In the TVA area, the purchases of electric appliances are running at the rate of a quarter of a billion dollars a year and since the war two and a half billion dollars worth have been purchased. I can assure you that somewhere around 99 percent of those appliances came from outside the Tennessee Valley.

In view of the above, it is apparent that this legislation is not only vitally necessary to the TVA area, but that its passage will benefit the Nation as a whole.

BILL REPRESENTS REASONABLE COMPROMISE

I want to point out and to emphasize that this bill, H.R. 3460, represents a reasonable compromise of many views after long and detailed consideration and deliberation. The issues of this bill have been debated both in the Congress and outside of Congress for more than 5 years.

No fewer than five sets of hearings have been held in the House and in the Senate on this legislation in the 84th, 85th, and the present Congress. The Senate passed a compromise version in the last session. But, the House in its crowded schedule did not get an opportunity to act on this matter, notwithstanding the excessive hearings and a favorable report on the bill.

Thus, the bill as it has reached us here has had just about all the sharp edges knocked off it and all the most controversial issues have been modified and compromised.

PRESIDENT RECOMMENDS BILL IN BUDGET MESSAGES

I might point out too that this legislation was proposed by President Eisenhower in his budget message of January 17, 1955—and I quote:

The Tennessee Valley Authority is giving immediate attention to the possibilities of financing further expansion of its power system by means other than Federal appropriations. The Authority has been requested to complete its studies in time to permit consideration by the Congress in this session of any legislation that may be necessary.

The requested legislation was submitted to the Congress later in 1955 and hearings were held on it in that year. On January 16, 1956, in the budget for the fiscal year 1957, we find this:

There is pending before the Congress legislation which the administration has proposed for financing steam-power facilities of the TVA through the sale of revenue bonds.

On January 16, 1957, in the budget for the fiscal year 1958 we find the following:

Legislation is recommended to authorize the TVA, subject to regular budgetary review, to finance new generating facilities by the sale of revenue bonds.

In his budget message of January 13, 1958, the President said—and I quote:

In accordance with my earlier recommendations, both Houses of the Congress have had under consideration legislation which would authorize the sale of revenue bonds by the Tennessee Valley Authority. I hope that action on appropriate legislation will be speedily concluded.

In the budget for this year, we find the following:

Proposed legislation will again be recommended to the Congress, its purpose being to permit the issuance of revenue bonds as an additional means of financing needed power facilities.

So Mr. Speaker, the President advanced this idea for this legislation in the first place and he has repeatedly called for passage of this legislation in his various messages to the Congress.

The members of the present Board of Directors of the TVA—Gen. Herbert D. Vogel, Mr. Arnold R. Jones, and Dr. Frank J. Welch—who has, as we know, recently resigned—were all appointed by President Eisenhower. I think it is significant that this Board has approved this legislation. May I quote from the letter written to our colleague, Mr. DAVIS, stating the Board's opinion on this bill:

TENNESSEE VALLEY AUTHORITY,
BOARD OF DIRECTORS,
July 29, 1958.

Hon. CLIFFORD DAVIS,
House of Representatives,
Washington, D.C.

In response to your inquiry we welcome the opportunity to express our deep concern that the legislation now before your committee to authorize TVA to issue revenue bonds be favorably reported and approved by the House at this session of the Congress. Enactment of self-financing legislation is urgently required to enable TVA to meet the growing defense and domestic demands for power in the area. We believe Senate bill 1869 as approved by the Senate last year provides a workable basis on which to undertake this new means of financing. Managerial flexibility commensurate with responsibilities delegated to the Board by law should be retained in bill in order to permit effective and efficient operations, and to insure minimum costs, including those of procurement, design, construction, and interest. TVA's plans, programs, and experience under the new legislation will be fully reported to the President and the Congress each year under existing law, as well as under special provisions for consultation and reporting incorporated in that bill. In addition the ceiling of $750 million included in the bill means that the Congress will have an early opportunity for full review of our initial experience. If the legislation is enacted we pledge our best efforts to administer it effectively.

HERBERT D. VOGEL, *Chairman.*
A. R. JONES, *Director.*
FRANK J. WELCH, *Director.*

H.R. 3460 represents a reasonable compromise of many views. The provisions of this legislation reflect 4 years of very careful analysis and consideration. In that time and in the process of going through the committees and through passage in the other body, this legislation has been changed and amended as no other legislation in my recollection ever has been. There are still some things in here that some people appear not to like. I might say that there are some things in this bill that we who represent the TVA area would prefer to have otherwise. As it stands now before you it is a reasonable bill that offers a reasonable solution to the continuing TVA controversy. As a matter of fact, in the form that it comes before you this bill apparently meets the approval of at least the greater number of the private power companies adjoining the TVA.

In this connection, I want to call your attention to the fact that Mr. Harllee Branch, Jr., president of the Southern Co., which is the parent company of five of the utilities which serve the area adjacent to the TVA, appeared before the committee. During the hearings Mr. Cramer asked Mr. Branch—and I quote:

As far as you are concerned, with the Vinson amendment, which merely provides congressional control over expansion of territories, and the Treasury Department and the Bureau of the Budget review of the actual selling and timing of the bonds, are you satisfied the latter as well as the former is needed so far as Government control of this bond issue is concerned; is that correct?

Mr. Branch replied—and I quote:

With respect to my companies, if there is protection against an expansion of TVA into our territory, my companies, as companies, have no concern:

He added:

The only thing I can speak for them on is to the point, please do not permit an unwarranted and justified encroachment in our territory.

In other words, he said that whatever his own personal opinions as an individual might be as to Treasury or Bureau of the Budget control, and speaking solely as a representative of his companies, and on behalf of the companies, their concern was for a territorial limitation.

It has been 4 years since the President made his first proposal for self-financing the TVA, and 4 years since Congress began to consider this measure. Meanwhile, the TVA has received no appropriations for increasing its power capacity. TVA's ability to meet the power needs of its area is becoming desperately limited.

A crisis caused by a shortage of power would deprive our people of the power needed for normal growth and would severely threaten the ability of the area to enjoy, on equal terms, the opportunity for development with the rest of the Nation.

The people of the TVA area have been thwarted on every hand and from many fronts—appropriations have been denied, opposition has been expressed against any further use of surplus corporate funds; and now sincere efforts to pass a workable and equitable self-financing plan are being opposed.

For years, the opponents of the TVA have been telling us that they are opposed to financing TVA's power operations through appropriations and suggesting that TVA go to the open money market for funds for additional capacity. That is precisely what the legislation now being considered by Congress proposes—to let TVA stand on its own feet. For years the enemies of TVA have been saying that they had no desire to destroy the TVA but merely wanted to remove the TVA from dependence on the Treasury. That is precisely what this legislation proposes. Despite his own expressed misgivings about the TVA, the President has said that he wants to maintain the TVA at maximum efficiency but he insists that he wants to free the Treasury of the financial burden for TVA's power function. That is precisely what this legislation would accomplish.

It is time that we disposed of this problem and faced up to our responsibilities, not only to the TVA area, but to the Nation. I, therefore, urge my colleagues not to be misled by misrepresentations and propaganda about this legislation.

British Reaction to Montgomery

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BECKER. Mr. Speaker, in light of recent statements made by Lord Montgomery, more familiarly known as Field Marshal Montgomery, dealing with our President and officials of our Government, as well as the American leadership, I take leave to insert in the RECORD today two paragraphs from a letter I have just received from an English friend of mine for 40 years. These paragraphs are very significant, I believe, and self-explanatory. I am also inserting, following this letter, an editorial from the British Daily Telegraph published in London.

I am certain that no American newspaper could deal more severely with Lord Montgomery than does the editorial of the Daily Telegraph:

DEAR FRANK: I sat up late last night to see and hear the television play made by CBC of "Mark the Mountebank." He is a congenital idiot in a lot of things he says and does and his timing on this occasion has been particularly unfortunate, as have been his references to people's health. You will be interested, I know, to learn that his effort this time has been badly received here as the leader in today's Daily Telegraph will show. He speaks, of course, as a private citizen but, as a great soldier, he should be more conscious of his sense of responsibility.

I think the President dealt well (very) and with dignity, with the questions put to him about the telecast in the States. He does not have to defend himself to you, nor to our people.

The article from the British Daily Telegraph follows:

UNSILVER SPEECH

As much in timing as in tone Lord Montgomery's television views about American leadership are to be deplored, the more so since they reflect popular fallacies which are too deeply ingrained to need public encouragement by so distinguished a voice. The only excuse for a field marshal launching into controversy is to air unpopular truths. To give credence to popular falsehoods is a sad waste of Lord Montgomery's talent for courageous frankness.

How can the field marshal complain of the lack of American leadership when the very policies which he later advocates are precisely those which the United States has consistently and successfully championed, in the face of sustained criticism from within the alliance? He would like to see the forces of Western Germany guarding the NATO front in Europe; he wants the West German Army equipped with tactical nuclear weapons, and above all he believes that if there should be a roughhouse in Europe, American blood must be shed on the first day. He must know that during the past 6 years it has been the American administration which has fought hardest for these self-same aims and that today it is the Americans who resist all pressures to adopt new policies which might endanger these aims.

How then can he justify his claim that the leadership is passing to the British? Does he really believe that the British are doing more than the Americans to encourage the Germans to guard the NATO front or to equip the West German Army with nuclear weapons or to keep the American Army in Germany? Paris and Bonn hold an entirely contrary view. To them it is British rather than American leadership which is rather suspect. This chauvinistic distortion of the facts, coupled with tasteless and irrelevant references to Mr. Herter's crutches—the field marshal was actually reminded that Franklin Roosevelt, whom nobody ever accused of being incapacitated from leading, was a cripple—can only harm the cause which in the past he has done so much to serve.

Sigma Delta Chi Founders Day

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BURDICK. Mr. Speaker, April 17 of this year marked the 50th anniversary of the founding of Sigma Delta Chi, an organization dedicated to the highest ideals of journalism. It was fitting that the anniversary be marked by a proclamation, reprinted herewith:

PROCLAMATION BY GOVERNOR OF THE STATE OF NORTH DAKOTA

Whereas Friday, April 17, 1959, is the 50th anniversary of the founding of Sigma Delta Chi, the national professional journalistic fraternity—an organization dedicated to the highest ideals of journalism; and

Whereas members of this organization include a majority of North Dakota's working professional newsmen, who labor continually and unselfishly to further the progress of their State and contribute to the knowledge of its citizens; and

Whereas the North Dakota members of Sigma Delta Chi, like their 17,000 fellow members elsewhere in the Nation, have strived ceaselessly for preservation of the people's right to a free press; and

Whereas the State of North Dakota is privileged to have among its organizations an undergraduate chapter of Sigma Delta Chi at the University of North Dakota, as well as the statewide North Dakota professional chapter of the fraternity;

Now, therefore, I, John E. Davis, Governor of the State of North Dakota, do hereby proclaim Friday, April 17, 1959, as Sigma Delta Chi Founders Day in North Dakota and urge all of its citizens to pay tribute to Sigma Delta Chi, expressing appreciation to its members for the work they do to keep us informed, promote our State and community enterprises, and protect our rights and privileges.

In affixing my signature to this proclamation, I take especial note of the fact that members of Sigma Delta Chi will be in Williston April 16 and 17 to observe their golden anniversary with fitting exercises, and to

participate in the annual meeting of the North Dakota Press Association.

Given under my hand and the Great Seal of the State of North Dakota here in my office in the State capitol at Bismarck, N. Dak., this 9th day of April 1959.

JOHN E. DAVIS,
Governor.

Attest:

BEN MEIER,
Secretary of State.

Farm Surpluses

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BROOMFIELD. Mr. Speaker, over the years, our Nation has been accumulating a staggering amount of surplus farm goods. At present, for instance, we have enough wheat in Federal storage bins and graneries to supply all the needs of our Nation and our world export market for almost 2 years if not another grain of wheat is planted.

These Government-owned surpluses amount to some $9 billion. They are costing us some $1 billion a year for storage and interest charges alone.

The problem confronting Congress is, What is going to be done about our farm surpluses and how are we going to prevent them from growing even larger in the future? In my opinion, this is one of the most pressing problems which Congress has to face. A realistic look at our present agriculture support policies by Congress is long overdue.

First of all, it might be well for us to determine just who is in favor of our present farm support programs.

The taxpayers do not want them. They are paying for our agricultural program out of their pockets to the tune of some $7 billion annually, the third highest amount in our Federal budget. Only costs for defense and interest payments on our outlandish national debt total more money.

The consumer does not want them. The artificial value placed on farm products by our Federal Government is robbing him of many dollars a year in extra food and clothing bills. Expenditures for food and clothing generally add up to a large portion of the average family budget, and any artificial increase in these two items means a lower standard of living for the average family.

The farmer does not want them. In a recent survey by Farm Journal magazine, 78 percent of the farmers who answered indicated that they considered present price supports for farm goods too high, while some 55 percent of these farmers said they thought the Federal Government should get out of the agriculture business entirely.

The administration does not want them. The present price support program is helping to throw our Federal budget out of kilter and is contributing to a top-heavy budget for the Agriculture Department. In addition, Congress has not seen fit to provide our Secretary of Agriculture with programs he has requested.

Who wants farm price supports then? If consumers, taxpayers, our President, and Secretary of Agriculture and our farmers are opposed to the present program, that seems to take in the vast majority of people in the United States.

All that appear to be left on the other side are some Members of Congress who benefit politically and a few big farm operators who have been reaping rich benefits from our Federal Government without harvesting a crop.

It seems to me that the majority of Congressmen should catch up to the will of the people in this very important matter. We cannot continue to throw away money in billion dollar lots to support a program which has not and cannot work. We cannot continue to pay our big farmers thousands of dollars apiece not to grow crops. These people do not need Federal money anyway. They are doing fine.

We are going to have to give the farmer back his freedom. That is the only fair way of doing things. We have to start reducing our ridiculously large stock of surplus foods, and that is going to take some backbone on the part of Congress.

Besides our school lunch programs, our surplus food distributions to those who need it here at home and abroad, there is another way we can use this extra food. That is in promoting the settlement of our new State of Alaska. I have introduced a bill this session, H.R. 5761, which would permit homesteaders to Alaska to receive surplus Federal food while they are clearing and settling their land. This seems to me to be the least we can do for these brave people. This distribution of food to homesteaders would not cost our Federal Government very much dollarwise, as we would have to store the surplus food for a number of years anyway if our present agriculture policies are permitted to continue.

We are going to have to get rid of our farm surpluses. We are going to have to stop wasting our Federal revenues on an agriculture program which is causing more harm than good. We are going to have to return our basic freedoms to our farmers, who are hampered only in this respect by Congress and its failure to pass an agriculture program which faces up to the problems confronting our Nation.

People Want Gold

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include the following article on gold by Mr. Harry Sears, of Angels Camp, Calif., which appeared in the April issue of the Western Mining and Industrial News. Mr. Sears is president of Calaveras Central Gold Mining Co., Ltd., and chairman of the Western States Gold Committee. He is recognized as one of the outstanding authorities on gold in the United States. He has been invited to participate in a conference with the Secretary of the Treasury on May 13 to discuss our general gold policy and the problems involved. The article follows:

Three words describe a condition as old as civilization—people want gold.

They express human emotions, the desire for power, wealth, adornment, or merely personal satisfaction, plus some sense of safety.

For 25 years our people in this country have been denied the possession of gold, except in the form of manufactured products. The Government asserts complete control.

END OF THE ROPE

But we have reached the time when this Government, having failed to provide us with sound money and a sane and honest fiscal policy, find themselves deeply enmeshed in a rapidly growing inflation, with the greatest indebtedness in the history of the world, with an irredeemable paper currency, based only on debt, with no sound monetary reserves which can be used under their present system, and from all quarters come their confessions that they need some solution to their problems, but have not found it.

JUST TALK

We still talk about dollars but do not use them. The Federal Reserve notes which we use instead of money merely carry the insignia which has been familiar to us for years, but because of constantly shrinking purchasing power, this paper currency is valued only in pennies and when translated into an equivalent of what a dollar should be in value, for almost any transaction in our daily lives, we are met with high prices, but these are merely the result of multiplying our currency units, because of their constant loss of purchasing power, into the number required to bring their usefulness to the necessary amount demanded for goods and services in our daily transactions.

GOLD IS EXCEPTION

There is one outstanding exception to this perfect pattern. The price of gold, which was set by Government decree in 1934 and which the Treasury has refused to alter, has been steadily reduced since the originally proclaimed $35 per ounce, so that translated into the purchasing power of the paper currency which is paid for it by the Treasury, the price of gold becomes: $16.80 per ounce with a 48-cent dollar; $11.55 per ounce with a 33-cent dollar; $8.75 per ounce with a 25-cent dollar; $3.50 per ounce with a 10-cent dollar; 35 cents per ounce with a 1-cent dollar.

And by applying the same factual figures to the sales of gold by the Treasury we find that during the past year between $2 and $3 billion in gold has been sold to foreign central banks and their government and private customers, in addition to all the gold which was supplied by the Treasury for commercial use in this country and abroad, at the same reduced prices.

STUPID

The proponents of this suicidal and fantastic stupidity have the audacity to call such results the "value of gold," and groups of economists and monetary experts are constantly seeking to have conversion of this Federal Reserve currency into gold, at the $35 price and a favorite slogan with them is that any increase in the price of gold would be inflationary.

The root cause of the inflation stems from the practices of the Federal Reserve System,

their multiplication of printed currency based on debts, the removal of gold from all monetary use in the United States and the unlawful Treasury practices and propaganda regarding gold.

BEYOND CONTROL

The inflation has been built by the government because they wanted to build it, but it is getting beyond control and the people are searching for safety and a way out of the confusion. They are beginning to turn to gold.

We are at the date of an important anniversary. Twenty-five years ago the Gold Reserve Act of 1934 was passed by Congress. This is claimed as the authority for the gold regulations and practices of the Treasury; and that Congress acted under its Constitutional power to "Coin money and regulate the value thereof," but Congress has used no such power with regard to this act, and the Treasury has been clothed with no authority.

MISLEADING

That was some time ago, the details may be quite dim in your memories, but again please note the title, the Gold Reserve Act of 1934. This very title is misleading and its interpretation has been appalling. Few people have read it and realize its actual powers and limitations and during this quarter of a century we have been taught fundamental errors and have been herded into mistaken understandings and have been taught false beliefs regarding gold. Our Government officials have promoted fictions and claimed powers which are outside the law and which they do not possess.

Our rights and the peoples' rights are fully supported by law and are directly contrary to the claims and practices of the Treasury.

LET'S GET THE FACTS

So that there may be some order in this confusion we review provisions and purposes of the act.

The Government took title for the United States, to the gold coins and monetary gold bars which had been in the vaults of banks for many years or which had been turned in at the Treasury or Federal Reserve banks by our citizens in accordance with Presidential demands.

We need not here determine the legality and morality of Congress in blindly following Presidential orders and stripping the American public of their gold, in 1933.

This was in the period when the President ordered Congress to pass laws and not to hesitate because of doubts as to their constitutionality, so acting under the assumption that possession denoted authority, title to this gold was declared by the act, to pass to the Government.

THE LAW

But it is extremely important that we know what was provided as to gold owned by the Government, we therefore quote from the act: "No gold shall hereafter be coined, and no gold coin shall hereafter be paid out or delivered by the United States.

"All gold coin of the United States shall be withdrawn from circulation and together with all other gold owned by the United States, shall be formed into bars of such weight and degree of fineness as the Secretary of the Treasury may direct. No currency of the United States shall be redeemable in gold.

This is the important provision of the act and through improper interpretation of these words, or through intentional disregard of their meaning, the Treasury and other Government departments have indulged in a program of skullduggery toward gold which violated the basic property rights of all citizens and has almost entirely destroyed the gold mines and gold producing districts in 13 Western States.

LAW DEFIED

They have confiscated the gold which was taken from its owners, in defiance of law, and they have been parties to the imposition of frauds on our citizens generally, through misrepresentation to them that gold was the basis of a reserve to provide safety for users of the present irredeemable currency.

With gold clearly and completely removed from all monetary use in the United States it lost its former identity as money, and became a simple commodity, and Congress then had no greater power over it than over any other commodity.

The fact that some of it is stored in Treasury or Federal Reserve vaults, or Fort Knox, gives it no monetary standing or character for the Gold Reserve Act specifically terminated any monetary use of gold in this country. The term "bullion" has no monetary significance. It merely means "metal in the mass" and the term has been in common use for centuries.

JUST A COMMODITY

All gold owned by the United States thus became merely a commodity stored in Government warehouses in 1934, and the Secretary of the Treasury merely became the custodian of the warehouses. It is thus exactly the same as the commodity gold produced from the mines and is subject to all safeguards for property which our Constitution and laws provide.

The act gave no authority to the Secretary of the Treasury to set a price for gold and to maintain such a set price during the years of inflation when the purchasing power of irredeemable Federal Reserve currency dropped steadily so that now it is only accepted on the basis of from 25 cents to 33 cents on the face value of the so-called dollar. This means that in buying gold from a producer the Treasury pays for it with irredeemable paper currency of which the purchasing power has been so reduced that it pays only from $8.75 to $11.50 per ounce, and not the much touted $35 which is publicly held forth as the rate the Treasury pays.

The Secretary has a set of regulations but owing to the fact that he is only dealing in commodity gold, just as any private citizen would deal in it, he has no authority to control or enforce commodity gold. But in spite of this he compels gold producers to secure a license from him before they can melt their gold and place it in marketable form and he also demands that they contract to sell the gold to him, at his price, to avoid having this license canceled.

Of course gold cannot be produced at these prices, except in a few special cases and as a byproduct from other metals.

There were about 4,000 operating gold mines in production when they were preemptorily closed as an asserted war necessity, in 1942. After years of idleness the great majority of these could not attempt reopening because economic difficulties of inflation and currency depreciation had made a higher gold price mandatory. A few mines attempted reopening but after heavy losses were forced to again close down. This is the condition of more than 95 percent of all gold mines in the country.

FRAUDS ON THE PEOPLE

Another provision of the Gold Reserve Act of 1934 gave the Secretary of the Treasury authority to buy and sell gold, at home and abroad. Sections 8 and 9 provide for these purchases and sales at varying prices, with no special price specified. As this was virtually a public trust it was his duty to see that these purchases and sales would be properly conducted and the laws respected, but this has never been done.

The gold policy of the Treasury was concisely stated by former Under Secretary Randolph Burgess in testimony before a Senate Committee in 1954, when he said:

"We buy and sell gold freely with other countries at the price of $35 an ounce and we sell gold to foreign banks and private owners as well."

There was a lot of loose language and fancy phrases in the act and in the proclamation of the President which announced it in 1934, but none of this could vary the essential fact which the act established.

When gold was completely removed from monetary use in the United States there could be: No gold dollar, no gold content of the dollar, no gold monetary reserves.

MERE TOKENS

In addition, there is a statute which declares that no obligation of the United States could be measured in gold, therefore no matter what the President said, surplus language describing unauthorized and nonexisting facts have no effect and establish no rights, but in view of what has since happened one announcement by the President should be remembered. He said:

"In pure theory, of course, a government could issue mere tokens to serve as money—tokens which would be accepted at their face value if it were certain that the amount of these tokens were permanently limited and confined to the total amount necessary for the daily cash needs of the commodity."

This could well have been an advance description of managed currency and the present Federal Reserve notes. Since they have no ascertainable value they fit the description of a "mere token to serve as money." They are accepted far below face value for it is certain that the amount of these tokens is not limited, either permanently or temporarily, and they are not confined to the daily cash needs of the community but are contributed in fantastic amounts as gifts all over the world. Thus vast amounts accrue in the hands of foreign banks and private owners as well, which are given the fancy title of foreign trade balances and the Treasury honors these by selling them gold at $35 an ounce.

BRAINWASHED

Nevertheless throughout the years, Government officials, bankers, business advisers, economists, teachers and Members of Congress continue to think and talk about these nonexistent gold formulae and our currency as though they were real. They have been so effectively brainwashed that they continue to delude themselves and others by repetition of untrue and wholly fallacious theories.

For years we have been conducting our lives under this irredeemable and constantly depreciating currency. In testifying before the Senate Finance Committee in 1957, retiring Secretary of the Treasury Humphrey, who had just admitted that the purchasing power of the dollar had dropped to 48 cents, was asked:

"But you do think that as long as this inflation keeps up, the savers and pensioners and people who have paid on insurance for 20 to 30 years, are the forgotten people, are they not?"

To this Secretary Humphrey replied:

"They are definitely forgotten people who have been injured * * * They are severely injured."

IT IS PLAIN ROBBERY

In these words was the confession of the Secretary of the Treasury regarding your bank balances and savings.

In spite of the contempt for the legal and property rights of our citizens and gold owners, as shown by the gold regulations and Treasury practices, gold is extremely important to the Treasury as a screen to conceal their real position.

If the deposits in our banks are injured by saving our shrinking currency, there could be no question that gold producers have a greater injury illegally forced upon them.

Their gold is taken under coercion by a Treasury acting without authority and they are forced to accept Federal Reserve currency in exchange for their gold. They are brazenly robbed.

PUBLIC MISLED

In spite of the Treasury's repeated insistence that U.S. citizens cannot possess gold, they misrepresent gold to the people in order to mislead the public. In hearings before the Senate Finance Committee in 1957, former Treasury Under Secretary Randolph Burgess admitted:

"We have got a kind of gold standard and to the extent the people have confidence that we are going to keep the money nailed down to the value of gold, it is easier to sell the bonds."

We have had no gold money or monetary gold in this country for a quarter of a century. Gold held by our Government is merely metallic gold as a commodity.

It is in the same class as the gold which is owned in the thousands of gold mines and properties throughout our Western States.

RIGHTS DENIED

The rights to produce this gold and sell it are on an equal footing with the rights of our citizens to purchase it and to hold it, or to sell it as they may choose.

Congress has no power to enact laws or to authorize regulations which abridge these rights of possession and when the Secretary of the Treasury attempts to enforce such regulations he is acting illegally and without authority.

A current case in the Federal court bears directly on this. It concerns possession of gold bullion by a man in the State of Washington, charging him with a criminal act for which he was arrested, tried, and sentenced. During recent years there have been many instances where others have been treated in this fashion and in most cases they have not contested, having been overawed by the long standing propaganda and claims that the Government had this power, or they could not afford the cost of an appeal.

COURT DECISION

This case was appealed, and after consideration by the Court of Appeals, has been remanded to the original court for corrective action or dismissal. The criminal charge for gold possession was based on original emergency orders of the President early in 1933 and upon subsequent Treasury regulations and the Gold Reserve Act of 1934, but it was found by the U.S. Court of Appeals that there are no criminal penalties provided in the Gold Reserve Act for possession of gold and no criminal statutes authorized by Congress.

Of course, the conditions under which the original Presidential emergency orders were issued, no longer exist. In 1933 they were used to force the people to turn their gold coins and bullion over to the Treasury and later, title to this gold was given to the United States in the Gold Reserve Act of 1934. It all became commodity gold and gold coinage was wiped out.

COIN BAN LIFTED

In fact, even the Treasury has recently lifted bans on the possession of gold coins and they are now permissible to be held by the public and are classed as collectors' items. But the old criminal bogey, as to gold bullion, is still held over the heads of the people by the Treasury. It is interesting to note the language of the Court of Appeals in reversing this case:

"It seems vital as a matter of national policy that emergency regulations and almost dictatorial powers granted or conceded in the turmoil of war, cold war, economic revolution, and the struggle to preserve a balanced democratic way of life, should be discarded upon return to normal conditions, lest we grow used to them as the fittings of ordinary existence. Executive regulations drafted and confirmed for an emergency should expire with the emergency."

Since the Gold Reserve Act of 1934 established the status of gold owned by the United States as merely commodity gold, and abolished any former status it may have had as money, or monetary gold, it had the effect of establishing all gold in the United States as commodity gold and as private property.

NO AUTHORITY

Neither Congress or the Secretary has any power or authority to prevent United States citizens from buying, selling, or holding gold; or

To prevent the mining or processing of gold in the United States, or to make regulations which would interfere with the proper conduct of such business by the owners of this gold, or any mineral deposit containing same; or

To set a price limit on gold, or to compel its owners or producers to sell it in any manner, or at any price which does not conform to valid laws regarding private property; or

To require gold miners and producers to have any form of license in order to melt their gold, which is a necessary part of mining to change it from the form of a concentrate in which it is mingled with other metals, and to prepare it for sale; or

To confiscate privately owned gold or to assess any owner with a penalty or a threat of penalty, because of its possession; or

To appropriate or take possession of privately owned gold, in any manner which violates the property rights of the owners, or contrary to any valid law made to protect them; or

To misrepresent the status of gold owned by the United States and to state or imply that it is in any manner connected with the present irredeemable currency in common use.

LEGAL PRINCIPLES

In considering newly mined gold from properties in the United States and summarizing the laws which must be obeyed by the Secretary of the Treasury we find he is governed by the following well-settled legal principles:

Private control of commodities and private property is unconstitutional.

Private property and property rights of all United States citizens are protected under our Constitution and must be so recognized and respected.

Private property of citizens is protected from seizure or confiscation.

Private property cannot be taken for public use without just compensation and this cannot be determined without a hearing.

It should come as a welcome breath of hope for the future of the gold-mining industry to consider that although in the past we have been singled out and made the victims of lawless treatment by our Government, we have well settled rights which can be invoked and can reverse this condition for the future.

Gold producers have been an isolated industry with limited public contacts in the past but the drastic effects of the manufactured inflation has brought gold into fresh prominence and as the cycle of inflation continues the doubts and the growing resentment of the people can compel the Government to establish and use real reserves of gold, for there could be swift collapse of the multiplication of paper currency now being used.

PEOPLE WANT GOLD

In recent years there has been increased buying of gold in free countries abroad. Our substantial citizens have been adding to their holdings, but these had to be handled as bulk purchases since the sales were large and the storage abroad was expensive, so this was never a practical market for our modest citizens.

But there has been preparation underway for some months to bring the advantages of a free gold market to us close at home, and on such a scale that it could be a popular market. With expenses cut to a minimum it can serve all classes. This is about ready to function in Canada and trading would be on the open commodity markets both there and here in the United States. The gold will remain in bank valuts in Canada and warehouse receipts will be traded on the market.

Even in its preliminary steps the volume of demand for gold is causing surprise in Canada and they see that here is a world market in the making. But we can forsee that it will not be necessary even to go to Canada or to trade there, for we now know that morally and legally there is a clear right for us to have a free gold market here in the United States, and to start the building of such a market. The growing fear and unrest in the minds of our own people can be a factor of great importance.

CASE IN COURT

Among other steps, there is a carefully prepared case in progress in the Federal Courts to terminate all control of newly mined gold through Treasury regulations.

Our citizens have watched their bank accounts wither and fade in the purchasing power of their deposits and they have plunged into the stock market to multiply their shrinking dollars only to find that this is now even a bigger gamble than horse racing.

They want something tangible, that could be safe and dependable but whose value can grow as it attracts increased public demands for its possession.

Throughout history, this has always been the function of gold. It has not been permitted to register its value in this country during the past 25 years. That value should soon show at more than $100 per ounce.

Let us therefore view this as a fresh start when we turn away from the past and forsee a far different future.

A Bill To Amend the Trading With the Enemy Act Dealing With Copyrights, Trademark Properties, and Motion-Picture Film

---

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. HARRIS. Mr. Speaker, yesterday I introduced a bill to amend the Trading With the Enemy Act dealing with copyrights, trademark properties, and motion-picture films. In order to afford the Members of the House of Representatives and the general public a better understanding of this bill, under leave to extend my remarks in the RECORD, I include a letter dated April 13, 1959, from the Attorney General addressed to the Speaker of the House of Representatives, requesting introduction of this legislation, and an explanatory memorandum of the bill prepared by the Department of Justice:

APRIL 13, 1959.

The SPEAKER,
House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: There is attached for your consideration and appropriate reference

a legislative proposal to return to its former owners or their successors-in-interest, certain property vested under the Trading With the Enemy Act, as amended (50 U.S.C. App. 1 et seq.). This property, which is presently administered by the Office of Alien Property in the Department of Justice, consists of vested copyrights, trademarks, and unexpired contract interests involving copyrights and trademarks. The proposed legislation would effect a statutory divestment of the Government's title to these properties without any necessity for the filing of claims or any other formal action by the former owners or their successors-in-interest and thus without the necessity of any administrative processing by the Office of Alien Property or any other agency of the Government. The measure would also authorize the transfer of all vested motion picture film prints to the Library of Congress for retention or disposition by the Library as it sees fit. The proposed legislation would not return the income or proceeds received by or accrued in favor of the Office of Alien Property from any of the divested assets prior to the effective date of divestment.

The purpose of the draft bill is to bring to an end the administration of the above-mentioned categories of vested property. In the absence of legislation of this nature, the Government will be faced with the prospect of continuing the administration thereof for an indefinite period of time.

The future income to be derived from the vested copyright, trademark and film properties is not substantial and will no doubt steadily decrease. Accordingly, enactment of the bill would not appreciably diminish the total amount of vested funds ultimately available for financing the program of compensation to American war damage claimants which the administration has recommended to Congress for enactment.

An explanatory memorandum is attached to the draft bill which analyzes its provisions and explains at greater length the reasons supporting its enactment.

Early legislative action on this proposal would be a major step toward termination of the World War II alien property program.

The Bureau of the Budget has advised that there is no objection to the submission of this recommendation.

Sincerely,

WILLIAM P. ROGERS,
Attorney General.

EXPLANATORY MEMORANDUM RE PROPOSED BILL TO AMEND THE TRADING WITH THE ENEMY ACT, AS AMENDED

Among the various categories of enemy-owned assets in the United States which were vested under the Trading With the Enemy Act and are administered by the Office of Alien Property as a consequence of World War II are copyright and trademark properties and prints of motion-picture films. A description of these categories and their status under present law are set forth below.

1. Copyrights: Vested copyright interests number more than 300,000 in all. These include not only directly vested copyrights but also interests in prewar contracts relating to the use of copyrighted material in the United States. Inasmuch as copyrights have a statutory life of 28 years and may be renewed for an additional 28 years, it is obvious that the ownership and administration of vested copyright interests by the U.S. Government will continue far into the future in the absence of legislation authorizing the disposition of such interests. In the fiscal year ended June 30, 1958, the Office of Alien Property received approximately $131,000 in royalities for copyright licenses and contracts. The amount of such royalties will no doubt steadily decrease during the years to come and at some point will fall below the costs of administration.

2. Trademarks: There is presently a total of 300 vested trademarks and trademark contract interests. Trademark registrations are effective for 20 years and may be reregistered at 20-year intervals as long as the trademark is used. As a result Government ownership and administration of vested trademark properties may continue indefinitely under present law. Income produced by these properties during the fiscal year ended June 30, 1958, was only $20,000 and it is anticipated that this figure will decrease in future years. Accordingly, the cost of the trademark program will no doubt soon exceed the income it produces.

3. Prints of motion pictures: The Government presently owns several million feet of vested motion-picture film. This property is perishable and all of it will ultimately have to be destroyed. Little of this material has more than nominal commercial value and the income received from rentals thereof is insignificant.

The purpose of the proposed bill is to terminate the administration by the United States of the above-described vested property and thus to hasten the end of the World War II alien property program. Inasmuch as the three types of assets vary in the problems of disposition which they present, the proposed bill treats them separately in three new sections to be added to the Trading With the Enemy Act, as amended (50 U.S.C. App. 1–39), as follows:

Section 40: This section would relieve the Government of its ownership of vested copyrights and unexpired copyright contract interests by a statutory divestment requiring no action on the part of the Office of Alien Property. The effect of this section would be to restore the ownership of the divested property to the persons in whom it resided prior to vesting or to their successors-in-interest. The divestment would not extend to royalties or other income received by or accrued in favor of the Government during the period of its ownership and would not prejudice the rights of the persons who have licenses issued by the Office of Alien Property in respect of vested copyrights.

It should be noted that the divestment would serve to return copyrights and unexpired contract interests therein to persons and firms in the East Zone of Germany. Thus, although such persons and firms would not receive the return of any money in the hands of the Office of Alien Property, they would become entitled to any income from their copyrights and contract interests which might accrue after divestment. Investigation in Germany has disclosed that practically all the former owners of valuable copyright properties who were located in the East Zone of Germany prior to World War II have now established themselves in the West Zone. As a result the amount of future income payable to former owners in the East Zone from the copyright divestment would be negligible.

The proposed section 40 excludes from return by reference to specific vesting orders the copyrights and contract interests connected with the publication in the United States of Hitler's Mein Kampf, the diaries of Paul Joseph Goebbels, the memoirs of Alfred Rosenberg and a work by a leading Nazi, Otto Skorzeny. The moneys collected in connection with these works are of course also excluded from divestment. A photographic history of the Nazi Party formerly owned by Heinrich Hoffman, its official photographer, has been excluded from return. In addition, the copyright to a scientific motion picture entitled "Meiosis" has been excepted from divestment because of its wide use by American educational institutions. Since this copyright was owned by an East German firm prior to vesting, divestment might impede its future use in this country.

Section 41: This section, which deals with vested trademark properties, also employs the technique of a statutory divestment. However, it excludes, by reference to specific vesting orders, certain possible reversionary or other similar rights relating to trademarks and good will which since prior to World War II have been assigned to and held by vested enterprises which are still controlled by the Government under the Trading With the Enemy Act, as amended. In general, these vesting orders are catch-all orders issued as a precautionary measure for the purpose of cutting off any unknown or undiscovered rights which may have been retained by enemy nationals with respect to the good will, trademarks and trade names of these vested corporations. Although these nebulous reversionary rights may be nonexistent or without any real value, their divestment in favor of the former owners might invite unnecessary harassment of vested corporations and their involvement in litigation with respect to those portions of their businesses in which the trademarks are used, notwithstanding the fact that the vested corporations for many years have operated these businesses independently of these former owners.

The proposed section 41 provides that where a trademark or a trademark interest was owned prior to vesting by a person in East Germany, it will be divested in favor of a person in the Federal Republic of Germany if a competent agency of the Federal Republic certifies that an equivalent trademark has been registered by it for such person.

The divestment would not extend to income received by or accrued in favor of the Government from trademark properties during the period of its ownership and would not prejudice the rights of persons who have received licenses from the Office of Alien Property in respect of vested trademarks.

Section 42: Some motion picture film vested by the United States was seized by our Armed Forces overseas and is in the custody of the Library of Congress; other film seized in the United States is in the custody of the Attorney General. Although custody is divided, title to all of the prints is in the Attorney General.

Subject to stated exceptions, this section authorizes and directs the transfer to the Library of Congress of title to the prints in its custody and to those prints in the custody of the Attorney General as to which the Library exercises a right of selection. The section affords complete discretion to the Attorney General and to the Library to dispose of prints in their respective custody.

Obion-Forked Deer Project

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. EVERETT. Mr. Speaker, there appeared in the Sunday Morning, May 3, edition of the Commercial Appeal, an outstanding newspaper of Memphis, Tenn., an editorial relative to the Obion-Forked Deer project, known as the west Tennessee tributaries.

The Congress last year appropriated $75,000 for the advance engineering and planning for this project. The General Assembly of Tennessee passed legislation early this year which would furnish

the rights-of-way and maintenance of this project.

We in the Midsouth appreciate the great interest shown by the Commercial Appeal in flood control and drainage matters which are so important to us. The editorial of May 3 follows:

OBION-FORKED DEER PROJECT

The economy of the Lower Mississippi Valley being pegged as it is on effective and adequate flood control and drainage facilities, any progress along that line benefits the whole area and all its people.

One of the most important projects of the type relates to the Obion-Forked Deer areas of West Tennessee—a project as vital to Memphis as to Dyersburg or Union City. It was authorized more than a decade ago on the basis of a comprehensive report of the Corps of Engineers and a survey which determined that the ratio of benefits to cost more than justified the undertaking.

The drainage program was delayed until an agency to be responsible for acquisition of rights-of-way and maintenance could be set up. The last general assembly provided for this and all that is needed now is a Federal funds allocation.

Some sportsmen have expressed fear that the project would do great injury to recreational potentials, but the fear seems to have little but hypothesis to support it. Recurring flood misery and damage in the Obion-Forked Deer areas, on the other hand, are stark matters of annual record.

The Obion-Forked Deer project is wanted and needed by the agricultural and business interests of the sections which will be immediately benefited and it is a need which is paramount.

When the original study on the west Tennessee project was being made, the U.S. Fish and Wildlife Service found that damages to fish and game in the area might be reduced by a $70,000 annual total in the Obion and Hatchie River Basins but that the figure might be cut by remedial works. No work was authorized for the Hatchie, thus that figure would appear to be excessive if applied only to the Obion.

In their 1948 report on the Obion-Forked Deer Rivers above the backwater limits Army engineers asserted that average benefits of $885,000 to croplands alone might be expected to result from only that portion of the improvement. That calculation was based on 1946 farm prices. The benefits expectation would be higher today.

There should be no controversy between the communities and area which the Obion-Forked Deer project is primarily designed to assist and wildlife enthusiasts. There is no room for it. Adequate control and development of our water resources are basic to our progress and in all related undertakings protection of life and property and enhancement of land values must take precedence.

Truman Sees No Change in Policy Under Herter

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. McCORMACK. Mr. Speaker, there is no one better qualified to discuss foreign policy than former President Harry S. Truman. During the period he was President of the United States, he conducted his duties, particularly in the field of foreign affairs, with sound vision and intuitiveness and with great courage.

In my extension of remarks I include an article written by former President Harry S. Truman for the Bell Syndicate, Inc., and appearing in the Washington Post of April 28, 1959:

TRUMAN SEES NO CHANGE IN POLICY UNDER HERTER

(By Harry S. Truman)

The foreign policy of the United States is shaped and determined so largely by our needs for security and preservation of world peace that no abrupt change, even in the person of the occupant of the White House, could result in a significant change in that policy today.

I, therefore, do not foresee any material difference, with the appointment of Christian A. Herter to succeed John Foster Dulles, in what we must do.

Whatever special qualifications Secretary Herter brings to his office—and they are impressive—we must understand that he will be the instrument of the President, who alone has the responsibility for making foreign policy.

In these anxious and dangerous times, the responsibility and the role of the President in the conduct of foreign policy call, more than ever, for his constant personal vigilance and direction.

A President must know what he wants to do, and he is the only person in a position to get it done, no matter who is Secretary of State. The tragic illness of John Foster Dulles removed at a critical moment, a dynamic and influential instrument of the President.

The new Secretary of State is an experienced public servant and a capable diplomat. He is of a different temperament from that of his predecessor. In certain respects he will act more as the instrument of the President.

REMEMBERS HERTER WELL

Time alone, of course, will tell how effective he is in negotiations with the Communists and in dealing with our allies. I remember him well when, as a Member of the House of Representatives, he helped in the bipartisan efforts to bring about congressional approval of the Marshall plan.

The necessity and the circumstances of the new appointment, I hope, will help correct the notion that a Secretary of State, under our Constitution, can ever assume the role of the President in the making of foreign policy.

The President, himself, cannot properly delegate that responsibility, no matter how brilliant or distinguished a Secretary of State may be.

During my administration there were four Secretaries of State, but at no time was there any departure or deviation from the basic policy followed by this country. They were each in his own way highly individualistic, with pronounced gifts, qualities, and temperaments. But they all knew that final decision on high policy matters had to be made in the White House by the President.

The exercise of this responsibility cannot be a matter of discretion on the part of the President, no matter what his opinion or whatever regard or esteem he may have for his Secretary of State, or how much he may rely upon his skill and judgment.

PRESIDENT IS ARCHITECT

There should never be any doubt in the mind of the man in the Kremlin or among our allies that the President, himself, is exercising his full responsibility as the architect of our foreign policy.

There have been several critical moments in recent history where confusion has resulted because critics of this country claimed that our diplomatic spokesman did not speak with the final authority of the President.

I am inclined to believe that clamor for meetings at the summit has been in part due to the impression that negotiations with anyone other than the President are useless and inconclusive. Now that we have a conditional commitment for another meeting at the summit I hope that the coming meeting for the Foreign Ministers in Geneva, with the new Secretary of State participating, will make it clear that he is the direct instrument of the President and that useful decisions and understandings can be reached in dealing through him. And if there is to be a summit meeting, preparations by the Foreign Ministers are vital to any hope for progress and achievement there.

If all critical issues were to be deferred for discussion and final settlement at a meeting of the heads of state, we would find ourselves in a hopeless jam and in an impossible position.

GENEVA MEETING CRITICAL

In my opinion, in view of all that has transpired in the past weeks, the meeting at Geneva takes on special importance and should be more than a maneuver or just a technical procedure leading to a meeting of the heads of state. If the meeting at Geneva first faces up to the immediate critical issues and is conducted in good faith, it will have an important bearing on whether there can be any basis for success at the summit and on the prospects for peace. I hope that what happens at Geneva will enable us to continue talks with the Russians in our efforts to save the peace.

If the forthcoming visit of the Vice President to Moscow can help in some way, and if it provides the Kremlin with an opportunity to clear some of the air, then I am all for it. The Vice President not only will carry with him the prestige of his office, but will go as a special instrument of the President.

Should Premier Khrushchev indicate that he himself, would like to visit Washington, it might be well to encourage him. I think Khrushchev needs first-hand exposure to the United States and a good look at it to balance off his overassessment of what his missiles and industrial might can do to frighten us.

INVITED STALIN HERE

I tried to persuade Stalin to visit the United States on several occasions, but I was led to understand that he could not risk the trip because of the situation at home.

But after my own trip to Potsdam and the previous trips of Roosevelt to meet Stalin, I felt that there was no longer any sense for an American President to meet the Russian dictators at their convenience and thought it was high time they came to meet with us here.

We traveled great distances to show that even as a leading power we did not insist upon anyone coming to see us on our own grounds. Dictators have a way of summoning spokesmen of other nations to bully or beguile them into surrender or false security.

Moscow, as the capital of the Communist world, has staged meetings of satellites, neighbors, and so-called neutrals intended to propagandize the notion that all roads lead to Moscow.

From time to time some members of the Kremlin have traveled to Peiping to placate the Red Chinese dictators in recognition of that country's rapidly developing power and its position as a possible rival. But the seat of the Communist and satellite world continues to be physically in Moscow and in the Kremlin.

FOLLY OF INDIAN NEUTRALISM

I often wondered why Nehru, whom I regard as one of the most intelligent of our

modern world leaders, failed to sense the folly of his neutralism in the face of such overwhelming evidence of Communist intentions to dominate the free world.

I could understand the plight of India geographically and economically, and, when President, I did everything I could to extend assistance to India. But when the free world was confronted with brutal attacks by the Communists in several critical areas, I found little understanding and no support and even open criticism from Nehru in our actions to defend ourselves against aggression.

Though sorely tried, we never lost patience with India even when our pleas for cooperation were steadily rejected. This situation was exploited by the Russians with serious damage to the free world.

Today Nehru is confronted right on his own doorstep, with the most blatant act of Communist imperialism, Red China's attack in Tibet. I know the dilemma and the dangers that face Nehru, but I suggest that the time has come for him to add his weight and influence against the international Communist aggressors.

The Communists have shown that they have utter contempt for the weak and the neutrals, and no lasting peace is possible if we forget this.

International communism is forever probing for weak spots. It is constantly seeking to drive a wedge between the free nations. It is now trying to split the allies on several issues, and we must not permit this to happen.

I regret that recently in Britain voices were raised in petulant criticism of American policy which might better have been conveyed through official channels and which served no purpose except to provide the Kremlin with propaganda material.

As allies, we must keep each other fully informed and never give the false impression that we are drifting apart. If we should, in fact, permit anything, however provoking, to separate any of the allies, it would expose us all to great harm.

And here at home I would counsel that we act as united people in the serious days ahead of us.

Address by Lee Todd, National Vice President, Future Farmers of America

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. EVERETT. Mr. Speaker, Lee Todd, national vice president of the Future Farmers of America, of Bells, Tenn., which is in my congressional district, made an outstanding address before the Tennessee Association of Future Farmers of America in Memphis, Tenn., on April 25.

Lee Todd is the 20-year-old son of Mr. and Mrs. Robert Lee Todd. He operates a 100-acre farm in partnership with his father, and owns 32 Aberdeen Angus cattle outright.

Lee was secretary for the Tennessee association during 1955 and 1956, and was second place winner in the 1955 national FFA public speaking contest. He was valedictorian of his Bells High School class, most outstanding student, editor of the high school annual, and vice president of the senior class. Other honors included Beta Club president, Boys State delegate, and participation in several FFA judging teams.

Todd is a general agriculture student at the Martin branch of the University of Tennessee. Because of the extensive travel done by national FFA officers, Lee will drop out of college at the end of the current semester. His college honors have included the presidency of both the sophomore and junior class, and membership in the All-Students Club.

Todd's farming operations have already earned for him a labor income in excess of $10,000. In addition to his Angus herd, he farmed 18.6 acres of cotton with his dad this year. Other enterprises included 7 acres of oats, 7 acres of soybeans, and 39 hogs.

Under unanimous consent, I include his address along with my remarks in the Appendix of the RECORD. The address follows:

Mr. Chairman, distinguished guests, FFA officials, and fellow future farmers, it is indeed a delightful pleasure to have this opportunity of attending the 31st annual meeting of the Tennessee Association Future Farmers of America and to participate in our program again this year. It has been my privilege to attend each of our State conventions since I was a sophomore in high school, and I assure you that the FFA will continue to receive my interest and support even after I am no longer eligible to hold membership as an active member.

It gives me great pleasure to bring you greetings from the national organization of the Future Farmers of America with its more than 383,000 members in some 10,000 local chapters in all of our United States and Puerto Rico. I have been kept rather busy since being elected your national vice president. I have already attended meetings in Oklahoma and Texas, and before many more weeks have passed I will have been also in Texas again and in Arkansas, Mississippi, Florida, North Carolina, South Carolina, Alabama, and perhaps some of the other Southern States. On these visits into the States, I really have the opportunity of seeing FFA members in action as we visit and speak at local, district, and State meetings, livestock shows, high school assemblies, rodeos, sweetheart contests, banquets, and just about every kind of meeting where you will find farm youth.

When I was a somewhat younger boy than I am now, I remember that on a very special occasion, I was allowed to buy the toy of my choosing. I picked out an intriguing toy. Someone suggested that the toy looked somewhat complicated for a boy of my age. The clerk assured us that it was an educational toy which was designed to adjust a child to live in the world of today. The clerk explained that any way the boy puts it together, it is certain to be wrong. I have thought of that statement many times during the years, and I am convinced that the great future farmer organization is affording the farm youth of America one of the best possible opportunities of education and training, and it will enable future farmers to learn how to put things together in such a way that as we work cooperatively our world will not be all wrong.

I have just recently returned from a 7-week national good will tour for the Future Farmers of America, and I appreciate this opportunity to tell you that this tour carried the five other national officers and myself to some 20 cities located in 10 northeastern States. We toured more than 50 plants and visited with topflight executives and industrialists. These outstandingly successful men recognize the qualities of leadership which are the outgrowth of the future farmer organization, the fact that these men, who are some of the greatest business executives in America today, were willing to greet us personally, entertain us in their homes, and contribute thousands of dollars to the future farmer foundations award program is sufficient evidence that they have a firm belief in the vital role that FFA is playing in the agricultural economy of our Nation. They realize that the foundations award program provides incentives for boys studying vocational agriculture to exert their best efforts toward reaching the aim of our FFA and that is the development of agricultural leadership, citizenship, and cooperation.

I would like for you to think with me briefly concerning these three important qualities. Let us consider how we may further improve them and how we can try to be better able to carry out this primary aim of FFA.

In the foundation upon which the FFA organization is built, the cornerstone was carefully selected. A simple inscription of a single word appears on its polished face. That word is leadership.

What is leadership? Why is it important? Who may expect to become leaders? How can leadership be developed? These are important questions with which we are all concerned. There are probably as many definitions of leadership as there are people. Everyone has his own ideas, but running through them all we find certain common elements. I believe that leadership is that combination of qualities in an individual which inspires confidence, draws others toward him and causes them to follow him. He has the earmarks of a guide, a coordinator, a chief, and a commander. Someone has said that leaders are people who can accomplish that which others have not the heart to attempt. A truly good leader is a director of constructive activity. He is a good leader because he has the welfare of his followers in his dealings. He spends his energies in trying to see that right prevails. Intelligent, thinking people follow good leaders.

Never in the history of our country was the need for good leadership greater than it is today. It is especially true in agriculture. However, as we look around us we see on every hand baffling problems not only in farming, but in Government, education, finance, industry, commerce, foreign relations, and other fields. Even our plain everyday living is complicated. Today's problems must be solved in some manner. FFA has a definite responsibility in this tremendously important undertaking.

Every person is not capable of becoming an outstanding leader, but there are many who possess certain leadership qualities. Our problem then is to find our talent, develop it, and put it to work. We must develop and use the leadership abilities we may have along the lines to which we are best suited. By doing so, we will lead fuller, richer, and more productive lives.

Good leaders realize that they must learn how to make friends, keep friends, and avoid making enemies. They must be able to interest, inspire, and convince. They must be able to work and win against opposition, and they must have a word of praise for those who do their work well. Good leaders know how to follow as well as lead, and they must be aware that it is only through others that they succeed. No organization can exist long without a continuous supply of good capable leadership. If the FFA organization is to continue to hold its "place in the sun," we members must make definite provision for developing that supply of adequate leadership from within our own ranks.

We must recognize that each office in the organization involves specific duties and responsibilities. Officers to fill these places should have some traits and abilities which help to fit them for the job. The FFA is an agency for the development of rural and agricultural leadership. Is it accomplishing

this purpose? I wonder if each one of us is developing and using our leadership abilities to the best advantage? Is your chapter exerting an influence for good in your community? Are your officers carefully selected? Are your members gradually taking their places in adult civic and farm organizations? In order to develop these essential leadership qualities, we would do well to carefully consider these lines from Edgar A. Guest and to apply them to ourselves:

"You are the fellow who has to decide
Whether you'll do it or toss it aside
You are the fellow who makes up your mind
Whether you'll lead or linger behind.
Whether you'll try for a goal that is far
Or be content to stay where you are.
Take it or leave it, here's something to do
Just think it over—it's all up to you."

Next to leadership on the FFA Foundation is the important stone bearing in bold letters the inscription "cooperation." Because of their close relationship, they were so placed. Their position adds strength to the entire FFA organizational structure. Most of us are aware that cooperation means to act jointly with others—working together for a common good and that it also involves the principle of the greatest good to the greatest number.

Individualism is a traditional characteristic of the American people and especially the American farmer. It is a heritage which must be preserved. But in the dawning of that new day when all farmers are well trained for their vocation, it appears that they will surely have to learn to practice that individualism within a framework of cooperation. Farmers who plan to get the most out of a farm business must be sound financial managers, wise buyers of things they need, efficient in growing crops and raising livestock, and capable salesmen in marketing satisfactorily the products of their toil. Farmers work hard, giving close attention to skill and production details, but if along with it they do a poor job of buying and selling, much of their labor will be lost. This may be either because they pay too much for what they have to buy or because they secure too little for what they must sell or it may be both.

It is encouraging to note the increasing number of FFA chapters cooperating in operation in all parts of the United States. Through these subsidiaries, developed as a part of a definite program of work, we members are receiving invaluable, firsthand experience and training. They also contribute to a better home and community life.

The third primary aim of FFA is citizenship. To become a good citizen should be the sincere desire of every American youth. Citizenship does not fall upon us as a magic cloak. It is more than merely attaining an age designated by law in order to enjoy specified rights and privileges. In reality, good citizenship is the result of growth and development in body, mind, and spirit extending from the earliest days of home training on to the end of life.

Within comparatively few years, farm families have been brought closer together than ever before. We are aware of the many inventions and improvements that have made this possible. We are certain that the automobile, good roads, the telephone, electricity, the radio, and television have played important roles in this change. Being brought closer together, farm communities are in a position to acomplish more as a unit. With more emphasis on citizenship and the development of a better community spirit, many splendid things can be accomplished in the future.

By carrying out our program of work, FFA members are contributing materially to the upbuilding of their respective communities all over the country. FFA experience is practical training in citizenship of the highest order. It is more than mere study about the subject in school because there is actual participation all along the line in doing something about some of the community problems.

Many of the changes brought about in localities where FFA chapters operate are far beyond what might be expected of just any group of farm boys. The long lists of activities include items contributing to the educational, recreational, social, and religious life as well as to the safety and economic betterment in the community of which the school and chapter are a part. Through FFA experience, useful farmer citizens are being developed.

You can readily see why these qualities are so important and why the development of agricultural leadership, cooperation, and citizenship is the primary aim of the FFA. As future farmers of today, we must endeavor to develop these qualities so that, as the farmers of tomorrow, we shall be better able to live and deal with other men and so that the American farmer will be better able to take his rightful place in the economy of our Nation. It is my sincere belief that membership and purposeful participation in the FFA often means the first step toward becoming a farm specialist.

As we peer into the dim and nebulous future of a space age, we have good reason to set worthy goals and aim high to reach them. Just as the hunter does when he aims at a distant target. We must not let our aim fall short or fail to shoot far enough ahead. We must look up and ahead and aim high at distant targets.

Amendment to Postal Regulations

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. PUCINSKI. Mr. Speaker, I have today introduced an amendment to the Postal Regulations which will affect thousands of clerks and distributors in the U.S. Post Office. This amendment would reduce the minimum passing grade for scheme examinations of postal field service employees to 90 percent. The Post Office Department last year issued a directive on case examinations for post office clerks advancing the requirements from 95 percent correct to a new requirement of 97 percent.

This decision by the Post Office Department has created an unbearable situation among the thousands of hard working and loyal postal employees who are trying to do a good job for our Government, for the people they serve, and for the Post Office Department itself.

It is inconceivable to me that these new requirements of 97 percent efficiency, so to speak, would be required of any human being. Many of the clerks who have to score this very high percentage have told me in private conversations that this new directive is virtually cruel and inhuman.

The Chicago Post Office Clerks Union No. 1 has recently adopted a resolution protesting these new standards because they allow virtually no room for error and because they follow on the heels of previous directives which have already tightened scheme examinations. There is no question in my mind that we in Congress are greatly concerned with maintaining peak efficiency among all of those who would serve the public. I believe that the Post Office Department is trying to do a sincere job in its effort to serve the public, but I believe just as strongly that this particular new requirement tries to exact from human beings efficiency which no industry would require, even from its most carefully designed machines.

This new directive, with its very stringent requirements, creates a climate of such unbearable fear that I think the efficiency and morale of our underpaid postal workers is seriously impaired, and I suggest that, well meaning as this directive may be, it is defeating the very purpose for which it was created.

I hope that the Congress will act very swiftly in approving my proposal so that we can again restore the dedicated workers of our postal system to a more sound and logical position. This, I am certain, can be accomplished by requiring a minimum passing grade for scheme examinations of postal employees to 90 percent.

I have always been very much impressed with the great pride which the overwhelming majority of postal employees demonstrate toward their work. There are few, if any, postal employees who fail to recognize the profound responsibility which their respective assignments call for. I cannot help but feel that if this new rigid standard calling for virtually 100 percent efficiency is permitted to remain in the postal regulations, thousands of dedicated employees, many of them with long years of loyal service to the Government, would have to be discharged for failing to meet these exacting standards, seldom, if ever, required in private industry. It is my understanding that many field service employees are already faced with dismissal because they have failed to score a 97 percent performance on their scheme examinations.

Resolution Adopted at Annual Observance of Polish Constitution Day, Buffalo, N.Y., May 3, 1959

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution which was unanimously adopted at the annual observance commemorating the adoption of the Polish Constitution of the 3d of May, held at the Polish Union Hall, 761 Fillmore Avenue, in the city of Buffalo, N.Y., on May 3, 1959:

Whereas the year 1959 marks the 168th anniversary of the adoption of the Polish Constitution of May 3, 1791, which documented for all time the respect of the Polish

people for the dignity of the individual and their lofty aspirations for freedom; and

Whereas today the ideals and the objectives of the Polish people the world over are to restore freedom to their brethren in Poland and to free them from the subjugation and influences of the forces of communism; and

Whereas at the current and forthcoming conferences on the Berlin problem, attempts are being made to bring about a revision of Poland's western boundaries on the Oder and Niese Rivers, under the ostensible design of strengthening Germany as a buffer state between the zone of Russian influence and the West; and

Whereas these lands recently acquired by Poland have traditionally been in the past Polish lands except for periods of German expansion in its "drang nach osten"; and

Whereas we feel that a lack of a positive and affirmative position of our American State Department in support of retention of Poland's western boundary at the Oder and Niese Rivers places the people of Poland in the untenable position of reliance upon the Soviets as the sole guarantor of its western boundary, thus stifling the spirit and determination of those people in the direction of further independence from the influence of communism; and

Whereas Poland is in grave need of economic aid to return its economy to a sound financial position and to reduce its reliance on Communist Russia; and

Whereas John Foster Dulles, as Secretary of State, has guided the destiny of our Nation and sponsored the cause of peace in the world, and is now forced by reasons of health to terminate his great endeavors for humanity and all nations: Now, therefore, be it

Resolved, That as Americans dedicated to the cause of freedom in all nations, we feel dutybound in the name of justice, equity, and international morality to take a firm stand in the defense and maintenance of the territorial integrity and lawful rights of our ally, the Republic of Poland; and be it further

Resolved, That we support the efforts of the Polish-American Congress in its appeal to President Dwight D. Eisenhower and our State Department for a pronouncement of a favorable position of American diplomacy regarding maintenance of Poland's western boundary on the Oder and Niese Rivers; that a firm position of our State Department in this respect will indicate leadership of the United States of America in the forum of world opinion and will tend to curb the present unrest and uncertainty in Central Europe; and be it further

Resolved, That we commend John Foster Dulles, our former Secretary of State, for his untiring efforts toward a just peace in the world and for his condemnation of the double standard of Communist Russia in the United Nations, which position of said nation strikes at the very foundation of man's promising effort to abolish resort to force and replace it by the processes of justice and law; and be it further

Resolved, That we appeal to our President, Dwight D. Eisenhower, and our Representatives in Congress to take a favorable stand on proposed loans to be extended to Poland in order to bring a firmer economy in that nation and to encourage the people of Poland in the direction of greater independence from the influence and reliance upon Soviet Russia; and be it further

Resolved, That we commend our President, Dwight D. Eisenhower, on the firm and courageous stand that the United States of America has taken in the current Berlin crisis; and we petition and appeal to him to continue all necessary military preparedness on land, on the sea and in the air to keep our land strong and able to properly defend our homes and our loved ones against any totalitarian aggression from without; and be it further

Resolved, That we, as loyal citizens of the United States of America, hereby pledge our loyalty and allegiance to our great and beloved country; and be it finally

Resolved, That copies of this resolution be sent to the President, Dwight D. Eisenhower; the Secretary of State, Christian A. Herter; the former Secretary of State, John Foster Dulles; our New York State Senators, Hon. Jacob Javits and Hon. Kenneth Keating; our Representatives in Congress, Hon. Thaddeus Dulski, Hon. John Pillion, and Hon. William E. Miller.

Law and the New Horizons

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD a speech delivered by the Honorable Sidney A. Fine, justice of the New York State Supreme Court, and my predecessor as U.S. Representative for New York's 22d Congressional District. Judge Fine's excellent address, which was delivered at a luncheon of the Service Clubs of the Bronx on Law Day, May 1, 1959, is as follows:

LAW AND THE NEW HORIZONS

On January 6, 1959, President Eisenhower issued a proclamation designating today, Friday, May 1, as Law Day, U.S.A.

The largest national association of lawyers in America, the American Bar Association, inaugurated the idea and has actively sponsored and promoted it. Their intent in establishing this observance is:

First, to strengthen the Nation's dedication to the rule of law as the foundation of our free society; and second, to freshen every American citizen's awareness of the rights and privileges he enjoys by reason of our system of laws and courts.

Our Founding Fathers rightly said, "We hold these truths to be self-evident; that all men are created equal." In that word "equal," the Founders of our country implied the meaning embodied in the motto which adorns our Supreme Court, "Equal justice under law."

We see then that our equality is founded in and through the law as a legal concept. What is this thing called law? What does it do for us?

So long as man exists as both an individual and a member of a social complex, there will be divergencies between his individual and his social needs and responsibilities. These differences stem from variations in personality, in abilities, in possessions. Left to ourselves, these differences could cause endless clashes, resulting in chaos. These differences could make the future even more unpredictable than it is.

The law steps in at this point, not to pretend the differences do not exist, but to cushion the inevitable collisions which they evoke. It both protects us in the development of our own individuality and assures stability in the social order—protecting children by conferring the legal status of marriage on their parents; protecting our households by making unlawful certain rapacious types of acquisition; protecting our right to advance in life by giving legal existence to educational institutions; protecting the gains our labor has brought us by defining property rights; protecting our participation in the political life of our Nation by defining and safeguarding our right to vote, and finally assuring us that even after death those who follow after us will share in the patrimony of worldly goods, national culture, and political traditions we leave behind us.

These ends are only accomplished by means of fixed legal institutions. These legal institutions in our country are threefold. They are the bar, the courts, and the laws.

The courts are forums in which, through procedures going back now nearly a thousand years to the commencement of the English common law, justice is made manifest. Their high duty to the body politic demands the reverence which we pay them. In the United States of America, due to our Federal structure, there the two complete sets of courts: State and Federal. Each operates in the same geographical territory, but the jurisdiction of the Federal court is restricted by the terms of the U.S. Constitution. At the apex of this system, the ultimate arbiter of our constitutional rights, as you know, is the Supreme Court of the United States.

A review of its decisions shows that in each instance the Supreme Court, even in the face of unpopularity in some quarters, has protected either the substantive or the procedural right of some person. Not to accord him these protections, not to grant him every safeguard of individual liberty written into the law after so many difficult but glorious centuries of endeavor and attainment, would be to tear down the very fabric of the law which protects us all.

What is this fabric of the law which we revere? In America it is the great traditions of the English common law, setting up marriage rights, property rights, rights to reimbursement for personal injuries, and the safeguards, for both the guilty and the innocent, of the precise definitions and procedures of the criminal law. Many of these protections have been placed in the Constitution of the United States, a document of strength and limitation; strength for the Nation, for it gives organic body to all our cherished beliefs. If it fails, our Nation fails. And it is a limitation on the power of government to interfere with the inalienable rights of man. It is a document of incomparable value in the heritage of liberty. These are the legal truisms of today. What of tomorrow?

Chief Justice Warren has said: "The history of law is as old as human nature. By the same token, its proper scope is the world. In fact there is no tribe on the face of the earth however primitive, and no nation, however tyrannical, that is without some customary or formal code of crime and punishment. The problem of law in the next 25 years, therefore, is not so much to introduce law anywhere as it is to improve, strengthen, and civilize law everywhere. Especially must we broaden the scope of that youngest and most fragile of legal systems, the law of nations."

What problems have we to face in this new age? The closer interconnection of nations, due to increasing swiftness of transportation, has placed a twofold responsibility on our shoulders; first, to accommodate our present law to any new types of liability that may arise; and, secondly, to refine and modernize our law, taking away the medieval trappings, serviceable to an insular and isolated mind, and having reached the bedrock of rights to make them comprehensible to people once far distant from us but now neighbors of but several hours' journey. Other advances of modern life require reconsideration. Atomic energy has its peaceful and its warlike uses. How shall we promote the one and control the other? The vast interstellar spaces around us will soon be peopled in the truest sense of the word. What legal problems of

discovery rights, control, and ownership will arise? How shall we step forward now to meet these challenges?

Our objective in conforming our own law to the new era, and in making more articulate the fragile character of the present law of nations will be, as has been said, to keep the rules of law in harmony with the enlightened sense of the nation. Then we shall have strength; then we shall have the true basis of peace; and as the Psalmist once sang: "Justice and peace will greet each other." The human heart, hungry for peace and justice, has no greater desire.

In Moscow today May Day is being observed. There, people are obliged to parade before dictators who rule them by whim and caprice as distinguished from our Government founded on laws and established principles. The dictators often put on spectacular displays to impress the hearers with their might and power. As a contrast to these, we are assembled here in unspectacular proceedings dedicated to moral principles, to the rights of man embodied in the Magna Carta, the Bill of Rights, the Declaration of Independence, the Constitution. Pomp and splendor can never be an adequate substitute for truth and for freedom in serving the people.

It is fitting that on this occasion we note with pride the accomplishments of our legal representatives who, working in harmony with those of Russia, England, and France, brought to justice the German war criminals. To have a trial satisfactory to Russia, England, France, and the United States was not an easy task. Procedure in each country was different from that of other countries. Differences arose that might have completely thwarted the trial of the criminals involved, but intelligence, patience, understanding, and learning on the part of great lawyers and great jurists of the world powers involved overcame all obstacles and justice ultimately triumphed.

Through negotiations between the United Kingdom, the Soviet Union, France, and the United States, the agreement of London signed on August 8, 1945, adopting a charter for an International Military Tribunal, the legal profession established the groundwork for the Nuremberg trial, which was an accomplishment without precedent or equal. The charter of the International Military Tribunal condemned wars of aggression, mistreatment of civilians, crime against humanity—murder, extermination, enslavement, deportation and other inhumane acts committed against any civilian population before or during war; or persecution on political, racial, or religious grounds in execution of or in connection with any crime within the jurisdiction of the tribunal, whether or not in violation of domestic law of the country where perpetrated. This is now international law accepted by the world powers.

Now, if the lawyers of the four countries involved can work side by side in solving this world problem, then there is great hope that lawyers using the same skill, understanding, and intelligence can persevere and ultimately save the world from a conflict involving the use of destructive nuclear weapons. Fair and logical reasoning and understanding must and shall supersede nuclear weapons.

When the time for decision arrives, I am personally convinced that lawyers and judges should make decisions affecting mankind and not ambitious dictators or power-hungry military men.

The world must survive in law and order or perish in stupidity and greed. Only the future can tell which course will be pursued. In America the choice is clear and unequivocal. May God give the other nations comparable wisdom!

If the pen is still mightier than the sword, then in this dangerous jet age of nuclear weapons which can kill or maim a million people immediately and affect genetically generations yet unborn, it becomes even more important to see that the pen is wielded by capable hands. It is not a pleasant thing to contemplate that future generations will pay for our present inability to avoid armed conflict in settling our differences with other people who share this earth with us.

The Nuremberg trial established the principle that the extermination and enslavement of civilian populations are international crimes and that individuals can be prosecuted and punished for such crimes. Mr. Justice Cardozo once said: "The power of precedent is the power of the beaten path," and the precedent has now been established in this jet age by these courageous, learned, and devoted men of the legal profession. Furthermore, this same case established the precedent that Russia, England, France, and the United States can work together in peace and harmony in applying sound legal principles.

It seems almost inevitable to conclude that the future of the world will be decided either by the bullets of regimented soldiers or the briefs of competent lawyers. Let us be mindful that God gave His children the Ten Commandments before He gave them jet planes and nuclear weapons. Supremacy of the rule of law within nations has created freedom for man. Supremacy of the rule of law among nations can assure the survival of man. Let us hope and pray and work for the arrival of a law day for the entire world—a day when law will replace weapons in the control of the fate of humanity and man will flourish in freedom.

Credit Union Growth

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee will soon commence hearings on legislation to amend the Federal Credit Union Act. My bill on the subject is H.R. 3674.

In connection with this proposed legislation I commend to the attention of our colleagues the following article which appeared in the American Banker of March 19, 1959:

CREDIT UNION GROWTH IN TEXAS 1947–57 EXCEEDED NATIONAL RATE OF EXPANSION

AUSTIN.—The growth of credit unions in Texas 1947–57 has been even more pronounced than their rapid development in the United States, it is pointed out in a recent issue of Texas Business News, published by the Bureau of Business Research of the University of Texas.

Credit union membership in Texas (from 100,000 to 500,000) and loans rose over 1,800 percent (from $9.4 million to $172.6 million). Number of Texas credit unions increased 300 percent to near 1,000.

The 500 percent increase in members, contrasts with a national credit union membership growth of only 300 percent. Texas' 1,800 rise in the credit union's loans compares with a national credit union loan rise of 1,000 percent and the gain of 300 percent in number of credit unions contrasts with a national percentage of increase of only 200 percent.

MORE STATE CHARTERED

While more than 60 percent of all credit unions in Texas have Federal charters, State-chartered credit unions experienced the greatest increase in number during this 10-year period the review observed. Nationally, State-chartered credit unions increased at a slower rate than those with Federal charters. The membership in Texas credit unions increased from approximately 100,000 in 1947 to more than 500,000, again, the greatest increase in Texas membership was experienced by the credit unions with State charters.

The bulk of loans made by Texas credit unions are short-term consumer loans to members, but occasionally loans are made to finance real estate purchases and other credit unions, according to the review. Of the short-term consumer loans made in recent years, consolidation of personal debts has been the most frequent reason given for borrowing on the part of members. Among the more specific reasons for borrowing, automobile purchases stands out as the most important in all but the smallest-size credit unions. Lack of capital among the smaller and newer credit unions is perhaps the principal deterrent to making automobile loans, it observes.

Even though there has been an upward trend in loans to finance purchases of consumer durables in recent years, particularly of automobiles, the review says, the majority of loans made by credit unions are still relatively small in amount, ranging between $200 and $500. Most of these smaller loans are remedial loans rather than luxury loans. In most credit unions, the large loan is the exception rather than the rule.

RATES ON LOANS VERY COMPETITIVE

Discussing rates on loans, the review states:

"The fact that short-term consumer loans customarily carry a higher effective interest rate than long-term real estate loans does not imply that the rates charged by credit unions are excessive. On the contrary, the rates charged on consumer loans by most credit unions are very competitive with other consumer financial institutions, and in many cases are lower.

"The maximum rate of interest that a credit union can charge is 1 percent per month on the unpaid principal balance after each month's payment. That is the equivalent of an actual annual interest rate of 12 percent. In many credit unions, the interest rate is lower.

"For example, the University Federal Credit Union of Austin, charges three-quarters percent per month on the unpaid balance to finance a new car, which is the equivalent of an actual annual rate of 9 percent. This should be compared to a stated annual rate of 6 percent levied on the original balance for the whole credit period as charged by many other financial institutions. This is equivalent to about 12 percent on an actual annual interest rate basis. Most credit unions also provide, without charge to the borrower, credit insurance which pays off the loan balance of a borrower who dies or becomes totally and permanently disabled."

Some credit unions, it is noted, pay higher rates on savings than do saving and loan associations and banks. A few do not.

SHARE SAVINGS RISE

The largest item in the total liabilities of credit unions has usually been savings shares, the review notes. This item in the last few years has hovered around 90 percent of total liabilities in Texas credit unions. The dollar amount of shares increased from $16.2 million in 1947 to $191.3 million in 1957, an increase of nearly 1,200 percent. This compares to the national increase of about 700 percent.

Summarizing its report the review says: "In summary, credit unions over the last decade have generally been able to achieve the purpose for which they have been chartered, that is, to lend money at relatively low rates to their members and at the same

time to pay relatively liberal dividends on the savings shares of members while at the same time accumulating necessary reserves."

U.S GROWTH COMPARED

As background for the discussion of credit union growth in Texas, the "Texas Business Review" article presents data on the national role of the credit union. "The credit union today is one of the most rapidly growing financial institutions in the United States," the review remarks. "In the 10-year period ending December 31, 1957, the total assets of all credit unions increased from $600 million to more than $4 billion, a rise of nearly 700 percent. In the same period, total assets of savings and loan associations increased only 412 percent, while assets of mutual savings banks and commercial banks rose 178 percent and 143 percent, respectively. (See tables).

"In comparing the amount of savings of individuals in selected types of financial institutions in the United States, the proportion of savings in credit unions at the end of 1957 is admittedly quite small (2.7 percent).

"However, if the trend in the proportion of savings held by commercial banks, savings and loan associations, mutual savings banks, and credit unions continues in the next 10 years as it has in the past 10 years, the proportion of savings held by credit unions should approximate 9 percent at the end of 1967.

"It should be noted, however, that many factors affect the growth of financial institutions, and there is no guarantee that the same rate of growth will continue.

The total assets of all credit unions in Texas increased from $18.0 million in 1947 to $215.7 million in 1957, an increase of nearly 1,200 percent. The national increase was only 700 percent. Again the greatest increase in Texas credit union assets was realized by the State-chartered organizations.

"Credit unions are chartered as mutual nonprofit institutions by both Federal and State governments. About half of the approximately 18,000 credit unions in the United States are chartered and supervised by the various States, and the other half obtain Federal charters and are supervised by the Bureau of Federal Credit Unions of the U.S. Department of Health, Education, and Welfare.

"Legislation permitting the Federal chartering of credit unions was first passed by Congress in 1934. The legislature of Massachusetts, in 1909, is credited with enacting the first State law permitting the State chartering of credit unions. The legislature of Texas passed its credit union law in 1913. Currently, the chartering and supervision of State-chartered credit unions in Texas are the responsibility of the Department of Banking of the State of Texas.

Selected data on credit unions in Texas

[Dollar amounts in millions of dollars]

	Number of credit unions	Number of members	Total assets	Shares	Loans outstanding
Federal charter:					
1947	245	73,200	[1] $12.4	$11.4	[1] $6.4
1957	641	355,708	$137.2	$121.8	$106.2
% increase	262	486	1,105	1,070	1,659
State charter:					
1947	[1] 88	26,204	$5.6	$4.8	$3.0
1957	388	186,795	$78.5	$69.5	$66.4
% increase	441	713	1,398	1,440	2,227
All credit unions:					
1947	333	99,404	$18.0	$16.2	$9.4
1957	1,029	542,503	$215.7	$191.3	$172.6
% increase	309	546	1,196	1,180	1,839

We Send Too Much Military Aid to Countries Needing Food

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. WOLF. Mr. Speaker, our military-aid program is coming under close scrutiny by this Congress—and for good reason. First of all, military aid is given to a number of authoritarian governments who use the aid to further entrench themselves in power. American military aid becomes identified in the minds of the people of these countries as a symbol of Yankee imperialism which keeps their country from having a more democratic government.

Our military aid is used to aggravate regional and local tensions, between traditional rivals. This has occurred, for example, in the Middle East and in Asia. In such instances Soviet imperialism is successful without any kind of active aid or internal subversion on their part. They are able to benefit from our blind insistence on following the old ways without looking at the results of these old ways.

Finally, our military aid, when sent to underdeveloped countries, puts an intolerable burden on the economy of the country thus stunting normal economic growth. We must come to grips with the problem of foreign aid soon or, indeed, it may be too late.

Under unanimous consent, I include an article on military aid that appeared in the Cedar Rapids Gazette on April 25, by the distinguished columnist, Marquis Childs:

WE SEND TOO MUCH MILITARY AID

(By Marquis Childs)

WASHINGTON.—In the House of Representatives, which often suffers from a sense of neglect as attention centers on the Senate, Representative CHESTER BOWLES, of Connecticut, is demonstrating that you do not have to surrender your identity in that large and closely disciplined body.

He has made a series of speeches dealing with the principal problems of the day that have been full of constructive criticism and even some ideas on how to approach those problems. His latest—on foreign aid—takes the responsible view that Democrats must support the President's full request for $3.9 billion. But they also have an obligation try to bring about some major changes in that program.

Above all, what BOWLES said about the need to examine the military side of the aid program comes at a moment when there are growing doubts of the wisdom of so much stress on military help. Too often when military hardware—much of it obsolete—is sent to underdeveloped countries it puts an intolerable burden on the economy of the country and entrenches a military caste eager to get more tanks and planes.

The simple answer of the American military to this criticism is that these countries demand squadrons of jets for prestige value. If the United States does not provide them someone else will. That answer begs the question that BOWLES and others put as to the added burden imposed on countries barely staggering along under a load of poverty, disease, and ignorance.

APPLIES TO LATIN AMERICA

This applies with particular force to Latin America where the prestige value of planes and tanks is carried on the back of a peasantry that is often hungry. Dictators and their rivals are inspired to all kinds of intrigue by these same prestige symbols.

The International Bank has figures showing the extent to which military spending absorbs public revenue in countries south of the border where poverty is a constant invitation to revolt and Communist subversion. An ever-larger share of the national budget goes to sustain a military apparatus that gladdens the hearts of the colonels but has little or no real worth in the age of nuclear war.

Nearly 20 percent of Haiti's budget goes to the military, including the islandwide police force. The percentage of Brazil is 29, for Chile 24, for Paraguay 28, Peru 20, Colombia 21, and Honduras 18. In some instances the cost of a constabulary is included.

A recent visitor to Haiti called on President Francois Duvalier to discuss the urgency of Haiti's problems as inflation and hunger stalk the land. The visitor was astonished to have Duvalier say that one of his urgent needs was for more modern fighter planes. This seemed to an outside observer the very last thing that would contribute to economic recovery and political stability.

The problem in Haiti, as in other areas in Latin Amreica, is internal security. For this purpose a half dozen helicopters properly manned would be more effective than any number of squadrons of jet fighter planes. The poverty and illiteracy that are the root cause of insecurity—the breeding ground of communism—cannot be solved with fighter planes.

OPPORTUNITY IN CUBA

Cuba is an example of a country that under Batista distatorship bristled with guns. In his many talks in Washington Fidel Castro gave evidence of wanting to build the economy of his country on a sound basis with a rising living standard. Especially in his 2½-hour conversation with Vice President NIXON,

who talked to him like a friendly Dutch uncle, Castro stressed his plans for land reform and more industry.

There is an opportunity in Cuba if, as NIXON stressed, Castro will recognize the seriousness of current Communist infiltration and if he wil shut down on the revolutionary groups threatening other Caribbean nations. It is an opportunity to help build strength on a broad popular basis.

That same opoprtunity exists, as CHESTER BOWLES pointed out, in every underdeveloped country. To build up an almost useless military apparatus is to risk the waste of the little economic help that does go in.

Readjustment Assistance to Veterans

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. WOLF. Mr. Speaker, today I had the opportunity to appear before Yarborough Subcommittee on Veteran's Assistance in support of Senator YARBOROUGH's bill S. 1138. This bill provides for readjustment assistance to veterans who serve in the Armed Forces between January 31, 1955, to July 1, 1963.

I am so impressed with the need for such legislation, and the worth of this bill, that I am introducing my own bill today.

Under unanimous consent, I am placing into the RECORD my support of S. 1138:

Mr. Chairman, I appreciate this opportunity to appear before this subcommittee today to urge you to act favorably on S. 1138.

I have a special interest in such a bill for, I dare say, if the granddaddy of this bill had not ben signed into law by President Roosevelt back in 1944, I would not have had a chance to go to college. I would not have been able to participate to my fullest abilities as a ciitzen. I would not have become as useful a citizen as I think I have become.

Now, multiply my case by 7,800,000 or over 51 percent of those attended schools of all kinds from the period of 1944 to 1956. The bill turned out 440,000 engineers, 43,000 doctors, 23,000 nurses, 113,000 scientists, 237,000 teachers, 42,000 machinists, and 36,000 ministers. I am sure that over 50 percent of these people would never have gone back to school if it were not for the GI bill.

America would have been a cultural and scientific desert without that bill. America could well have ben a place where bitter young veterans with no opportunity offered to them by the society would have formed and joined violent and totalitarian groups to vent their embittered feelings against our democratic society.

America within 10 years after the Second World War would have become a second-rate power because we would not have had the necessary educated manpower to go forward in every field of scientific, cultural, and business endeavor.

Let me give you a particular individual example of the kind of person this program has helped and, consequently, how the society was helped. Floyd Gould came home after 3 years overseas with no idea of what he wanted to do. He took a menial job in a laundry, then switched to selling soap. He tried, then quit, a typing course on the GI bill.

By 1948, disgusted, he went to the VA for vocational counseling. When the tests showed he had an outstanding IQ and a natural tendency for sciences, he was enrolled in college as a GI physics student.

Now, 8 years later, exlaundryman Floyd Gould has three degrees, including a doctor of philosophy degree. Dr. Gould is now an atomic physicist at the Brook Haven National Laboratory.

Many of you will remember the honest fears of those who were against the GI bill. They feared that our college campuses would be taken over by the Federal Government, that the intellectual level of students would be lowered, that educational standards would be destroyed. Well, none of these things happened. The Federal Government did not take over our universities, the intellectual level of all students was improved, for the returning GI's were serious about their studies. They set a tone of importance and meaning to college education which, in the past, was not present. Their purpose was getting an education, not participating in many activities that detracted from education.

Educators generally agree, as the distinguished educator, Dr. Herold Hunt, has said, that "many veterans came to college with a deeper sense of values than those who came directly from high schools. Their seriousness brought good scholarship and a high level of achievement."

Professors themselves were forced to revise their conception of teaching and their lecture notes because of the inquiring minds of these war veterans. These students knew too much about life to be satisfied by a rehash of old lecture notes of lazy professors. This, too, was one of the important results of the GI bill and it cannot be underestimated; for the return of the GI shook out the intellectual and social cobwebs that gripped our institutions of higher learning for scores of years.

Many times, Mr. Chairman, we concentrate on those activities with which we are unsuccessful. We are pessimistic about the decisions we make and the results of many of our programs for which we vote, but this is one program which America can point to with pride and say that it was an unqualified success.

The GI bill took many of these young men, their minds half-formed, who knew only the hard discipline of the military, who know only ways of killing, and educated these men to the point where they became vitally useful human beings to themselves and society.

But somehow this program was allowed to die. Despite our pious pronouncements on education and the lift the GI bill gave to our society, and despite the fact that millions continued to serve and be drafted into the Armed Forces, the program ended. I have always felt that this was a dreadful mistake and for that reason I am going to support and introduce legislation similar to S. 1138. I would like to outline the following reasons as to why I think we should reinstitute the GI bill as it pertains to education.

Our national security requires more educational training for our citizens and a greater number of young men educated in technical and scientific skills. As Senator NEUBERGER stated in January 1956, "What better way, than to overhaul the Soviet Union in the preparation of scientists, and to assure us of the other skills our civilization must have, than to revive the program which once increased enormously the technical and cultural training of millions of young men and women?" We have been bombarded since the advent of sputnik about the need for skilled and trained personnel. What better group is there to train than that mature group of young people who have served their Nation honorably? Here is a program where qualification and service can be rewarded to the benefit of all concerned. I might also suggest, Mr. Chairman, that in Russia today any person demonstrating ability is given free education no matter how far they want to go. No question is asked in Russia what the financial position of a potential student is. They are only asked what is your ability?

We must return to the notion of equality of sacrifice when we approach the problem of service on the part of individuals for national defense. We draft people into the armed services; we send these men to far off places—from Okinawa to West Berlin to Vietnam. We ask these men to serve for 2 years. We enforce long reserve obligations; we ask from these men great sacrifices.

Yet there are others who have benefited from this cold war crisis without any sacrifice. The great corporations have made billions of dollars in profits because of Government defense expenditures. This week's issue of U.S. News & World Report dramatizes this very well. These corporations have had tax advantage after tax advantage—such as removal of the excise profits tax—without anyone seriously questioning the profit levels of these corporations. We have heaped advantage on one group in our society—the large corporations—a group that already has great advantages, and demanded great sacrifices from a group that because of age, experience, and material status are naturally in an inferior position as to the hearing they get from their Government. I submit that we must help those who are sacrificing most in this crucial period in our history. That group is the young enlistee or draftee who leaves his community, in fact, to defend the United States. Advantage must not accrue only to the powerful, but it must be given as a right to the weak in influence. This program will accomplish this for men formerly denied educational opportunities will have a chance to enjoy education, skill, and higher income.

As you can see, I do not agree with some in the administration who state that military service since January 31, 1955, has no longer been a sacrifice: To say that military service is now free from risks is a very questionable assumption. I am sure that this is not really the assumption of the Defense Department, nor do I think it is the assumption of a Congress that will spend $40 billion for defense this year. With treaty obligations and military personnel throughout the world who may be involved in military crisis at any time and any day, I am sure that no one can say that safety is to be found in the military service. Let me conclude my remarks by listing some of the following achievements which will result from passage of the Yarborough bill:

1. The Nation will be able to repay those who sacrifice the most in a way which will be beneficial to both the indvidual and the society.

2. The defense of our Nation will be strengthened because this bill would provide training for potential scientists, engineers, technicians, and other professional people thus raising the technical and skilled levels in America up to or surpassing the ratio of such personnel now enjoyed only by Russia.

3. Those who benefit under this program will not only aid the society because of their increased educational training, but will materially aid the coffers of the Treasury. For example, the costs of all aspects of the GI bill was $14½ billion, yet this entire amount will be repaid in full through extra income tax that these veterans pay as a result of their educational training. One Veterans' Administration spokesman has stated that because of the extra educational training veterans pay a billion dollars a year more than they ordinarily would have paid. By 1968, the old program will be paid off in full.

and after that the return is pure profit. Hence, we can say that the GI bill is a smart business investment.

4. Enlistments in the military service will increase. Many bright young men in lower economic brackets would enter the military service if they were shown that the Government intended to help them later on in getting an education. We know from past experience that incentives aid enlistment—and this bill will be a truly appealing incentive. Passage of this bill will show our young men that we appreciate and recognize the great service they are doing for us.

5. Finally, besides raising the standard of living and preparing our young people for automation by developing their technical, scientific, and educational skills and reducing the number of unskilled, we are providing for an enlightened and educated citizenry. This is a responsibility of Congress.

6. Before closing my testimony, I would like to at least mention another part of this bill which is of great importance to those of us who are concerned about the problem of the American farm.

As you are well aware, the tendency toward managerial farming and oligopoly in farming grows greater with each succeeding day.

Consequently, young men who are interested in farming do not feel that there is any reason for them to stay on the farm. They feel that capital is not available for them if they want to enter the life of farming on a small but scientific and efficient level. Hence, they retreat to the cities, to a life that they consider second best. On my trip to Iowa at Eastertime many farmers came by my mobile office to ask the question: Who will run our farms, young men from the farms, or great corporations? Mr. Chairman, in Iowa today only 2 percent of our farmers are under 30 years of age, while almost 50 percent are over 50 years of age.

Section 4 of title 38 of the Code will help young people stay in farming. It will assist eligible veterans in purchasing farmlands, livestock, and machinery. This is an important aspect of this program, and I hope it will be strongly supported.

In S. 1138 we are providing for a citizenry trained for freedom, dignity, and democracy. This, I submit, is our best weapon against totalitarianism—an educated and enlightened citizenry able to increase the future with increase of knowledge, understanding, and skill. And, this, I submit, was the result of the GI bill, and will be the result of the Yarborough bill.

I thank the chairman for listening so intently and again say I'm happy to support his bill by introducing my own bill which is substantially his bill.

Railroad Retirement Bill

SPEECH
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5610) to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Oklahoma [Mr. MORRIS].

(Mr. MORRIS of Oklahoma asked and was given permission to revise and extend his remarks.)

Mr. MORRIS of Oklahoma. Mr. Chairman, I first wish to say that I have a very high regard and sincere respect for the great committee handling this bill, including of course its great chairman, the distinguished gentleman from Arkansas [Mr. HARRIS], but I believe that the Staggers substitute which in substance is H.R. 1012, is preferable to the committee bill, H.R. 5610, for the reason that although both bills provide for certain benefits for railroad employees and retirees, yet the committee bill would, as I view it, deprive them of certain other benefits that are protected in the Staggers amendment or substitute.

The arguments that have been made that these benefits that are retained for them in the Staggers bill will put too great a burden on the railroads I believe is not good reasoning to justify passage of the committee bill in preference to the Staggers bill.

I realize fully that the railroads are essential to the welfare of our Nation, and I certainly am willing and anxious to do every proper and reasonable thing I can as a Member of Congress to help pass legislation that will give the railroads a fair and reasonable opportunity to operate efficiently and enjoy just and fair profits, and I am perfectly willing to help pass further sound and reasonable legislation if necessary toward this end. But I do not believe that the railroads should be helped at the expense and burden of the employees and retirees alone as provided in the committee bill, but that such burden if justified should fall on all the public and not just on this comparatively small group. I therefore will vote for the Staggers amendment.

Federal Fair Trade Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD a guest editorial appearing in the Statesville, N.C., Record on March 27, 1959, reprinted from an earlier comment in the Montgomery Advertiser. This editorial, like all others, sets forth many reasons why the Federal fair trade legislation, H.R. 1253, and other similar measures, should be defeated:

A FEDERAL "FAIR TRADE" BILL

When a Federal fair trade law was first proposed by price fixers intent on plugging the gaping holes left by recent court decisions, it was considered unlikely that such a bill would pass. After all, it was aimed at the consumer, wasn't it? And Congressmen would scarcely be willing to go on record in favor of a measure which would immediately raise the prices of many things their constitutents buy.

But now the failure of the proposal seems far less certain. This because consumers aren't organized the way manufacturers and retailers are. The National Association of Retail Druggists, for example, has raised a war chest to finance lobbying for the bill. And with good reason: Many fair traded drugstore items sell for profit margins ranging from 100 to 1,000 percent.

A 1956 survey by the Government revealed that in areas where fair trade prices were enforced, consumers paid prices averaging 28 percent higher than did consumers in areas where free enterprise and supply and demand established the price.

Although the Justice Department has gone on record as being opposed to fair trade laws, along with the Departments of Commerce and Agriculture, the Federal Trade Commission, the American Farm Bureau, and the General Federation of Women's Clubs, the opposition is nowhere near as militant as the powerful fair trade lobby. And lobbies, it has been clearly demonstrated too often, can by pressure and guile overcome the wishes and interests of the public.

Doctors in a Changing World

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address given by me on April 6, 1959, before the Scientific Assembly of the American Academy of General Practice, meeting at San Francisco, Calif.:

DOCTORS IN A CHANGING WORLD

(Address by WALTER H. JUDD, M.D., Member of Congress from Minnesota)

It is a great honor and privilege to appear before this group of distinguished men and women from the main body of the medical profession in this country—the general practitioners. You will understand why it is a unique personal pleasure for me to be meeting again with the profession in which I spent 19 years of my life. I enjoyed the deep and abiding satisfactions that always come from the conviction that one is being useful to persons in need.

Formerly, almost the sole reason for your attending meetings like this was to learn new techniques and procedures that would enable you to practice medicine more skillfully and successfully. You came in order to learn more about diseases and how better to diagnose them and to treat your patients.

But medical meetings have changed—because times have changed. The doctor's job is bigger than it was. The inclusion on your program of a discussion on so broad and nontechnical a subject as "Doctors in a Changing World" is striking evidence of that fact.

I

First of all, the actual practice of medicine has changed at an astonishing rate. Some time ago I read that considerably more than half of the drugs most widely used nowadays had not even been heard of only two decades ago.

The remarkable advancements in anesthesia and the wide use of vastly improved methods of preventing fluid loss and surgical shock have transformed surgery into almost a different science from that of 30, even 20 years ago.

When I look through the list of titles of papers to be read and discussed at an assembly like this, I confess that I don't even know what some of them are about.

The rapid and sweeping changes in the science of taking care of the sick have doubtless been all to the good. No question can be raised as to your professional competence and up to dateness with respect to them. I am not so sure that all doctors are as alert to the other changes that are taking place in our world—changes that can have the greatest influence on how long and how well you may be able to use with satisfaction and success the professional knowledge and skills you have worked so long and hard to acquire in the past, and will work so diligently and interestedly to improve at this scientific assembly.

II

Great changes are taking place in the economics of medical practice. The costs of good medical care continue steadily to rise. More and more lay people are paying attention to that fact and are determined to do something about it, even though they may not have too clear an idea of just what to do or how to do it.

Despite widespread opinion to the contrary, the fees of doctors have not risen as rapidly in the last two decades as have the charges of most other groups providing personal services for people. During the same period when the general level of prices, including the costs of food and clothing, has more than doubled, the fees of general practitioners have risen only 73 percent. The fees of some specialists, such as obstetricians, have risen more; while those of others, such as general surgeons, have risen less.

But other medical costs have risen more steeply than doctors' fees. Hospital costs are up sharply, partly because of the belated increase in wages paid to labor in hospitals generally; partly because of the more extensive use of drugs and of expensive laboratory, X-ray, and other specialized examinations; partly because, under the various insurance plans, there has been a marked increase in use of hospitals for diagnosis as well as for treatment.

Our very success in inventing new cures and perfecting old ones has also increased the number of years during which people need medical care. It is doctors who are responsible for giving people 20 years more to live than was the case half a century ago. If those extra 20 years could just be squeezed in somewhere between the ages of 20 and 60, wouldn't that be wonderful? Unfortunately the additional years have to be added at the end, most of them after retirement. Even if the elderly are able to work where can they get jobs? How are they to make a living? What are they to do to keep their minds and bodies active and healthy? How can they avoid increasing anxiety as they see the value of their savings, their insurance, their pensions, their social security benefits gradually shrinking becaues their own Government has not succeeded in keeping stable the value of the dollars on which they were counting to live in deserved security and serenity during their declining years?

Again, they often have more illnesses, and longer ones, in these additional decades.

All these factors and others add up to steadily increasing total costs of medical care for our people. How are the costs to be met?

There are still many who do it by the old-fashioned methods of self-reliance and thrift. They save systematically for possible illnesses, just as they save for purchases of a home, or a piece of land, or an automobile.

More of our people are doing it by private voluntary health insurance than ever before.

But there is a large, perhaps growing percentage of our population that is not making plans for the future through savings or their own insurance, partly because during the depresison a philosophy was widely promoted that it is an economic crime to save. People should spend as fast as they can everything that they earn, can borrow, or otherwise acquire. The Government will somehow provide needed medical care if and when illnesses come along.

So there is an increasing drive to have the Federal Government, under one scheme or another, take over the financing of medical care. Many people have been skillfully led to believe that Government-financed medical care will give them more and better care for less. Most doctors oppose that because they are certain most people will get less and poorer medical care for more. For one thing, under that system, the doctors are kept so busy taking care of those who need it least, or only think they need it, that the doctors are prevented from giving the best care to those who need it most.

The public has been led to believe also that they can get Government financing without Government control, and ultimately Government operation of medical care. It is naive for anyone to believe that Congress will take the people's money away from them through taxes and then allow it to be spent by anyone else without its maintaining firm control. Congress would be completely irresponsible if it did not so control—and it is not and will not be that irresponsible.

Doctors tend to concentrate on improving the quality of medical care; those who don't understand the essentials of good medical practice take high quality for granted and concentrate their attention on trying to get more equitable distribution. They don't realize that a main result of the supposedly better distribution under Government management is a deterioration of the quality of the medical care until it is hardly worth distributing more equitably.

For when the Government finances and operates medical services, three things that are essential to good care are inevitably compromised.

First, the wholly voluntary relationship between the doctor and the patient. If the relationship is not completely voluntary on the part of the patient, he is not going to have full confidence in the doctor. If it is not completely voluntary on the part of the doctor, his heart is not fully in it. Under Government management the relationship cannot be wholly voluntary. The result will be injury to the patient's interests far more than to the doctor's.

A second requirement is that there be complete privacy with no intermediary between the patient and the physician. When the doctor gets paid by the patient, the doctor works for the patient. When the doctor gets paid in part or whole by the Government, little by little he comes to work for the Government. Again, the average doctor may be better off, but not the patient.

Under Government-financed medicine, the Government becomes an intermediary in another sense. Since public money is involved, a succession of clerks has to go through the records to see if the doctor performed all the tests for which he submitted charges, or did any unnecessary tests to run up the bill. Somebody in a Government bureau has to decide whether the doctor's diagnosis and treatment, and therefore his charges, were proper. In order to do that, Government employees have to read the patient's history, and record. Many patients are not going to be too eager to tell their doctor all the personal and private details that he needs to know in order to treat them properly, if they know some bureaucrats are also going to be reading those details.

What kind of care will the patient get with both his doctor and the Government managing his case?

A third essential for good medical practice is that there be maximum incentives for the doctor to do his best work and constantly to improve himself. One such incentive is financial reward in accordance with his ability and his effort. In every profession there are some individuals who are self-starters. Regardless of financial compensation or any other considerations (except the urge to satisfy their intellectual curiosity or their consciences) they give everything they have. But such persons are probably in the minority in our profession as in others. Most people work harder and do better if they believe such effort will get them ahead financially.

Another major incentive is professional recognition and advancement. The doctor wants the respect and confidence of his patients—and he will work hard to win it. But even more to be coveted is the respect of his colleagues. The most rewarding thing that can come to any physician is to be known as a doctor's doctor. A doctor may be able to fool his patients with a high-powered personality and a smooth bedside manner; but he can't fool his colleagues. Other doctors will bring themselves or their relatives to him only if he is really good.

Both of these powerful incentives—financial reward and professional recognition and advancement—are largely killed under governmental management where promotions are made on the basis of seniority—or, as it is sometimes called in Washington, senility.

What is necessary to get ahead under the bureaucratic system? The first essential is merely to live long enough. The second is to make no enemies. And what is necessary to make no enemies? The main requirement is never to have any new ideas. For if you have a good idea, it makes your superior resentful—why didn't he think of it first? And he holds up your promotion. If it is a bad idea, that also reflects on him as your superior, and he holds up your promotion. So don't do your best to get ahead by hard work and creative effort—just conform. That is fatal in our profession as it is in every other.

All these things that as doctors we know about the essentials of good medical care, make us oppose Government financing and operation of medical services. But it is not enough for us to be right. We must tell and sell our reasons to the public far better than we have. We can't do that by just talking to each other at medical meetings. We don't need to convince each other. We have to reach the public and the politicians, not to put something over on them, but to help them understand the situation so that no one else can put something over on them.

But because we oppose this particular change in the economics of medical practice does not mean we should or can successfully oppose all change. On the contrary, we must pioneer in finding sound ways whereby better medical care can be made available for all needing it, without the disadvantages outlined above.

For while our present system of medical service gives better average medical care than any other, that does not permit us to ignore the fact that under it many of those with incomes below the average do not get adequate medical care. Sometimes it is their own fault. Perhaps they are just lazy and don't try very hard to support themselves. Or they prefer to spend their earnings on liquor or the races. Or they do not plan ahead for illness or accidents. But their needs and those of their families are, nevertheless, a responsibility that a good society must find sound ways to meet.

We medical people tend to focus our attention on the good; our present system is all right, because most people have good care. Those who would turn to Government financing focus on the bad; they would scrap the system, because some don't have good care.

It is like the old philosophical problem of the glass of water that is three-fourths full. The reformer says it is bad, because it is not completely full; he would throw out everything and start with nothing. On the other hand, we are inclined to be a little neglectful of the quarter that is empty, because we are busy with the three-quarters that is full.

But where we ought to be is between those two—neither the radical who would destroy what we have because it isn't perfect; nor the reactionary who says it's good enough, because it's at least better than anybody else has. What we ought to be is progressive-conservatives. There need be no conflict between the two.

Conserve the essentials which enabled us to get good care for the 75 percent, or whatever the percentage is, but don't stop there. Move on; progress. Don't abandon principles proved sound, but find means to apply them in changing ways to changing situations, so as to reduce steadily the part of the glass that is empty. Much headway is already being made in this direction. Witness the widespread extension of voluntary insurance systems endeavoring to achieve on a sound actuarial basis, the advantages of better distribution of medical services without deterioration of quality.

The American Medical Association is exercising constructive leadership in promoting an overall program to improve the situation for the neediest group, the elderly:

(1) More extensive and noncancellable insurance policies by private companies.

(2) Reduction by doctors of their fees to such patients. I compliment the general practitioners because more than any other group in our profession they continue to think of medical practice as a ministry rather than as just a business.

(3) Reduction of medical costs by improving nursing homes and expanding home care programs as alternatives to more expensive hospital care.

(4) Better education in health maintenance by doctors, nurses, and employees, of those approaching or already in retirement.

It is essential also that we distinguish between two kinds of Government aid. One is nonrecurring Federal grants on a matching basis to States or localities for construction of facilities. With such grants goes no continuing control. This is the Hill-Burton pattern and is helpful, not dangerous.

The other is annually recurring grants for operation of facilities, including payment of salaries. This is the kind of Government program that must be resisted, for with such subsidies goes inevitable Federal control and the loss of real independence.

To summarize this point, doctors and dentists, hospitals, and health insurance companies all exist for the benefit of the sick, not the reverse. They must take a more active lead in making better care possible for the minority in our population that does not have it, while retaining the essentials of the system which has done so well for the majority, or else action will be taken by political groups which in the long run will not be good either for the sick or for those who provide medical services.

III

This leads to a third area where we face new situations. Government itself is changing—in response to the pressures of those who want it to adopt a concept quite different from that on which our Nation was established, the Jeffersonian concept that the American system functions best when government manages least.

For what main purpose did our forefathers originally come to this country more than three centuries ago? To establish a government that would look after them? No, they came here to get a chance to provide for themselves. The system worked, but it is under assault today here and everywhere around the world.

Adhering to that philosophy of government, they built a society which released as had never been done before in any time or place, the creative capacities that are in ordinary people everywhere. There took place here the greatest outburst of creative effort, imagination, invention, energy, production, and progress that the world has ever seen. It rushed ahead to the point where today the 6 percent of the people of the world who live in these United States have created almost as much wealth and have distributed it more widely than all the other 94 percent put together.

Why did that happen? Because of some good fortune or chance? No.

Was it because we in America had some superior ability that the other 94 percent do not have? Of course not.

Was it because we had greater resources? No. Theirs in toto were and are greater than ours.

The basic reason was an economic system based primarily on the right of the individual, and on opportunity and incentive for him to get ahead.

What the world needs most from us is not our wealth, which is a result, but the secret of our wealth. Wealth comes from only one thing—production of goods and services. Therefore, what the rest of the world needs most from us is the secret of our production. How can they get their own countries on a more productive basis? Their best hope is to understand and to apply the political and economic philosophy which brought our forefathers here. Many in America need to restudy it also.

In essence, the political struggle going on today both in our own country and throughout the world, is a struggle between two philosophies of government—between those who believe in government from the top down and those who believe in government from the bottom up.

Is it better to have more power in the hands of the few? Or of the many?

One group believes that the more complex a society becomes, the more its control and management must be concentrated in an increasingly powerful central government. The other begins with the same premise and comes to the opposite conclusion: namely, the more complex a society becomes and the more difficult its problems, the more impossible it is for anyone at the seat of central government, no matter how sincere and able he or his associates may be, even to grasp all the details of the country's varied problems, let alone manage them successfully as a unit.

When confronted with a new or tough problem, one group goes to the government first; the other goes to the government last—only if and when their own efforts and all local remedies have been exhausted.

One believes a government should provide equal rewards to its citizens; the other believes the main function of a good government is to provide equal opportunities—not because it does not want the fullest possible rewards for all its citizens, but just because it does want such rewards, and believes this is the way to get them.

Which kind of government is best? The kind that does most for its citizens directly? Or the kind that makes it possible for most citizens to do most for themselves—and then assists with those who for whatever reason cannot provide the basic necessities for themselves?

One group believes that speed in solving a problem is in direct proportion to the amount of money the government provides. The other believes that the greater shortage is not money, but trained and dedicated personnel. As a Harvard medical student recently commented on this very point, "It is still not possible to get a baby in 1 month by getting nine women pregnant."

Some sincere persons, because of their preoccupation with those who are inadequate or unfortunate—and there will always be such—become so concerned about helping the unfortunate that they think this is the primary, almost the sole, function of a good society. Others, equally sincere, believe that the primary concern of a good government is not handouts for the relatively few, but solvency for the many. For only as a society provides opportunity for the many to become solvent will there long be anything with which to help the unfortunate.

Some of us believe that to work for ever-increasing Government regimentation of the lives and affairs of our people is a thoroughly reactionary policy. It is moving backward, not forward. Yet, on every hand these days those who call themselves liberals are generally the ones who are asking for the greatest amount of Government management and control.

Some of us believe that the first function of a good government is to protect the liberty of the individual citizen—not to take it away. We believe this, not because we don't care about society as a whole, but because we do care about it—and believe this is the best way to serve it.

Woodrow Wilson was a genuine political philosopher and a great student of government. In a speech in New York in 1912 he said that the history of man's struggle for liberty is the history of his struggle to hold down the powers of government. Yet many are now insisting that the way to increase liberty is on every occasion to expand the power of government, including the taking over of medical care, which would give it a direct relationship with and corresponding influence over every man, woman, and child in the land.

Doubtless Hitler was convinced he was working only for the well-being of the German people. What wonderful things he did for them. He made the trains run on time. He modernized the factories. The restrooms were clean and sanitary. The streets were clean. There were no beggars. There was no unemployment. The Germans had higher living standards than almost anyone else in Europe. He gave the people free medical care. He gave them summer vacations at public expense. He gave the women maternity benefits. Weren't those good? No, not when to get them meant loss of their freedom—and then of the benefits also.

A good government will provide a floor below which no citizen is allowed to fall in hunger, disease, ignorance, squalor. But it will not try to build a bed on which citizens can just rest without further needs to struggle.

Security is not the chief end of government; it is an essential and a useful crutch for the misfortunes of life. But if one uses a crutch unnecessarily or too long, one forgets how to walk.

I think it can be stated as a law that whenever a government does for its citizens that which they have the capacity to do for themselves, it begins to destroy both their capacity and their incentive to do for themselves. It weakens rather than strengthens the foundations of freedom and the means of genuine progress. What we need to do with our system is not to scrap it, but to believe in it and use it.

How can doctors best influence their Government's actions? On matters affecting medical services, by all odds the most potent weapon is not resolutions and floods of letters or telegrams; it is personal explanation of the issue to the Representative or Senator by his own general practitioner. You already command his confidence, or you would not be his doctor. He knows that you are not a selfish person with some ulterior motive to promote. He also knows that you know what you are talking about in this field, and he trusts you.

On the matters that affect the public as a whole, you can have greatest influence by working along with other patriotic citizens

in politics—and politics means elections. Associate yourself with the party that you think is nearest right on the most important issues, work in and through it to select and then to elect good men and women to public office at every level of government.

Don't imagine you can do much to change the views or votes of persons who were elected by those in opposition to your position. Your job is to elect to office those who already hold the same general position as you, and will work for it.

The self-styled independent cuts himself out of the most effective action he might exert. The political parties which he disdains choose the candidates whom he then has a chance to be independent of, or between—which is not much independence.

As both citizens and doctors we can develop sound ways, private and governmental to handle the mounting costs of modern medical services, if we will work.

There is one more area in which the patterns of thought and life that doctors have known are changing—the most fundamental area of all. Our basic assumptions as to the nature of man are being challenged. We must consider this change because it involves the future of every person in our land. And before we are doctors or nurses, we are citizens of this Republic.

Some years ago I heard the eminent Lebanese philosopher, Dr. Charles Malik, now President of the United Nations General Assembly, say that when the Conference on Human Rights convened in Paris after World War II, the delegates spent several months trying, in vain, to agree on what man is. For how could they declare what the rights are to which a human being is entitled until they decided what a human being is?

Our society was founded by men who wrote, "We hold these truths to be self-evident, that all men are created * * *." They believed that there is a Creator; that man is His child and therefore a part of the Creator. That is, man has in him qualities and capabilities different from those possessed by any animal; he has something of the Divine in him. He has the capacity to make moral judgments and independent decisions based on those judgments.

The philosophy and faith of the Communists deny all this. They deny that there is a Creator, that there are such things as moral laws, such things as right and wrong, good and evil; or that man is, by nature, a moral being. They insist that he is merely the smartest of the animals, the animal with the largest brain—period.

They believe, therefore, that just as their eminent physiologist, Pavlov, demonstrated that young dogs can, by consistent control of their environmental stimuli, be conditioned to make predictable, unvarying, automatic responses, so with young human beings. They believe that you and I think that we have consciences and the capacity to make moral judgments and independent decisions, only because we have been taught that we have such qualities.

Therefore, it is their mission to liberate us from our errors. To do that they must first conquer the whole world, so that they can then abolish the institution of private property. It is private property, they believe, that gives man the notion that he is a distinct individual with inalienable rights as a person. They must remove the human infant from his parents—as is being done in Red China now—before the parents can communicate to him the false ideas regarding man's nature which in their childhood they received from their parents. The state will then, by controlling the child's environment and what goes into his mind, condition the child to seek nothing for himself, to be cooperative, and to desire only to serve the masses. Because no one will then need or want anything from anyone else, policemen will not be needed. The state will wither away and the perfect society be established everywhere.

Some in the free world will fiercely object that they can't change human nature. They reply that they are not trying to change human nature; they are merely using it. After centuries of false doctrines regarding man's nature, they have discovered what it really is. To them it is like Newton's "discovery" of the law of gravity. He did not invent the law; he merely perceived and announced what it had been all along.

You and I believe that man is more than a physical and a physiological organism. We believe he has in him as an inherent part of his nature something intangible called spirit or soul. We believe this intangible is as real as the tangible and that it has very great influence on the state of his health, and on the success of our efforts to cure his diseases and relieve his suffering. Is the practice of medicine to be reduced to mechanical adjustments of physical organs, as a garage mechanic adjusts the carburetors of automobiles? Bad as we believe medical services operated by our type of government would be, what would it be like under the Communist philosophy?

We believe that to be good medical practitioners, we must treat every single one of our patients, not as just a physical mechanism with heart, lungs, and liver needing to be put back in order periodically, but as a distinct person, a whole person—body, mind, and spirit. And the unique, the most precious, the most vital thing about the human being is the human spirit.

This world conflict is not an old-fashioned struggle for control of land; it is for control of man—the mind of man, the soul of man, the whole of man. It is total conflict. No one of us has a right to ignore it. No one of us dares fail to play his full role in this conflict—as a doctor, as a citizen, as a human being.

Never did doctors face more changes—in our medical practice, in the economics by which it is to be supported, in the Government by which we seek to order well our corporate life in this Nation, and in the basic philosophy of life itself. Never did we face such a fundamental challenge to the ultimate values of life. Never did we have to think so deeply and work so hard as we shall have to in the years just ahead if we are to live in dignity and usefulness—or even to live at all.

Our generation cannot escape the call to great dedication and heroic effort, if we are to secure the blessings of liberty for ourselves and our posterity. All other blessings depend on that.

International Banker 1959 Model

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the American Banker of April 22, 1959:

INTERNATIONAL BANKER 1959 MODEL

We used to hear a good deal about international bankers back in the 1920's and 1930's. Radio and other speakers regaled us with how these mysterious international figures, always identified as bankers, went about getting rich by fulminating wars for the purpose of selling munitions. They even were supposed to have started World War I, and to have fostered the Communist revolution in Russia.

The argument ran that if these supposed profiteers of warmaking did not exist, there would be no wars. And since they never could be identified, and personally brought to the bar of public opinion, it was impossible to prove that they did not exist.

Today we have a new kind of international banker. Peace is his work. Unlike the "warmongering international bankers" of demagogic fiction of a generation ago, they go about the world forging plowshares, as it were, not swords.

Over the weekend, these international bankers, 1959 model, were in the news again.

In far away Asia, India, and Pakistan have been at virtual bayonet points over the division of the waters of the Indus River. Its headwaters are in India, but it flows through Pakistan. Both countries need all the water they can get for irrigation purposes. In another age and time, a controversy such as this could have led to bloody warfare. The already tense situation between Pakistan and India needed only more heat to burst into a renewal of the slaughter which attended their first years of separation into two nations.

Fortunately for the peace of the Far East—and possibly of the entire world—there was hope, sometimes dim, that the practical problem of diversion of the Indus waters could be solved peacefully—a hope patiently nourished by the new style international banker, and now apparently brought to a successful consummation.

Our international banker, 1959 model, is no man of mystery working deviously. He does his work openly, though quietly. Sometimes his failures make news, as when a petulant dictator refuses to bow to the realities which must be faced in financing an Aswan Dam. Sometimes his successes are told in a few lines, which fail to underscore the fact that he has won another victory for peace.

India and Pakistan have worked out a 1-year agreement for amicable division of the Indus River flow. Hope, cautiously expressed, is that this 1-year agreement is foundation for permanent settlement of the controversy.

Mentioned in the news is that the good offices of the International Bank for Reconstruction and Development aided in arriving at the agreement. For a decade its engineers, its financial experts and its exponents of internation good will of the bank have been quietly at work with their counterparts in India and Pakistan.

Time, and the facts of life of World War II, virtually have erased from memory the fiction of the bad international bankers which was part of the folk lore of a generation ago. In their place are men of peace, not war, the international bankers of our postwar world.

End of the Game

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in the Wall Street Journal of May 5. If we cannot learn from our own experience, maybe we can learn from the experience of our sister republic, France.

One thing that the article debunks is the notion, and that is all it is, that a 5 percent expansion of the economy in a year will take care of all the problems

of inflation. France had better than a 5 percent expansion and it took care of nothing of the kind. France learned her lesson, and under the leadership of President de Gaulle is taking the necessary measures to put her house in order.

Let us hope that we, too, will put our financial house in order before it is necessary to adopt drastic and painful measures. As is well said in the article:

The point is not a balanced budget for its own sake, whatever that may mean; the point is to make a small (too small as yet) attempt at reform before we, too, face financial collapse.

The entire article follows:

END OF THE GAME

Despite America's own experience in the past 20 years, many people apparently find it difficult to regard inflation as a serious threat; either that, or they think it useless to discuss inflation because they fear nothing is going to stop it anyway.

So sometimes it is a good idea to look at the experience of others—both as to what unchecked inflation actually does and what can be done to check it—for clues to our own situation. The recent experience of France was ably summed up in a New York speech the other night by Jacques Rueff, a judge in the Court of Justice of the European Economic Community and author of the report on which the current French financial reform is based.

Without going back into the history of French inflation since World War I, Mr. Rueff remarked that from 1953 into last year the country had been enjoying an unprecedented wave of expansion which had increased domestic production at a rate of more than 5 percent a year. "But this economic prosperity was accompanied by a rapid inflation which, between January 1956 and June 1958, had been reflected in a price rise of 25 percent."

Inflation not only wrecked the fiscal structure, distorted the economy, and drained foreign exchange reserves; it had grave social and political consequences, as it customarily does. For example, Mr. Rueff noted that by the feeling of frustration it "arouses in the largest section of the population—and the one that should be best protected—inflation, far more than Marxism, gives rise to a desire for social upheaval and revolution. Almost everywhere, the number of Communists is in proportion to the pace of the inflation."

In any event, on June 1, 1958, when DeGaulle took over in France, the game was up. However popular the expansion had been, no government, whatever its aspirations or its political complexion, could any longer escape the necessity of changing the policies which had made the expansion possible. A thoroughgoing reform of the public finances was indispensable.

In his report on financial reform Mr. Rueff told the French Government: "The idea that France, alone in the world, should be characterized by a kind of congenital inability to earn her daily bread by her own labors is simply absurd. It is sufficient to state the problem to realize that the crisis in the balance of payments arises neither from the nature of things, nor from the behavior of the people, but from a particular feature of the conduct of French finances; namely, inflation. * * * To restore the equilibrium in the French balance of payments, only one effective measure exists: to suppress the inflation."

The details of the reform are complex, its essence simple; the urgent need was drastically to reduce the borrowing required to cover the deficit. This was done, along with numerous supporting moves; in Mr. Rueff's words, the reform differed from preceding attempts "by its breadth and by its systematic and coherent character." Since it is a program of austerity for government, it is arousing political opposition, but so far its economic results are encouraging. It shows that inflation can be suppressed.

There are a number of interesting points here for comparison with the U.S. note, for instance, the 5 percent a year by which the French economy had been expanding. That is the same percentage by which liberals in Congress and elsewhere insist the U.S. economy must expand. And they want it to be done by Government stimulus.

That means inflation, for that is the only way government, as distinct from private initiative, can reach such a rate. But even if the rate is temporarily achieved by inflation, the Government—in the United States no less than France—before long faces financial collapse.

It is also instructive that the French, facing ruin, had no real doubt about what had to be done. When responsible people saw the Nation had been pushed to the end, they indulged in no shilly-shallying or outright deceit, as in the case of the American liberals who try to find the causes of inflation anywhere but in inflationary Government deficits. Instead the French did something about the deficits that were the true cause.

This is the point the Eisenhower administration is trying to make in its appeal for a balanced budget next fiscal year—a proposition attacked at times with an almost insane bitterness. The point is not a balanced budget for its own sake, whatever that may mean; the point is to make a small (too small as yet) attempt at reform before we, too, face financial collapse.

Now we are not trying to say that inflation in the United States has as yet gone as far as it had in France by last June. Indeed we are saying there is no earthly reason why it should. The only reason it may undo the United States is that there are so many inflationists at work. If such lawmakers lack the commonsense to figure things out for themselves, they ought at least be able to learn something from others.

And before the American people permit any more of this dangerous playing with the Nation's financial structure, they had better take a hard look at the end of the game.

The Water Problem

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article issued by the Agricultural Experiment Station, University of Massachusetts, at Amherst, which contains some very interesting information on the subject of water supply:

THE WATER PROBLEM

"Congress is finally showing signs of doing something about dwindling water resources.

"At least, the first step has been taken in the proposal of western Senators for a special committee to study the problem.

"The Nation now consumes about 240 billion gallons of water a day. By 1975, it will be using about 350 billion a day.

"But there are no water-resources development projects under construction, or even planned, to meet future needs.

"With the western bloc showing the way, Congress is now leaning to the belief that a broad new program by Federal, State, and private agencies is needed." (Newsweek, Feb. 23, 1959.)

THE WEST WORRIES ABOUT WATER, BUT THE NORTHEAST NEEDS IT EVEN MORE

That the West has good reason to worry about its water supply is understandable, but the Northeast—the great industrial complex of the Nation which contains half of our total population—has even more reason to be concerned, and more urgent reason to act.

The Northeast, with its huge centers of water-consuming heavy industry, its crowded metropolitan areas, and its intensely cultivated medium-sized farms producing for local consumption, must have more and more water each year—and this in the face of falling water tables and diminishing watersheds.

With a population density of 284 per square mile—6½ times the national average—the Northeast's water problem is even further aggravated by unscientific lumbering operations which weaken the moisture-holding ability of the soil.

MASSACHUSETTS WATER RESOURCES COMMISSION REPORT

The Massachusetts Water Resources Commission conducted a drought study during 1958 which pointed up the vital need for further intensive research into this increasingly serious problem. "During the course of its study, the commission held regional meetings * * * and nearly 300 municipal and water supply officials were invited to take part. * * *

"The results of the * * * study * * * bear sober and reflective reading. They should be examined carefully not only by water supply officials, but by individuals and groups seriously concerned about water in their own communities.

"Improved standards of living have resulted in a steadily increasing per capita water consumption. In the metropolitan district, for example, average daily water consumption has risen 63 percent since 1930.

"Coupled with this rapid increase in total demand has been a noticeable shift in population from urban to suburban areas.

"Of the 99 instances of municipal water shortage experienced during the period 1953–57, all but 6 reflected the inability of the communities to meet consumer demand either at the source or in the distribution system."

NEED FOR A RESEARCH CENTER

"Soil and Water Conservation Research Facility Needs in the Northeast," a report prepared by a committee authorized by the Northeastern Agricultural Experiment Station directors, has emphasized the need for establishing a Northeast Regional Research Center. Only this kind of research facility can effectively meet the serious problems arising from a rapid increase in water consumption and soil cultivation at a time when water supplies and soil erosion are becoming critical.

This report stresses that, for maximum economy and efficiency, this research center should be located on a land-grant college campus, where State, Federal, local authorities, and representatives of industry could avail themselves of the specialized facilities and research talent.

JUSTIFICATION AND COST

Research at the selected location should be expanded upon the establishment of needed facilities. This expanded laboratory would then become headquarters for investigating erosion, the watershed hydrology, runoff, and the soil management problems that need urgent attention not only in New England but throughout the related problem areas of the Northeast.

The cost of this facility would not be excessive—in the neighborhood of $2 million—and in light of the immediate need for an

interstate organization which would help the Northeast maintain its industrial and agricultural strength, and considering that this vital area pays about 40 percent of all Federal taxes (as compared with the less than 10 percent paid by western States) the cost would represent only a fair return for the strength that the remainder of the United States now draws, and will continue to draw from the Northeast.

THE UNIVERSITY OF MASSACHUSETTS

In attempting to determine the proper location for a Northeast Regional Research Center, two elements must be taken into account: geographic location and potential facilities. On both these counts, the University of Massachusetts is well qualified as a site for establishment of such a research center.

The university, the fastest-growing institution of higher education in the Northeast, possesses the trained personnel in related scientific disciplines which would serve to support the staff of a soil and water research facility in a broad attack upon the problems. Its location at Amherst, on the alluvial plain of the Connecticut Valley, and its accessibility to the major geological/geographic variations, offer excellent advantages for the establishment of a soil and water research laboratory. This location also encompasses the numerous watersheds to the west and north, as well as the diverse forms of agriculture characteristic of the Northeast region. Another valuable asset is the university's proximity to the vast industrial concentration of the Northeast, where water supply problems center around manufacturing, dense population, and expanding suburbanization.

SUMMARY

1. The problem of diminishing water supplies is far more critical in the Northeast than anywhere else in the Nation.

2. The solution to the problem is urgent because this relatively small region not only supports half our Nation's population, but is also the backbone of an economy from which almost half our taxes are derived.

3. Expanded soil and water research facilities to attack the problem are of overriding importance.

4. The University of Massachusetts is extremely well equipped to form the nucleus of a greatly expanded soil and water research center. It has the basic requirements plus qualified supporting personnel. Its geographic location is eminently suited for assisting other Northeastern States with their soil and water problems because it has so many of them at its own fingertips.

Amendment of the Renegotiation Act of 1951

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. MULTER. Mr. Speaker, on April 27, 1959, I introduced H.R. 6670 to amend the Renegotiation Act of 1951. On April 30, 1959, I presented the following statement to the House Ways and Means Committee in support of my bill:

STATEMENT OF HON. ABRAHAM J. MULTER, OF NEW YORK, BEFORE THE HOUSE WAYS AND MEANS COMMITTEE IN RE H.R. 6670, APRIL 30, 1959

Mr. Chairman, I am grateful for the opportunity you have granted me to submit to your committee my views on amendments to the Renegotiation Act of 1951. As an aid to small business, I have introduced H.R. 6670, to amend the Renegotiation Act of 1951.

As a member of the House Small Business Committee and chairman of its subcommittee on small business and Government procurement, I have had close contact with the problems and difficulties that small business has encountered under the Renegotiation Act. It is, therefore, the purpose of my bill to attempt to remedy some of these difficulties.

In the 84th Congress, the Renegotiation Act of 1951 was amended to increase the minimum amount subject to renegotiation from $500,000 to $1,000,000. With the rise in the cost of labor and material, it should definitely be increased again. It should be obvious that with the increased cost of production the beneficial effect of the $1 million exemption granted by the amendments in the 84th Congress has been nullified.

An evaluation of the most recent statistics published by the Department of Defense on procurement clearly indicates that the percentage in dollar value of procurement business going to small business is on the decline—in fact, from a figure of approximately 25 percent in 1954, it has now dwindled to approximately 16 percent. Consequently, it becomes apparent that the remaining "place in the procurement sun" for small business under the present Department of Defense policies is in the subcontracting program.

I am not asking for, and have never requested, any special subsidies for small business. All that I have asked for small business is an equal opportunity to compete for Government procurement. There is no doubt that the technical skills of small business are a necessary element in our national defense.

It is my opinion that the present operation of the Renegotiation Act of 1951 as amended is a deterrent to responsible and capable small business concerns active in defense work. In amending the Renegotiation Act of 1951, my bill proposes to provide definite assistance to small business. One of its major factors is to encourage subcontracting in Government procurement to provide incentives for small business concerns and to encourage prime contractors and upper-tier subcontractors to subcontract the maximum proportion of their contracts and subcontracts with small business concerns. In so doing and in adopting the amendments I offer, Congress again would reaffirm its long-standing policy of assuring small business concerns a fair share of contract awards for goods and services which are needed by the various Government procurement agencies.

My bill proposes that a fair profit allowance should be given as a reward to contractors who achieve economies through their small business contracting program.

It is my opinion that one of the reasons why small business concerns engaged in defense work find it increasingly difficult to continue profitable operations is because of handicaps which are embodied in our procurement system. Among some of the handicaps encountered by small business are free plants and equipment available to large prime contractors. These are encountered in military cancellations or stretchout programs where the large prime contractors have a habit of not only canceling out every possible subcontract but where they engage directly in competition with their former subcontractors. Apparently this is done by the prime contractors on the theory that for every dollar's worth of work done in their own plant they are afforded an opportunity for more favorable profits in the renegotiation allowances. This practice has occurred in many instances in the past and is not restricted to periods of stretchouts or cancellations but to periods when the large prime contractors are lacking in defense work. This shortsighted policy of the large prime contractors aided by the opportunities under the Renegotiation Act are responsible for hundreds of small manufacturing concerns either curtailing operations or going out of business entirely. The skills, ability, and initiative are completely lost when small business concerns are driven out of defense work. This elimination of small business from the defense potential narrows the buying base and the Government becomes dependent upon fewer and fewer firms. In view of the absolute necessity for the maintenance of small business in our defense effort and the narrowing down of subcontracting, it becomes ever more important that the impediments of the Renegotiation Act must be eliminated or so modified as to encourage subcontracting. The failure to do this will cause more and more independent business firms to disappear from the defense production picture.

It is the intent of my amendments to the Renegotiation Act of 1951 to remedy this evil. My amendments to the act attempt to do the following:

Section 1 declares the policy of Congress to be: (1) to encourage subcontracting in Government procurement in order to provide incentives for small and independent business concerns, (2) to encourage prime contractors and subcontractors to subcontract the maximum proportion of their contracts and subcontracts to provide the proper profit motives for small and independent business concerns, and (3) to expand the Government procurement base by providing incentives and encouragement to small and independent business concerns.

This section reaffirms the long-standing policy of Congress which assures small business a maximum proportion of the contracts for goods and services awarded by the procurement agencies of the Government

Section 2 of my bill is designed to encourage large prime contractors to attain the maximum in subcontracting to smaller concerns. By its language the section includes the Department of Defense and all other procurement agencies. The amendment in section 2 also provides that a fair profit allowance should be given as a reward to a contractor who achieves economies through a small business subcontracting program.

Section 3 increases the minimum dollar amount subject to renegotiation from $1 million to $2 million. In this connection, I would like to indicate to the committee that an examination of the records of the renegotiation board would reveal that the bulk of the dollars recaptured by the board come from the top 100 defense contracting firms and that only meager sums are recovered from the smaller defense contractors.

Section 3 also provides for exclusion of subcontracts from renegotiation of those contracts awarded to the lowest acceptable bidder as a result of competitive bidding in which three or more responsible and competitive bidders have taken part, provided that the subcontractor is not owned, controlled, affiliated with, or a subsidiary of the prime contractor.

Section 4 is designed to help the small manufacturer who caters to defense needs. There are many concerns which make standard items peculiar to industry but do not have the facilities or opportunity to create a demand in another industry or from the consuming public.

I firmly believe that the adoption of my amendments to the Renegotiation Act of 1951 as amended would widen the defense purchasing base and aid small business.

Thank you for granting me this opportunity to be heard.

The Significance of Israel

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. ROOSEVELT. Mr. Speaker, in March of this year, Mr. Al S. Waxman, editor-publisher of six newspapers in the Los Angeles area, directed his editorial comment to certain points regarding "The Significance of Israel."

The editorial, which appeared in the Los Angeles Reporter, the Beverly Hills Reporter, the Pico Reporter, the Park LaBrea Reporter, the Wilshire Reporter, and the California Jewish Press, has been brought to my attention by a goodly number of my constituents urging that this timely editorial be given wide readership.

Under leave to extend my remarks, I insert the text of this editorial from the March 20 issue of the California Jewish Press:

THE EDITOR'S OPINIONS
(By Al S. Waxman)
THE SIGNIFICANCE OF ISRAEL

Outside of the United States of America there is probably only one other nation which has nerve centers in every corner of the globe and in every nation of the world. This contemporary of the United States of America is the State of Israel.

Only in its 10th year, the State of Israel has made an international name for itself by having fought its way to freedom, worked its way to success, used diplomacy to gain position, succeeded to gain stature.

There are Jews in every corner of the world, in every nation, in all walks of life. Through the centuries the Jew has been caricatured as a shrewd, cunning person who doesn't work with his hands to achieve his successes. We have seen that the State of Israel belies this.

Jews, almost wholly and totally, have taken barren deserts and created green valleys which produce the finest of fruits, vegetables and foods. On their greenery they have raised food-supplying cattle. In the midst of arid deserts they have produced water and have built industry. Their coastal lands have become important harbors for importing and exporting.

Most of this was done with a tool or implement in one hand and a self-protecting gun or weapon in the other. Without trying to do so they have shown the world that Jews can—and do—toil in the sun with their hands. Israel is a living example that the Jew can succeed as a farmer, laborer, menial worker, artisan.

Jews throughout the world have kept their eyes on the State of Israel because it has meant much to them. To some it was a nationalistic feeling and to others it was a religious achievement. But to all Jews, whatever their national origin or citizenship, Israel means something important. For one thing, it knocks down every lie upon which Adolph Hitler built his strength and following. If the State of Israel had been in existence when Hitler began his maniacal ravings there might have been only a few willing to accept his lies. Even at that time Tel Aviv was being described as the "most modern city" in the world.

True, today there is a divided opinion among the Jews on the subject of Israel. There are the religionists who accept Israel as their Promised Land, even though they still prefer to remain living in the United States and other free countries; and there are the assimilationists who look upon the State of Israel as a very friendly nation which deserves their support—but as American citizens. Whichever group the Jewish people selects, they still recognize that the State of Israel has made a tremendous contribution to the welfare of Jews wherever they are.

Jewish people behind the Iron Curtain who have not been able to get out of there because there were no havens of refuge, now bless the soil of Israel. Thousands upon thousands of them have grasped the current opportunity to leave Soviet rule and enjoy freedom in the State of Israel.

We who enjoy freedom are contributing in every way possible for these refugees from communism to start life anew in a free country on free soil.

Not only the Jews have been affected by the birth of the State of Israel. Western powers have a feeling of comfort that there is a democracy in the Middle East which will preserve their bulwark against communism. Even some of the Arab nations surrounding Israel are happy that this tiny nation is standing in the way of Soviet threats. Yes, Israel means many things to many people.

H.R. 5778: A Bill To Require the Labeling of Decorative and Imitation Hardwood Products

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BRAY. Mr. Speaker, I would like to direct the attention of the House to my bill H.R. 5778, which would require the labeling of decorative and imitation hardwood products. This is similar to a bill which I introduced last July, which was not acted on prior to adjournment of the 85th Congress.

This bill is for the protection of the consumer. At the present time imitation, machine-stamped veneers resembling genuine grain finishes are being applied on solid lumber, hardboard, metal, and plastics, and sold as the genuine article. The public is rarely aware of this deception—in many cases even the retailer does not know the actual composition of a wood product.

The legislation I seek would protect the legitimate hardwood and veneer manufacturers because those producing quality merchandise have been hurt by this unfair competition of second-rate, ersatz products. They do not fear the competition of the substitutes and synthetics as such, for the quality and beauty of their merchandise makes it clearly preferable. But the average person is not always aware of the imitation until it is to late and there are no labels to aid his powers of discrimination. They do not care what materials are used to manufacture furniture or television cabinets if it is properly identified and advertised.

That is not the case today when preposterious imitations and false advertising are victimizing the public and have imposed an unnecessary hardship on the industry. It could be the case in the future if we adopt H.R. 5778, which would make it unlawful to introduce or manufacture for introduction into commerce, or to invoice, sell or offer for sale any decorative hardwood products which are misbranded or falsely or deceptively advertised. It provides that all hardwood and/or imitation hardwood products must be labeled. These labels, as well as advertisements and invoices, must name the wood species actually used, and, in the case of artificial printed grains, must reveal the name of the material, such as fiberboard or plastic, actually used, and the fact that the grain is an imitation.

Authority for the establishment of proper codes, rules, and regulations and their enforcement would be vested in the Federal Trade Commission. Of course the only ones who would have anything to fear under this law would be those who are attempting to delude and deceive the public and undercut the legitimate hardwood and veneer industry.

Some of the finest veneers are made in the Seventh District of Indiana and elsewhere in the Hoosier State. It is an important industry, the leaders of which are striving earnestly to do a good job. They ask no protection from fair competition of clearly identified and correctly advertised substitute products. The protection they seek is as much in the public interest as in their own. I hope the Committee on Interstate and Foreign Commerce will favorably report this bill in the near future.

Showman Slams NAACP

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Jackson (Miss.) State Times, dated May 1, 1959:

SHOWMAN SLAMS NAACP
(By George Whittington)

The first interest being served at Poplarville is that of communism, a Negro comedian whose name became a byword 30 years ago declared here Thursday.

Stepin Fetchit, who parlayed a shuffling gait and a lazy whine into a million dollars and a name synonymous with laziness, made that declaration, adding that in any such situation, "Communist participation, Communist interest, and Communist interference might be found."

Fetchit stopped in Jackson today on his way to the gulf coast, on a booking tour for "Little Richard," noted bop-singing Negro evangelist. He went to the office of the State Sovereignty Commission, where he met the press, voluntarily lumping a barrage at both the Poplarville mob and the National Association for the Advancement of Colored People.

Fetchit—real name Lincoln Theodore Monroe Andrew Perry in honor of four U.S. Presidents—made his observations in com-

menting on the mob kidnaping of Negro M. C. Parker in Poplarville.

He said he sees Communist influence within the NAACP, even if the Communists don't dominate the organization—and he issued a warning to all Negroes against those who would pretend to serve their purposes through force.

"You can't destroy the rights of one person or one race without endangering the rights of all," Perry asserted. "You can't give power to one big group without having the ever-present danger of that group to use its rights against you," he said.

He added that he is flatly opposed to the program of the NAACP in the South, "although I once gave benefits in its behalf."

He said that since the time he worked in behalf of the then-fledgling organization, he is convinced its aims have changed. "I knew Walter White personally," he said, "and I don't think the NAACP today is what he wanted it to be."

As for the possible use of the NAACP by the Communists in furthering its own program, Fetchit declared, "The Communists use the organization—anybody. I've seen the influence even in the pulpit.

"And if they're using the NAACP, you can only say that the people in that organization are human."

But, he went on, he doesn't think the current program of the organization—whether Communist-inspired or not—is the right program for the South. "You can't force integration," he said. "If it came as a natural order, that would be right."

Fetchit denied sharply that his characterization of the Negro ever belittled his fellow man.

"I think I was admired by everybody, Negro and white, for what I was," he said. "I was a human being with a talent, and respected as such. I don't think I ever belittled the Negro race.

"On the other hand, as the first Negro to become famous in movies, I think I helped to lift the Negro a little higher than he was."

Fetchit said he hasn't appeared in a movie since 1950, when he made "Bend of the River" with James Stewart. And he only made that, he said, because Hollywood had begun to pick up untalented actors and casting them as Stepin Fetchit types.

He said he resented the casting of such types as much as did the NAACP in denouncing the type as such.

And just to prove that the old Stepin Fetchit isn't dead—in spite of his soon-to-be 66 years—Fetchit donned his rubber baldy cap, to make him appear bald, put on a floppy, moth-eaten felt hat, and went into a comedy routine.

It doubled his small audience with laughter.

"Laughter," he observed as it ended, "still is one of the best tonics in the world. And a humorist is the greatest ambassador any race or nation can claim."

TVA Through the Eyes of an Engineer

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. SANTANGELO. Mr. Speaker, the subject of electric power has been debated through the years. The Tennessee Valley Authority legislation will cause a great deal of comment. The benefits of electrification are manifest throughout the Tennessee Valley and through the adjoining areas.

The Wilson Dam is an engineering feat of which America can be proud. However, America must not be smugly complacent in its accomplishments. There is much room for improvement, especially in the field of engineering, and in today's struggle for survival, engineers must play an important role and engineers must do better.

A penetrating analysis of the problems which beset us today and a fresh approach was made by Brig. Gen. Herbert D. Vogel, U.S. Army, retired, who is presently Chairman of the Board of Directors of the Tennessee Valley Authority. General Vogel has held this position since September 1, 1954. He attended the University of Michigan in 1918 and 1920 and the U.S. Military Academy of West Point in 1920 and 1924. He has received advanced degrees in master of science, in civil engineering, from the University of California; doctor of engineering from Berlin Technical University and civil engineering from the University of Michigan.

His military service has been with the Corps of Engineers, U.S. Army, with the rank of second lieutenant in 1924 to brigadier general in 1954; while in the Army he served in the Southwest Pacific from 1944 to 1945 as chief of staff, Intermediate Section of Oro Bay, New Guinea; and was commanding officer of base M, Phillipines. He was Lieutenant Governor of the Panama Canal from 1950 to 1952. He has worked on several boards which include Beach Erosion, Mississippi River Commission, Board of Engineers for Rivers and Harbors, and chairman, Arkansas-White-Red Basins Interagency Committee.

I believe that in view of the timeliness of the legislation dealing with the Tennessee Valley Authority that the remarks of the Chairman of the Board of Directors will prove illuminating, interesting, and helpful. The remarks made by Brigadier General Vogel at an all engineers dinner at the American power conference in Chicago, Ill., on April 1, 1959, follow:

When I selected the topic of my remarks this evening—"Engineers Must Do Better"—I had no idea that it would be my honor to follow at the dais so eminent a person, and so eminent an engineer, as Philip Sporn. I refer to you, Mr. Sporn, in a double context because in all my contacts with the electric industry since I have been with TVA I have found nothing but universal admiration for you, both as a person and as an engineer.

And before this audience I know it is quite unnecessary to describe in detail the pioneering you have done over the last two decades to increase efficiency and lower costs in large electric power systems. The advanced accomplishments of the American Electric Power Co., especially in the utilization of high temperatures and high pressures and in extra high voltage transmission, puts you and your company in the forefront of the industry not only in the United States but in the world. Any company that can place five of its plants among the six most efficient in the country, as your company did in 1957, is indeed worthy of all the honors that have been conferred upon you and your associates. In fact, when I say, as I am about to say, that "engineers must do better," I have in mind standards such as you have set.

I

We must look to our engineering standards, clearly and carefully, because the world in which we live and work is a puzzling complex of currents and countercurrents. The burdens which will be carried by trained engineers in the years to come will be far greater than anything we have experienced in the past. To prepare for that burden I might begin by examining our own moment of time in the perspective of history, in the atmosphere of our culture and heritage, and with the urgency of our common peril.

In these last hours of the second Christian millenium, the forces of freedom have only just arisen and with a titanic effort defeated the threat of world domination from the wracked and twisted evil of Nazi Germany. Some of the more gaping wounds of this war have been closed, the festers bandaged, the scars covered. But already a new threat has taken shape. History has scarcely been able to blink its eyes in the moments which have seen the destruction of the isolated oligarchy of Russia and the swift rise of its regimented peasantry to industrial and military power.

Since the end of the Second World War we have felt the fury of the winds of conflict as they have blown from this new quarter, swept through Eastern Europe, isolated Berlin and all but destroyed Korea and parts of southeast Asia. Through it all, the free world and the Communist world have held each other psychologically at bay, each fearful of atomic destruction from the other—a situation which Winston Churchill has poetically described as the melancholy paradox.

Yet in the midst of this relative stillness, the swirling clouds seem to have passed on. The sun shines. The winds are calm. It is as though we are centered in the eye of a hurricane. Economically we are prosperous. Our huge military expenditures prime the business pump. Profits are satisfactory and stock prices rise to record levels. Wages climb step by step, and industry is expanding. Automobiles are packed with power and designed to a fare-ye-well with knick-knacks and gadgets. We spend billions of dollars to gouge away mountains and fill in the valleys to make way for high-speed traffic. Church membership grows and their temples of beauty multiply. Life is good and Christian righteousness seems to fall like a mantle upon our people.

We only delude ourselves, however, if we believe that because we possess the most enlightened democracy known to man, it must inevitably prevail. We only fool ourselves if we argue with foggy logic that because our system of free private enterprise has summoned the industrial might to overcome every past threat to our national existence, it must inevitably do the same again. We cannot camouflage our own weaknesses with the notion that right makes might and that righteousness cannot suffer defeat. We may not, as in Judah of old, cry "peace, peace" when there is no peace.

Now, in this period of stalemate, in this ominous calm in the eye of the hurricane, we as a nation must think and act. Dreadful though the military impasse may be, it nonetheless gives us a period of preparation for the winds to come. Now is the time to attend to the essentials of our national existence. Now is the time for hard work and selfless sacrifice. Now is the time when we as engineers must take the measure of what is demanded of us in this moment of history, and respond with our utmost.

As a military engineer, one of the men I honor most is that remarkable officer whom President Monroe named in 1817 to become superintendent and father of the U.S. Military Academy at West Point—Col. Sylvanus Thayer. Founded in 1802 as a school for engineers and artillerists, West Point became

in effect the first engineering school of our Nation. But its first years were marked by disorganized effort, lack of funds, and inexperience. Following the War of 1812, which so dramatically demonstrated the country's dire need of trained military leadership, Thayer was sent to France to study the military schools which had been so effective and useful to Napoleon Bonaparte. The system of training and education which he instigated at West Point upon his return has been continued in principle for nearly a century and a half.

Sylvanus Thayer built West Point on the foundation of three cardinal tenets, and I should like to borrow these as the foundation of my message this evening. The first principle is probity. The second is education. The third is discipline.

On this base, Thayer erected the courses of training which turned out men capable of planning for the long pull or improvising in an emergency. His graduates became the professors who pioneered in formal engineering education in a score of colleges and universities in the mid-19th century. His proteges planned and executed many of the canals which laced the country in that day. They pushed the national road through the mountains from Baltimore to Vandalia, Ill. They improved the safe harboring of our oceans commerce, and laid out railroads as they crossed the plains, fighting Indians in the process. They pioneered in making scientific instruments such as the zenith telescope and in creating industries such as the famous Cold Spring foundry, opposite West Point, which produced our first locomotive and some of the most advanced ordnance of that day. For these reasons, and because of his personal imprint on other institutions of technical learning, Sylvanus Thayer has been dubbed the father of American technology, as well as the father of the Military Academy.

Probity—synonym for truth. Probity—whose content is fact, not conjecture; reality, not fantasy. Probity demands that we pursue the truth and act accordingly. It demands conviction and steadfast purpose.

When the security of the Nation is concerned, the pursuit of truth and fact becomes not only a matter of importance but a matter of urgency. In the context of these meetings of the American Power Conference, one of the most critical fields for inquiry is the field of natural resources. A check down the list of topics scheduled for discussion here shows that the distinctive purpose of this conference is to discover improved methods of converting raw energy resources into electric power. Steam turbines, fuels, water technology, nuclear power plants, computers and network analyzers, and a score of other subjects are listed in the program. Important as they are, these topics are but parts of a whole picture and it is crucial that today's engineer grasp that whole picture. Engineers have the knowledge and the skills to use our energy resources for the maximum military and economic benefit, but if they are to do so, they must combine vision with their technical talents.

Let me illustrate, using the Tennessee Valley Authority, because I know TVA best. At the Widows Creek steam plant in northeastern Alabama we are in the process of installing a new generating unit with a capacity of 500,000 kilowatts. It will stand beside generators with only one-fourth the capacity, all installed in the present decade. Its performance, however, is what interests me most. Compared with its companion generators at the same plant, this new 500-megawatt unit will turn out in a year an equivalent amount of electricity with 150,000 fewer tons of coal, resulting in a saving of about three-quarters of a million dollars. This technological advance is a tribute to the design and research work of both TVA and General Electric Corp., which is building the generator. It is conservation affecting both resources and money.

But the Widows Creek 500 unit is only a link in a whole chain of engineering achievements. Foremost, perhaps, is the development over many years by many men of the multipurpose dam, the tool which enabled man to harness the full capacities of entire river systems. TVA's 9 structures on the main stream of the Tennessee River and 22 other dams on the tributaries keep the abundant waters of the region under sustained control, providing assured supplies of cooling water for steamplants and industries, a waterway to lower the cost of transportation and flood regulation providing safety for riverbank sites. The dams themselves produce large amounts of electric power, using the same water in as many as 14 sets of turbines as it flows to its confluence with the Ohio near Paducah. Thus, the attention engineers paid to resource development more than a quarter century ago is contributing to economical electric power production today in a strategic defense region.

Between northern and southern Rhodesia, at the Kariba Gorge of the Zambezi River in south central Africa, Italian engineers have been building one of the world's great dams in one of the most primitive areas on our globe. The natives had no dread of leaving their lands to make way for the reservoir. They were laughingly confident that the white man could never tame the great Zambezi. Resettlement plans for these people were complicated by the arid surroundings, and wild animals are still being evacuated from islands formed by the rising waters. Yet the principal purpose of this dam is to supply low-cost power for industrial purposes. The main industry is copper mining, but the electricity will also serve a growing industrial area in southern Rhodesia. With power costs reduced an estimated 25 percent, economical copper production can go forward, and with increased output copper prices for consumers can be kept down. Since the United States uses over half the copper of the free world, it is plain that the Kariba Dam has something to do with the price of teakettles and turbogenerators in the United States.

This utilization of a great natural resource to reduce operating costs and consumer costs is accepted as commonsense. And if it makes sense in the primitive conditions of southern Africa, how much more applicable is the same kind of commonsense in our own complex industrialized economy. According to Roger M. Blough, chairman of the United States Steel Corp., 99 percent of all useful work in this country is performed by machines, and we must add that a great proportion of them are utterly dependent upon electricity. Before this audience, it is unnecessary to spell out the critical importance of electric power to the continued improvement of productivity in this country. I do emphasize, however, the importance of the fullest and most economical use of our natural resources to contribute to that end. Our rivers can be developed not only for power but for the prevention of floods which endanger valuable industrial sites, for the storage and sustained use of water for processing, and for low-cost transportation.

Mr. Blough, in his admirable Newcomen lecture of last December, centered in a few sentences the challenge facing America and its material and human resources. "We are only in the first skirmishes," he said, "of a worldwide battle of production that is destined, I believe, to rage for many decades to come. America's resources in this economic contest include, and must include, the use of its first team both at home and abroad. And that first team as a strong, well-equipped American industry. A moment's reflection is enough to demonstrate that whether or not America will emerge triumphant from that contest depends in large measure on the virility of American industry."

My own contact with engineers and technicians from other parts of the world who come to visit TVA and examine its facilities has dispelled any illusions I may have had as to their lack of ability to compete with us on equal terms. These men are learned in their professions, alert to their opportunities, and aware of the worldwide implications of their activities. In many fields they are beginning to regard us as a bit old-fashioned and too adherent to tried and proven methods of the past. The Italian engineers who built the Kariba Dam experienced two recordbreaking floods in the course of their work, but they achieved success nevertheless. The Germans are making remarkable advances in the design and construction of lightweight, slender steel bridges. A casual view of the great industrial complex rising from the rubble of Hamburg gives one a feeling of apprehension.

When I was a student of hydraulics in Germany 30 years ago I was fascinated by the extent to which Europeans seemed to make simple things the hard way. Their hook gages were beautiful instruments equipped with many hand-knurled knobs and adjusting devices. Both micrometers and verniers, accurately calibrated, were used to obtain accuracy beyond any practical need. On the other hand, our own hook gages were simple and utilitarian. They cost much less and served the same purpose.

Today the roles of the two continents seem to have become reversed in places and we see many points of evidence to make us wonder whether American industry is losing sight of cost control. Our automobiles, once noted for their simplicity and economy, now are world renowned for their frills and gadgetry, for their elaborate styling and their unnecessarily powerful engines. Germany, with other European nations, now is manufacturing the simplest, most economical automobiles in the world.

Trends of this sort in engineering will do little to improve the competitive capabilities of American industry in the markets of the free world. They are even less realistic in the light of the growing industrial versatility of the Soviet Union with its probable impact on world trade in the very near future. For years after World War II, when the iron curtain was tight and unyielding, we stood aside with amused skepticism when the Russians made their sweeping claims of technological progress. We set our eyes on their system of tyranny and told ourselves that science could not long survive in an atmosphere of such repression. In the democratic climate of freedom, we said, science takes root firmly, we reap an abundance of strength, and it cannot fail. We acted as though we had peace when there was no peace. The Russian sputnik rudely interrupted our dreams.

Today and in the future we are faced with an economic sputnik. Khrushchev proclaims: "We declare war upon the United States in the peaceful field of trade. The threat to the United States is not the ICBM, but in the field of peaceful production." Mikoyan declares that the aim of Soviet trade is "no longer to defend the Soviet economy but to bind others to it." Plainly, the power of Russian technology is being mobilized for the aggressive purposes of communism. We can now anticipate all the tricks of disruption to world commerce which we encountered from Hitler and his blackjack traders.

Are these boasts to be taken seriously? Dr. Neil H. Jacoby, dean of the Graduate School of Business Administration at the University of California, who has faced the Russians in international economic conferences, says emphatically, "Yes * * * all of the expert studies on Soviet economic growth

converge on the conclusion that since the second World War, the real Soviet gross national production has been growing at a rate of about 7 percent a year. This is a rate approximately twice the rate of growth in the real output of the U.S. economy since World War II."

How extensive is the Soviet penetration into world trade? She is now one of the major world exporters of machinery and equipment. The State Department reports that one of her main tactics is to move into vulnerable areas where local products are having difficulty being marketed. Iceland must sell fish. The Soviets buy it, and send oil in return. Wherever commodities are in surplus—wheat in Argentina, rice in Burma, cotton in Egypt—the Soviet bloc is moving in to trade, supplying in return goods that range from Polish coal to East German typewriters. Business Week forecasts a Russian invasion of western markets for jet and turboprop airliners. In the last year, the Soviets have been exporting aluminum and tin, stirring up problems in the free markets for those products, and its purchases of copper have affected the price of that commodity.

Particularly ominous is the Soviet economic move toward underdeveloped areas where the urge of the people for higher standards of living is one of the main ingredients of nationalism. Soviet credits to such countries now are estimated in the billions of dollars and affect at least 14 countries in Asia and the Middle East. Dr. Jacoby reports that the Soviets can offer a larger variety of goods suited to underdeveloped countries than we can. Our equipment is of advanced design, suited to our conditions, while Soviet exports such as automotive equipment, trucks, and cars, are more rugged, more easily kept in operation, and better suited to a primitive country. Moreover, the Soviets send technicians with their goods, trained not only in their expert fields but in the language of the country to which they go. And thousands of students and trainees go in return to the Soviet Union.

The challenge of world competition facing this generation of industrial managers is more complex and more fateful than any set of conditions in our history, and the role of the engineer increases in importance. He holds his traditional place as the scientist and the builder, but as management decisions require technical knowledge on an increasing scale, he must be able to move into executive positions. The engineer by training perceives the fundamental role of resources in our competitive effort. He has the insight to realize why they must be developed fully and used efficiently. His goal as a highly technical trained individual is identical with the interests of the Nation—the effective use of resources to promote a strong economy, lithe and trim, working with its sleeves rolled up.

III

America demands much of its engineers in this period. Freedom demands much. And to bring engineering performance up to these demands, engineers must think clearly about the processes of education by which this country is training its future engineering leaders. Sylvanus Thayer had as his second tenet, education, and in his methods he was far ahead of his day. A recent biographer called his curriculum "a most unusual and comprehensive blending of liberal arts and scientific education." Because the best military textbooks at that time were those of the French, the French language was given an emphasis equal to the study of mathematics. English grammar included the study of Latin and Greek authors. Geography and history took their place beside military instruction and sword exercise.

The cry is heard often in this postsputnik period that we must train more engineers. Not only are the Russians turning out more than we are but our own industries and scientific projects are feeling the shortage. The situation will become more critical as time goes on, unless we act. These are serious matters. But this evening I would rather give emphasis to another aspect of engineering education and that is what I call the development of a broad engineering personality.

It is no longer sufficient to be just a ramblin' wreck from Georgia Tech. As Sylvanus Thayer foresaw the broad demands that would be placed upon the country's military leaders, today we can predict that the demands of this period on the trained engineers will require breadth of understanding as well as intensive knowledge in a particular field. They must possess wisdom as well as knowledge, and our engineering colleges must arrange their courses to provide it.

My reasons for this emphasis are both practical and human. On the practical side, I might illustrate by citing a survey by the Esso Research & Engineering Co. not long ago in which the company asked its supervisors to ascertain what recent college graduates actually do, how they spend their time. The result showed that 60 percent of their time was devoted to collecting, correlating, calculating, and interpreting data. But 30 percent of the time was devoted to writing reports or letters. The point is that most of the information developed in an engineering occupation is used not by the engineer himself but by others. Communication is an essential part. Engineers, just as lawyers and accountants and economists, tend to develop a manner of speech which too often is understood only by themselves, erecting what someone has appropriately called a wall of esoteric jargon between themselves and the nonengineering world.

It reminds me of the New York plumber who wrote to a scientific agency in Washington that he had found hydrochloric acid fine for cleaning out drains, and did they agree. The agency wrote back, "The efficacy of hydrochloric acid is indisputable, but chlorine residue is incompatible with metallic permanence." The plumber responded, delighted that the Government seemed to agree with him. Washington became alarmed and again wrote the plumber, saying, "We cannot assume responsibility for the production of toxic and noxious residues with hydrochloric acid, and suggest you use an alternate procedure." The plumber was somewhat mystified but doubly happy to have this apparent confirmation of his discovery. He wrote back accordingly. With this, some practical person in the Bureau took the case in hand with these words: "Don't use hydrochloric acid; it eats hell out of the pipes."

Engineering, more and more, is a team proposition requiring not only clear communications but a solid knowledge of human relations. We have to fit in, and this requirement applies whether the team consists of a surveying party or an organization planning a great international enterprise. In my own field of public works, how thoroughly was I compelled to learn that the design of a dam was only the beginning of its construction. The project has to be explained and sold, over and over again, to fellow engineers, to members of Congress, to the people affected by the construction. Far more man-hours are required for the economic and financial aspects of estimating costs and justifying expenditures, thinking through the economic results and their impact on the people of the area, and ironing out differences among people, than are required for construction itself.

When the American Society of Civil Engineers completed its recent survey of engineering education, the first point in its summary included the following: "* * * (the engineer) must * * * have an understanding of the society he lives in and of his fellow man. He must be able to envisage and plan the whole of a project in consideration of its economic structure and utility, its sociological impact, and its technical details. He must be able to present his ideas effectively and to defend them. It is essential, therefore, that he have a good understanding of the social sciences and humanities, and a facility in the arts of communication of ideas."

Demands for broad engineering education are not new, and they have raised fears in the minds of many educators that attempts to crowd the engineering curriculum will dilute the content of technical courses, resulting in a deterioration of the quality of the graduates. The American Society for Engineering Education recognized these fears in its penetrating examination of engineering education a few years ago. It called them groundless and found that 30 or more leading engineering schools had developed "carefully planned programs that provide a sound introduction to the humanities and social sciences while simultaneously reinforcing the student's engineering training."

Experimentation with curricula is essential. Much, of course, already has been done. We also must encourage men to go into graduate work; in this connection industry must watch carefully that it does not stifle the flow of men into postgraduate study by overtempting promising students with high-paying jobs. Industry can do a great deal—and I do not overlook what it is now doing—to widen the horizons of today's graduating engineers through scholarships and fellowships, and through in-service training. Some companies even provide a sabbatical year for the sole purpose of permitting their best young men to soak up the literature and history, the psychology and theology, the political science and the economics which have been bypassed in a busy life.

Basically, however, I think that engineering societies and engineering schools must recognize that the broad learning required simply cannot be obtained in 4 college years, or probably even in five. We must reach the decision that an individual cannot rightfully be called an engineer until he has partaken of the table of knowledge in the broad fields we call liberal arts and the humanities. As a man cannot be called a doctor or a lawyer or, in some denominations, a minister, without completing a general as well as a specialized curriculum, leaders in the education of engineers must recognize that the destiny of the profession involves much more than cold science and technology.

What I have been trying to build up to is the idea that engineers in the days to come will inevitably face increased demands and opportunities for leadership.

To qualify for that leadership engineers must acquire that broad base of learning which gives them a sensitive understanding of the widest range of human problems. The great books open to us the intellectual forces which have shaped the human mind. To know modern democracy, one must know something of Jefferson and Lincoln. As these many strands are woven together they produce what Dr. Ernst Weber called the maturing process of mankind. In his fine address upon his inauguration as president of Brooklyn Polytechnic Institute last year, Dr. Weber eloquently pointed out how startling it is to the nonphilosophical mind to discover "that mankind on earth is in the process of mental evolution which makes someone ready, somewhere, at some specific time to see a new relation, to discover a new experimental fact, to stumble upon a new process."

All the elements in the observation of the falling apple had been present before mankind for centuries, until Newton, in the fresh, inquisitive atmosphere stimulated by the Renaissance and the Reformation, seized

upon the principles it demonstrated and embodied them in the heritage of civilization. Thus, only among those men and women who live and work with an awareness of the cultural sweep of the centuries will we find the Newtons of future generations. Our age demands that with our works we have purpose. We must not merely run well; we must have goals. We must discern between the false and the true, between the values that are transient and those that are everlasting.

IV

The final point in Sylvanus Thayer's system of education was discipline, and in a way it was a most unexpected form of discipline. Certainly it was not entirely the dress ranks, squads right discipline usually associated with military schools, though there was plenty of drill mixed into the curriculum. Rather, it was an intellectual and moral discipline that forced his graduates to face the facts of existence. Thayer refused to accept the easy-going practices of the colleges of that day, permitting some reading, attendance at some lectures, passing a light examination, and then moving on. Thayer prescribed the bounds of his courses and determined that they should implant in the cadet a given body of knowledge. Each student had to be ready to recite every day. Examinations were tough. The unqualified were sent home.

But the severest discipline of Thayer was the self-discipline of the honor system. It may be argued that the honor system is a matter of morals, of personal integrity and honesty, and with that I agree. But it is also, basically and fundamentally, a recognition of man's necessity to find his greatest resources within himself. In battle, the regimental commander cannot look over somebody's shoulder for the answer to his problem. It must be within him. His leadership in mortal combat depends upon his intrinsic qualities. It is evidenced by that ancient adage of Army life, "You can't kid the troops." They can sense the real fibre of your being. It is one of the facts of life.

In every sense, barring actual military conflict, the United States today is in the position in which it must prove its metal. It must demonstrate once again the true fiber of its inner being. We have a fine record of past performance. We have elevated our living standards above all the world. We have established and secured a maximum of democratic freedom. We have risen in war to triumphant might. But today we stand on the threshold of a new age. We can't get by on our reputation. We must deliver the goods. We must discipline ourselves to face facts.

TVA several weeks ago became the center of a national debate because it purchased a large new turbogenerator from a British manufacturer. In spite of all the barriers against foreign imports imposed by import duties, the Buy American Act, and additional margins designed to protect employment in American industry, the bids from domestic concerns were nearly 50 percent higher than the British. The difference amounted to more than $6 million, a tidy sum. Some of the most interesting reactions to this award came from the workers of the General Electric Co. in Schenectady. Their employee newspaper carried two full pages of interviews, and I would like to quote some typical reactions:

"Our best answer to this price competition," said one, "is to cut costs and try to improve our manufacturing methods."

Another said, "Cannot we as individuals work for the same wages and produce more? Cannot we take less for our services?"

Still another said, "I think we're smart enough to beat this foreign competition if we all work together."

The emphasis of all comments, taken together, was on the need for greater selflessness, increased efficiency, and better teamwork.

These workers are realists. They know that they and their employers are up against stiff competitors and they all must call upon their utmost skill and ingenuity to meet the challenge. They are willing to face the facts. Management, under engineering leadership and guidance, can do no less.

In the years immediately upon us, American industry and enterprise must make an all-out effort to maintain world supremacy. Selflessness, efficiency and cooperation will be required of all contributing elements and all various factions.

The electric power industry in America has allowed itself for years the luxury of a running fight on the question public power versus private power. It is a wasteful issue, for it diverts the attention of the public and of our own officers from essential tasks. The prime function of the industry is to convert energy resources into usable electricity at the lowest possible cost. It is an unnecessary issue because in another atmosphere—in a climate of cooperation rather than antagonism—there is plenty for both to do.

Since my tenure in TVA I have reiterated the theme that TVA as a public power enterprise can live in America and grow in service side by side with private power systems without threat or danger either to their financial future or to the institutions of freedom. There is room in our economic system and in our philosophy of enterprise for both. Capitalism rose to greatness in the United States under a free competitive enterprise system, and the word "competitive" is as important as the word "free." The two are inseparable. Without freedom we have dictatorship. But without competition we have monopoly under which we know from experience true freedom soon fades. A vigorous competition—competition by comparison—between private and public power can be healthy for America, but each must recognize the rightful and enduring place of the other.

In the light of the task we jointly face—supplying power to improve the strength and efficiency of all America—we can impose on ourselves the self-discipline of facing facts, of attending to our basic jobs, and avoiding the diversionary squabbles that weaken and undermine our efforts.

Returning from a presidential commission studying U.S. trade policy and its effects abroad, Clarence B. Randall, president of Inland Steel Corp. and one of President Eisenhower's chief advisers on foreign economic policy, made this statement:

"The greatest roadblock of all to the creation by the United States of a foreign economic policy that bodily suits the responsibility that our country bears in the modern world is the inability of our business community to place the national interest above self-interest. Rare indeed is the company or the trade association that asks first the question of what is best for all of the people, and only secondarily what will help the marketing of a particular product. In the abstract, businessmen by an overwhelmingly majority favor the rising volume of world trade that liberalization would bring but they want it applied to some industry other than their own.

"Our foreign economic policy must be reformulated boldly to achieve two ends: One, the implementing of our program for national security, and the other, the creation of a steadily developing volume of world trade for the support of our own economy."

Mr. RANDALL's advice indicates that there is another product of American business that deserves more attention than it is getting. It is as old as business itself. Though intangible, it has a market value. It can be bought and sold. And it may be the most strategic product made in America in this period of intensified competition. It is good will.

Good will is fashioned out of the Golden Rule. It takes time to fabricate, and patience in understanding the problems and interests of others. It takes self-discipline in curbing our own self-centered instincts. Its greatest significance probably will lie in our trade with the underdeveloped areas of the globe where people emerging from primitive isolation are trying to take their place in a complex world. They are learning democracy from seeing how it works. They will learn free, competitive enterprise from its impact on their own affairs.

Move To Upset Hoover Commission Reforms Beaten

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ann Arbor, Mich., News of May 2, 1959:

MOVE TO UPSET HOOVER COMMISSION REFORMS BEATEN

President Eisenhower's record of never having had a veto overridden remains unbroken and, more important, a strictly politically inspired attempt to embarrass the administration and overturn a Hoover Commission reform has been beaten back.

Those were some of the implications of a little noticed bit of action in Congress this week, climaxed when the House, by a margin of four votes, failed to override a presidential veto of a rural electrification bill. The measure would have taken authority to veto loans made to cooperatives for rural electrification service away from the Secretary of Agriculture and given it to the Rural Electrification Administration.

The issue was close. After the President vetoed the bill, the Senate mustered more than the necessary two-thirds majority necessary to override. In the House, the balloting was 280 to pass the measure despite the veto and 146 to sustain the veto. A total of 284 votes was needed for passage.

The REA formerly was an independent agency but in 1953 was brought under Agriculture Department control in line with a recommendation of the Hoover Commission on Government reform. The change was part of an attempt to bring the chaotic Federal structure of bureaus and agencies into some sort of sensemaking pattern, with clear lines of authority established.

The move to turn the clock back had its origin in an Indiana political fight, which was climaxed when an Agriculture Department official denied an REA group permission to build a powerplant, which private power companies maintained was not needed. The bill which subsequently was vetoed was a politically inspired move to "get even."

Undoubtedly, much of the support for the original measure—and for the attempt to override the veto—stemmed from Secretary of Agriculture Ezra Taft Benson's unpopularity with a large segment of Congress, including some Republicans. This seemed like an excellent chance to slap Benson in the face, and there were many Congressmen who took delight in the opportunity.

Among those leading the fight against the bill was Representative GEORGE MEADER, of Ann Arbor, who based his opposistion on ad-

herence to Hoover Commission reforms. He called the proposal a step toward bringing back an unmanageable hodgepodge of sovereign autonomous bureaucracies in the Federal Government, and battled vigorously to defeat it both in committee and on the House Floor.

Although it is disturbing in a way that only a minority of Congress supported the Meader viewpoint, the victory is a welcome one nevertheless.

Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution adopted by the Trade Union Council of the Liberal Party of New York State and which was sent to me by my good friend, William Weiss, executive member of the Brownsville-East New York Club of the Liberal Party and vice chairman for Kings County. Mr. Weiss is also a member of the Trade Union Council. The resolution was adopted at a meeting of the council attended by 400 members representing 225 local unions with an aggregate membership of half a million. The resolution stresses the concern of the members of the council with the growing problem of unemployment:

RESOLUTION OF THE TRADE UNION COUNCIL OF THE LIBERAL PARTY

The country finds itself in an economic situation that has no precedent. Business is improving, profits are rising, yet high unemployment persists, and shows signs of becoming permanent. Growing productivity and growing disemployment are moving together.

At a time that calls for bold and far-reaching action, the policies of the Eisenhower administration and the measures taken by Congress actually constitute a retreat from the serious problem with which the Nation is confronted. In New York State, the Rockefeller administration and the legislature are likewise marked by an unwillingness or inability to meet the economic realities.

The extension of the temporary unemployment insurance program for only 3 months reveals, in itself, the tragic inadequacy of our national government to cope with this blight on the country's economic health. This is especially evident when it is realized that fully one-third of the $665 million appropriated for the emergency program still lies undistributed while the jobless go hungry. Furthermore, the extension will afford even this limited assistance to less than one-tenth of the country's unemployed.

Despite all the smooth assurances from the President and his economists that the recession is over, the Trade Union Council of the Liberal Party declares that the recession will not be over until unemployment disappears, and that our country can have no full economic strength without full employment.

We call for action. We call on the National Government and on the State government to put into immediate effect such measures that will give jobs to the unemployed, such provisions that will make American families economically self-sufficient, and such long-range plans which will overcome the contradictions that plague our economic growth.

We call for the immediate institution of the 35-hour week on a national basis.

We call for the immediate establishment of a minimum wage of $1.25 per hour extended to all workers.

We call for immediate passage of a depressed areas law, seeking to abolish pockets of unemployment, as well as economically blighted areas.

We call for increased unemployment insurance benefits, extended duration periods, more reasonable eligibility requirements, and broader coverage—on both National and State levels.

We call for tax relief for low-income and middle-income families. We believe, with organized labor, there must be an increase in the income-tax exemptions.

We call for the plugging of loopholes through which large corporations and combines escape their fair tax obligations.

We call for substantial reduction of the depreciation allowances in the extractive industries.

We call for the inclusion on the Federal Reserve Board of a member representing labor.

Finally, we call for the establishment of a National Economic Council composed of labor, management, farmers, scientists, technicians, the professions and consumers, charged with planning and executing a democratic program for achieving economic security, prosperity and ever-improving standards of living.

Soil Bank Versus Social Security

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I would like to call attention to an editorial which recently appeared in Wallaces Farmer concerning a ruling which classifies soil bank payments as rental income in many instances and causes some farmers to lose a portion of their social security payments. This is a ruling which should be changed. I trust that full study can be given to this quirk in the law, so that proper steps can be taken to make this change.

The editorial follows:

SOIL BANK VERSUS SOCIAL SECURITY

The most realistic program we have to bring about needed adjustments in agriculture is the conservation reserve. The whole-farm provision begun this year expanded its value and effectiveness.

The social security program could work hand in hand with the soil bank. Land retirement payments should supplement social security payments, permitting more farmers to retire at 65.

A quirk in the social security law is a stumbling block, however. It looks on soil bank payments as rental income only when the owner lives away from the farm, and has taken no part in its operation and management.

Thus, an owner-operator who wants to retire with his land loses his social security payments in all months in which he does any substantial amount of work on his farm, such as clipping weeds. In other words, his soil bank payments are considered to be wages if he looks after his retired farm.

This ruling should be changed. The fine line drawn in classifying soil bank payments is ridiculous.

Altoona (Pa.) Mirror Editorial Awarded Second Place in Statewide Contest on the Subject: "Employment of the Physically Handicapped"

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. VAN ZANDT. Mr. Speaker, the following editorial by J. E. Holtzinger, president of the Altoona, Pa., Mirror, which appeared in the March 14, 1959, issue, was awarded second prize in the editorial division of the annual Pennsylvania Statewide editorial and feature story contest on "Employment of the Physically Handicapped." Mr. Holtzinger will receive as an award a U.S. savings bond valued at $75.

The editorial follows:

JOBS WANTED

Every year at about this time we get a reminder from our friend Kermit Martz of the Pennsylvania State Employment Service that there are some very capable people who are physically handicapped and who are looking for jobs. The excellent experience that employers have had with these people over a number of years is one of the best recommendations we can think of in reminding prospective employers to give new ones a chance to prove their worth.

In most instances physically handicapped people have been given special training to help them overcome their handicap and to make them more valuable as employees. Nature herself comes to their aid, as many skilled observers report that the loss of one faculty is quite often counterbalanced by more acute functioning of the remaining faculties.

State and local programs to help train the physically handicapped for new types of work have been very successful. Outstanding capabilities have been developed by many of the jobseekers who suffer from some form of handicap and quite often these capabilities far outweigh their handicaps.

If everything works out as planned there will be hundreds of new job opportunities available in this area in the months just ahead. In planning for this brighter future employers of the area should not overlook the special training and adaptability of the men and women who have been trained by the rehabilitation department.

Physically-handicapped people themselves should not forget the many fine examples that have been set for them by others suffering from the same handicaps. This city and others like it across the Nation have had some of their finest businesses started and built by those who have overcome their obstacles.

Many who have been jarred from their original fields of endeavor by some accident which made it imperative for them to seek some other line of activity, have become outstanding in the new fields of activity. They have been leaders in all the creative fields. The mind is far superior to the hand, the foot, the leg or the arm; in fact, it surpasses all the individual members of the body.

Most successful ventures are launched by the people who are capable of creative thinking. Sometimes it takes the loss of some body faculty to slow down physical activity enough to give the mind an opportunity to indulge in creative thinking.

The world in which we live is constantly changing. One hundred years ago the United States was primarily an agricultural nation. About 50 percent of the manpower of the Nation was engaged in producing food and another 15 percent was engaged in harvesting the natural crops of nature.

Next in importance so far as numbers were concerned was the group which provided transportation for the products of the farms and woods. The manufacturing group was in a close race for second place and the various groups that were engaged in commerce were a poor fourth. Those who performed services for people otherwise engaged were in last place numerically.

Fifty years ago agriculture was fighting a losing race and those who were engaged in manufacturing things were taking over first place. The industrial towns and cities of the Nation were experiencing a great boom and transportation also was reaching new horizons. The goods and services industries still were trailing.

Twenty years ago manufacturing had a definite hold on first place. Good gains had been registered by the service industries and agriculture still was losing ground in number of people employed.

Today as people demand more and more services, manufacturing and the services industries are practically tied for first place in our economy. Farmers employing production techniques still are losing out in numbers, but gaining in efficiency. The people who wash the vegetables, cook some of them, can others, cold process still others, and wrap the lowly carrot and the red-cheeked apple in cellophane are on the increase.

Services in all other lines also have been increased and slowly but surely this new field of endeavor is gaining first place in the employment derby. It provides a whole new field for the enterprising, thinking worker. Ideas are replacing gadgets as America's best sellers. It took an idea to create the gadget in the first place.

Industries that have made the greatest advances in the past two decades have been those industries where research has been most employed. Employers seeking good men and women for research will find some mighty rich talent in the physically handicapped people. Physically handicapped people will find some new fields of endeavor for themselves in this new and expanding economy.

Some windy March day the postman is going to bring us a letter from our friend Martz bearing this caption: "Wanted—Physically Handicapped People for Important Jobs in Industry and Business." Better call him while there are still some people available for those jobs requiring thinking, skilled and loyal workers.

Indiana Flood-Control Construction

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. WAMPLER. Mr. Speaker, the Public Works Subcommittee of the House Committee on Appropriations has been working long and diligently on the public works money measure for the fiscal year 1960. With the bill in the final legislative stages, I would like to set forth for the information and consideration of all the detailed flood-control problems and needs of the Sixth District of Indiana, the district which I have the honor to represent.

On March 5, 1959, I appeared before the House Appropriations Special Subcommittee on Deficiencies, headed by the gentleman from Texas [Mr. THOMAS], which was then conducting hearings relative to the second supplemental appropriations bill for fiscal 1959.

At that time, I had just returned from an inspection trip in and around my flood-stricken home area, Terre Haute, Ind. The degree of total waste, devastation, and privation was literally heartrending. The annual human, agricultural and property damage, loss and tragedy resulting from Wabash River floodings is incredible.

During the February 1959 flood, to which I have just referred, the small town of Clinton, Ind., with a population slightly in excess of 5,000 was fighting the floodwaters heroically, with some 8,000 sandbags purchased by the local citizenry for 14 cents apiece. As I told Mr. THOMAS' subcommittee, those sandbags were not purchased this year, they were bought several years ago during a previous flood, and when the danger was past they were emptied and stored so they could be used again, when the Wabash would inevitably threaten the area's people and their homes.

West Terre Haute has been flooded out for 3 consecutive years. Flood crestings are so frequent and so severe that Terre Haute no longer records flood levels at the 14-foot mark; the 20-foot mark now is the only recorded level.

In February of this year, floods along the Wabash caused 60 Indiana major highways to be actually impassable, thereby totally isolating many entire communities. Waterworks in the cities of Huntington, Wabash and Peru were so acutely threatened that if the floodwaters had risen 6 inches to 1 foot more, the local water would have become thoroughly contaminated, thus setting off a serious health hazard, conceivably to the epidemic stage.

I have obtained from the adjutant general of the State of Indiana a tally sheet of the expenses and losses incurred during the February 1959 flood. The totals I think are slightly less than astounding. It cost the people of the State of Indiana in expenses and losses—agricultural and property—a computed total of $1,663,211.77; of that total $567,105.46 was spent and lost in the immediate area in and around west Terre Haute.

To fight the floods, not only local volunteers were and are used, the Army and Air National Guard, the Adjutant General's Department, the State highway department, State penal farm labor, the Civil Defense Department, the American Red Cross, the Indiana State Police, the Vigo County Commission, the Terre Haute Street Department and the Army and Navy Reserves were employed. Two hundred and thirty-six State and Federal vehicles were used to fight back the floodwaters for a total of 17,833 hours.

And I am informed by the Indiana State adjutant general that the $1.6 million total is very conservative because it does not include extensive damage to private and personal property. In addition, President Eisenhower, within the last 2 months, has declared the general area a disaster region two times to the extent of emergency disaster Federal funds totaling $500,000.

Note, Mr. Speaker, that this rather staggering tally of expenses and losses is only for the February 1959 flood. The February 1959 flood has been preceded by 22 major Wabash River floodings; 9 within the past 12 years.

Flood damages in 1913 amounted to $11 million; the 1943 flood damage was $10,660,000, and the loss of 6 lives; the 1950 flood resulted in 4 deaths and damage of $1,662,000.

The 1957 and 1958 agricultural losses of acreage along the Wabash tributaries, including the White River, amounted to 487,200 acres, and total crop value losses amounted to $19,064,000.

Indiana highway losses due to floods in 1958 cost the counties and the State $602,770 in road repairs and $912,754 in bridge repairs. The 1957 State flood loss figures were $502,187 for roads and $113,417 to replace washed out or damaged bridges.

All these figures have been compiled by Indiana State officials and are a matter of published record.

And now, for the fifth time during the 4-months-old-year of 1959 the Wabash River again is just about to spill over its banks bringing death and destruction. The Lafayette Journal and Courier newspaper for April 28, 1959, just 3 days ago, carried the headline "Wabash Flooding Again."

The accompanying story states, in part:

> The Weather Bureau said the Wabash should go about 3 feet over the 12-foot stage at the city of Wabash sometime Tuesday, then roll downstream and gain in depth.
>
> The river should hit 5 or 6 feet above the 14-foot flooding stage at Montezuma Friday and about 3 feet over banktop at Terre Haute Saturday.

Mr. Speaker, these appalling losses and expenses, not to mention the consequent Wabash Valley population and economic drainage, must be arrested and hopefully stopped. I am not asking for construction that has as one of its multiple purposes recreation. I want flood control project construction that will keep flood-driven, filth-laden waters from washing away homes, stores, factories, schools, and churches, and driving sincere, honest, hard-working people out of the area in which they were born and in which they would like to live and rear their families.

I have asked for, and the Army Corps of Engineers has informed me they have the engineering capabilities to utilize during the fiscal year 1960, the following funds for already authorized projects:

West Terre Haute local protection project: $30,000, to complete preconstruction planning.

Sugar Creek levee: $15,000, to initiate preconstruction planning and bring the planning to 50 percent of completion.

Wabash River Basin study, above the White River: $40,000. The President's budget for fiscal year 1960 asks only $25,000 for this study. General Person, Assistant Chief of the Army engineers, tells me the Corps has the capability to utilize $40,000 during fiscal 1960. The additional $15,000, Mr. Speaker, will allow the Army Corps of Engineers to continue working on Sugar Creek, Wild Cat Creek, and Big Pine Creek.

Clinton levee,: $5,000, to enable the Army engineers to restudy the project.

Conover levee, which is a Terre Haute local protection project: $2,000, also to enable the Army engineers to restudy the project.

I understand that because the Adams Levee, Parke County, group's charter is expiring, a new document is needed. And since there is no Raccoon Levee, Parke County, organization, one will have to be established under State-authorized charter. In the case of the Greenfield Bayou levee, the group must reorganize because its current charter is not sufficiently inclusive. For these reasons, I am making no money requests for the Adams, Raccoon, and Greenfield Bayou levees.

I have, however, asked the Indiana Flood Control and Water Resources Commission and the local levee representatives to expedite their reorganizational activity.

The following charts compiled by the adjutant general of the State of Indiana constitute, I think, self-explanatory evidence of the desperate need for flood control construction in Indiana's Sixth District:

Indiana flood costs, by departments, February 1959

TERRE HAUTE AREA, IMMEDIATE AREA IN AND AROUND WEST TERRE HAUTE

Wabash River Basin projects, Indiana

Project	Estimated cost			Fiscal year 1960 engineering capability to utilize funds [1]		Remarks
	Federal	Non-Federal	Total	Planning	Construction	
Active authorized projects:						
West Terre Haute local protection project.	$473,000	$95,000	$568,000	$30,000	0	Funds would be utilized to complete preconstruction planning.
Sugar Creek levee	355,000	27,000	382,000	15,000	0	Funds would be utilized to initiate preconstruction planning work and bring that planning to 50 percent of completion.
Adams levee	262,000	13,200	275,200	0	0	Time limit on existing levee district charter is about to expire and the district will have to be reorganized.
Greenfield Bayou levee	1,890,000	270,000	2,160,000	0	0	The existing levee district will have to be reorganized as it now encompasses only the northern half of the project area.
Raccoon Creek levee	300,000	33,000	393,000	0	0	Levee district will have to be reformed. Original district charter has expired.
Projects deferred for restudy:						
Clinton levee	[2] 93,000	[2] 9,000	[2] 102,000	5,000	0	The fiscal year 1960 capability is for restudy work only.
Terre Haute local protection project (Conover levee).	[2] 199,000	(3)	0	2,000	0	Do.

[1] Fiscal year 1960 capability to utilize funds based on premise that no funds will be made available to these projects during the remainder of fiscal year 1959. The amounts shown have been determined strictly from an engineering standpoint, considering each project by itself without reference to our overall capability, or fiscal considerations. Since no funds were included in the President's budget for fiscal year 1960 for any of these projects, no funds can be utilized in view of overall budgetary considerations.

[2] Estimates last revised in 1954.

The Role of International Marketing Communications

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp., at the 1959 convention of the International Advertising Association held at the Hotel Roosevelt, New York City, on April 29, 1959:

THE ROLE OF INTERNATIONAL MARKETING COMMUNICATIONS

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., 1959 Convention of International Advertising Association, Hotel Roosevelt, New York City, April 29, 1959)

As a businessman concerned with international marketing, it has given me great pleasure to have merited your choice as the speaker to open the 11th convention of the International Advertising Association.

You already know from your program that the theme that has been set for this convention is "Operation Opportunity—the Booming 1960's." Many illustrious speakers will follow me to expand on this theme. But, as the opening speaker it is my privilege to set the tone of the convention which I propose to do by leaving you with a message. I hope my choice is one that will become more meaningful to you as we enter the exciting times that lie ahead of us.

A few days ago, as I was assembling my thoughts for this address, I overheard a remark which I will phrase as a question because some of you may have had the same feeling when you read the program of this convention. The remark went somewhat like this:

"This International Advertising Association should really make up its mind. With speakers like Senator Javits, Ambassador Lodge, and Jim Farley, what are these guys? Are they businessmen or are they politicians?"

Well, maybe we are a bit of both. As international businessmen our responsibilities are pretty broad. We represent the business interests we work for but we also represent the interest of the peoples that we work with in many countries throughout the world. This means that to become successful we have to be good businessmen and we have to be good politicians, too. If this is true, and I believe it is, I think that the interests of the people for whom we work and the interests of the peoples we work with around the world will best be served in this coming decade if we remember one very simple precept; that this is: To let the truth shine through in all things that we do.

Truth is the most powerful force that we have to build with in the years ahead, and, if need be, it is the ultimate weapon with which we will safeguard that which we will build.

Now, let's take a look at marketing communications and the business of advertising as a standard bearer of truth throughout the world. Let's take a look at it from the businessman's point of view as well as from the politician's point of view.

Politics and advertising have this in common, that they thrive best in a free society where both are subjected to the continual harsh light of publicity, claim and counterclaim, criticism, and opposition. About the only difference I see between the two is that a politician is a little bit like a banker. A banker draws up a statement at the end of his fiscal year—a politician subjects himself to the approval of the public every 2 or 4 years, as the case may be. But with a piece of merchandise and with advertising every day is election day, and every product and every advertisement is continually and completely subject to the verdict of public opinion. In both cases it is truth and character that stand out.

If we look over the field of famous trade names, the ones that are permanent are the ones that have been truthful and honest, that year in and year out have given full value for the dollar. If you stop to think of the amount of faith the average buyer puts in the merchandise he buys in the American market today it is the finest possible tribute to the veracity of the American printed advertising word. If you look at the politicians the world remembers, from Washington, Jefferson, Jackson, Lincoln, and Cleveland down to our own day, it is not the clever and expedient whom we remember but those who were known in their day for their stubborn addiction to the truth.

I do not know what your concept of a politician is. Perhaps it is as erroneous as my own idea of an advertising man used to be. I used to think that advertising men were long-haired artists who dreamed up ideas. Perhaps you think a politician is an adroit character who spends his time glad handing; in a smoke-filled room. But just as in advertising the harsh reality of sales results weeds out the opportunist in favor of the statesman who renders a public service.

Let me give you a definition of politics that I have carried with me for a quarter of a century, written by Andrew Oliver in Boston more than 150 years ago. It goes like this: "Politics is the most hazardous of all professions. There is no other in which a man can hope to do so much good to his fellow creatures—and neither is there any in which, by a mere loss of nerve, he may do as widespread harm. There is not another in which he may so easily lose his own soul, nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all its temptations and degredations that beset it, politics is still the noblest career any man can choose."

With the change of a few words that would be an equally good definition of advertising.

To carry the parallel still further, let me give you a list of 10 rules for the making of a successful politician, which I have set down for my own guidance. A politician must have a good personality. He must have what we call character. He must be a substantial human being. He must work hard. He must be able to get other people to work for him and with him. He must have native ability and must be able to see and use ability in others. He must be aggressive but not to the point of being offensive. He must have a feeling for what people want. He must be able to make decisions. He must understand the meaning of the practical compromise without loss of principle. Above all, he must be truthful. The man or the advertisement that does not tell the truth is distrusted and shunned, and rightfully so. The dog of untrammeled ambition is usually pursued by the rabbit of conscience. In short, I find little difference in the rules for success, whether in advertising or politics or any other field.

But whether we be businessmen or politicians devoted to the communication of truth about our business, our profession or our country, we each have our detractors, those who misguidedly (and sometimes wantonly) go out of their way to muddy the waters.

You would think that we have enough trouble today with the Soviets stirring up strife in Europe and in the Middle East and

with their counterparts the Red Chinese working for the envelopment of southeast Asia. Well, we don't seem to be satisfied with these problems and so, as we always have done, we manage to grow some of them in our own backyard.

As businessmen we deal with something called economics. And, the people who deal with economics are called economists; that is, some of them are. So, a businessman is an economist, too, although he may not have a Harvard degree.

Now I want to be understood to say that I have the greatest respect for professional economists. They can, and most of them do, help us who are on the practical end of things with the many problems which we must meet. Every sizable company employs them and profits by their advice.

But, there are a few economists who are not content to advise business and government and then let the responsible managers make the decisions. They want to make the decisions themselves. Above all they want to tell the President and Congress what to do with and to business.

I have met a good many of these economists, not only in business but in Government, for I was, for nearly 8 years, doing my bit in Government myself. And, in the Post Office Department I had a pretty big business to direct. I met a good many of the economists who were in Washington in those years. Most of them I respected. I liked almost all of them. But, the thing that struck me was not only their lack of practical knowledge of the problems of business but the fact that they never were able to agree with each other. Some of us had to make the practical decisions and when we got to that we had to brush away all of the technical language and the four-, five-, and six-syllable words and apply that commonsense that experience had provided for us in our years in business before we ever went into Government.

Of course I was also in politics. And, in a way politics is a busines, too. The only thing about politics as a business that is distinctive is that if you are honest there is no monetary profit in it. But, in business honesty is not just the best policy but the only real policy. In politics the profit is not in material things but in the satisfaction of serving your country and your fellowman so that he will have a better way of life.

We hear a good deal of talk these days about the need for advertising censorship and regulation. I know of no field that needs regulation less or that has disciplined itself more. There is no governmental body whose wisdom could be as great or whose discipline could be as harsh as that of the open competitive market. If we stop to think about it, competition functions in much the same way as his majesty's loyal opposition or as a minority party. State an untruth, be it ever so small, and your competitor is quick to point it out and to force you to correct it. Here and there a fly-by-night may publish an exaggeration and before competition and the public have time to catch up with him he will be gone. But the permanent manufacturer who represents 98 percent of the products we live by has long since learned that truth and honesty in advertising are the only policy that enable him permanently to live with his public.

To return to the economists who have been in Government in past years, some of whom are still around, they are still writing books and articles. And they still cannot agree among themselves. I am thinking now of several examples. One of these has written a book which has had a lot of attention. In it he concludes that the American people are much too well off. They have not only all that they need but all that they want. And also that they have a lot of things that they not only don't need, but that they should not really want at all. They are just too darned prosperous.

Of course this is a long, long cry from the days when they were saying that one-third of the people were ill clothed, ill fed, and ill housed. But a lot of water has gone over the dam since then. And a lot of economists have gone over the dam too. But some of them still survive. One of them goes on to say that the people are buying too many nice big automobiles while the Government is not building enough roadways and highways to accommodate them.

Well, we do have our traffic problems, we must admit. But it is also true that we are spending, through Government, billions of dollars a year to solve these problems. And that volume of construction, along with the big Federal program passed by Congress a few years ago, is going about as fast as it is humanly possible to go. But you cannot build highways with money alone. It takes engineering and planning and the mobilization of workers and machinery. And above all, it takes time.

But this economist is in a hurry, and so he would slow down the building of cars in two ways. He would take the money away from consumers by heavier taxes. The economists' term for taking the other fellow's money is "drain it off." Then he would have workers and producers work fewer days in the year and fewer hours in the week, and also have them work with less energy while they are working. He is not talking about fewer cars alone. He would have fewer refrigerators, and cosmetics, and baby food, and television sets, and telephones. He doesn't mention Coca-Cola, but I imagine he thinks we consume too much of that, too. Probably he believes that the refreshment people get from Coca-Cola makes them work harder. And in his book that is bad, very bad indeed. For most of this overconsumption and overproduction he blames advertising. He sees in advertising a sinister plot to make people want more than they need. And in his catechism it is a sin to want more than you need.

We have heard a lot from people who call advertising waste. There are some who would have Government tell every businessman how much he should spend and not spend on advertising. These people would have a Government bureau determine in every individual case what percentage of its gross receipts should be spent for advertising. Thus they would have an army of bureaucrats going over your books and making your business judgments. Of course, this would take more Government money—and employ many people who would otherwise be making things people could use.

But, I have seen enough of Government to know that there is waste in Government, too. I have served with the Hoover Commission and I have participated in many reports of the Commission, reports which point out specifically where those wastes are and how they can be eliminated.

We are not stingy with Government services. As a nation we are spending very considerably more than $100 billion a year at the Federal, State, and local levels. This is a very big part of our national production. It is, I believe, big enough. What we need is to get our money's worth for what we are giving in taxes.

But, I am at a loss to know a simple fact. How does this economist expect to get the taxes to pay for more and more public spending if at the same time we are producing less and spending less and working fewer days and hours? Sometimes the expert misses the simple point of commonsense. In his theories he forgets his arithmetic.

Thus, there is a continual need for keeping the record straight, not only in our own country but throughout the world. And the best suggestion that I have to offer to keep the record straight is to recommend that you, as marketing communicators keep constantly in mind the need to let the truth shine through.

This coming decade will produce pressures such as we have not yet felt or even envisioned in our conduct of world trade. Therefore, unless we do stick to certain fundamental principles and communicate these to other people adequately, we will lose the privilege of leadership that the world has grown to look to us for.

Marketing communications, the practice of which is in your hands, is an invaluable part of this privilege leadership. You, as its practitioners must use it wisely. It is for you to communicate the truths of sound business practice that we as a nation have learned and have pioneered, as well, over the years. It is for you to communicate that business must be allowed to make its own unfettered judgments. It is for you to communicate that the individual must have right to make his own free choice.

These are the freedoms that have made us what we are as a nation. We are by no means perfect. But this system of ours has produced more for all, more of what makes for happiness, and culture, and peace, and order, than any nation has in all history.

This is liberty, the last best value given to man on earth. This is the truth that is ours—mine and yours. Value it, cherish it, protect it and let it shine through in everything you do.

Could Canada Be Neutral?

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. DENT. Mr. Speaker, as time marches to its inevitable climax with this, our generation, one wonders how well we have accomplished our dedicated mission of the past generation.

We wonder how many friends we have made and how stanch our allies are.

We wonder, too, how many will march with us and how many will stand and cheer from the sidelines.

If any American feels overly secure in his smugness of sloganized security perhaps the challenging article written by J. B. McGeachy, which appeared in the Financial Post, Toronto, Canada, will cause him to stop and look at the clock.

Time can and will run out on all of us if we do not check and doublecheck on so-called foreign policy or better still, our lack of it.

When a nation, like an individual, starts to buy friendship, loyalty, honor, or respectability, it heads for the rocks and shoals of a troubled future. Today is as good a time as any to read the attached article:

COULD CANADA BE NEUTRAL?
(By J. B. McGeachy)

Should Canada abandon defense spending? Should we consider adopting a policy of neutrality, like India or Austria, in the cold war?

The mere fact that these questions can be asked—and they are indeed being asked by intelligent Canadians—suggests a revolution in our national thinking. It's evident that many of us are deeply disturbed by the per-

lious situation to which 12 years of cold war have brought us.

This is not surprising. The experts tell us, with harrowing diagrams to illustrate our plight, that Canadian cities could be pulverized by H-bombs hurled over the Arctic in ICBM's or lobbed from submarines submerged in Atlantic or Pacific waters.

Why is the Canadian population in this danger of being wiped off the map? It's a fair question. Since Canadians threaten nobody, how can any other nation feel unfriendly toward us?

True, it could be replied, we are not strong enough by ourselves to threaten anyone; but we are firmly allied to one of the two superpowers. Indeed, "allied" is much too feeble an expression.

To all intents and purposes Canada is now (let us candidly use the accurate if painful word) a military satellite of the United States. And by consenting, without a murmur, to the use of our soil to facilitate nuclear assault on the Soviet Union, we make Canada a wholly legitimate target for the Russians in the event of trouble.

This analysis leaves out some of the relevant facts, but it is accurate so far as it goes; and it leads naturally to the question: Would we be safer if we were defenseless or neutral or both? In that posture, with neither arms nor allies, could we work more effectively for peace?

I seriously doubt if either unilateral disarmament or neutrality is practical politics for Canada in the world of 1959. By this I simply mean that, even if we had the desire and the will to bring about so dramatic a change in our policy, I am not sure if we could get away with it. We are a small power caught in the middle of a big power struggle which many seem to regard as a life-and-death contest for survival. Sovereignty, protocol and even ordinary manners, if they get in the way, may be brushed aside.

Still, it doesn't seem to be treason to discuss the issue; for it is in fact being discussed in spite of the prevailing opinion that Canada has lost all freedom of choice.

As one writer recently summed up orthodoxy, we are "inescapably bound to the American chariot" and the best we can do is "try to stay in the front seat." Maybe so: but at least it's legitimate to examine the basis of this assumption. There is nothing to be said for numb, dumb acceptance of the existing situation as permanent.

Let it be noted that once a war has started, as many of us remember very well, it's too late for debate on the rights and wrongs of the national policy; public morale won't stand it. But there's no war going on now; and I think Canadian morale is steady enough for an argument on the wisdom or unwisdom of the policy of armament and alliance we embarked upon when we joined, and indeed helped to found, NATO in 1949.

One might begin by remarking that in the 1930's Canada, just like the United States, was both neutral and defenseless. Quite as isolationist as the Americans, we had no armed forces to speak of and we refused all commitments abroad.

Let us agree that Canadians would rejoice and sing hosannas if, with safety, we could revert to that blissful situation. Ideally, all the nations would be disarmed and a court would settle their disputes. Armed forces, alliances and commitments are not noble and virtuous in themselves but a second-best expedient, justified only if they serve their intended purpose.

But why is it thought impossible for Canada to return to the disarmed neutrality of two decades ago? One reason, I strongly suggest, is the change that has taken place in the American position; and here I refer to recent history.

In September 1939, when Britain and France declared war on Hitler, we abandoned our "no commitments" slogan and got into the fight. But our neighbors, though they had been the loudest scoffers at appeasement in 1938, showed no inclination to join us in this enterprise. In a war that affected us, they were prepared to abstain indefinitely.

Indeed in October 1939 the 21 American Republics, including the United States, proclaimed their neutrality in a document called the Declaration of Panama at the same time announcing that there must be no hostilities on the high seas within 300 miles of their shoreline.

So seriously did they take this requirement that they protested jointly at the end of 1939 when British warships chased the German *Graf Spee* to its demise off Montevideo, Uruguay. To the protest Winston Churchill replied that if the Royal Navy weakened in its job of patrolling the Atlantic, the Republics "would soon have many worse worries than the sound of one day's distant cannonade."

The Americans, then, were far from accepting the notion of collective security during either of the wars against Germany. in these combats they were belligerents for just 1,835 days out of 3,633 or 50.6 percent of the time; they were neutral (though not impartial) for the remaining 49.4 percent.

I recall these facts only to make the point that Canadians are under no obligation whatever, merely out of neighborly good feeling, to commit themselves to take part in U.S. wars.

It may be replied that goodwill has nothing to do with the case; but I would disagree. "Goodwill" may not be precisely the right word; but certainly a desire to keep in step with Washington, to consider American feelings, and to avoid a collision with the United States in foreign affairs (take, for example, the case of China) is a factor in determining Canadian policy.

And I suggest, without fear of contradiction, that this is one reason why we are in our present pickle and that one very serious obstacle to defenseless neutrality for Canada is that it would distress the Americans and cause a marked diminution in their love for us.

Indeed, as everyone knows, that is understatement carried to the point of absurdity. If Canada should suddenly decide to withdraw from its military commitments and to expel all American military personnel and equipment from this country (as a neutral would be obliiged to do), our neighbors would be far more than merely upset. They might regard our action as so unfriendly as to justify invasion and forcible occupation of our terrain.

But they might not. Without doubt, hostile, warlike action against Canada would cause intense pain at Washington and do immense damage to the reputation and prestige of the United States. Thus the question to be explored is whether anything would be gained for Canadian security or the cause of peace generally, by confronting the United States with this dilemma.

If the Americans simply took over and operated military installations here against our will, obviously there would be a very serious net loss to the western alliance—a loss of repute that would injure us all in the remotest corners of Africa and Asia.

But if, as seems more likely, the Americans responded to the Canadian threat by bringing all possible economic and diplomatic pressure to bear upon us, as they would be fully entitled to do in their national interest, beneficial results might ensue.

The Americans might be shocked into awareness of the Canadian position; and the Canadians might be inspired by their own boldness to engage in some overdue bargaining and debate with the neighbors.

Up to date, in our defense arrangements with them, we have been far too sentimental (hands across the border and that sort of thing) and not nearly cold-blooded and hard-boiled enough. That was the whole point of my argument that emotion based on past military association does not, or should not, enter into this discussion.

What are the Canadian realities of which the Americans should be made conscious if possible? One reality is that we are not, and could not possibly be, morally or philosophically neutral in any scrap between Washington and Moscow. We are definitely on Washington's side.

But this argument is about military commitments in advance of hostilities; and we might reasonably claim the same right to stay out of a fight as the United States, thought never pro-Hitler, claimed and exercised in 1939–41. True, we signed away this right by joining NATO; but treaty obligations can be renegotiated when they lead to a wrong result.

NATO has apparently been effective in checking the expansion of Russian power in Europe; but the Canadian-American entanglement has led, by slow degrees, to a situation in the Arctic that doesn't strike Canadians as an example of reasonable collective security. It looks to them more like organized collective insecurity. Being threatened with nuclear bombs from our own Arctic frontier was not what we bargained for when NATO was negotiated 10 years ago.

It may be replied that this risk is one of the facts of present-day life, not to be blamed on the Americans, and that the advance of technology has made neutralism impossible for a country in Canada's geographical position. A North American nation might stay out of European squabbles, it may be argued, when the severest attack anyone could launch was by medium-range bombers carrying old-fashioned knickknacks like 5-ton bombs; but how could Canada, placed between the two combatants, be neutral in a war that may be fought with H-bombs propelled over oceans and continents, scattering fallout in their wake?

This argument, though formidable, is not wholly convincing. It is one thing to be exposed accidentally to fallout and the dropping of bombs in the wrong country; it is quite another thing to invite deliberate attack by close-knit alliance with a nuclear power. Switzerland, Austria, and India (to mention only three) would all be vulnerable, in greater or less degree, to the accidents of a nuclear war. They are all neutral.

But surely, it will be objected at this point, Canadians would be vitally interested in American victory and survival in a Russo-American atomic war. Certainly we would; but there's a widespread belief that if the Russians and Americans ever start pasting one another with thermonuclear weapons there will be no survivors in either camp. Would it not be a good idea to arrange that a few Candians, anywhere from Aklavik to Windsor, should have maybe a 1-percent chance of living on and restarting the human race in the northern hemisphere?

In short, the case for Canadian neutralism, if you put your mind to it, turns out to be quite persuasive—even though it may be academic. And I have not even mentioned the argument that a neutral North American nation might expect to be useful, and perhaps influential, in composing Russo-American differences. This may be the best reason of all for Canada to set itself up as a one-country "third power."

For the present, however, my only suggestion is that the Canadian ambassador to the United States should pick the largest American audience he can find and state the case for Canadian neutrality hypothetically. He could then point out that Canada has sacrificed a position of relative safety and probable usefulness for the sake of American security. He could explain that Canadians are reasonably alarmed by the results of this sacrifice and may have to consider a change

of policy—a kind of Canadian disengagement—if the American Government does not speedily negotiate some relief of current tensions—in the Arctic, to mention one danger zone only.

I think it can be positively guaranteed that this speech by our ambassador would get attention at Washington.

But whether it is ever delivered or not, the point is that we are in a strong position to bring pressure upon the Americans. Unless this country is merely a "territory" of the United States as subservient as any African or Asian colony ever was to a European master, we should be able to fix the terms on which Canada serves the ends of U.S. security.

At the very least these terms should include a due share of defense contracts for Canadian makers, which brings me to a recent proposal that looks like a variant of the one here discussed. This proposal, prompted by the collapse of the Avro-Arrow program, is that Canada should abandon all defense spending and disburse the money as "economic aid," not being in the big power league of countries that can afford a modern arsenal.

If this proposal means simply that the United States should take over 100 percent of the cost and manning of Canadian defense, I don't see that it gets us anywhere. This would be merely a fiscal arrangement with no moral significance; and the effect of it would be to accentuate Canadian subservience. Indeed Canada cannot afford a defense program like the American or the Russian; but 17 million Canadians can produce approximately as much as 17 million Americans—or about twice the population of New England. A division of labor on that basis could be arranged or obtained under pressure.

But if the proposal to abandon defense spending means that Canada should be defenseless and neutral, why, then there's room for an argument. I hope such a debate will take place soon and vehemently. I regard this piece as a preliminary contribution.

A Mothers' Day Message

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD the following Mother's Day message by A. W. Kopke, of Oklahoma City:

MOTHER'S DAY

(By A. W. Kopke, Oklahoma Paper Co., Oklahoma City, U.S.A.)

Sunday, May 10, is Mother's Day. It should be for all a day of tender significance and happy memories. Time has perhaps scattered the snowy flakes on her brow and made furrows on her cheeks, but is she not beautiful now? The lips are thin, but these are the lips that have kissed many a hot tear from childish cheeks. The eye is dim, yet it glows with the soft radiance of holy love which can never fade. She will go farther and reach down lower for you than anyone else on earth.

She is an empty well into which you can pour all your heartaches and sorrows. Her arms are warmest when you are sad or hurt, and her hands are coolest on a fevered brow, when you are ill. She is that miracle God has created, who can make the whole world right, and peace descend upon your troubled soul. You cannot walk in a midnight haunt where she cannot see you; you cannot enter a prison whose bars will keep her out, you cannot mount a scaffold too high for her to reach, that she may kiss you and bless you in evidence of her deathless love. When the world shall despise and forsake you; when it leaves you by the wayside unnoticed, she will gather you up in her feeble arms and take you home.

For:

"The greatest battles ever fought,
Need I tell you where and when?
In history books you'll find them not,
For they are fought by the mothers of men."

So, if she lives, go and see her, or send her a telegram, a greeting card, or a litle gift. She will love you for your thoughtfulness and it will bring tears of joy to her faded cheeks. If she has gone to her eternal reward, then may the chimes of memory bring back to you, soft peals of the sweet, tender melodies of her lullaby, in those happy bygone days, when as a little child, you were cradled to sleep on her loving breast.

All honor then to the mothers of America on this day so fittingly set aside as Mother's Day.

Berlin: Brandt Versus Ulbricht

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. COHELAN. Mr. Speaker, in seeking to further understand the nature of the situation in Berlin, we can view the problem in terms of the two key men on the scene, Walter Ulbricht, boss of the East German Communist Party, and Willy Brandt, mayor of West Berlin, as C. L. Sulzberger has done in his article in the May 4 edition of the New York Times. I request that Mr. Sulzberger's analysis of what he describes as an "uncomfortable contest" be included in the RECORD for the consideration of all Members of Congress:

THE COCKS IN THE BERLIN COCKPIT

(By C. L. Sulzberger)

EAST BERLIN, May 3.—Divided Berlin must remain the world's most dangerous cockpit as long as Germany stays divided and, since reunification still lies far off, this former capital has accustomed itself to permanent cold war. Here the power blocs clash head on and each side recognizes that if one or the other yields, the global strategic balance will be changed.

Nobody is better aware of this than the two cocks in the cockpit who symbolize the East-West conflict. These two cocks are Walter Ulbricht, boss of the East German Communist Party and therefore of East Germany and East Berlin, and Willy Brandt, mayor of beleaguered West Berlin.

AN INTERESTING PAIR

The pair are interesting representatives of their respective systems. Brandt, a burly, 45-year-old Social Democrat from a Baltic worker's family, with open face and frank way of talking, seems to typify the new democracy established in the West and hoping one day to govern all Germany up to the Polish border.

He is a realist and a fighter. He knows that for the present his is but a holding operation; that the political existence of the 2 million Berliners for whom he speaks is protected only by a tripwire allied garrison and the determination of those Allies to fight if their forces are interfered with. Brandt, a refugee from Hitler, was a Norwegian citizen when he returned to Berlin after the war. He gave up this protection to live in the cockpit and join the fight in which he is now a leader.

THE CONTENDER IN EAST

Ulbricht, the eastern code, is in appearance a bantam: short, a generation older, with wagging beard and rimless glasses slightly masking his expression; given to oratory and a bumptious manner even in informal conversation. He appears less reposed and more overconfident than Brandt, relying, it would seem, upon his Soviet masters and the geographical advantages of his situation.

Like Brandt, Ulbricht is from a workingman's family. For decades a party functionary, he too lived out the Hitler years abroad, in Russia. He too returned to Berlin with a foreign passport—Soviet.

Ulbricht is skillfully pressing for what would superficially appear to be perhaps relatively minor gains. But he is shrewd enough to know that if any of these is achieved, all Berlin and eventually all Germany may fall to communism. He makes a great show of reasonableness. He wants Western diplomatic recognition of his government just as Moscow has recognized Bonn. He wants nuclear weapons banned from both Germanys and a peace treaty between them and the big-four powers. And he wants to demilitarize East and West Berlin.

THE MEANING OF DEMANDS

Such demilitarization means, of course, withdrawal of all allied token forces. Ulbricht pledges that West Berlin's security and independence would be honored and could be insured either by the big four, by the U.N. or by both. But Ulbricht knows that if these concessions are allowed the heart will go out of Brandt's resistance.

Ulbricht's cockfighting tactic is to peck about slyly looking for small practical triumphs any of which would bring an ultimate strategic victory. Brandt is aware of this. He is adamant and unyielding. He knows there can, in fact, be no retreat for hemmed-in West Berlin. He knows if the allies agree even to reduce their minimal garrisons, every German will interpret this as the beginning of the end.

BRANDT'S STAND IN WEST

Brandt said he is not opposed to all changes in the uncomfortable administration of his Berlin. But if, for example, the U.N. is brought into the picture, its agents must supervise both sectors of the city. And they can never replace the Western garrison. For West Berlin lives only under the umbrella of fear—communism's fear that if it acts against the Allied battalions, world war III will come.

This is an uncomfortable contest. Here in the East, Ulbricht has masses of room for maneuver. He can strut all around the restricted circle in which Brandt is perforce confined. But Brandt has behind him the astounding resolute support of the people who freely elected him. He is armed by an inner conviction of justice. And he knows that as long as the West is with him, Ulbricht dare not try for a mortal blow.

Poland, Its Constitution, and the United States

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. McDOWELL. Mr. Speaker, Sunday I had the honor to meet a member

of the Lublin Polish Government who was imprisoned by the Russians at the end of World War II for an extended period of time. After meeting this gentleman, Mr. Zbigniew Stypulkowski, I was given the opportunity to address a group of Americans of Polish descent as they assembled to celebrate the 168th anniversary of the Polish Constitution of May 3.

Since the ideas promulgated in the address were well received, I feel they represent some of the deep-seated feelings which Polish people hold in regard to the United States and its role in alleviating the situation in which Poland finds itself today. Furthermore, the address expresses a view on this pertinent question of U.S. foreign aid, and more specifically on the mutual security program. As a result, I feel it proper to bring these ideas to the attention of my colleagues.

The Council of the Polish Societies in the State of Delaware, and the Delaware Division of the Polish American Congress passed, last evening at their celebration, a resolution treating certain immediate problems of foreign policy. These groups have requested me to put their resolution before the Congress as an extension of remarks.

Therefore, I, under unanimous consent, introduce the following material to be printed as an extension of remarks in the CONGRESSIONAL RECORD:

ADDRESS BY HON. HARRIS B. MCDOWELL, JR., ON THE OCCASION OF POLISH CONSTITUTION DAY

I suppose that you people get tired of listening to speeches which start with "good evening ladies and gentlemen, I am very happy to have this opportunity to"—and so on. But the fact is, I am happy to be here, and more than a little proud that you did me the honor of inviting me.

I know that today is a special kind of day for you and that it must be a day which you meet with mixed emotions, for you are celebrating the establishment of great freedom in Poland, yet Poland is without that freedom today.

And, for the rest of us who are not Polish or of Polish extraction, this 16th anniversary of the Polish Constitution of May 3 has special significance too, for it very pointedly brings to our attention the struggle of the Polish people to maintain a degree of independence.

Poland is today waging a desperate fight to establish a nation embodying the principles of democracy, the principles put forth in the May 3 Constitution.

In that document, the Polish nation, like the United States, sees not only the text of the constitution articles, but the realization of certain fundamental concepts governing the relationship between man and his state.

The May 3 Constitution accepted the principle of the sovereignty of nations, that nations, simply because they are nations have certain rights, rights to conduct their own internal affairs, rights to be free from being trampled by other countries which are land hungry and power hungry.

And on the other side of these rights, Poland realized that there were duties to treat each country with respect, to accept the principles of international law, and to infringe upon none of the rights of other countries.

That document was based upon a fundamental belief in the dignity of each human being. "All power in civil society," states the constitution, "is derived from the will of the people." Religious freedom was but one of the basic rights of man which that constitution respected. It even encouraged a system of national education so that the population could be trained and informed enough to continue Poland's reforming Government. In fact, the 4-year congress, from 1788–1792, devoted itself almost entirely to educational and other reforms for the purpose of making the lives of the peasantry and the urban and middle classes a better life to lead—a life more in line with man's inherent dignity.

Prominent representatives of the democratic states praised the May 3 Constitution. It meant true freedom for Polish peoples, they said, and showed that Poland was far ahead of many European countries in understanding democracy and the ways to establish a truly free system.

But, Poland was not in a geographical position in which she could quietly finish the work which the constitution had started. Her neighbors, Germany on the west, Russia on the east, were determined that Poland would not live in peaceful independence. When the Molotov-Ribbentrop agreement was signed, making allies of Germany and Russia, and the Western Powers watched, expressing their concern but doing nothing else, a shadow of fear crept over Poland, fear which was changed to horror when the armies of Adolph Hitler began their devastating march in 1939.

There are no people who paid more dearly for the Second World War, and, when the war was over, when the West was sure that at last the peoples of Europe could be free in peaceful independence, Poland continued to pay and is paying now. Only the names of whom they pay are different—now it is Khrushchev instead of Hitler.

The political and moral oppression and the economic misrule and exploitation by the regime, obviously subservient to Moscow resulted in the Poznan revolt of June 1956, and that revolt forced the Communists to make concessions and to liberalize the regime headed by Gomulka, the first secretary of the party.

Moscow, fearing repercussions in the other captive nations, protested against making any concessions to Poland, but in the showdown in Warsaw in October 1956 Khrushchev, who had personally flown to quench the fire, had to give way lest an attempt at his usual brutal oppression lead to disastrous results for himself and the Russians. Poland had challenged Khrushchev, and Khrushchev's position and policies. He, of course, was afraid for no one but himself and the threat to his leadership.

Among the gains won by the Polish people was the regime's new policy toward the church, which again permitted religious teaching in schools. There were other concessions too, which led to the liquidation of the collective farms so detested by the farmers. There was some relaxation of censorship which permitted greater freedom of the press, although criticism has been tempered by the common knowledge that Soviet Russia would not permit the installation of a non-Communist regime. Then too there was cessation of terror by the security police. Although these achievements by no means restored the full enjoyment of human rights, they were none the less, important.

But, as the Communist Party regained control of the situation, the improvements were one by one taken away. Developments in the course of 1958 have been marked by intensified repression of the people, a moving backward to the completely totalitarian state which existed at the time of the revolt. This retreat from the gains of October is particularly evident in regard to worker's rights and church state relations. Even worse, there are many signs that the gains of October are to be further reduced. For several months, a ruthless press campaign was conducted against the church and against any type of religion in general. The minister of education of August 4, 1958, forbade religious instruction in state school by members of religious orders and congregations. On August 9, 1958, the Catholic hierarchy lodged a protest, calling the order an unconstitutional violation of the basic church state agreement. Russia and its Communist Parties everywhere, however, do not know what unconstitutional means. Most everything Russia has done since its own revolution in 1917 is unconstitutional.

Recent statements by leading party members indicate that collective farms are to be reinstated. Gomulka himself stated on September 7, 1958; "the only correct road must in the long run lead to the collectivisation of Polish agriculture."

There has been no genuine freedom of opinion in Poland since the loss of independence, and even the freedom of criticism which Gomulka announced at the eighth plenum in 1956 lasted less than a year. Censorship has been reestablished. Many papers have been banned, including the outspoken organ of the young Communist intellectuals, Pro Prostu; party control was increased over newspapers and the campaign against the more independent newspapermen and writers was proclaimed by the head of the party propaganda machine. Today the press and other media of information are again becoming as subservient to the party and the regime as before October 1956. They, of course, have no choice. And underlying this censorship, this total inability to speak, think and say what one wants, is the fact that increasingly, the regime in Poland is resuming the traditional Communist pattern of violating and denying the basic human rights.

I know it is not a pretty picture which I have painted, and you probably know more about how ugly that picture is, than I. But I firmly believe that the situation is not without hope. I believe that we can contribute to the formation of a free Poland based on the principles of the May 3 constitution. I refuse to believe that Russia, a nation born of hatred, based upon an impossible economic system, and dedicated to defiling the dignity of man, can long continue to spread its wickedness throughout the world. I paraphrase the words of Lincoln, though he was talking of something altogether different, and say: "A nation, so conceived and so dedicated cannot long endure." It cannot be forever the power ruling half the world—it cannot because we will not let it.

You may be thinking, that the U.S. Government is a little late in its concern for Poland—in its concern for all of Eastern Europe, and you very well may resent the fact that this country and the Western democracies have been so slow in meeting the Russian challenge. If you do resent this, you do so justifiably for the United States must hang its head in shame for some of the mistakes it has made in Eastern Europe.

I know these mistakes were not deliberate. They resulted from misunderstanding and ignorance. First of all, the United States grew up faster than it realized. This country was so naive at the end of the First World War, that it did not even realize that it was the world's greatest power, and that the Treaty of Versailles could not be workable without its signature. At the end of the Second World War, the United States trusted Russia, to a certain extent. History has proven that trusting Russia was a mistake, but who at that time knew it was a mistake? Who had a choice to do anything other than trust Russia? Hindsight makes analysis extremely easy; foresight is another thing altogether.

Admittedly, though, this country, when it saw what was happening east of the Oder-Neisse, should have done more to help these oppressed peoples. More aid should have gone to Poland; and to Hungary. But we

must remember one thing: the United States is a democracy. It can't maneuver quickly as some would have it do. Many groups have influence and representation in the Congress and in electing the President, and unfortunnately, some of those groups have felt very strongly that this country should not give foreign aid to countries under Communist influence. These will give aid only with strings attached to it.

Happily, the United States is moving away from this philosophy. The people in this country are slowly beginning to realize that the only way to keep the Communist satellites from eternally being in Russia's orbit, is to aid them financially and technically. Gradually, through such assistance, these countries become more sound and stable economically, and less dependent upon Russia, economically and politically. This is what happened in Yugoslavia and the well-being of the free world depends upon many more of the same instance.

So, slowly, the traditional opposition to extending aid to Communist countries has been, and is being, whittled down. On June 7, 1957, an economic agreement was concluded with Poland. The agreement consisted of two parts, the first of which extended $30 million credit to Poland from funds made available under the Mutual Security Act. This loan will be paid back over a 20-year period. The second part of the agreement provided for the sale of $18.9 million agricultural commodities under Public Law 480. On August 14, 1957, an amended agreement was signed providing for an additional $46.1 million of surplus agricultural commodities under Public Law 480. Thus, the total dollar value for surplus agricultural goods sold to Poland by the United States was $65 million.

On February 15, 1958, the Department of State announced the conclusion of another economic agreement with Poland. The first part of that agreement made available to Poland $25 million in credit in order that Poland might buy machinery and equipment for food processing, and for the leather, textile, and metal industries, medical equipment, and other essentials. The second part of this agreement provided for the sale to Poland of $73 million worth of surplus agricultural commodities. This means Poland under the 1957 and 1958 agreements has received $57.7 million worth of wheat, $53.1 million in cotton, $6 million in soybeans, $9.9 million worth of soybean oil, and cottonseed oil, fats, and oils amounting to $3.6 million, a total of $10.6 million in barley, corn, and grain sorghum, and $3.3 million worth of nonfat dry milk. Then, too, in 1958 an amount up to $200,000 for ocean freight charges on shipment of voluntary contribution for relief in Poland was made available under the Mutual Security Act.

To recapitulate then, in 1957 the United States loaned in dollars or made available to Poland in the form of surplus agricultural commodities, the total of $95 million. In 1958 the total was $98 million. Furthermore, under the June 1957 agreement, the United States took the following actions:

1. The Treasury Department removed the prohibitions on the transmittal of Treasury checks and remittance in payment of social security, veterans, and other benefits under U.S. laws to Polish residents.

2. The Department of Agriculture announced that the Commodity Credit Corporation is prepared to consider applications for credit arrangements in connection with export sales of Commodity Credit Corporation commodities for shipment or transportation to Poland.

3. The Department of Commerce will amend export control regulations designed to simplify licensing procedures for U.S. exports to Poland.

Essentially, this is what the United States has done in the way of offering assistance to the oppressed people of Poland.

We have not done enough but I have great hopes, that we may adopt a more realistic policy toward our foreign aid, which in my mind, is the most feasible way by which we can defeat the Red menace. In my work on the Foreign Affairs Committee, it has been heartening to see that there is a real attempt on the part of some Government officials, Senators and Congressmen, to break down the traditional barrier against giving foreign aid to Communist influenced countries.

The people of Poland always have manifested strong attachment to the Western World and to the democratic way of life which we in the West enjoy. It is so important that this flame of freedom burning in the hearts of the freedom loving Polish people not be extinguished. There is no freedom in Poland today, but the spirit of freedom is not dead. Hitler could not defeat the Polish spirit, neither can Khrushchev.

We of the United States can aid Poland. We can help her to stand on her own feet, separate and independent from Russia. But just as we must give material aid, we can and must encourage, nourish that spark of freedom which still burns within the Polish people. They are looking to us for encouragement and reassurance that they are not forgotten by the free world. We must assure them that they are not abandoned, and that we will assist them in keeping their famed Constitution from being appropriated as an instrument for Communist exploitation. The Constitution of May 3 is a source of noble pride to all Polish peoples; in these hours of difficulty and sorrow it is a consolation—a signpost pointing to the future.

The world owes Poland that freedom which the Constitution embodies. There is no nation, no group of people, which has paid more dearly for a chance to be free.

It is therefore very important that the United States give economic aid and moral support to the Polish nation; the future of the whole Western World depends greatly upon the establishment of freedom in Poland and the other eastern European countries.

We, Americans of Polish descent, assembled at Modjeska Hall, Wilmington, Del., this 3d day of May, A.D. 1959, under the auspices of the Council of the Polish Societies and Clubs in the State of Delaware, and of the Delaware division of the Polish American Congress, to commemorate on this 168th anniversary of the adoption of the Polish Constitution of May 3, to pay homage to the memory of Polish patriots who wrote the Polish Constitution of May 3, and who were responsible for its adoption; and

Whereas the world lives today under the threat of war for Berlin, and enslavement of central Europe by Soviet Russia, and the fear or revival of German territorial appetites; and

Whereas the enslavement of central European nations by Soviet Russia, perpetually fosters cold war paralyzing the will and strength of the Western nations; and

Whereas, while the rights of nations are taken for granted, all over the world nations and empires collapse or are transformed, and the West still accept the subjection of the nations of central Europe; and

Whereas the lasting disengagements between East and West will only be achieved by bringing into being a wide wall of free central European nations between Germany and Russia; and

Whereas, until the nations of central Europe are able to live their independent lives in accordance with their desires and traditions, the threat of war will hang over the world; and

Whereas no half measures reducing the forces in Germany or creating corridors on either side of Berlin will remove the main sources of disturbance. On the contrary, they might increase them by creating artificial boundaries and new points of friction bringing about a very doubtful contribution to peace; and

Whereas the Soviets who have broken every agreement and treaty they have ever made, who have violated their pledges for free elections in Poland and in other enslaved nations, their sole aim now being is to get American recognition for the status quo of those enslaved nations;

Resolved, That we, assembled at this meeting commemorating the 168th anniversary of the adoption of the Polish Constitution of May 3, express that before the proposed conference of the Foreign Ministers of Great Britain, France, Soviet Union, and the United States, the West must establish what it is going to require of Russia and not merely what it will defend, otherwise the negotiations will end at least in the maintenance of the status quo; further

Resolved, The question of Berlin should be considered only as a part of the wider question of the future of Germany and of European security as a whole, which is bound up with the liberation of central Europe; further

Resolved, The main real guarantee against Germany is the definite recognition by the Western Powers of her present eastern frontier on the Oder and Western Neisse, depriving her of her assault gate to the east and averting the rebirth of Prussia, which drew its aggressive strength largely from lands taken from Poland over the centuries, regaining of this land is not regarded as a compensation for the loss of the eastern Poland's territories, but as a return on the old part of Poland enabled by the defeat of Germany in the World War II to which Germany launched the world in association with Russia in 1939; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, Department of State, Representatives and both Senators representing the State of Delaware in the U.S. Congress.

CHARLES L. PARUSZEWSKI,
Chairman.

Attest:

VINCENT J. KOWALEWSKI,
Secretary.

On Dealing With Russia—An Inside View

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I am pleased to include an excerpt from an article by the Honorable Dean Acheson, former Secretary of State, that appeared in the New York Times magazine of April 12, 1959, and which excerpt appears in the April 27, 1959, issue of U.S. News & World Report. There is no one better qualified to discuss foreign affairs, based upon his knowledge and experience, than former Secretary of State Acheson. The excerpt of his New York Times magazine article of April 12 is very timely and appropriate at this time, and worthy of profound consideration by all persons interested in our foreign affairs, and par-

ticularly those charged with the responsibility of forming our foreign policy and carrying the same out:

ON DEALING WITH RUSSIA—AN INSIDE VIEW

(By Dean Acheson, former Secretary of State)

There is a good deal of folklore about on the subject of negotiating with the Russians. At the moment, the British, with the authority of those who have just been there, are giving currency to some of its more dubious maxims.

It may be wise to pause and examine some of the observations being put out. All in all, they cover a pretty broad field. We are told, for instance, that, since only Mr. Khrushchev can make decisions for the Russian Government, meetings at lower levels are foredoomed to failure; therefore, on to the summit.

Again, that the tragic experience of Geneva in 1955 came from a grandstand conference, and that this summer's meeting should be held in private.

Another suggestion is to hold a series of summit conferences at which the heads of government take up one matter after another, decide them, and let the lower echelons work out the details.

So far as substance is concerned, Mr. Drew Middleton of the Times has expressed the British view in somewhat euphemistic terms. The British would seek, he says, stronger guarantees for Berlin in exchange for a move gradually to meet the Soviet desire for a stabilization of the situation in Eastern Europe. One of the steps in this move, so the London Observer reports, is to be a freezing of East and West forces or a ceiling on them in a zone exending either side of the Iron Curtain and beyond Germany.

Is it true that the only way to work anything out with the Soviet Government is by conference with the top man and his staff?

The answer is that it depends on what one is trying to work out. Matters as complex as the concerting of military and supply operations on a vast scale during a world war did require this method. Yet the method, as method, contributed nothing to real agreement on the solution of eastern European questions.

On the other hand, in 1949, arrangements for the ending of the blockade of Berlin were agreed to without meetings at any level. It depends on what the Russians find it in their interests to do.

Let us have a closer look at the events of 1949. After the coup of Czechoslovakia, Stalin had decided, in Khrushchev's later phrase, to cut out the "cancer" of Berlin. So, following the reform of West German currency, a serious problem for East Germany, the blockade of Berlin began in 1948. The United States responded with the airlift—which probably would not work today—and by a counterblockade of East Germany. The Russians became the losers both in Germany and in their general propaganda position.

Then, at the end of January 1949 the Soviet Government published answers by Stalin to questions submitted by a newspaper correspondent.

One of these questions and its answer were most interesting. The question was whether the Soviet Government would raise the blockade if the Western Powers agreed to postpone the formation of a West German state pending a meeting of foreign ministers to consider the problem of Germany as a whole. The answer given to this is worth quoting in full:

"Provided the United States of America, Great Britain, and France observe the conditions set forth in the third question, the Soviet Government sees no obstacles to lifting the transport restrictions on the understanding, however, that transport and trade restrictions introduced by the three powers should be lifted simultaneously."

Officers in the State Department believe that this might be a signal that the Soviet Government was ready to discuss an end to the blockade and counterblockade. It was decided that the Secretary of State, in a press conference, should give a signal back.

This took the form of a bland discussion of the questions and answers in the Stalin interview. No great importance was attributed to them. It was pointed out that the formation of a West German Government could hardly be a cause of the blockade since it had not been thought of when the blockade was imposed and was not imminent at the time. Certainly the measures taken in response to the blockade would end when it did. Finally, there were these two paragraphs:

"There are many ways in which a serious proposal by the Soviet Government to restore normal interzonal communications and communications with and within Berlin could be made. All channels are open for any suggestions to that end. The United States, together with the other Western occupying powers, would, of course, consider carefully any proposal made to solve the Berlin problem consistent with their rights, their duties, their obligations as occupying powers.

"As I say, all of the normal channels are open. I hope you will not take it amiss if I point out that if I on my part were seeking to give assurance of seriousness of purpose, I would choose some other channel than the channel of a press interview."

At the same time, a senior diplomatic officer attending a United Nations meeting was instructed to say quite casually to a senior Russian officer at the same meeting that he had been interested in the answers recently in the press and wondered whether they suggested anything more than the strict words of the text. The Russian officer had no information; but if he learned anything he would pass it on. In a week he did, equally casually. The answer had been very carefully prepared in Moscow. If the American officer had any specific question the Russian would do his best to get an answer.

WHEN SECRECY PAID OFF

Thus began a protracted and highly secret negotiation. The very fact that secrecy was preserved was to each of the parties a sign of the good faith of the other. In the end it was agreed that the blockade measures on both sides would be ended, a Foreign Ministers' meeting convened on the German problem, and no obligation incurred to postpone action on a West German Government, since there was plenty of time for the meeting to be held before, in the normal course of events, any further steps would be taken. As the negotiations finished, other parties were brought in; they approved the plan and joined in the announcement.

The conference of Foreign Ministers which followed took weeks and accomplished almost nothing. It was an exercise in propaganda over Germany. The Russians had exhausted their capacity for adjustment, and further progress must await the development of new realities.

Now, let us bring all this into focus on today's problems.

If the Russians believe, which I do not think they do, that their interests would be served by liquidating their offensive against Berlin, they are capable of doing this without a conference at the summit or elsewhere. They might demand, as a price, a conference of some sort to put the limelight of propaganda on what they might think was a new soft spot. But this would follow their decision and not be its cause.

Today, however, they do not wish to end their offensive against Berlin; they want to push it to success. The conference which they seek is designed not to be a cover for their yielding but for the yielding of the West.

PRIVATE CONFERENCES: IMPOSSIBLE

This brings us to the second of the illusions we have mentioned about negotiating with the Russians. This is contained within the belief that it is possible to have "private" and not "grandstand" conferences of heads of governments.

President Eisenhower does not share this illusion. "It is rather difficult," he said recently, "to visualize such a thing. If you meet with a group of world leaders, it is rather hard to keep the spotlight off of it." And how does one talk informally with batteries of interpreters and recorders and all that sort of thing? It would almost inevitably change, I think, into something rather formal.

The illusion, however, goes deeper than the belief that it is possible to keep these meetings private and out of the spotlight. It goes to a misconception of the role of these meetings in the Russians' strategy of negotiations.

The purpose of these meetings to them is not, through discussion of a subject, to reach a resolution of it or an accommodation regarding it. These meetings are acts in themselves which are intended to affect the relative positions of the parties.

The Soviets negotiate by acts and not by debate, offer, and counteroffer. Their purpose may be to separate allies, or to undermine governments with their people, or to win over uncommitted peoples. Or it may be, as in the tragic experience of Geneva in 1955, to bring a sense of relaxation, good will and security, before some energetic offensive such as Soviet intervention in the Middle East.

Publicity is the lifeblood of such an operation. It is not merely, as President Eisenhower thinks, that a meeting of world leaders attracts the spotlight. It is that the purposes of the Russian leaders demand the spotlight, for the spotlight makes an act out of a speech.

Here, too, the Soviet leaders have built-in advantage, for the spotlight shines brilliantly throughout the free world and stops at the Iron Curtain which rings their own. Their opponents and all who may support or sympathize with them are open and eager to be worked upon. But the Communist people are immune from any counteroffensive, and hear only what their rulers wish them to hear. The dice are loaded in this game.

The conclusion is not, of course, that the Western Powers must not go to these conferences. But it is an illusion to expect much from them, or to identify them with the process of negotiation, in the usual sense of the word. They should be recognized for what they are: dangerous and highly mobile adversary operations in which a cumbersome four-party control, matched against the fingertip variety, will do pretty well to score a tie.

The most elementary precautions require that the four pilots have a pretty concerted view of the hazards of the operation, the objective of their opponent, and both the strategy and tactics they may jointly have to follow.

As things are, one is not so sure that some bad collisions are not inevitable. Take, particularly, the idea of a move gradually to meet the Soviet desire for a stabilization of the situation in Eastern Europe and a freezing of East and West forces * * * in a zone extending either side of the Iron Curtain and beyond Germany.

This combination of words would not win a prize for clarity. But, if one might hazard an interpretation, they seem to mean that the West would accept indefinite Soviet domination of Eastern Europe and insure it by agreeing to the status quo of military

power from eastern Poland to—and, perhaps, including France.

This status quo would give preponderant power to the Soviet bloc. Doubtless there are some who would defend such a policy as a realistic evaluation of, and adjustment to, the ratio of power in Europe. They would do well to pause and think back.

Just 22 years ago another British Prime Minister made a very careful, well thought-out, not unintelligent appraisal of these factors and acted upon it quite coolly, and deliberately. Let us turn to Mr. Sebastian Haffner's description of the 1937 situation in the London Observer of September 28, 1958:

"Now Germany had, without meeting serious opposition, rearmed again and was making territorial demands backed by real power. Dealing with these demands was no longer a question of calling Hitler's bluff The question to be faced was whether to resist Germany at the very real risk of another war or whether to accept the new balance of power and adjust European frontiers and alliances accordingly, in favor of Germany and an agreement with her.

"Mr. Chamberlain, the new British Prime Minister, faced this question squarely and took his decision in favor of the second alternative.

"This scheme amounted, in effect, to the renegotiation, among the four great powers, of a new European peace settlement without a preceding renewal of war. The new settlement was to be based on the existing true balance of power, which meant a revision of the 1919 treaties in favor of Germany and, to a lesser extent, of Italy. Germany and Italy were to be made, by territorial concessions and extensions of their spheres of influence, contented and saturated powers like France and Britain; the new territorial settlement was to be underwritten and guaranteed by all four powers; and it was then to be capped by the establishment of a new four-power concert of Europe, permanent mutual consultation, reentry of Germany and Italy into the League of Nations, and disarmament.

"If this scheme—which, incidentally, was the last essay in world leadership on the part of Britain—succeeded, it meant peace for at least a generation, and also, for the same time, the preservation of Europe's global preponderance and the postponement of the world revolution which the Second World War was to unleash."

HITLER AND KHRUSHCHEV—A PARALLEL

The essence of the scheme was "to anticipate public German demands by private offers and to take and maintain the initiative." And this is where it failed. In the first place, Hitler did not want to be given what he demanded; he wanted to take it. In the second place, his demands came too fast to be satisfied by orderly processes of negotiation. The pace became more and more breathless until Hitler tired of the farce and moved against Poland.

The proposals mentioned above strike one as substantially similar to Mr. Chamberlain's scheme, but the parallel is not wholly complete. Khrushchev has no prejudice against being given what he wants. He is also willing to move in a more dignified way in receiving what Hitler before him had wanted—the domination of Europe—just so long as the West does not dillydally about it. He knows, or believes he does, the direction in which power ratios are moving and wants European relations to the Soviet Union and the United States adjusted accordingly.

One of the morals of this is that, while dealings with the Soviet Union are in some respects unique, in their fundamentals they are not. Another moral is that, in dealing with the Soviet Union, the prime requisite is to be honest with ourselves. Negotiation and flexibility are very fine words, but if we really mean retreat, if we mean a move gradually to meet the Soviet desire for the stabilization of the situation in Eastern Europe and a freeze of forces in Central Europe, it would be much better to be frank with ourselves.

For then we would all know that what we are proposing to do is to neutralize Western Germany, and to make impossible any defensive force in Western Europe except the threat of nuclear retaliation from America. With the growth of Russian nuclear power to a position of practical equality, this threat loses its credibility.

THE FACTS TO BE FACED

But the chief moral of all is that we should realize the facts and act upon them. One such fact is that, whether we like it or not, we are on a moving belt which is going to the summit. The question is no longer whether to go, but when, and what to do when we get there.

Another such fact is that at this conference what transpires—the proposals and counterproposals, the moves and countermoves—will be, like the shadows on the wall of Plato's cave, reflections from the real world outside.

If, as is the fact, we are failing to keep pace, as we could, with the rapid developments in the field of nuclear power, and have actually discarded all the increase in our conventional power created during the Korean crisis, our shadow on the conference table becomes pallid and emaciated.

If, with determined energy, we reverse these catastrophic tendencies; if, in addition, we increase our strength in Europe as—so we are told—the supreme commander has urged, then our shadow becomes more solid, because the strength of our position has become so.

We can and should be ready, as we have been on occasions in the past, to use ingenuity in devising ways to give the Soviet Union reasonable assurance of its own security and demonstrate our willingness to remove causes of anxiety, if any there really are. The negotiations at Geneva over the past years have had this purpose.

But one thing we should never do. That is to undermine the security of Western Europe—and with it the best hope we have for avoiding resort to nuclear war—by destroying the possibility of developing such a strong defensive position on the ground in Europe that any aggressor contemplating a move against it must contemplate an attack on so large a scale that nuclear war would almost certainly result. Only such a situation makes strategic nuclear power a credible threat and an effective deterrent.

It is because the Russian purpose in disturbing the status quo in Berlin seems—as already pointed out—clearly directed to making any military strength in Europe impossible, that one can hardly hope for much more from the conference than a return to the negotiations interrupted by the move against Berlin, and an end to that move. But one not given to pessimism may with reason fear that the Russian purpose and some of the proposals of our ally discussed here could bring disaster.

The CBR Threat

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. SIKES. Mr. Speaker, I want to take this opportunity to call to the attention of my colleagues the column by Monte Bourjaily, Jr., appearing in the May 2, 1959, issue of Army Times entitled "The CBR Threat." I feel that the information contained in this article is of utmost importance and I am sure that the subject of Mr. Bourjaily's column will be of interest to the Congress. I take pleasure in having it printed in the CONGRESSIONAL RECORD:

THE CBR THREAT

(By Monte Bourjaily, Jr.)

A favorite target of those opposed to spending money on defenses, passive, and active, has been civil defense. They argue that the purpose of civil defense is to give one-time protection of a civilian community against thermonuclear attack. This they say would cost tens of billions of dollars which would be better spent building retaliatory striking power, able to react in counterpunching style, at the first threat of attack against us.

Such a counterattack, they say, would knock out any enemy ability to further destroy civilian communities, thus making useless the vast systems of bunkers, radars, antimissile missile launching sites, and so forth, that passive and active defenses are made of.

But is it true that the only threat to civilian communities is a thermonuclear attack in which planes or missiles carry the warhead?

Maj. Gen. Marshall Stubbs, the Army's chief chemical officer, doesn't think so.

The Russians, he says, are fully aware of the capabilities of chemical, bacteriological, and radiological (CBR) weapons. Against civilian communities they make an ideal weapon system. They destroy or enervate the civilian population without destroying the plants and equipment that would be essential to (1) support a long ground war and (2) produce the things that are essential to life after the war is over.

For this reasons, says General Stubbs, "We must maintain a strong civil defense."

Against CBR attack, such a civil defense system need not be the expensive, bunker (or deep shelter) construction that critics of passive defense say it is. In fact, a program of information and education is the most effective method of building such a defense.

Certainly some equipment is needed. Impermeable clothing, gas masks, stocks of medicines, immunizations against the most likely diseases, increased public health activities, cleanliness in homes and industrial plants and offices, all costing money, are a part of any defense effort against CBR.

But to make people conscious of the potentials and possibilities of CBR attack and defense requires publicity. People must know what to expect and how to defend against it.

This creates a major problem. Because, for some reason, high officials in the Defense Department and the State Department have made it a national policy to prevent discussion of CBR.

CBR warfare has been painted as so horrible that it has become uncivilized to discuss it. Admission that we have CBR weapons is almost forbidden. Claims that defenses against CBR exist are also taboo.

But to defend against CBR, people must know what it is, how individual agents work, what the specific steps are that can be taken against them.

Equally important, because there are documents in which some defenses are described, men who are respected must be able to discuss CBR freely before most people will listen to them.

Big bangs, high-speed planes, giant battleships, the mysteries of submarines and missiles—all these have more "sex appeal" than an aerosol cloud, mixed with normal cloud formation, secretly released at a point where weather science says it will drift over a target and start disease.

Against the attack at its initiation there is little defense. Even the attack itself might never be recognized. It would appear as an epidemic of unknown source. Until a series of such epidemics developed and the statistics showed that they were not of national origin, there would be no way to know that the Nation was under attack.

Bacteriological and chemical attack is cheap, easy to deliver, hard to defend against. And neither the attacker nor the defense, except for the fear of their mystery, makes good copy.

The greatest enemy of fear is knowledge. In the CBR field, secrecy is the defender of ignorance, the producer of fear. It may not conform to the publicity consciousness of certain people, but it apepars to me that the Nation's defenses would be strengthened if this secrecy were removed and if some of the headline hunters would put self-advancement aside to advance knowledge in this unspectacular area.

What Is Wrong With Unions?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a most interesting letter I received from a union member from my home State. This man, quite understandably, wishes to remain anonymous:

DEAR SIRS: In submitting this my first contribution to your publication may I say that in being a member of the U.A.W. myself I am not antiunion but antiloafer in a sense that after seeing this type of behavior through the years I can only come to the conclusion that management and labor have slipped somewhere. Naturally I have to request that you do not disclose my identity should you decide to use my article.

Respectfully,

P.S.—The above remarks could also be used as you see fit and to conclude I can only say this. Where could a person go today and get paid for doing nothing?

WHAT IS WRONG WITH UNIONS?

DEAR SIRS: I have chosen the above title because of the fact that recently there has been a growing concern in this land of ours, and particularly in this State, of the recent recession and its accompanying unemployment.

Being employed in one of the largest automobile factories in Michigan for over 25 years I should like to reminisce a little and go back to the time of the last wartime period.

I can well remember assembly lines being so loaded with personnel, people were falling over each other to get out of each other's way. Restrooms were loaded at all hours, and one could witness any kind of pastime from playing cards to reading the daily newspapers.

Today it is different. Uncle Sam is not footing the bill, and there is a distinct show of retrenchment in the overall reduction of employees in all departments. Also there is a growing demand for more productivity. All of this is very difficult to accomplish after the bars have been let down too long.

The net result is we find union stewards and plant committeemen who have not worked in years resenting the implication that they should take off their coats and show a little interest in what they were hired for.

All of which brings me to this conclusion: Does management operate under a set of double standards in that they close their eyes to what the UAW stewards and plant committeemen do with their time and expect the rank-and-file to make up for this discrepancy?

Mr. Reuther and those who are so want to get America back to work would do well to think this over. If unionism is to continue its gains then it should commence to rid itself of the parasites from within. By this I mean the type of man when elected to office considers this as a free ticket to quit working. This man is no good to the company, to the union, or its members.

As a direct result of the union setup today we find skilled men looking for work, or otherwise doing work unsuited to them; in other words, round pegs in square holes. The big cry is seniority. Well, this is how it works: The more seniority you have the better it is for you, except (and here is where the rub comes in, viz, if you are an elected steward of the union it does not matter if you have a lot of seniority or a little, you can, if there should be a layoff, keep your job in preference to a worker with much more seniority).

What is wrong here? It means that a man who never saw the place until years after you have worked for the company can remain for years employed while you are thrown out on the street.

Election to office has meant nothing more than a free pass to get out of working, the excuse being that they are too busy with grievances to take care of the work assigned to them. This has worked a hardship, especially where a steward is a member of a small group and in his absence the others have to carry the load.

Mr. Reuther should be asked, and very bluntly, the following questions:

How long would he tolerate a condition of this kind in his own organization if he had to pay for it from his own payroll?

Why should a man with many years more seniority than his steward be out on the street in preference to a steward or plant committeeman who has less?

These things, and many more, are why more than one supervisory employee has said to me in the recent past that to try to enforce an order is folly and that they wish that they were of eligible retirement age so that they could get away from it all.

The Cold War: Facts, Myths, Consequences, and Cure

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, few men are better qualified to speak on international relations than Brig. Gen. Hugh B. Hester, who speaks on "The Cold War: Fact, Myths, Consequences, and Cure."

Not only has General Hester 34 years of military experience, preceding his retirement in 1951, but he has continued his part in public affairs by graduate study of international relations at the University of Pennsylvania. He has written numerous articles for many journals of comment and literature.

Under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD his comments on the cold war delivered last September to the United Electrical, Radio, and Machine Workers of America:

THE COLD WAR: FACTS, MYTHS, CONSEQUENCES, AND CURE

(An address delivered by Gen. Hugh B. Hester, retired, Wednesday, September 3, 1958, before the 23d international convention, United Electrical, Radio, and Machine Workers of America)

I work for peace, and I am delighted to be here because I think this is an audience that needs to hear the message that I have to give. While I realize that the subject that has been announced is "The Cold War: Facts, Myths, Consequences, and Cure," I am really going to talk about peace.

And while talking about peace I recognize that in many circles the word itself has become somewhat suspect. I deplore this but I recognize it. Nevertheless, I am going to talk about peace. And I am going to use one of the techniques that has been, in my opinion, used very much to the disadvantage of America.

It shouldn't be necessary for an officer that has spent more than 34 years in the Regular Army of his Nation, serving in every rank from that of second lieutenant to that of general officer, to have to come before any audience and to defend his patriotism. But that is one of the consequences of this cold war. And I am going to prove not only by my record but by association that I am entitled to talk to you as a patriotic American.

The President of the United States on April 19, 1953, shortly after he took office, said that: "Every gun that is made, every warship launched, every rocket fired signifies, in the final sense, a theft from those who hunger and are not fed, those who are cold and are not clothed. We pay for a single fighter plane with a half billion bushels of wheat. We pay for a single destroyer with new homes that could have housed more than 8,000 people * * * is there no other way this world can live?"

That was Dwight D. Eisenhower on April 19, 1953.

MacArthur—and I would like to read this directly from his speech on his 75th birthday in Los Angeles under the sponsorship of the American Legion; this is General MacArthur who had command of our forces in Australia and later in the Philippines and then took command of our occupation in Japan. I served under him for 3 years—he said, and I quote:

"But this very triumph of scientific annihilation—this very success of invention—has destroyed the possibility of war being a medium of practical settlement of international differences. The enormous destruction to both sides of closely matched opponents makes it impossible for the winner to translate it into anything but his own disaster."

I would like to underscore the word "disaster." He continued:

"War has become a Frankenstein to destroy both sides. No longer is it the weapon of adventure whereby a shortcut to international power and wealth—a place in the sun—can be gained. If you lose, you are annihilated. If you win, you stand only to lose. No longer does it possess the chance of the winner of the duel—it contains, rather, the germs of double suicide. Science has clearly outmoded it as feasible arbiter."

Perhaps the most distinguished field soldier that America has had in its long history is General of the Armies, Omar N. Bradley. I had the pleasure of serving with him in the Pentagon. At a Memorial Day exercise in Massachusetts in 1948 he said this and I quote:

"It is easy for those of us who are living to honor those who are dead for in doing so we can assuage our feeling of guilt for the dead.

"Wars can be prevented just as surely as they can be provoked, and we who fail to prevent them must share in the guilt for the dead."

He continued some years later at St. Albans Assembly in Washington (November 5, 1957) before the St. Albans Episcopal School, and he said the following which I shall read:

"The central problem of our time, as I view it, is how to employ human intelligence for the salvation of mankind. It is a problem we have put upon ourselves. For we have defiled our intellect by the creation of such scientific instruments of destruction that we are now in great danger of destroying ourselves."

Then he continued, "This irony can probably be compounded a few more years or perhaps even a few decades. Missiles will bring anti-missiles, and anti-missiles will bring anti-anti-missiles. But inevitably this whole electronic house of cards will reach a point where it can be constructed no higher."

And he concludes: "If we are going to save ourselves from the instruments of our own intellect, we had better soon get ourselves under control and begin making the world safe for living."

I submit, ladies and gentlemen, that puts me in pretty good company—the President of the United States, one of the distinguished soldiers of the World War MacArthur, and that great distinguished field soldier, Omar N. Bradley.

I cite these distinguished officers in connection with a story, if I may digress for a moment, of a young lawyer from my section of the country. And you may have recognized from my accent it is the South, but certainly not the Deep South; the Deep South that doesn't believe in the equality and the dignity of all men before all other men. I believe very deeply that all men are created equal in the eyes of God. This ought to be repeated again and again in America today.

He was the first lawyer in Granville County to graduate from Harvard Law School and he was pleading his case before the circuit court. He said some things that were pretty smart and some not so smart. It happened to be a matter of contract law under discussion and the judge said, "Mr. Ingram, you ought to assume that the court knows at least the elements of the law of contract. We know it must have consideration, legal purpose, and so forth." The young fellow smiled at the judge and said, "Your Honor, I made that assumption at the last court and lost my case." [Laughter and applause.] I no longer assume all will accept defense of peace as patriotic.

Since your president asumes that all of us belong to a kind of bureaucracy, unions and the army and all the rest, I feel somewhat at home. When I was invited up here by the president through one of his representatives and yours, I accepted with great pleasure and alacrity. The chap that asked me was Russ Nixon, with whom I had the pleasure of serving in Berlin in the early days of the Armistice.

But since that invitation was extended to me, the United States and the world have been brought twice to the brink of war. In the last 10 years we have been apparently moving from brink to brink to brink, to a point where a great many people refer to our Secretary of State as the Secretary of Brink of War.

Now, I promised to unload this wagon and I will do so promptly and let you ask some questions if the chairman will permit.

What are the facts about this cold war that you hear so much about in the press, over the radio and on the television? The fact is, ladies and gentlemen, there is nothing new about it.

This war, either hot or cold, between the United States and the U.S.S.R., has been going on since 1917, and it was a hot war from 1918 to 1920. We invaded Russia from three sides, Archangel, Vladivostok, and another point up near Archangel. Twelve other nations, former allies of Imperial Russia, did likewise. These powers, including the United States, then an associate power—we had not decided, at that time, that we wanted to belong to every conceivable alliance—so we were an associate power—but we participated in a complete blockade of what was then the Soviet Union, very greatly reduced from Czarist Russia as you may recall, for 1 year.

I am not prepared to say how many people's lives were lost because of that blockade. We do know that millions starved, but I am not prepared to say that they would have lived, all of them certainly, if there had been no blockade, I doubt that they would have because of the poor distribution system.

But when people tell you this is something new, I want to tell you it isn't and the cold war idea, ladies and gentlemen, is not a new idea: it started long, long before 1917. A cold war has been a part of every ideological struggle: The Crusades, the invasions of the Mohammedans; the struggle between the Catholics and Protestants. It has been an integral part of all religious wars and all imperial wars. And everything the Russians are saying about us today and everything that we are saying about the Russians, the Athenians said about the Spartans, the Romans about the Carthaginians, and if you want to go back further in history, 5,000 years ago, they were saying the same things about each other in China.

So there is nothing new about it. It is just another one of the instruments of conflict, including the present cold war.

But what has it cost you and me and every other American citizen? Since World War II we have spent approximately $500 billion for security. And I might add that in the opinion of the people with whom I talk in Washington and around the country, the United States today, after that expenditure, has less security than at any other time in her history.

It has reduced the purchasing power of the dollar that you are paid by 50 percent.

The great powers alone are spending over $100 billion annually. It is probably close to $120 billion, and that is estimated to be more than the annual income of two-thirds of the human race.

And I ask you, in all seriousness, how are you going to build schools, how are you going to build playgrounds, how are you going to build hospitals, and provide adequate medical care not only for these two-thirds of the human race but for your children and my children and our grandchildren?

I submit, ladies and gentlemen, even if it were possible to keep this enormous expenditure going without the catastrophe of war, it would not be possible for you to adequately educate, house, and clothe your children and it would be impossible to combat successfully this horrible thing that we call juvenile delinquency.

Down in Washington some pundit said, in discussing the subject of juvenile delinquency, when an adult acts like a child we call him silly; but when a child acts like an adult, we call him a juvenile delinquent.

And I submit that as we look at the facts that I have just presented to you about this cold war, that there is a great deal of substance in that pundit's statement.

One of the basic myths that we hear about this cold war is that the United States and the West were perfectly willing to cooperate at the end of the Second World War, but for Stalin intransigence.

Gentlemen, I submit from all the facts I have presented that this is not true. There has been no real effort on either side to reach a detenté, to make a cooperative effort—and I repeat either side. I want to make this very clear because most of the things I am going to say are going to be said about our side, not because I think it is any worse or as bad as the other, but I am talking to Americans who have an opportunity to take action. If I were making this speech in Russia, I would talk to the Russians about what they are doing and what they ought to do. So the press and you will recognize, I hope, that I am talking to an American audience and I am telling you about some of the things that we are doing, you will understand it for that reason.

It doesn't do me any good or you any good to get up and repeat David Lawrence's and Constantine Brown's harangues about what all the terrible things the Russians have done; the many, many dozens of contracts and international agreements they have broken. Why should I compete with them? They have a column and parrot all the evils of the Russian people and leaders daily and they get plenty of help from radio and television commentators and newspaper columnists. I don't need to compete with them. I am going to tell you some things that you ought to know about what we are doing

It simply is a myth that the capitalist world and the Communist world have at any time in the last 40 years been willing really to sit down to discuss their problems and resolve their differences. So when people tell you it was Russian intransigence, that was part of it, but only a part of it.

The second myth is that the Russians were going to move across Western Euorpe to the English Channel and the only thing that stopped them was NATO. Ladies and gentlemen, that is also not true. That's a great myth. If the Russians had any intention of moving to the channel, NATO had nothing to do with stopping them. To this day it is not capable of stopping the Russians from moving to the channel if they intended to do so. If they intended to move, which I doubt, the only thing that has stopped them has been the fear of a third world war. And I can tell you, after making a 12,000-mile trip a year ago through 8 of their 15 republics, neither the Russian people nor the Russian leaders want war with the United States. They have had it. They want peaceful coexistence and want it badly.

Why? Not because they are any more peace-loving than anybody else, but because they lost between fifteen and twenty million people during World War II. That's 10 percent of the population, ladies and gentlemen. They lost in farms and factories the equivalent of all the farms and factories of the United States east of the Mississippi River. I mean a comparable loss because they didn't have that many factories.

Ladies and gentlemen, they don't want war. They've had it.

Another great myth is that only our opponents are subversive; that this is an instrument or weapon of welfare that we don't deal in.

If you will permit me, I would like to quote from Walter Lippmann.

In his August 5 column of the Washington Post, Walter Lippmann said:

"Someone to whom the President will listen should warn him that he will make a great mistake if he thinks that he can dominate the summit conference with

charges of indirect aggression. For the truth is that indirect agression—that is to say, propaganda, infiltration, bribery, subversion—is an old instrument of power politics, and in our time it is the way the cold war is fought. Both sides use it when they think they can do so to their own advantage. It would impair, not enhance, the President's moral credit if he were to become blindly self-righteous, and were to tell a knowing and skeptical world that we do not resort to what he calls indirect aggression and that only our adversaries do.

"Panama will be sitting on the Security Council, a living reminder of how the United States obtained the Canal Zone in order to build the canal. Guatemala was only recently the scene of a successful coup, publicly applauded by Mr. Eisenhower himself, to oust an anti-American and fellow-traveling government. The President will be reminded of what happened in Iran when Mossadegh was pushed out. Over the whole of the President's denunciation of external interference against existing governments will hang the Dulles theory of the liberation of Eastern Europe, and the obvious fact that if we knew a way to overturn the existing governments without the enormous risks of war, we should be only too happy to use that way."

What I am trying to point out is that every nation has used every one of the weapons in its arsenals in a total war. And you might be interested to know that this principle was actually enunciated during our American Revolution. Up to that time most of the wars of the world had been fought by professional armies, privately owned armies of the kings and the emperors.

But we did not like standing armies, so we said every citizen must serve in the defense of his country.

What did that do? I am not pointing these things out critically. Not at all. I am merely pointing out how these things developed.

Well, if everybody owes service to his Government in wartime—at least that is the way it has been for nearly two centuries now—it means that your technician, your scientist, your businessman, your munitions makers, all owe service to the Government.

Under this concept your technicians, industrialists, scientists, all of you people come into the picture. There isn't a member in this audience that isn't a part of our war efforts.

That was introduced for the first time, ladies and gentlemen, during the American Revolution, and it was perfected by the French in the French Revolution that followed. And this makes a myth again out of the contention of those who say that limited war is still permissible but that unlimited war is not. Limited war between the polar powers is a great myth.

Limited war between the United States and Russia is completely impossible. Once Americans and Russians begin to shoot each other, you are going to trigger your thermonuclear war.

That doesn't mean that some Chinese can't shoot some other Chinese, or some Arabs can't be shot by some Jews. It means that Russian and United States soldiers, sailors, marines, and airmen must not start shooting each other.

I would like to pass briefly now to the consequences. The most outstanding consequence, it seems to me, is the modern propaganda machines. We are in a propaganda war now and have been for years. The shooting part comes later, but it always comes unless the leaders are willing to sit around the conference table to discuss their differences and resolve their disputes.

That is why I have proposed again and again meetings at the summit, regularly scheduled, so that the people who control the thermonuclear weapons, the men who have to give the signal for the start of a war, can become acquainted and understand one another.

But this propaganda machine is building up in the minds of you and me and everybody on both sides of the Iron Curtain a mental state that will tolerate human incineration.

I have heard a Representative of Congress say that he would rather see the human race, the whole human race, incinerated than to see the Communists dominate the world.

Well, I am going to beg out of that commitment because I don't want to be incinerated, and I know that no nation can dominate the world for anything except a brief period of time, and I do know that many nations have been conquered only to rise very soon thereafter to challenge their conquerors.

It has happened to most of you as well as to me. I have participated in two occupations in Germany, and the Germans, as far as I can discover, are getting along pretty well today. They are telling us off more often than not.

I remember a Britisher, when Russ Nixon and I were stationed together in Berlin, at one of our quasi-partite meetings, giving a toast to the United States in which he said: "You won't have any allies in the next war." That was rather astonishing coming from a Britisher. So we asked: "Why?" and he replied: "Well, for the simple reason that you treat your enemies after you conquer them so damn much better than you do your allies that everybody will want to be conquered by you next time." [Laughter.]

That leads to another point. All of this tragic nonsense about the inevitability of war simply is not true. It is a pure fabrication. You don't really have permanent enemies and you don't have permanent allies.

What you actually have are opponents, and they change with such rapidity that it is almost impossible to tell from one decade to the next who is your friend and who is going to be your opponent or enemy. Nations have permanent interests, but they certainly do not have permanent allies or permanent friends.

Please don't quote me as saying that I think the United States should never have any allies. I feel about this alliance thing a good deal like the cowhand felt about the sermon. Just because we didn't have any alliances for more than 150 years it should not follow that in 10 years we should make an alliance with everybody who is willing to state for a consideration that he is opposed to communism. And yet this is exactly what we have done.

We have more than 40 allies today, and there is only one single unifying factor in any one of them. They don't speak the same language, they don't have the same interests, and they don't have the some concept of freedom and justice. But they do have a common interest in U.S. dollars, and that is all.

Ladies and gentlemen, when the showdown comes—and God forbid that it should ever come—we won't have any allies, as that Englishman said in his toast. Why? Because the alliance system itself is not reciprocal. It has not mutuality. Why do I say this? Because it is the same distance from England to Poland and vice versa, since the English have bases only in their own country and the Poles have bases only in their own country. But the distance between Russia and the United States is not the same both ways. Why? Because the United States and Russia both have alliances which permit them to have bases on other people's territory.

Repeatedly, in my trip to Europe Members of Parliament and Members of the Chamber of Deputies of France kept pointing out the nonreciprocality of the relationship in these alliances. They recognized that in any thermonuclear war between the polar powers all of Europe would be destroyed, whatever might happen to the United States and the U.S.S.R. And we can't deny that.

If you cannot protect your allies, you cannot depend upon them. Every competent student of international relations knows this. And just as soon as U.S. dollars are cut off, it will be, in my considered judgment, to the interests of these countries to become neutral. The same will happen to the Russian allies.

There should be a neutral belt throughout Europe. There should be military disengagement of the capitalist forces of the world from the Communist forces of the world—complete disengagement right around the globe in order to avoid a thermonuclear war.

Now let us take a look—Mr. Chairman, you have got a gavel here, I saw you use it once, so just use it on me when these people's seats can't take it any longer.

Let's look around the globe. You've got a divided Germany. Does anybody really believe that you can unify Germany inside NATO? Does anybody believe that you can unify Germany inside of the Warsaw Pact?

No. Even Mr. Dulles doesn't believe that. You cannot liberate Eastern Europe from the Soviet domination unless you have a European settlement which makes Europe safe for Russia, safe for Europe.

What you need is a simple declaration on both sides, after you have reached an agreement to neutralize the area and to get both the Russians and the United States out of Europe—back home, both of them—a simple declaration that any violent modification of the territorial status of any European state by external means will constitute a cause for a third world war. This is all that is required to preserve the peace of Europe.

Let's take a look at one of our many brink-of-war situations. Does any informed person really believe that peace in the Middle East is possible so long as the Russians and the United States will not cooperate. Just as long as the little boys can play the big boys off against each other conflict is inevitable.

Do you suppose that Russia will permit the United States to exclude her from the Middle East without stirring up all possible trouble? The answer to that is, would the United States permit any great power to exclude her from her own backyard? Do you suppose we would permit Russia to say you can't come into Mexico, that's our concern? Or Canada? The answer, ladies and gentlemen, is pretty obvious. The only way that you can get a solution in the Middle East is to have a detentê between the U.S.S.R. and the United States.

Isn't it completely irrational for the American Government to chide the Arab Government for not recognizing Israel when the United States refuses to recognize one-fourth of the human race, China, and insists on maintaining islands that are almost within rifle range of her coast.

The people who insist that a settlement of the Middle Eastern problem is possible without a settlement of the major problem between the United States and U.S.S.R. are either ignorant themselves or think that you are completely so.

The Russians are not going to permit the United States to dominate the Middle East in its backyard any more than we are going to permit the Russians to dominate an area in our backyard.

So, I repeat, what you need here is disengagement. The United States and the U.S.S.R. must agree to work together in this area before any real peace or stability can be achieved.

Let the Arabs federate. They have got just as much right to unite—they speak a common language, they have a common culture, they have had a historical background

that antedates the United States by thousands of years—they have just as much right to unite as the United States had. Just as much right as England had to make Scotland, England, and Wales a United Kingdom. Just as Russia had the right to unite its various colonies. Just the same right that Italy had in the first part of the 19th century, and Germany had in the second.

All the statements about guaranteeing oil for the west is pure malarkey. Who would they sell their oil to if not the west? Mossadegh didn't refuse to sell oil to the west when he nationalized the oil companies in Iran. England refused with the concurrence of the United States to let him sell it. But it was not a case of the Iranians refusing. They wanted to sell the oil to the west. Where else could they sell it?

I know that these observations will not gain the approval of the hundred percent American. But I am talking to the thousand percent Americans, those who believe you must do unto others as you would have them do unto you.

I am talking about and to people that belong to the human race, and if you do not belong to that today, ladies and gentlemen, you are not going to exist very long, because the world is growing and changing in very vital respects. Nationalism alone is not enough. My country may it always be right is correct but my Government right or wrong is quite a different matter.

The Arabs are going to unite with or without our consent.

You cannot expect to ever unite Korea, or Vietnam under a government that is completely hostile to China. You haven't the power to do so. And no Chinese leader is so ignorant as to permit the establishment of a beachhead on his own continent by an implacable enemy, allied to a Polar power enemy, unless he is forced to do it, and the United States has not the power to force it.

Even if the Communists don't last on the mainland, neither Chiang Kai-shek nor any of his descendants will return to occupy mainland China. They have lost the "call or favor of heaven." They were evicted after they had once occupied it and there isn't a case in the 5,000 years of Chinese history in which someone who had been ejected, who had lost the favor of heaven, has been returned to power.

So all of this talk about Chiang Kai-shek returning to the mainland of China is the bunk.

There can be no peace with China so long as the United States inside on maintaining these bases in her mainland harbor and supports a pretender to power, Chiang Kai-shek. They may not expel Chiang Kai-shek from Matsu or Quemoy this year, they may not do it next year, but ladies and gentlemen, it will be done, and if we do not change our attitude and make it possible for peaceful evacuation, it is my prediction that it will trigger world war III—unless it starts in Germany or in the Middle East prior thereto.

There is not a case in history in which any great power permitted a pretender, supported by another great power, to remain at peace any longer than it was powerless to challenge him.

Walter Lippmann says that Germany will be united with or without war. And it is within our province along with the Russians to permit its unification without war.

Dorothy Thompson says that there will be an Arab nation with or without our consent. With our consent we can arrange it peacefully, but without our consent, it will be arranged anyway.

Nathaniel Peffer, head of international relations at Columbia University, one ofthe great experts of that area, says that China is no peril to the United States. China has no Navy. China cannot invade any portion of the globe that is of peril to us without a Navy. She can expand on the mainland, and if continually refused the fredom against attack from Formosa Straits, it is very likely she will use her vast Army for that purpose just as she did in Korea.

Many people that have studied the subject carefully believe that Chinese intervention in the Korean war might have been avoided had we recognized Red China as Mr. Truman planned in March 1950.

The whole matter of recognition had been cleared, I am told, when a distinguished U.S. Senator, Senator KNOWLAND, went on a nationwide television and radio hookup opposing it. After this, Mr. Truman cancelled the planned recognition.

We actually went to war with China when Mr. Truman put the 7th Fleet in the Formosa Straits, and since she had no fleet to challenge the 7th Fleet, she challenged the United States later in Korea where she had land forces.

And I ask you here who is capable of saying that Mr. Truman's putting the 7th Fleet into the Korean civil war was any less of a violation of the United Nations' Charter than Chinese intervention in Korea who had no obligation under the Charter since China was not allowed to become a member because of the opposition of the United States?

Who is to make that moral judgment? I know that I can't, and I doubt if anybody that is informed can.

The United States cannot have it both ways. Either Formosa is a part of China and interference in her civil war constitutes a violation of our obligation under the Charter, or it is not a part of China and it is a fraud to insist that Formosa instead of China be seated in the United Nations.

Nations and people do not have allies in any meaningful sense, they have associates; they do not have enemies in any permanent sense; they have opponents. And the associates and opponents reverse their position with remarkable rapidity—as an example, Germany and Japan and the United States before Pearl Harbor and Germany and Japan and the United States in 1950. A second illustration, United States, the Soviet Union and China in 1941 and again the Soviet Union and China in 1950. Does it look like we have permanent allies or permanent enemies?

The enemies of nations and peoples are not Fascists, Nazis, Communists, Nasserists or any of these "ists" or "isms." The real enemies of man are abject poverty, abysmal ignorance and arrant bigotry. Any war, hot or cold immeasurably increases the three of these monsters.

And the first victim of any war is truth. Truth is truly the Unknown Soldier of any war. It does not lie buried in some richly decorated sarcophagus or magnificent mausoleum at Arlington with a military guard in attendance or at the Arc de Triomphe or anywhere else in the world. Truth lies rotting in the shrunken mind and shriveled heart of the ignorant, the prejudiced and the bigoted everywhere.

Those who would rather incinerate the human race through thermonuclear war than sit around the conference table with their ideological opponents to resolve their disputes and reconcile their differences, they are the familiar "100 percent patriots," are the old Crusaders, the religious inquisitionists; the two-dimensional minded; those who see all color as black and white; all conduct as good or evil; and all the world as God or Devil.

Undess we realize the real enemies and apply therapeutic treatment to the causes rather than to the symptoms, we are bound to fail and this time we shall probably pull down all the pillars of civilization instead of merely those of the Temple as was the case of Sampson of old. In closing I would like to read the final paragraph of my guest editorial which appeared in the Saturday Review, November 16, 1957:

"It no longer serves any useful purpose to debate who or what started the cold war; or why, when, or where it was initiated. It is an evil thing and must be liquidated. It should be permissible, also, to declare that expressions such as 'balance of power,' 'positions of strength,' and 'power politics' have lost all rational meaning. They are anachronisms in the A- and H-age and must be discarded.

"As possible useful contributions to a new approach, the following suggestions are presented. First, the President should resume discussions with the top leaders of the great powers. The United Nations headquarters offers the proper place for such a meeting, with the President of the United States in the role of host.

"Second, the United States should promote instead of oppose the universalization of the United Nations. At this great forum all voices should be heard, not just those nations we or any other people may temporarily approve.

"Third, the U.S. Government should discard its pious attitude about recognition of those regimes actually in control of the instruments of power in other countries. Whether the leaders of any nation, great or small, meet or fail to meet in their official conduct high standards of personal probity is largely a matter of who keeps the scorecards.

"Fourth, the United States should sponsor and support a vast economic development program under the auspices of the United Nations in order to eliminate the worst features of poverty now smothering freedom in many lands. It is believed this could be accomplished at much less cost than with unilateral aid, now largely military in character.

"Finally, the United States should assume leadership of negotiations designed to remove restrictions on international trade and travel. There is certainly no longer any valid evidence to support the thesis that restrictions on trade with Communist countries have retarded, or will in the future delay, their scientific and technical progress. But there is ample evidence to support the belief that these restrictions have increased the poverty of the world's masses and the burdens of those nations we would convince of the superiority of the capitalist system.

"It is worth repeating over and over again, I believe, that the real enemies of man are poverty, ignorance, and bigotry; that wars and preparations for war increase these; and that totalitarianism in whatever form is more often than not the symptom rather than the cause of man's maladies. The persistent sputtering of sputnik merely reemphasizes the importance of and necessity for man's continuous search for permanent peace, the grand design of which must ever remain a federation of the world and a parliament of man."

Those Quotation Marks, Again

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial appearing in the Greenville (S.C.) News on March 27, 1959.

That editorial shows how States like South Carolina, which through their

supreme courts have held fair trade laws unconstitutional, will find a fair trade law to be the law within their States regardless of their own wishes or regardless of their public policy as expressed by their courts or legislatures.

If the so-called fair trade bills, H.R. 1253 and other similar legislation, become law the rights of the State of South Carolina and other States will be trampled roughshod underfoot and retail sales within their States will be made subject to price fixing by persons as far away as the other side of the continent.

The article follows:

THOSE QUOTATION MARKS, AGAIN

Proponents of the "fair trade" laws, having lost fights in many State courts, including South Carolina's Supreme Court, have now redoubled their efforts in Congress.

On the opening day of the session, Representative OREN HARRIS, of Arkansas, introduced a "fair trade" bill. Because he is chairman of the House Commerce Committee which will consider the proposal, the odds are heavily in favor of its receiving the best of treatment.

"Fair trade" laws are not fair. They hurt the retailer by refusing him the privilege of selling goods at a price he chooses rather than one chosen for him by a manufacturer. And they hurt consumers by increasing the prices of the goods sold.

Those who favor "fair trade" laws say they protect small merchants. This is a dubious theory at best. Most successful small merchants are successful because they offer something more than price, for it is an observable truism that most inveterate price-cutters cut more than prices.

"Fair trade" laws won't stop the trend in some fields toward larger retail units any more than the failure to adopt those laws will accelerate it. But there will always be a demand for the personal services and friendly atmosphere offered by smaller stores.

The bad theory behind "fair trade" is compounded by the way it was put into practice. The minimum prices established by manufacturers did not have to be accepted by all sellers, nor even a majority of them. A minority could agree and thus force all sellers to follow suit whether they wanted to or not.

This was the reason why most State courts threw out the laws. Beaten in the States, the "fair traders" are now going to Washington for help in complete disregard for States rights.

We feel about "fair trade" as the Wall Street Journal recently expressed itself about "liberal" politicians. The words don't mean what they imply to most people That's why we put quotation marks around them, just as newspapers do in the case of "Prince" Mike Romanoff.

Physical Fitness

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. DORN of South Carolina. Mr. Speaker, Dr. Louis B. Wright, of the Folger Shakespeare Library here in Washington, recently made a speech in South Carolina in which he lambasted intercollegiate football. He referred to college alumni as "thick-headed" for promoting football. This is most shocking to me as it came at a time when we are all becoming aware of the physical unfitness of our youth. It is alarming to note that, at the present time, 52.8 percent of the young men of America eligible for military service are rejected because of physical deficiencies.

This physical softness is of great concern to the President of the United States, to many Members of Congress, and to our military leaders. The President has called several conferences in order to promote a campaign for better physical preparedness. American youth today are far below the physical standards of the youth of Western Europe. There must be an incentive for our young men to become physically fit and rugged. The greatest incentive that I know of in America today is college football. Hundreds of thousands of young boys play football on sandlot teams, on midget teams, and in high school in the hope that some day in college they, too, can participate in this great intercollegiate sport. Without the emphasis in college, I doubt if there would be the incentive earlier in life; thus, untold thousands of American youth would be deprived of participating in this great sport.

The military defense of America and conquest of space will require courage, physical fitness, mental alertness, and moral character. I know of no place where all of these traits of character are better learned than on the gridirons of America. In this cold war, we need as never before discipline, mental alertness, leadership, and sportsmanship. If space is to be conquered ahead of the Russians, it is going to require strong bodies and strong minds. Football is excellent training for our youth. It will help them meet the challenges of space and the Communistic ideology.

The training I received in football is most helpful to me here in this Congress during debate and in exercising our Democratic processes. It has been my observation that in those schools where intercollegiate football has been attacked and discontinued, there you will find a trend toward conformity, socialism, so-called intellectualism, and extreme liberalism. They howl about academic freedom, yet exponents of the free enterprise system and States rights and men who believe in individual liberty are scarcely welcome on the campus. Alger Hiss has made a number of appearances where footbal lhas been deemphasized.

We need more football and less sex education. We need more "Yes, sir" and "No, sir" and less child psychology. I only wish the weeping mothers and fathers in homes broken by juvenile delinquency could again be proud as they watch their sons participate in high school and college football games. We need education, we need brains, we need spiritual faith and, yes, muscle, to survive.

Mr. Speaker, the following article is from the column of Jim Anderson, sports editor of the Greenville (S.C.) News.

ANTISPORT SPEECH POPULAR

(By Jim Anderson)

Speaks apparently have learned that the best way to be quoted in the press is to lambast college athletics.

Not much notice is given to criticism of lack of better chemistry labs, or if the speaker says Latin as a language isn't needed.

Favorite quote in the high school Latin class used to be: "Latin is a dead language; as dead as it can be. It first killed the Romans; and now it's killing me."

Experts on Shakespeare such as Dr. Louis B. Wright of Washington, D.C., appear to know as much about the college athletic programs as we know about Shakespeare. Maybe it's unfair to Dr. Wright to say that if he had confined his remarks to the Bard of Avon the other day at Wofford the press reports wouldn't have made page one.

The address at Wofford was harsh towards sports. Dr. Wright has not kept himself informed on the trend in athletics when he says football is as obsolete as the tail of the dinosaur and that athletics has nothing whatsoever to do with education.

His contention is that many athletes are in college who shouldn't be there. Therefore, he thinks varsity sports should be eliminated and athletics be confined to intramurals.

But if there are nonathlete students in college who shouldn't be there, certainly psychology III isn't going to be dropped as a subject.

MUCH THOUGHT TO ATHLETICS

While the charge was being made at Wofford that only thick-headed alumni were keeping intercollegiate football, men of brains from the foremost colleges in a five-State area were in meetings where their thoughts were directed towards athletics.

The Southern Conference and Atlantic Coast Conference meetings at Williamsburg and Greensboro brought together faculty members, athletic directors and coaches of 17 outstanding schools. If Dr. Wright could have been at either meeting he would have been enlightened to a tremendous difference in the operation of sports programs today compared with 25 years ago.

The majority of educators believe that properly controlled intercollegiate athletics make a worthwhile and healthy contribution to the total educational program.

No longer are there double standards for the nonathlete and athlete. As Joe Sherman, of Clemson, points out, "the same degree of academic accomplishment" is required for all.

The athlete is most fortunate in getting extra education in sports that is not received in any other field. This extra education includes instilling of desire, teamwork, attempt to overcome overwhelming opposition, overriding fear, learning to discipline self, recognition of authority.

Athletics develop better citizens, soldiers, and men.

Now, Mr. Speaker, the following editorial is from the Washington Star:

ARE WE GETTING SOFT?

As National Youth Fitness Week begins, it is well to take stock of ourselves with respect to physical fitness. Those of us who are leading the sedentary lives of average city or suburban residents could profit from a bit of self-appraisal. We would find that we are creatures of automation in an age of labor-saving devices designed to make life easier—and softer for all. Instead of chopping wood or shoveling coal to heat our homes, we set the thermostat and let an automatic furnace do the rest. We drive to the corner for groceries or medicines. Our children ride in schoolbuses to classrooms only a few blocks away. We cut the grass with self-

propelled power lawnmowers—some of them with riding seats. Even farmers no longer follow the plow; they ride in relative comfort on tractors.

Some of us get a bit of exercise on weekends by driving to a country club and playing a round of golf—usually with caddies or carts to take care of the bag of clubs. Or we do some gardening, with the aid of a rototiller or garden tractor if possible. All of which, and much more, prompted Shane MacCarthy, head of the President's Council on Youth Fitness, to make this apt observation: "As the human being moves up the rungs of the ladder of material progress, he is prone to measure the advance by the amount of ease, comfort, and leisure he has acquired." Yet ease and luxury are not true measures of the strength of a people or a nation. The President has done well, therefore, to bring to the attention of American youth this week the national, as well as the personal importance of keeping one's self physically fit.

The Space Age—Challenge to America

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. THORNBERRY. Mr. Speaker, the Austin, Tex., chapter of the Veterans of Foreign Wars recently sponsored an essay contest among the junior high school students on the subject, "The Space Age—Challenge to America."

Kenneth Smith, of the University Junior High School, took first place honors; Miss Peggy Lyda, of Lamar Junior High School, won second place; and third place honors went to Miss Mildred Washington, of Kealing Junior High School.

It is greatly encouraging to me to know that the citizens which I am privileged to represent have an awareness and keen interest in this vast new subject. Because of the timely nature of the subject and because I think that the winning essay is exceptional in that it stresses the great challenge to mankind, I respectfully request that along with the letter of transmittal from this young man the essay be inserted in the RECORD. The letter and essay are as follows:

AUSTIN, TEX., *April 25, 1959.*

The Honorable HOMER THORNBERRY,
House of Representatives,
Washington, D.C.

MY DEAR MR. THORNBERRY: I am only too glad to enclose a copy of my "Space Age" essay, and hope that the work contains as much enjoyment and enlightenment for the reader including it as it did for the author in writing it. I hope, too, that if it ever sees print it may influence us all toward a healthier outlook on the subject. The next step in man's development won't have much immediate significance, but if it is to have any significance at all we must rid ourselves of many a harmfully provincial frame of mind.

This was my second essay to win citywide recognition—the first being on the subject of "Youth Appreciation," for which you also sent me a letter of congratulations—and I felt as if the subject were right up my alley, for the coming of the space age (like many other imaginative but impending concepts) is one well dealt with by science fiction. I am an avid collector and connoisseur, so to speak, in this field because of the frontiers and vantage points it has to offer in relation to writing. As always, the important thing is not that progress is about to be made, or changes effected, but it is rather that human beings are going to be affected, and are going to react. Coupled with scientific interest which is, I suppose, natural in all of us but too often squelched, my love for writing has sparked my appreciation for this genre of fiction beyond all proportion.

Unlike the hunter who must kill a form of beauty in order to capture it, and unlike the possession-obsessed persons who believe that they own beauty merely because they found incomplete bits here and there, the writer needs only add maturity to the ever-strange mixture within him and he is master of those fleetest and shortest lived of all beauties, thoughts, and what is more important, he can express something he loves, share it, and preserve it from being lost or confined to his solitary self. This is, beyond a doubt, the driving force behind artists in any field; the various things they have to say only prove the wide range of things a man can love, or hate (both emotions are intense enough to drive one to action). The fact that he knows how best to channel his feelings probably marks the major difference between a writer and an artist or a composer. While all three must win their appeal through the faulty system of the senses, the writer works, I feel, with the most personal medium. Nonetheless, it all boils down to Donne's statement that no man is an island; that is, the human being is not built to contain emotion but to channel it to either expression or control.

I very much appreciate your writing in the midst of your congressional duties which must be very demanding. Again I hope that the essay proves to be of some use, even though it is little but opinion. I would like not only to thank you for, but encourage you in your interest.

Cordially,

KENNETH SMITH.

THE SPACE AGE—CHALLENGE TO AMERICA

The space age presents more than just a challenge to America. It challenges all mankind. For man is a tiny and powerless entity, subject to the whims and great strength of wind and wave; he suffers from the attack of the smallest germs; and he cannot even affect the inertia of mountains nor the immutability of time. Yet this "poor microbe," man, has been armed with nature's most complex and effective animal weapon—a mind. Without this awareness of environment and the ability to record and correlate thoughts, man would indeed have been an easy prey for those ruled only by the law of the jungle. Perhaps necessity accentuated and developed the spark of consciousness that makes man and animal incomparable. Nonetheless this quality of intelligence has lessened the odds against man; it has enabled him to use steel appendages for his failing muscles; to protect himself from the elements by use of concrete, steel, and glass; to protect himself from the invisible, internal attack of germs by means of antibiotics; to use the laws of nature to his own advantages; and to cheat the corrosive forces of invincible time by adding years to his life through the application of medical research.

Thus, in terms of himself, man has improved and cannot but continue to do so. That he actually has succeeded only in coming to the edge of his cradle does not dwarf his accomplishments; it merely makes more significant the heights reached by this peculiar social mite. Guided by much more than impulsive instinct, man has striven out of necessity and has learned that the only survival is progress, for life is a process of change that admits to no such condition as stability. Man is more fully the master of his fate when he realizes that as long as he is going to change, he should control this change and make it beneficial.

It is this very principle that now urges man on, and he stands today on the shore of an ocean so deep and so vast that it totally defies his complete comprehension. Man's determined mind has almost enabled him to grasp the very stars which evoked such wonder and yearning from the ancient minds. Present man cannot discredit the tradition of genius which has preceded him; he cannot ignore the genius which now will not lie dormant; nor can he coerce the genius which is yet to come. Man has been slowly entering the space age ever since the concept of interplanetary flight was born. In the year of 1957 such a concept passed from the realms of fantasy into reality; the last vestige of an eternally earthbound man has passed away. Now we must adapt ourselves to the realization that space travel is coming as surely and inevitably as tomorrow's weather, and possibly with even less fanfare.

There is a challenge involved, one not unfamiliar to the human race. Essentially it is the same challenge that our pelt-clad ancestors faced; yet man has basically changed since Neanderthal faced the cheerless prospect of venturing forth into the dark. The challenge is no longer whether man can condition himself to the innovation, but how long it will take him to do it.

There are many things to be learned before we rush into the dark. We cannot expect to produce any great change in the universe; as usual, the only thing noticeably affected by man's progress will be man himself. Physical progress is useless but for its effect upon the human soul. In his thirst for superiority, we can only hope that man has fully learned that the control requires a greater effort than the unleashing.

Man must mature in an incredibly short time; for when he finally succeeds in separating himself from the earth, he will need a maturity akin to the maturity which was evident in the actions of those who in the past faced frontiers equally unknown. Man will need his maturity then because he will have nothing else upon which to depend. The beginning will be slow; but, given time, man may establish an empire that would link the stars, ultimately benefiting each individual human being. The accomplishments of America and of all mankind hinge upon the mental attitudes in effect today. We must tread cautiously.

Poison in Your Water—No. 72

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the New York Times of September 18, 1958, entitled "New Jersey Held Lax on Pollution":

NEW JERSEY HELD LAX ON POLLUTION—ZURMUHLEN SAYS INDUSTRY THERE FAILS TO DO PART TO KEEP HARBOR CLEAN

(By Murray Illson)

New Jersey industry is failing to do its share to lessen water pollution in New York Harbor, Frederick H. Zurmuhlen, this city's commissioner of public works charged yesterday.

He made the charge after the department of public works had made its last harbor water survey of the year. The department conducts surveys 4 days a week from mid-June to mid-September.

In this period a laboratory crew analyzes samples of water from waterways around Manhattan, the upper East River, Jamaica Bay, and in the Staten Island area.

Commissioner Zurmuhlen said that although the citizens of New Jersey were required to contribute to the control of water pollution in the Arthur Kill between their State and Staten Island, industrial organizations in New Jersey were not meeting their responsibilities. Industry in New York, he declared is subjected to regulations controlling the pollution of waterways.

In making its survey yesterday, the department's laboratory crew cruised for 7 hours in the harbor aboard the *Robin*, a chartered 55-foot diesel-powered boat.

The area of greatest pollution yesterday was reported to be in the Arthur Kill between Rahway, N.J., and the northwest corner of Staten Island. Near the Baltimore & Ohio Railroad bridge that spans the waterway there, the saturated oxygen content of the water was found to be zero.

The New Jersey coastline in that area has a dense concentration of industrial plants.

Cross Country With the On to Oregon Cavalcade

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. PORTER. Mr. Speaker, the On to Oregon Cavalcade is making its way across country successfully. Members of the wagon train have been greeted enthusiastically. Schoolchildren and adults have gotten firsthand information about Oregon, its historic past, busy present and wonderful future. One of the caravan members is Robert R. (Rudy) Roudebaugh, of Drain, Oreg. He is keeping a diary of the journey. Under leave to extend my remarks in the RECORD I include the following story from the April 30, 1959, Drain Enterprise which covers the first 8 days on the trail:

DRAIN DRIVER MAILS REPORTS HOME ON COVERED WAGON

The On to Oregon Cavalcade wagon train has been steadily retracing the historic route of early-day pioneers on their way to new homes in the Oregon Territory after leaving Independence, Mo., April 19. The seven wagons are on schedule, and have been attracting crowds and national interest beyond anticipation of the sponsoring groups.

Special banquets, prepared celebrations, mock Indian raids, police escorts, and swarms of sightseers have greeted the seven wagons every day the past week on their 2,000-mile trek to Oregon as part of Oregon's centennial year celebration.

Robert R. (Rudy) Roudebaugh, Drain wagon driver, has been jotting down notes while herding the Drain covered wagon across the Kansas plains and mailing them back to Drain. Concern for Dan and Daze, the two horses pulling the Drain wagon, is evident in the notes. Following is a summary of the notes made by Rudy:

April 19 (first day on trail): Made it to Red Bridge. Averaged better than 4 miles per hour. Dan would not eat.

April 20: Dan did not drink or eat. We left Red Bridge camp at 8:15 a.m. Stopped at last blacksmith shop on Oregon Trail at 9:09 a.m. Arrived at Lake Olathe, Kan., 2:50 p.m. It seemed the whole town turned out to greet us. School was dismissed to see wagon train. Made 20 miles today.

April 21: Dan is eating better. Gave him a handful of oats every half hour while on watch from 11 p.m. to 2 a.m. Pulled out of camp at 8:14 a.m. Dan is feeling better. Arrived in Gardiner 10:45 where Santa Fe and Oregon Trail divide. The chamber of commerce served coffee and gave kids milk. School was left out and there were children all over the wagon train. There was green grass for the horses. Made camp at 3:27 p.m. at the Herbert Kncibe farm.

April 22: Sun is out bright and everyone in good spirits. Left camp at 8:15. Came into Eudora at 9:48. Dan is feeling better and eating his feed. School dismissed to see wagons.

While I was passing out the invitations to Drain and talking with Eudora mayor the horses started to go with Janell at the reins. She tried to stop them, but Dan and Daze didn't stop until I was able to reach them.

At 10:08 we passed the Kaw Valley country school where all the pupils were waiting with a sign reading "good luck." Stopped for lunch at 10:59 just east of Lawrence. Have new feed for horses, and they are eating better. If I had a penny for every picture taken of the Drain wagon I could retire. At 12:14 p.m. passed Indian school of about 50 pupils (Haskell Indian Institute). Left school at 12:35 with Indian girl dressed in colorful costume riding in Drain wagon to Lawrence where the Indians performed a war dance.

Camped 4½ miles west of Lawrence at 3:42 p.m. Made 22½ miles today. Dan and Daze are tired, but ate their grain. Both horses have their hind shoes on now. Had to tie Dan to get shoes on. (The horses were so frisky at Independence, Mo., that horseshoes could not be put on the hind feet.)

Am just about out of letters from Drain's mayor inviting people to Drain this summer. Over 2,000 people at wagon train tonight. Bigger crowds expected when we hit Nebraska. (Drain Chamber of Commerce started Rudy out with 9,500 invitational letters. An additional 15,000 letters will reach the wagon train between May 8 and 13.)

April 23: Hard wind coming out of southwest as we left camp at 8:04 this morning. Schoolbus from Cottonwood Falls (100 miles away) came to see wagon train at 9:49. Schoolchildren came to buy wagon train envelopes. We are following fence made out of a pretty rock which lines both sides of the road. Entering Shawnee County at 10:20. Arrive at State fairgrounds at Topeka to camp at 3:59.

April 24: Dan and Daze are eating their grain. At Topeka, Kans., State fairgrounds. Got smaller collar for Dan. Ready to roll at 8:20 a.m. Going over Kansas River at 9:45. Original Oregon Trail wagon trails stopped for supplies at the place we reach at 11:57 for lunch. At 12:44 p.m. ready to roll. This is the hottest day yet. At Silver Lake we had a Indian raid starting at 1:42 p.m. We all survived. At 3:20 we reached Rossville to camp. Dan and Daze made it better today than any time on the trail so far. Made 22 miles today.

April 25: Left Rossville at 7:48 a.m. In Pottawatomie County at 9:49. At St. Marys at 10:48. Seven more miles and will camp. Horses will rest tomorrow (Sunday).

April 26: Over 5,000 people from a 80-mile radius came to the wagon train encampment at St. Marys on Sunday. Town itself is about the size of Drain. The St. Marys mayor was given a ride in the Drain wagon.

Freedom of the Press

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. HÉBERT. Mr. Speaker, John F. Tims, Jr., president of the Times-Picayune Publishing Co., of New Orleans, La., which organization publishes the Times-Picayune and the New Orleans States-Item, is a newspaperman's newspaperman.

If there is any newspaper publisher in America who knows more about the newspaper business from every phase and angle than Jack Tims I have not met the man.

The newspaper business is Jack Tim's life. It is his very existence. He grew up in the business and made it the hard way up the ladder of success. He is well qualified to speak with authority on any segment or facet of the newspaper business. Through the years he has earned the respect and admiration of the entire newspaper craft because of his knowledge and integrity in the field of journalism. This is especially true of those people in his own organization from presman to editor.

Anything that Jack Tims says of or about the newspaper business is worthy of repetition and for that reason I am taking this opportunity to direct to your attention and the Members of this House the address which Jack Tims recently made at the International House in New Orleans during the Caribbean area press seminar.

He said with emphasis that the free press has never before been under such disastrous attacks as at the present time. He gave plenty food for thought not only to his immediate audience but to anybody afforded the opportunity of reading his address.

Here is the complete text of his address and I urgently suggest that each of you take advantage and read it:

I consider it my privilege now to address you from the vantage point of the publisher where the entire operation of a newspaper and of the community which it serves must be closely observed and constantly checked.

DYNAMIC COMMUNITY

First of all I want to say we have the privilege in our newspapers to serve a dynamic, growing, vital community that has made tremendous economic and political advances in recent years, and which is destined to continue its role in international leadership in our country.

New Orleans today is a city of approximately 850,000 population, which includes our rapidly growing suburbs. It is the second port in the United States; it is advancing rapidly as a cultural, medical, industrial, and shipping center. It is one of the older cities of the United States, being almost 2½ centuries in age; yet it is dynamic and vibrant with new-found and developed energy.

The papers I am privileged to serve as publisher began well over a century ago, and throughout their long history have been a credit to this community. Last year we merged the Item with the States in the after-

noon field in the interest of better economic production, and this has proved an eminently successful advance. I have personally worked on the Times-Picayune Publishing Co. for a half century and have served in almost every capacity there is, on the business side of the newspaper.

LATIN BACKGROUND

Our papers have always had an international viewpoint and we have, therefore, been among the first to hail and encourage the international movement which began here 15 years ago, and which has produced International House, the International Trade Mart, the international relations department of the city, the port, and numerous other manifestations of international interest which you will note as you move about this delightful and beloved old city.

Actually our internationalism began the day this city was founded by the French in 1721, for we have always been close to Spain, France, and to the Latin American countries. This city has a Latin background and history that brings us especially close to your countries, and we have, therefore, watched the growth of this seminar with much interest.

JOURNALISTIC FACTS

Its purpose is the lively and profitable study and discussion of journalistic affairs of mutual interest, and in this category there is nothing so important or vital as the meaning of our profession itself, and the opportunities it presents and its chances for long-range survival. I know you will agree with me that newspaper work is, to those who practice it the world's most interesting and stimulating profession.

I would like to discuss here today briefly some journalistic facts of life which we face today.

In the incalculable span of time since man began in his cave, a century or two is a moment, a fraction so small that it cannot be noticed. Yet it is wholly within the last two centuries and indeed mostly within the last century that we have seen the rise of the newspaper as an important factor in our lives, and freedom of the press as a dominant issue of human freedom.

PRESS SUPPRESSED

Although the newspaper business today appears at its zenith of influence, power, and prosperity, actually the decline and suppression of the free press as a major force in our lives is well advanced throughout the world. As we pass from country to country and continent to continent we can trace the decay everywhere, the only difference being in degree ranging from death and disappearance of press independence in some place to evidence the cancerous germs have attacked journalism everywhere else.

Since you are the frontline troops in this most important battle, I think you will not fail to accept the facts as they exist, so let us look at some of them:

1. The free press has disappeared entirely in all the Iron Curtain countries, and the state press has appeared; roughly one-third of the world.

2. The free press has been weakened throughout Europe by economic factors, aided here and there by political measures.

3. The staggering rise in production costs has killed off thousands of fine newspapers all over the world, and has hit heavily in the United States.

4. The rise of communism, socialism, and other forms of dictator governments has been the quick demise or attack of newspaper independence, wherever it existed in those controlled areas.

5. There is a dangerous tendency in the United States to weaken the independence of the press through governmental controls, punitive laws, suppression of the news at its source, and its distortion by Government agencies and officials who attempt publicly to discredit the press.

6. Closing, suppression, and burning of fine, fearless newspapers, and killing, incarceration, or exiling of their owners and editors is again on the rise.

7. The influence of the press as the great safeguard of human liberty is under fire by determined, disciplined forces all over the world. These are the same forces that in general seek to exterminate us.

The hard facts of news are threatened, moreover, even in the United States where we find increasing suppression of news on the national, State, and local levels; the sugar-coating of facts by the rise of press agentry, the decline of good old-fashioned legwork reporting, and Government domination, restrictions, secrecy, and censorships.

Apply these factors to your own country or to any other country with which you are familiar and you will see that many of them are on the target.

GOLDEN ERA

Only a little over a century ago ordinary reporting was regarded throughout the world as dangerous to the public liberty. The rise of press freedom and newspapers' importance was in exact proportion to the rise of political freedom and independence—democracy and the rights of the common people—throughout the world. The press spearheaded this blessed era.

The golden era of the newspaper business began around 1800. This was about the time that most of the new world shook itself loose from the old, and we saw the beginning of republics and democracies throughout the Americas. In 1825 Thomas Babington Macauley said that the gallery in which the reporters sat in Parliament had become the fourth estate—most important of the realm.

I wonder if the fourth estate today is the most important of the realm in very many other countries throughout the world. I believe that it is in the United States, and I think it is in some Latin American countries, but I wonder how long we can hold the ramparts against the forces that would destroy the press and enslave the people.

FREE PRESS DEFINED

Democracy rests upon a free press and never have democracy and the free press been under such disastrous attacks as now. The struggle of democratic government to survive is more than ever in our history a life and death one. It is of course accepted that the keystone of democratic government is a free press.

But when I say free press I do not mean this in the sense that some persons and indeed some publishers think. A free press is a press free and obliged to print the facts and to express itself on public matters, but not a press free of responsibility, obligation, and the primary and heavy duty of leadership in public service.

In 1910 when this country had 92 million population there were 2,600 daily newspapers. Today with about 180 million people in the United States we have around 1,600 daily newspapers; in only a relatively few cities today are there more than one newspaper. The press is declining, numerically, because of costs of production and serious inroads into advertising support.

PRESS INFLUENCE

Today the publishing of newspapers has to a considerable extent passed from the hands of one-man owners and operators, great editors and publishers, and individuals into corporations, and become big business with profit a very necessary motive. Newspapers sometimes feel they can no longer publish as fearlessly as they have in the past because it might hurt business and there are many stockholders who live upon the paper's earnings. I certainly do not think that this is typical, but the very fact that it exists at all is important. Nor can it be denied.

It is seriously to be doubted that press influence today is as strong as it was 25 years ago. Such leadership once lost may be gone forever.

There are many danger signals and there are problems, recognized by yourselves and others, which may one day destroy the free press as we know it. That would mean the destruction of the Americas. A strong, fearless, independent, alert, and aggressive press is our very foundation. It is the one indispensible freedom. We are all familiar with the pattern of dictatorship, and its operations.

Dictators are extreme realists who put first things first, and the first thing a dictator does in converting a nation to dictatorship is to kill off the free press, and convert it into an instrument, the chief instrument of his power. We have seen this happen with discouraging regularity for at least two generations. Today the pace of press murder has been accelerated.

PRESS AGENTRY

There are many ways of killing newspapers or weakening them until they lose their influence, and where political measures are insufficient we have seen economic sanctions used with terrible results.

We have as much trouble in the United States as many of you do in your countries, and it would be useless to deny that there are people in our Government who would like to control our press if they could possibly do so. They are making inroads, too, through the control or suppression of facts, and the closing of vital public records.

There is little doubt that many governmental officials would welcome the opportunity of governmental licensing of the press as has been done with radio and television. We have seen in recent years the rise of press agentry in Government until today it is a lucky and very diligent reporter who can cut through the Government handouts to get to the source of news and find out the truth. The statement of a Government official, duly and correctly reported by our press associations and newspapers, is not necessarily the truth, and it may in fact be anything but the truth.

GALLOPING DISEASE

More and more we see suppression, sugar coating, and corruption of the truth while Government officials, even at the very top, berate the press and blame it for all manner of problems and evils. When two Presidents of the United States criticize, misrepresent, and ridicule the press as they have in the last 20 years you may be sure that lesser Government officials regard it as their privilege to do likewise, and to attempt to deceive and destroy critical or opposition independent newspapers.

Where these people lack the power to effect their purposes they have other effective weapone. Some of these are ridicule, insinuation, misstatements, and lies, casting of doubt, doubletalk, and many other means of confusing and undermining public confidence, and few communities in the world today are free of these vices.

This, gentlemen, is a galloping disease, not a creeping one. It moves very rapidly. It moves from top to bottom, it moves into State and local governmental circles, and unfortunately it spreads from there into business levels.

FIRST LINE OF DEFENSE

Eternal vigilance is the price of freedom, but even if we had this, I wonder if it would be enough in the face of the worldwide trends. We are awakening. Everywhere we see moves to fight back against this galloping suppression of the facts and toward government control, but no newspaper or group of newspapers has succeeded, or will succeed,

in always standing up to the firing squad, the torch, terror, opposition papers, newsprint control, economic sanctions, or any of a hundred of the other endless measures at the command of dictatorships.

The people must be aroused to the facts that newspapers are the spearheads of independence, the one absolute esential of freedom, that newspapers hold the foremost barricades, when these fall the main redoubts are lost. Power-seeking governments know how to lull and cow the people, they know how to deceive and disarm them, they know how to intimidate and disperse opposition once the safeguards of the press have fallen.

HOPE FOR FUTURE

The moral fiber of the people is the only hope for the future, and it has been weakened. I believe that we may be well along in the golden era of journalism, and that the fight to tell the truth will be constant, bitter, and disheartening for many years to come. There will be many battles lost. God grant that we will not lose the war. Should we do so human liberties which we have struggled for through so many centuries will surely disappear and republican forms of government will be lost.

I think these facts can well be the subject for fruitful study by this Caribbean area press seminar, and I thank you.

What's Fair in Fair Trade Prices?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD an editorial appearing in the Buffalo, N.Y., Courier-Express on March 25, 1959, entitled "What's Fair in Fair Trade Prices?"

That editorial goes further to show that fair trade is not in the interest of the consumer and that fair trade is nothing more or less than price fixing, and is repugnant to the American people.

WHAT'S FAIR IN FAIR TRADE PRICES?

Proposals for Federal legislation to let manufacturers fix retail prices of brand merchandise have aroused the firm—and, we believe, proper—opposition of both the Federal Trade Commission and the Department of Justice.

The proposed legislation would enable any manufacturer of brand goods to fix the retail price of his products merely by serving notice to distributors. Any retailer who then sold for less would be violating Federal law.

It seems to us that a Justice Department spokesman, Robert A. Bicks, first assistant in the Antitrust Division, went to the heart of the matter when he told the House Committee on Interstate and Foreign Commerce that such Federal fair trade procedure "signals the abandonment of our time honored free-enterprise ideals for the distribution sector of our economy." He added that it would stifle competition, raise prices, and impose Federal restrictions on States which had rejected the same proposals.

As long as a manufacturer gets his price for a product, why should he have the right to set that product's retail price? If a retailer can afford to sell for less than a competitor, why shouldn't the hard-pressed consumer avail himself of the benefit? We believe price fixing is repugnant to the American people, and that goes for efforts to put it over through Federal legislation bypassing States' objections.

"Fidel Castro: Liberator or Dictator?"—The Critics Review Jules Dubois' New Book—II

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following book reviews which appeared in the Chicago Sunday Tribune last month and in the New York Herald Tribune:

[From the Chicago Sunday Tribune]

FIDEL CASTRO: IS HE DICTATOR OR LIBERATOR?

(Reviewed by John H. Thompson)

The name of Fidel Castro has been a glowing star in the world's imagination since he came down from the Sierra Maestra with his bearded guerrilla fighters to liberate Cuba from the bloody dictatorship of Fulgencio Batista, who fled the country on New Year's day, 3 short months ago.

Since Castro's victory, and its train of executions of those deemed Batista's worst killers and torturers, many have been wondering about the bearded rebel, now Premier of Cuba. Liberator or dictator? What manner of man is this new powerhouse? What political philosophy moves him? What will happen to his lush homeland? Above all, how did he do it, starting with only 11 friends in the mountains in 1956?

One North American who was there and saw it all—the dictatorship, the wanton slaying, the rebellion, the political intrigues, the ineptitude of American Ambassadors—was the Tribune's chief Latin American correspondent, Jules Dubois, black-listed by every Latin American dictator, whether of the right or left.

Despite Batista's iron censorship, and the ever-present danger of death or injury, Dubois informed Tribune readers of the dictatorship and the rise of Castro. Now, working under pressure, Dubois has performed the almost incredible feat of putting the whole fascinating epic together in nearly 400 pages of drama, color, scholarship, and history. He has done this while retaining still another post, that of chairman of the freedom of the press committee of the Inter-American Press Association.

Within these pages is the story of modern Cuba, taken as a private preserve by men like Batista and other politicians. It is the story of a dictator resorting to widespread terror and assassination to retain power, of graft and corruption on a colossal scale, of unorganized political opposition, and of a young lawyer who refused to believe Cuba would remain enslaved.

It is the story of this young man, Castro, a sincere idealist who never overlooks an opportunity, as Dubois calls him; a figure of tremendous vitality, energy, and leadership; a man of paradoxes and contradictions; a leader who insisits that Communists have the same political rights as other political groups, but that he will never be taken over by the Communists; an intense nationalist who believes in wider share-the-wealth programs for a majority of his people; a lawyer who believes his postwar trials and executions of Cuban war criminals have much more legality than the Nuremberg trials of Nazi war criminals; a Castro, not anti-American, but touchily pro-Cuban, who bitterly resented apparent official American support of the dictator and the use of American weapons and bombs to kill Cubans.

Castro was not alone in opposition to Batista, the dictator. Others, in time, went into the hills to fight, or helped organize rebellion in the cities, or raised money for arms. But it was Castro who breathed life and fire into the whole movement. Inevitably, his personality came to dominate all of the rebel movements and became their fiery catalyst.

In 1953, captured with other young students after an unsuccessful effort to capture the army's Moncada Barracks in Santiago, Castro defended himself at his trial in words which came to have tremendous effect on the history of Cuba. In an eloquent defense—unsuccessful, for he was imprisoned—he outlined five basic reforms he demanded for modern Cuba.

Today this same program is incorporated in what the impetuous young man still demands for Cuba. To achieve this will he become a new dictator, as some of his friends hope? Dubois, in evaluating the Castro of 1959 and of the future, believes that Cuba's new premier and revolutionary chief can escape this fate.

Inevitably, because of the speed with which this manuscript was written—20 days—"Fidel Castro" was bound to suffer. Inevitably, too, the pace slows when Dubois prints in full the manifestos, letters, court briefs, and other documents which feature importantly in this violent period of Cuban history. These are minor criticisms. What Dubois has is an intensely vivid and discerning account of those years and the man who has reshaped Cuban history.

[From the New York Herald Tribune]

FIDEL CASTRO: REBEL

(Book reviews by John K. Hutchens)

When Fidel Castro comes up to Washington later this month as guest of the American Society of Newspaper Editors, and his hosts ask him the questions they are sure to ask, the Premier of Cuba can tell them where to go for a lot of the answers. They can go, if they have not then already gone, to this report by a highly respected colleague of theirs, the Chicago Tribune's veteran Latin-American correspondent, Jules Dubois, who has been keeping an eye on the Castro story for something like a dozen years.

ONE MORE DICTATOR?

Right there in the subtitle of Mr. Dubois' book—the first of what will surely be a swatch of Castro books—is the big question. Having been the leader of the 26th of July movement that rid Cuba of the Batista tyranny, will Castro go on to be a dictator himself?

Mr. Dubois, who wrote the last words of this book less than a month ago, believes Castro will not. He does qualify this opinion to the extent of observing that "the existence of a revolutionary de facto government without the checks and balances of representative, elective government, including a congress and a senate, lends itself to dictatorial measures." He adds, significantly: "Castro has a deep reverence for civilian, representative, constitutional government."

Is Castro a sincere idealist or an opportunist? Mr. Dubois' judgment: "He is a sincere idealist who never overlooks an opportunity. His goals are political, moral, and social revolution and election to the presidency by popular suffrage."

Were the Cuban people behind Castro in the struggle climaxed by Batista's flight on

the morning of January 1 last? "Solidly," says Mr. Dubois.

WHAT ABOUT THE REDS?

Did Cuban Communists play a role in Castro's triumph, and is Castro under Communist influence? Mr. Dubois sees no supporting evidence on either count. To be sure, the Communists, following their familiar practice, tried to climb onto the winner's bandwagon, but "they won't be able to capture him because the people of Cuba will not stomach communism and because they recall that the Communists made their greatest gains under Batista," Mr. Dubois asserts, noting Castro's denial that the 26th of July movement has favored even such socialistic measures as the nationalization of industries.

What then about those summary trials and executions of Batista followers that so offended world opinion? Castro's "rebel justice shocked almost everyone except the people of Cuba," Mr. Dubois declares, explaining if not condoning. "Castro had been telling them for months that the torturers and killers, and the informers who were responsible for the deaths of those they denounced, would be executed as quickly as possible after victory."

You are not to gather that this is a study in deification. Mr. Dubois, who saw Castro at close range during the war, and was the first to interview him after Batista's departure, sees the Premier as too impulsive and too easily exasperated. He thinks Castro erred in whipping up anti-American feeling in the flush of anger over American aid to Batista (though he sympathizes with Castro's resentment at the policies followed by U.S. Ambassadors Arthur Gardner and Earl E. T. Smith). The scorched-earth policy that resulted in the burning of sugarcane fields was a major blunder that Castro, himself, recognized.

But on balance, as Mr. Dubois goes back over the story that began with Castro's first and unsuccessful attempt at insurrection on July 26, 1953, at Santiago, he finds Castro a bold, intelligent and (within the framework of revolutionary violence) humane chieftain.

REPORTER AT WORK

To the dramatic saga of the man who in December 1956, was holed up in the mountains with a band of 11 men, and 2 years later defeated a standing army of 30,000, he adds valuable and revealing documentation: manifestos, magazine articles, excerpts from Castro's 5-hour speech before the court that condemned him after the Santiago fiasco. With names, dates, places, he cites the Batista atrocities that swung popular support to Castro. He writes with the prestige of one honored by his colleagues with regular reelection as chairman of the committee on freedom of the press of the Inter-American Press Association. But first of all he writes as a hardworking reporter who in his time has been beaten, jailed and shot at, but who never gave up, as he went about his business of getting the facts of a story. It is something to remember as you read the story he tells here.

Soaring Railroad Profits: Net Earnings Near Peak of Whole Postwar Period

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, in view of the discussion of the economic position of the railroad industry in connection with the debate on the railroad retirement and railroad unemployment insurance bill, I would like to call attention to a recent statement of the Railway Labor Executives' Association on the rail profits picture.

The railroad industry is vital to the economic well-being of the Nation. Congress recognized this fact by enacting the Transportation Act of 1958, which had my full support. I am pleased that American railroads have recovered from the 1957 and 1958 recession and their financial position is continuing to improve.

The text of the statement follows:

SOARING RAILROAD PROFITS: NET EARNINGS NEAR PEAK OF WHOLE POSTWAR PERIOD

The railroads of the Nation today, as always, are crying poverty, but are their cries justified? Not at all when you check into the facts and figures which reveal that railroad profits are nosed upward and nearing the peak of the entire postwar period.

Truth of the matter is that U.S. railroads have snapped back from the recession of 1957–58 and their basic financial position is excellent today.

In the last 4 months of 1958, the railroads were chalking up earnings at the rate of more than $1 billion per year in net railway operating profits.

That figure represents a higher mark in profits than in most of the postwar years; in fact, it is close to the peak earnings during that period.

Meanwhile, profits in 1959 are showing a further upward trend with carloadings on the rise. In the first 3 months of this year, carloadings registered a 6-percent gain over the similar period of 1958.

Rail labor's contention that the rail profit picture is far better than the carriers would have the public believe is confirmed by information released by the railroads.

For instance, the estimated net railway operating income of Class I roads in February of this year amounted to $39,793,000—that compared with $9,067,000 in the same month of 1958. And in the first 2 months of 1959 the estimated net railway operating income was $75,963,000 compared with a net of $40,982,000 in the corresponding 1958 period.

Other figures stemming from the Bureau of Railway Economics of Association of American Railroads reveal that total operating revenues showed a 4.1-percent increase in the first 2 months of this year—$1,532,496,964 compared with $1,472,791,123 in the corresponding period of 1958 while operating expenses increased less than one-half of 1 percent.

The railroads are and have been recovering very well from the recession that hit most industries, carloadingswise and profitswise.

In the week ended April 4, 1959, the railroads loaded 590,133 cars, representing a boost of 73,886 cars, or 14.3 percent over the corresponding week in 1958.

The Wall Street Journal recently conducted a survey which unearthed some interesting information that disproved the gloom and doom cries of the Nation's railroads.

The survey showed that the railroads have been doing much better in the profit column, in making a return from the economic slump, than have the big corporations of the country in general.

Profits of the major firms in the fourth quarter of 1958 were approximately 2 percent above those of a year earlier. Class I railroads, however, had registered a whopping 23 percent increase in that period. They earned $248 million compared with $202 million in the last quarter of 1957.

As did many industries of the Nation, the 1957–58 recession hit some railroads severely, but no serious damage was caused. No new railroads found themselves in a state of receivership or bankruptcy.

Dividends of some carriers were reduced or abolished for the year of 1958, but total dividends for the rail industry as a whole were reduced only moderately.

Total net railway operating income for all railways from September through December 1958, was $368,932,000—20 percent higher than for the similar period of 1957 and only 6 percent below the corresponding period of 1956, a year when net railway operating income surpasssed $1 billion.

After all charges, net income during the last 4 months of 1958 was $323,774,000. That was a 25-percent increase over the 1957 level; only 6 percent under 1956.

The net railway operating income, which is the operating profit of the railroads, has continued to be $1 billion or near it during most of the postwar years. Before World War II, the net operating income frequently slumped well below $500 million and even below $200 million during the depression years of the 1930's.

It has not dropped below $750 million since 1949.

Net income—the final corporate profit of the railroads—has remained very stable.

The carriers as a whole reported net deficits in some years prior to the war. This has not occurred since the war's end and in recent years the net income has been well over $500 million.

The same has held true for the individual railroads as for the rail industry as a whole—nearly all carriers have maintained net income in each postwar year. The number of roads which have failed now and then to register corporate profits has been small, even in times of temporary recession.

Following the 1949 recession, with recovery in 1950, the railroads of the United States moved ahead to attain new earnings' records. They amassed the largest net income in history, up to that time, in 1953, when they bettered the best of the lucrative 1920's and the peak years of World War II.

They endured another recession in late 1953 and throughout most of 1954, but hit a new peak level in 1955 when the 1953 record was smashed.

The U.S. railroads are making an impressive recovery from the 1957–58 recession and nearly all individual roads have shared in the industrywide return to better days.

Most carriers have increased their earnings well above the closing months of 1957 and near to the high peaks of 1956.

Some railroads have made higher profits then in 1956.

The outlook for 1959 is excellent.

Predictions for carloadings, stemming from shippers' advisory boards and other authoritative groups, are that a substantial traffic increase above last year's level will be registered in 1959.

Profits are looking up.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mrs. DWYER. Mr. Speaker, last Sunday, May 3, was Polish Constitution Day, the 168th anniversary of the signing of a great charter in the history of human freedom.

In Elizabeth, N.J., a large number of my constituents of Polish birth or descent gathered with their friends of other nationalities to commemorate this important occasion. The program was an impressive and inspiring one, in keeping with the spirit of the anniversary.

As one who was privileged to attend, I can report that everything about the program was of an extremely high order; the music, the songs and dances, the speeches and recitations. It gave evidence of careful planning, great effort, and willing cooperation on the part of people devoted to the cause of freedom and national independence.

The committee for the Polish Constitution Day program, the sponsoring Federation of Polish Organizations, and all those who participated in making this day a great success deserve thanks and appreciation.

Under leave to extend my remarks, I include the text of the program, together with a brief address which I was honored to give:

FEDERATION OF POLISH ORGANIZATIONS, ELIZABETH, N.J.

Polish Constitution Day was held Sunday, May 3, 1959, at the Polish National Home, 111-113 First Street, Elizabeth, N.J., commencing at 4 o'clock in the afternoon.

COLORGUARD—PRESENTATION OF COLORS

Polish Legion of American Veterans, Post No. 91, and the Ladies Auxiliary.

Polish Army Veterans Club, Post No. 57, and the Ladies Auxiliary.

Polish American Army Veterans Club of Joseph Pilsudski Polish Combatants, Circle No. 6.

PROGRAM

1. Opening address: Commissioner Jacob W. Krowicki, president of the Federation of Polish Organizations.

2. Master of ceremonies: Mr. Albert Sieratowicz, vice chairman of the Polish Constitution Day Committee.

3. National anthems—American and Polish: Johnny Lenard's Orchestra. Soloist: Mrs. Emilia Wozniak.

4. Invocation and remarks: Rev. John Pietrzkowski, assistant, St. Adalbert's Church.

5. Polish songs: St. Cecilia's Choir under the direction of Prof. Albert Wozniak.

6. Recitation: Entiled "Our Lady, Queen of Poland," by Miss Christine Skora, a pupil of St. Adalbert's School.

7. Address: Mr. Stanley Dworecki, captain of Polish Army in exile, World War II.

8. Polish folk dance: Wianek Group No. 408, of St. Elizabeth's Society, Group No. 793, Z. P. of A., under the direction of Mrs. Antoinette Balkowska.

9. Address: Hon. Thaddeus Gora, president, Elizabeth Board of Works, in behalf of Hon. Steven J. Bercik, mayor of the city of Elizabeth.

10. Address: Mr. Thomas G. Dunn, freeholder of Union County.

11. Recitation: Pupils of St. Hedwig's School of Bayway.

12. Address: Congresswoman FLORENCE P. DWYER, House of Representatives.

13. Recitation: Miss Barbara-Wanda Dworecka.

14. Address: Mr. Leon L. Krzyzak, of New York, general secretary of the Polish Army Veterans of America.

15. Musical selections: Johnny Lenard's Orchestra, under direction of Mr. John Lenard.

16. Address: Mr. Stanley Pelkowski, "My Recent Trip to Poland."

17. Benediction: Rev. Joseph Sapeta, St. Hedwig's Church, Bayway.

18. Words of appreciation and thank you: Mr. Albert Sieratowicz, chairman of the committee.

19. Closing: Everyone singing the Polish hymn, "Nie Rzucim Ziemi."

COMMITTEE

Rev. Joseph Smolen, pastor of St. Adalbert's Church, honorary chairman.

Rev. Joseph Amlicki, pastor of St. Hedwig's Church, honorary chairman.

Rev. Edward Kozlowski, pastor of St. Theresa's Church, honorary chairman.

Mr. Joseph Cichowski, chairman.

Mr. Albert Sieratowicz, vice chairman.

Mr. Stanley Pelkowski, vice chairman.

Mrs. Marion Wedzilowicz, secretary.

Mr. Jacob W. PARTIAL TEXT OF MRS. DWYER'S REMARKS

Today is a day for reflection, for hope, for dedication.

The 168th anniversary of the adoption of the Polish Constitution should be an occasion for freedom-loving people everywhere to reflect upon the meaning of freedom and independence, to hope for its restoration in those lands and for those people from whom it has been taken away, and to dedicate themselves to protecting the heritage of freedom here and encouraging it throughout the world.

This is the meaning of that day in 1791, which we commemorate today. The Polish Constitution was a landmark in the history of freedom and self-government. As an inspired statement of the nature of people, the origin of authority, the role of law, and the proper function of government, this document is and will remain a classic.

But it is a living classic—forever holding before the people of Poland and the people of Polish descent the ideal, the goal, the vision of justice and opportunity, and the right to live in peace and freedom.

This is a goal that Poland and America long have shared. Polish craftsmen were among the first settlers at Jamestown in 1608. Polish officers and men fought alongside Americans in our struggle for liberty in the Revolutionary War. And the framers of the Polish Constitution were inspired by the spirit of the American Constitution which they had helped make possible.

The people of Poland and America are united, too, by another bond—by an unyielding opposition to the inhuman tyranny and oppression of world communism, in particular the Russian variety.

It was an earlier kind of Russian tyranny against which the Polish people rebelled late in the 18th century, out of which grew the constitution we celebrate today. The period of Polish freedom after World War I was again stifled by Soviet armies in World War II. And the brief relaxation from Communist oppression which was won by the courage of the Poznan revolt in 1956 has once more given way before the relentless force of the Communist regime.

In recent months, the world has watched as intensified Soviet-inspired pressures have eaten away what little freedom was left in agriculture, education, religion and daily life in general.

Yet, the world also watches in admiration and awe the continued resistance of the Polish people, the courageous display of independent minds and unbroken spirits.

We in America are free to celebrate Constitution Day, as Poland is not. In their place, we must pledge ourselves never to forget that freedom is the right of every man, never to abandon those who are fighting to preserve their independence, never to give up hope that Poland some day will be free again.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the May 2 issue of the Chicago American written by Stanley Pieza:

POLES PUT HERO ON PEDESTAL AND GENERATED A MYSTERY

(By Stanley Pieza)

"And freedom shrieked as Kosciuszko fell."—Campbell.

On October 10, 1794, when 17,000 Russians defeated his army of 7,000 heroic Polish soldiers at Maciejowice, Poland, Gen. Thaddeus Kosciuszko was wounded and his fall was interpreted in the above words of Poet Campbell.

Inspired by the patriotic spirit of the hero revered by both Poland and America, Chicago's Americans of Polish ancestry gather each year at the General Kosciuszko shrine in Humboldt Park.

Since its erection in 1904, Chicago's Polish citizens have been parading to the equestrian statue of the general in the northwest side park to observe the adoption of Poland's constitution on May 3, 1791.

Located on a grassy expanse beside Humboldt Boulevard, the heroic statue of Kosciuszko, with sword swung up in a commanding gesture and his horse's head proudly lifted, surveys the river of automobiles from a massive pedestal.

The statue—one of the most beautiful and imposing in the city's park system—was erected by the American Poles to honor the memory of the great general who helped this country's fight for freedom in the Revolutionary War.

It is the work of a Polish sculptor, Kazimir Chodzinski. Unveiled January 11, 1904, the sculpture has been visited by millions.

MOVED BY WPA

The statue was moved to its present location by WPA workers in 1936—and thereby hangs a mystery unsolved to this day.

General Kosciuszko and his horse were hoisted off the pedestal and moved 200 feet from the center of the park drive. Then the workmen started moving the pedestal in the presence of Chicago's Polish leaders who came to supervise the removal of two memorial boxes supposedly placed under the pedestal in 1904.

They found one rusted box, containing documents, old newspapers, and coins. Then a search was made for the other box that was thought to be there—but no other box was found.

The missing box contained a bottle of rare vintage champagne.

The late John Romaszkiewicz, then president of the Polish National Alliance, was present and was one of those who sought to find the other memorial box with the champagne. He said:

"I remember, plain as day, that the late Kazimir Zychlinski, my predecessor, told me that at the time of the erection of the General Kosciuszko statue he personally placed two memorial boxes under the pedestal. Where is the other box?"

The other box still has not been found.

LEADERS PRESENT

Others who witnessed the opening of the one memorial box and were chagrined at the loss of the other were the late Joseph L. Kania, then president of the Polish Roman

Catholic Union, and the late Mrs. Honorata Wolowska, who was president of the Polish Women's Alliance.

Tomorrow will mark the 168th anniversary of the adoption of the Polish Constitution of May 3. It was Poland's Magna Carta, and through it the Polish people hoped to live in freedom without the interference of their enemies.

The Poles throughout the world hail May 3 as Poland's national holiday—similar to our July Fourth. Polish leaders—aided by Americans—are working for a free Poland today. They say they want a Poland that will be free of Communist domination.

Polish history is replete with brave deeds of a people fighting for their freedom. For more than a century Poland was partitioned and governed by three nations—Czarist Russia, Austria and Germany. In the aftermath of World War I Poland was resurrected. In World War II she fell into the hands first of the Nazis and then of the Soviets.

UPRISING IN 1793

It was one of Poland's struggles to regain freedom that was led by General Kosciuszko, who summoned the Polish patriots to arms in 1793.

The call went to the cities and villages. The men, young and old, but lacking gunpowder and cannons, came prepared to battle with scythes, pitchforks, and knives. The first battle took place at Raclawice on April 29, 1794, when the Russian artillery was routed.

Crafty Catherine II then dispatched an army of 17,000 of her best soldiers which annihiliated the Polish army of 7,000—and when Kosciuszko was wounded Poland lost her fight for freedom.

Kosciuszko came to America before his final fight for Poland's freedom. He reported to Gen. George Washington in 1776. His ability as an engineer was of invaluable use to the Continental Army.

WEST POINT IDEA

It was General Kosciuszko who first suggested West Point as the spot for the U.S. Military Academy. The monument erected to his memory at West Point by American youth remains as a grateful nation's tribute. Kosciuszko had fought for 6 years in the American Army. Nathaniel Greene best sums up what Kosciuszko had done for America and what he had been to his brother-soldiers. Wrote Greene:

"Colonel Kosciuszko belonged to the number of my most useful and dearest comrades in arms. I can liken him to nothing in his zeal in the public service, and in the solution of important problems, nothing could have been more helpful than his judgment, vigilance and diligence. He was fearless of every danger. He never manifested desires or claims to himself, and never let opportunity pass of calling attention to and recommending the merits of others."

ACTION BY CONGRESS

In 1783, Congress belatedly conferred upon Kosciuszko the rank of brigadier general with an acknowledgment of its high sense of his long, faithful, and meritorius service.

Kosciuszko revisited America in 1797. Before returning to Poland, he received from Congress a grant of 500 acres of land in recognition of his military services. This property was located in the extreme western border of the U.S. Military Lands, on the site of the present city of Columbus, Ohio.

Before embarking at Baltimore, Kosciuszko gave Thomas Jefferson his power of attorney and wrote out the will authorizing Jefferson to use the money of his estate to purchase Negroes * * * and give them liberty in my name. Thus Kosciuszko advanced the cause of emancipation more than a half century before the Civil War.

Kosciuszko died in Switzerland October 15, 1817, far from his motherland.

RESTS WITH KINGS

His body rests in the Wavel Cathedral at Cracow, Poland, where lie Poland's kings and her most honored dead.

The spirit of Kosciuszko still remains in the hearts of freedom-loving Poles throughout the world.

And tomorrow at the monument in Humboldt Park, Chicago's Polish Americans will rededicate themselves to the United States, the country Kosciuszko helped to create.

The first Polish Constitution Day in 1904 attracted thousands of members of the various Polish-American organizations and parishes of the city and suburbs

Among the most prominent speakers to appear at one of the celebrations of Polish Constitution Day was Ignace Jan Paderewski, Poland's great statesman and wizard of the piano. He spoke there in 1915.

SIKORSKI SPEAKER

Another famous son of Poland to speak at the Kosciuszko statue during the annual celebration was Gen. Wladyslaw Sikorski, World War II hero. This was in 1940.

Poland's hero of World War I, Gen. Jozef Haller, spoke at the annual observance in 1945.

Gen. Bor-Komorowski, leader of the Polish underground during the Nazi occupation, addressed crowds at the 1946 celebration.

The late Vice President Alben Barkley paid tribute to Americans of Polish ancestry at the ceremonies in 1952.

In 1956, the speaker at the Constitution Day event was Gen. Wladyslaw Anders, who led Polish troops at the victory of Monte Cassino, Italy, in World War II.

Gaylord Container Corp., a Division of Crown Zellerbach Corp., Is Doing a Magnificent Job in Forestry Research and Development Which Greatly Enhances the Value of Louisiana Timberlands, Thereby Aiding Every Man, Woman, and Child in This Great Timber Area in Louisiana

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. MORRISON. Mr. Speaker, recently I had the unusual opportunity of attending the second annual southwide Pulp and Paper Day celebration, and thereby have a part in the launching of a typical pilot forest project on the land owned by one of my constituents, Joe Kelly Coburn, in Livingston Parish, La.

Mr. Speaker, it is difficult to describe and explain just how important this Gaylord operation in making paper products at their Bogalusa plant is to the development of this section of Louisiana.

It affords better living conditions for each and every one of the citizens of this vast area, and it is the largest individual payroll in Livingston Parish. No longer does a farm or landowner, either small or large, have to only hope that oil will be discovered, because with the young growth of pine timber, he can have a definite money crop growing night and day, month in and month out, year in and year out, on his land, and still have potential oil possibilities.

Without the Crown Zellerbach organization, which owns the Gaylord Container Corp., there would be no market for much of this timber, and that is a perfect example of how the people need the Gaylord Container Corp. and the Gaylord Container Corp., likewise, needs the people, to grow the raw materials which they use in the manufacture of paper products, which, of course, is pulpwood.

Crown Zellerbach has certainly put out a warm hand of friendliness and has demonstrated their great confidence in the people who own this land and live in this area. No better example can be shown than by their act of establishing, which is in the process of completion, a paper mill costing approximately $20 million, which is located in this area at St. Francisville, La. With their present mill at Bogalusa and their new mill at St. Francisville, all of the landowners and inhabitants of this great area can with all confidence rest assured that they will derive tremendous benefits from this operation. The vast amounts of money that will be paid for the raw pulpwood materials, and the tremendous amounts that will be paid in payrolls, both directly and indirectly, in this vast operation has brought and will bring even more wealth to this section, and greatly improve our living conditions. We have much to look forward to in the future, and we have a lot to be thankful for that Crown Zellerbach had confidence in our people and our lands in this section of the United States.

As we all realize, this is one of the fastest growing timber sections in the entire United States, and for that reason, this land has a great potential production value in all kinds of timber products.

It is, therefore, most essential and necessary that we protect and preserve this great industry by protecting and preserving these timberlands, so that they will produce the maximum wealth in timber products that they are capable of.

That is why this pilot forest right here is so important, because it takes property belonging to an average citizen and clearly demonstrates how this land can be utilized to its fullest extent to produce a maximum of valuable timber products. This is an example of tremendous amounts of money that have been spent in research and development in bringing this pilot forest to a realization, so that everyone of us can see just exactly with our own eyes a concrete example of how to utilize our land to its fullest extent and advantage.

I firmly believe that in the years to come not only will our timberlands be utilized to the fullest extent, thanks to the beneficial cooperation of the Gaylord Container Corp., but that further cooperation of mutual benefit and under-

standing will even become greater between this company and the people that it serves. Without this source to purchase our pulpwood, many acres of our land would be without value and without revenue, and instead of going ahead with progress, we would stand still or even go backward economically. Therefore, it is certainly evident that with the continued use, and the vast future potential market for paper products, that we all have a great deal to look forward to in the years to come.

I only regret that all of the Members of this House were not able to be present and to have the opportunity that I had to see firsthand the great possibilities of the production of timber products from our land. It would give a much clearer and comprehensive understanding of the vast importance of the paper and paper products industry, and how much it means to the citizens of this great Nation of ours, both directly and indirectly.

Mr. Speaker, the following are the remarks which I made on this occasion:

THE PILOT FOREST POINTS THE WAY

I think it can be said without reservation that the program in which we are taking part here today is one of the most significant events to take place in our area in some time. The pilot forest project is truly an outstanding example of the benefits that can result from the close cooperation of agriculture and industry.

As you probably know, this pilot forest is one of more than 90 established this year for the first time in 12 southern States. It's a project of the Southern Pulpwood Conservation Association, sponsored locally by a pulp and papermill member of that association and by a progressive-minded owner of woodlands. Our hosts here in Livingston Parish are Joe Kelly Coburn, the owner of the property on which the pilot forest is located, and Gaylord Container Corp., division of Crown Zellerbach, which is carrying out the forest work on this property. To both, we offer our congratulations. The roles they are playing in the creation of the pilot forest here will mean much to this parish and this area in the near future.

This pilot forest and others like it are informational and educational projects. They are designed, as their name implies, to show the way, to show the owner of small woodland areas how to grow trees more profitably on his property. In setting up these pilot forests as guides to others with silmilar property in the parish and adjacent areas, the pulp and papermill has agreed to do a complete initial forestry job in order to bring the property into full production. Incidentally, all proceeds from the timber harvest go to the landowner.

You may ask why the pulp and paper industry is investing in such an undertaking. I'm told that there are many reasons, but the most obvious one, of course, is the need for a steady supply of that renewable raw material of the industry—wood. Since 74 percent of the woodlands of the South today belongs to the owners of small woodland tracts, it's natural that the industry would look to this group for much of the wood it needs.

Unfortunately, however, only 40 percent of the woodlands belonging to owners of small tracts is being managed to guarantee future high-level productivity. Although in recent years, important progress has been made in getting woodland owners to undertake improved forest practices, the pilot forest projects should give tremendous new impetus to substantial additional progress.

In this parish there are there are 105,000 acres of woodland similar to the wooded area on this farm. One of the primary considerations in the selection of this pilot forest site by a country committee of outstanding representatives of forestry, agriculture and others was the degree to which the property could serve as a demonstration to as many farmers as possible. This meant that in terms of size and existing forest conditions, it should be reasonably typical of most farm woodlands in the area.

I think you'll quickly understand the reason for this. The foresters who have planned the development of this woodland say that the measures which have been started here should increase the productivity of this area by three-fourth cord of wood per acre per year. If this increase of three-fourth cord per acre year were applied to all the 105,000 acres of farm woodland in this country, we would have an additional 80,000 cords produced here annually that are not being marketed today. In terms of dollars, at the rate of $15 per cord, f.o.b. car, this would mean an additional $1,200,000 in new business to Livingston Parish each year. It would be the same as the establishment of a substantial new industry here in terms of additional dollars created for the economy of the parish.

Think of that. Putting all the small woodland tracts of Livingston Parish into a high level of productivity would mean the equivalent of a new industry. To me, this is one of the most interesting and significant aspects of this whole program. And, this is newly created wealth which will benefit not only the landowner, but the whole community.

Let me give you a couple of other pertinent economic statistics. During 1956—the last year for which we have complete information—1,648,500 cords of pulpwood were produced in Louisiana at an f.o.b. car value of $24,727,500. In this parish, the value of pulpwood produced in that year was an estimated $1,155,750. Remember that one pulpwood truck represents an annual business of $22,500 to the community in which it operates.

These facts do not take into consideration the large economic contributions made directly by the pulp and paper mills. For example, the wood produced supports the paper mills, of which there are 8 located in Louisiana. These plants provided full-time employment for 13,218 persons, with a payroll of $57,869,100 in 1956. Wood harvesting provides the equivalent of 6,594 additional jobs in the State. The replacement value of the pulp and paper mills in Louisiana is $370,875,000.

These are just a few of the interesting economic facts about one of the South's largest industries. But I think they are indicative of the vital part the industry plays and will play in the future growth of the area. And they also point up the vital need for the closest kind of working relationship between industry and agriculture for the mutual benefit of all concerned.

An unusual feature of the pilot forest is its permanence. This tract will be developed to its fullest potential as an enduring example for years to come. It is to serve the broad purpose of illustrating as complete a forestry program on farm properties as is possible. It would point the way toward the fullest development of individually owned forest resources. The result will be maximum benefit for our communities from this balance of industry and agriculture.

It is expected that when the various harvests are made, they will be measured in terms of board feet, numbers of poles, lineal feet of piling, as well as in terms of cords of pulpwood.

The pulp and paper industry is undertaking this pilot forest program with full knowledge that much of the wood to be yielded will go to uses other than pulpwood. But the industry also knows that by improving total productivity, it improves the chances of increased pulpwood production.

It is my understanding that it was difficult to practice good forestry in many areas of our State only a few years ago because there was no market for trees of small size. When you chop cotton or thin corn to a stand, for example, you write it off purely as a cost item because there is no market for the excess plants. However, these operations may be carried out with no more elaborate equipment than a good hoe and a strong back.

Thinning trees to a stand employs the same principle of plant growth, but it takes a much broader back and more expensive equipment. Therefore, it is a much more costly process unless there is a market for the thinnings. The pulp and paper industry provides that market and the farmer now can thin his crowded woodland at a profit. You will notice that I did not say clear his woodland. I said thin it to a good stand.

When this has been done, the remaining trees have the space they need for maximum growth of all kinds of products. As higher valued trees are being grown, there will be times when another thinning or a combination harvest is desired. Here, again, the pulpwood market is a very valuable asset to the farmer.

Some trees will need to be thinned still again before they are large enough for saw timber, even though there may be many trees in the stand of saw timber size already. Some trees may not be straight enough for saw logs, yet they can be cut in such a way as to yield pulpwood. Others may be diseased and not be cut into sticks of pulpwood. Even the tops of saw timber trees, formerly wasted, may be worked into pulpwood. The same type of management will benefit trees that are to be used for even higher valued purposes such as poles or piling.

Right here on the property of Joe Kelly Coburn, a number of measures have been started to get the woodland into peak production. For example: (1) Planting of open areas, (2) prescribed burning for brush control, (3) girdling of cull hardwood trees, (4) timber stand improvement in pure hardwood stands, (5) selective cutting.

Farms are most successful when every acre is profitable. Making farm woodlands productive can add immeasurably to the stability and to the profitability of the farm operation. Like any crop, there are certain problems in growing wood that must be solved if the product is to be salable. The pilot forest program is designed to show the way to better woodland management by showing practical solutions to these problems.

Before concluding, I should like to summarize briefly:

First, the markets for paper and paper products are continually expanding in this Nation and throughout the world. New and fascinating uses for pulpwood and other wood products are continually being developed.

The warm climate of the South makes this region ideal for growing the raw materials to serve the dynamic paper industry. The industry itself is expanding in the South where it can be near that fast-growing renewable natural resource—trees.

The industry is making enormous contributions to the wealth of the region with its tax dollars, payrolls, investments and payments to those who supply it with wood.

Farmers and other owners of small woodland tracts can create new wealth for themselves and their fellow citizens through sound management of woodlands, resulting in higher productivity, not only of pulpwood, but of other forest products.

The pilot forest has been established as a means by which owners of small woodland

tracts can see firsthand the application of proper forest practices on property like their own.

The result of bringing all woodlands up to maximum productivity is comparable to the establishment of an important new industry in the parish.

I believe very strongly that the pilot forest in concept and in action is an example of one of the finest relationships between agriculture and industry in the Nation. It has been established on the principle of cooperation and mutual benefit for all concerned. It seems to me that the pilot forest is truly symbolic of the kind of working partnership between different segments of our economy that will assure the future of the South and the Nation. I would urge all interested persons, as well as forestry and agricultural agencies, to make full use of the excellent educational opportunities of the pilot forest.

Thank you for giving me this wonderful opportunity to be here and have a part on this second annual southwide Pulp and Paper Day in the launching of this pilot forest project.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Deserved Honor Paid Walter C. Hornaday, Dallas News Washington Bureau Chief

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. JOHNSON of Texas. Mr. President, it is always a delight to me when personal friends of mine are accorded honors which I know are due them. So I was highly pleased to learn that Walter C. Hornaday, longtime head of the Washington bureau of the Dallas Morning News, had been cited by his alma mater, the University of Wisconsin, for distinguished achievement in journalism.

I have known Walter Hornaday for many years, both as a loyal friend and as a news reporter of extraordinary competence. Walter brings an objective eye and a knowledgeable mind to the arduous and responsible task of covering the Washington scene for one of the great newspapers of the Nation. He is accurate; he is fair; he is thorough; and he has a facility with the written word that arouses my constant admiration.

No honor was ever more completely deserved than that paid Walter Hornaday by the University of Wisconsin.

I ask unanimous consent that the Dallas News story telling of the citation and giving a few highlights of this distinguished newsman's career be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOURNALISM CITATION—UNIVERSITY OF WISCONSIN HONORS NEWS' WALTER HORNADAY

MADISON, WIS.—Walter C. Hornaday, veteran correspondent of the Dallas News, Friday was cited for distinguished achievement in journalism by the University of Wisconsin.

Hornaday, chief of the News' Washington bureau, was one of three to receive such a citation at the annual journalism institute of the university's school of journalism.

The others were New York playwright Howard M. Teichmann, author of "The Solid Gold Cadillac," and Robert Fleming of the American Broadcasting Co.'s Washington staff.

Hornaday's citation described him as "part of the warp and woof of Texas journalism since 1914" and praised him for "journalistic performance as big as your native State."

The Texas newspaperman was graduated from the University of Wisconsin in 1913. During his college days he worked on the Daily Cardinal and on the Badger, the school yearbook; he also served as Madison correspondent for the Minneapolis Journal, where he was employed briefly after graduation.

Returning to his native Texas in 1914, Hornaday for a while assisted his father, the late W. D. Hornaday, a widely known Austin correspondent and journalism teacher.

Later, he was employed in the State capital by the San Antonio Express and the Austin American and became city editor of the latter.

In 1916 Hornaday received a telegram from the late E. B. Doran, managing editor of the old Dallas Journal, offering him a job. He took it.

He has been with the Dallas News organization ever since, except for 2 years of Army duty in World War I, in which he was twice wounded in combat as a member of the famous Rainbow Division. He had been commissioned in the First Officers Training Camp at Leon Springs.

Hornaday has covered virtually every beat in the newspaper business, including political campaign, State and National conventions, and the State and National capitals.

Since October 1, 1944, he has been head of the News' Washington bureau.

Tribute by Edward P. Morgan to Dr. Martin Vorhaus

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. NEUBERGER. Mr. President, people who advance the cause of medical research are contributing to the enrichment and advancement of human life. One such person was Dr. Martin G. Vorhaus, a gifted physician, who died recently in New York City. An eloquent and moving tribute was paid to the distinguished career of Dr. Vorhaus in a broadcast by the distinguished commentator, Edward P. Morgan, over the American Broadcasting Co. network on May 1, 1959. I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD this informative and thought-provoking broadcast by Mr. Edward P. Morgan in honor of the achievements and enlightenment of Dr. Martin G. Vorhaus.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

EDWARD P. MORGAN AND THE NEWS, MAY 1, 1959

In some respects, I suppose, the life of a man is like a meteorite. On an orbit from somewhere to somewhere, it enters our human atmosphere, draws a fleeting incandescent mark across the sky of society and then goes out. Yet the trajectory of one life may arch higher and farther than that of another. And the meteoric light of such a man burns with a warm and steady flame which leaves behind it not just the twinkling stardust of fond memories but something permanently luminous.

Such a luminosity glows in the hearts of countless people tonight from the broad, healing act thrown with careful calculation across their horizons by a doctor named Martin G. Vorhaus who died unexpectdly in New York City day before yesterday.

Martin Vorhaus was one of my closest friends. There can be something gross and vulgar in sentimentalizing in public over the loss of a friend. But the purpose of this small tribute to him here is not a personal one but to share with you, if I may, some of the qualities in him that made him such a remarkable human being. It is good to remind ourselves, too, perhaps, that some of the greatest of men do not bear the outward label of world celebrity but spread their strength and love of life quietly, like a warm spring rain.

Martin Vorhaus was born a Jew, 62 years ago here in New York. His father was an atheist with a wonderful but provocative, challenging respect for the world and a penetrating mind. Martin married a lovely nurse who was a Lutheran and together, eventually, they became Quakers. To me this search and synthesis made a strong, refreshing thing. It must have been this breadth of experience in part that stretched this Park Avenue doctor's interests over broad human fields far beyond the usually lucrative confines of fashionable medicine to gently neurotic patients. He had a fertile inquisitive affinity for the whole human race. One of his friends has described him as a kind of a secular saint.

Dr. Vorhaus may not have invented the word "empathy" but he was the living meaning of it. In one of his books, "The Changing Patient-Doctor Relationship," he defined the term as an unusual human trait with a strange, eerie quality "not unlike the metaphysical characteristics of extrasensory perception. It presupposes the ability of one person to project himself inside another and, being there, to act first as a completely impartial observer: to observe and record what is going on; then, having done so, to return to home base with all of this information intact and to classify and to interpret all of it."

I have never known a man who so rewardingly combined the finest attributes of the old-fashioned country doctor and the sophistication, urbanity, and restless alertness of the modern physician, determined to continue to learn. Psychosomatic medicine, I believe they call the practice of probing the links between the emotional and the physical areas in human ailments. This man was the sensitive electrician who knew the intricate wiring that connects the heart and the stomach. He was familiar with the wavelengths linking the viscera and that apparatus we sometimes call the soul.

This rare perception made him the bane of some of his more pompous colleagues. He was the needle that pricked their balloons of pretense. He upheld and refined the American Medical Association's highest standard of professional ethics. But he chided the AMA unmercifully and with relish for its often hysterical insistence that any progress toward better health, hospitalization, and medical care was creeping socialism. He received signal recognition from the AMA, incidentally in the 1930's, for his pioneering in the clinical use of vitamin B–1 in the treatment of neuritis. Ironically, he was felled swiftly by a defiantly virulent

virus pneumonia which doctors have not yet learned how to combat. I can almost see Martin G. Vorhaus, M.D., shaking an admonitory finger at the AMA, the Congress, and indeed the rest of us, and saying, "You see, here is just one more proof of the urgent need for better preventative medicine and more and more medical research."

This is Edward Morgan saying good night from New York.

Journalistic Legacy of Thomas L. Stokes

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. KEFAUVER. Mr. President, a number of friends of the late and courageous Thomas L. Stokes attended the first award dinner in his honor at the National Press Club on May 5, 1959.

David Lilienthal delivered the principal address and the journalistic legacy of Tom Stokes was given by Richard Strout of the Christian Science Monitor, who was a contemporary and close friend of Thomas L. Stokes.

I know that friends and admirers of Tom Stokes will enjoy reading Mr. Strout's address.

I ask unanimous consent that the principal part of it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TOM STOKES MEMORIAL

(By Richard L. Strout)

Every now and then some exceptional new reporter joins the Washington press corps, some crusader, some hellraiser, and it's funny how, after the years, the experienced newspaperman can generally spot him. He may be aggressive, like the late Paul Y. Anderson, or Bob Allen, or he may start out relatively young and shy and mild as Tom Stokes did. These men are a little different from their fellows. Journalism to them isn't just a business. They would shudder at the word but it's a kind of lifetime crusade. It's a way of tilting at the smug and mighty, and of somehow yanking out the truth against obstacles. That kind of reporter, when he hits Washington, is likely to stay, and die in harness. You can't somehow imagine a Nate Robertson or an Ed Lahey or a Ray Clapper or a Clark Mollenhoff ending up in a fat-cat public relations job for General Motors or United States Steel. They don't necessarily have to be radicals though a lot of them are. Joe Alsop is a good Republican but it's hard trying to imagine him toeing some chamber of commerce line or passing out handouts for some corporation.

These men have a purpose in life, a goal, a fire in their bellies; they are not using journalism as a stepladder to something else; they are generally here to stay. That's what Tom Stokes was when he came to Washington way back in 1921, 38 years ago.

He was 23 years old. Outwardly, I am told, he looked mild and shy and amiable. He was bright; he had got a Phi Beta Kappa key at the dreamy old Confederate university town at Athens, Ga. I arrived in Washington 3 or 4 years later and ultimately came to know Tom. He liked to tell how he was in the SATC camp at college and one day was told to report to the 6-foot Regular Army officer. Tom presented himself with a snappy salute. "What's your name?" demanded the officer crisply.

For the life of him Tom couldn't remember. It was part of Tom's personality both that this incident actually happened and that later he could look back on it without mortification. The officer dismissed Tom kindly and told him to come back sometime when he could remember his name.

Once as a youngster Tom volunteered in church to go as a missionary to China and though he didn't go he remained a bit of a missionary all his life. His mother died when he was 13 and his world seemed to crash about his ears. He came to Washington from a smalltown newspaper in Georgia where a hideous lynching had occurred. He was a sensitive, imaginative person and I think the sickening affair haunted him. There was that element in Tom under his gaiety. I guess that most of us, whether we admit it or not, feel some degree of guilt over the state of the world and some go their quiet way, as well as they can, trying to expiate it.

Ruminating over what I should say tonight I invented a kind of game; I asked some of Tom's old friends what was the single characteristic that they thought differentiated him from anybody else.

He was a liberal, of course; not a namby-pamby liberal but rather a fierce liberal when he discovered what he considered to be injustice. But there are a lot of liberals. He was also cheerful, and intelligent, and good company. Granted all that, there are other people like that, too (not enough, but some).

It got to be funny, the way I constantly got the same answer to my question, expressed in different ways but meaning the same thing.

"It was the way he managed to hold his strong views and yet managed to retain the liking—no, it was stronger than that, the affection—of people whose views were harshly antagonistic to his." In my lifetime I have never seen anyone who had this attribute to a stronger degree than Tom Stokes.

Most of us are not like that. I know I am not. More than likely if I don't like a man's views I don't like him—and he probably doesn't like me. We probably each get a little vindictive satisfaction out of this arrangement. This wasn't true of Tom.

I don't mean that Tom didn't have critics—or perhaps even enemies. But consider the fact that Tom never hesitated to lecture the South on civil rights and that he yet remained one of the few columnists the South would listen to on that subject. It was the same with most people of all shades of opinion. I have seen it many and many a time. When he sat down at the press table in the Senate restaurant, or at his favorite place in the National Press Club, others would always crowd in. They would sit down and not go away.

People who weren't on speaking terms with one another would drop down if Tom were there, chat amiably and then go off and perhaps not be on speaking terms again. It was really something to analyze. He was a warm, comfortable stove; he was a walking truce, and yet he would not yield his liberalism an inch in the festive atmosphere. I really can't explain it: I suppose part of it was that he had no malice at all, and no arrogance at all.

Tom liked people. And he was gay and companionable. Just to give you an idea, let me interject one personal reminiscence. It was during Harry Truman's famous 1948 whistle-stop trip to California. We all knew Truman didn't have a chance to win and for that reason were perhaps relaxed, and rather sorry for the little man. After all, he was putting up a game fight though of course the odds were quite hopeless. Who could beat Dewey? The further west Truman got the more colloquial he got, and the more relatives he seemed to have scattered about the country. (I have always meant to go back some time and count those relatives: It did sometimes seem that Harry had had more than his fair quota of grandparents.)

Well, Tom and a party of us were sitting in one of the press drawing rooms of the campaign special one day between whistle stops, laughing at Truman's folksy phrases. He kept repeating that he was going out to California "fur to get me a degree." Simultaneously the doughty little warrier was disclaiming charges of corruption and was telling audiences that the Republicans had nothing on him—"they couldn't prove a thing."

Suddenly Tom, if I remember aright, began drumming with his hand. "Why, it's poetry," he exclaimed. And then he uttered in a kind of sing-song voice what I shall always consider to be a positive example of simple inspiration—the actual Truman phrases put together:

"They can't prove nothing. They ain't got a thing on me;
I'm going down to Berkley fur to get me a degree."

Of course Tom put it to the tune "Oh, Susanna," and it quickly blossomed into the theme song of the trip. The stanzas grew and grew and I must say Truman proved to be an inexhaustible quarry of high grade material. The Truman phrases needed no depletion allowance.

Like every old-time newsman I have a metal file cabinet of clippings by my desk. How often when I turn to it I still find some first-rate clipped item from the Stokes' column. (It is odd—using material from a man who is no longer here.) These columns remind me that Tom was one of the few who kept his balance of objectivity in the otherwise all-but-universal paeans from the press after the 1953 election.

(I suppose I am in a minority but I have always felt that the American press—or a good part of it—deprived the administration for several years of something to which it was legitimately entitled, a virile opposition. Every President needs this unending, critical press scrutiny. The administration and the country loses them at their peril.)

Tom's normal style in these columns was simple, direct, and unpretentious. He had a grim concern with many matters which other columnists found too humdrum to explore. I think he was the one who first brought to my attention the role of the regulatory agencies in Washington—the great "fourth branch" of the American Government. It was something that back in 1953–55 hardly any other writer seemed interested in.

* * * * *

"I suppose a posthumous prize is out of the question."

Well, I seem to be wrong.

Here we are tonight.

So often I run across a story that I think Tom ought to be handling—if he were here. There was such a story last week: the Commerce Department's 3-year check of "distribution of national income." It sounds terribly dull, doesn't it? But what it shows is a terrible disparity of income in America between the rich families and the poor. It's an easy statistic to remember. The 20 percent of American families with the lowest income are getting, after taxes, only 5 percent of the total income. And then if you reverse that, the 5 percent of the American families on top—that is the richest 5 percent—are getting 20 percent of the national income. It's easy to remember, for the poor-

est ratio is 20 to 5; for the richest the ratio is 5 to 20.

That's the kind of story Tom, almost alone, could present to his big syndicated audience with great effect. And it's a story that ought to be told for it represents the real basis of the Soviet challenge. The Soviets are already cutting into our lead in shere bulk of goods produced, but suppose they come abreast of us and make the distribution more equitable than we do—as the Scandinavian countries are now doing, for example. That is the challenge to the American way of life; that is the real threat of Soviet competition.

Before I end I should like to mention Tom's autobiographical book of Washington life, "Chip Off My Shoulder." I think it is about the best panoramic color story of Washington, from Harding down to Roosevelt in 1940, until Arthur Schlesinger, Jr., came along. If you can get a copy you might like to read it alongside Schlesinger.

There are many phrases I should like to quote. For example, Tom is describing (p. 298) the great depression of Hoover's days:

"Into our financial vocabulary in those Hoover days, too, came the phrase 'balance the budget.' * * * A 'balance the budget' fetish was created. It was hailed as the cure for all our economic ills, then, and down to our day. Men still use the incantation 'balance the budget.' It is the mumbo-jumbo of the conservative economist, the businessman, the banker. It is a magic wand. It is also a refuge from serious and constructive thinking about what is wrong with America. It has its importance but it is far from being all important."

Lest there be any suspicion that I am intruding a partisan note into this nonpolitical meeting let me repeat that this was written in 1940 about a situation that occurred in 1929.

I think many of us here consider ourselves liberals. I hope we have sense of humor enough to relish this other quotation from the book:

"While I sympathize with the aims of many liberal groups, I am occasionally rebuffed by their intensity, which occasionally becomes arrogant, and by their assumption frequently of self-righteousness. If they would smile occasionally and not take themselves too seriously I would feel more comfortable with them."

Tom richly deserved the Pulitzer prize which he won. But it is ironic that he got the award not for exposing reaction, as he did all his life, but for his equally fair and determined crusade against the political use of WPA relief funds in Kentucky in behalf of the New Deal Democrats, in the 1938 midterm election. Tom was right in his exposé, and it represented a splendid bit of reporting though it made some of the liberals mad at the time. But it is a chance which the progressive reporter must take. Stay on your own side of the fence and things will tend to remain quiet and you probably won't get many prizes. But stray out briefly and attack fellow liberals and you run the risk of being tagged with a Pulitzer.

Well—I have not come to the end of my material but I have come to the end of my time.

I was struck the other day by something I heard at another service. It was for Barrow Lyons, a man who helped organize this meeting in honor of Tom Stokes but who did not live to be with us here tonight.

At the memorial service for Barrow Lyons something was said which I would like to repeat now.

It was by a friend of Barrow's who told how the two of them one summer day had tramped through the woods and stopped at a lovely spot by a stream, and there discussed a mutual friend who had passed away. The two of them laughed at old memories and brought back old times. They seemed to commune with their absent friend.

When it was time to go one of them stooped for a minute and picked a flower by the stream—it was a rare blossom, a cardinal flower—and he flicked it across the stream.

"Just to let you know we were here, Tom, old chap," he said.

Blind Justice—The Prince Edward County, Va., School Case

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. THURMOND. Mr. President, the trend away from local self-government is evidenced each day in decisions handed down and actions taken by all three branches of the Government. One of the most recent examples of this trend is a case of judicial high handedness. The fourth circuit court has overruled a Federal district court in Virginia in the name of justice; however, as ably presented by the Washington Evening Star in an editorial appearing Wednesday afternoon, May 6, this justice is blind.

I ask unanimous consent that this editorial entitled "Blind Justice," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLIND JUSTICE

The fourth circuit court's ruling in the Prince Edward County school case does two things which, we think, are unwise and which in the end will prove harmful to both white and colored children.

This ruling strips Federal District Judge Hutcheson, the man closest to the scene and to the people of Prince Edward, of all discretion. Judge Hutcheson, foreseeing closed schools and serious injury to the education of children of both races, had postponed the beginning of integration until 1965. But the circuit court, at the request of lawyers for the NAACP, has said that this will not do. Instead, the local authorities now face a command to start desegregation in September of this year. And of Judge Hutcheson's time extension, the appellate court said: "No argument is needed to show that the last delaying order of the district judge cannot be approved, and that it has become necessary for this court to give specific directions as to what must be done." In short, a court of appeals, which has no firsthand knowledge of the local situation, has taken over. Henceforth, it will tell Judge Hutcheson what he must do.

The second unwise aspect of this ruling is that it undertakes to require desegregation in a county which has insisted that it will not integrate its schools. Perhaps this is not properly a matter of concern to an appellate court. But it should—and it will—concern all the people of Prince Edward County.

Prince Edward is a small rural county lying some 60 miles southwest of Richmond. Its school population is 54 percent colored and 46 percent white. White parents have made the necessary preparations to establish private schools for their children. Nothing has been done to provide any schooling for colored children if the public schools are closed down, as most probably will be the case if a specific demand for enrollment of colored children in white schools is made.

This is a dismal prospect. Judge Hutcheson had found that Prince Edward's schools for colored, in terms of curriculum and physical plant, are equal to if not better than the white schools. The appellate court does not dispute this. Now, however, in keeping with the Supreme Court's holding that segregated schools are inherently unequal, the issue is pushed to a point at which the colored children are facing the prospect of no schools as the alternative to segregated schools.

It may be said, and it may be true, that the Prince Edward authorities would be no more ready to accept integration in 1965 than they are today. It may also be true that some kind of schooling for colored children, privately or perhaps federally operated, eventually will be provided in Prince Edward. In the short run, however, the education of the children will suffer severely. And even in the long run the desegregation problem will not be solved. This may be justice—but in the Prince Edward situation it is a form of justice which is singularly blind to the consequences that are being visited upon those whom it is supposed to help.

The Jamestown Church Tower

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. ROBERTSON. Mr. President, last February, Gov. J. Lindsay Almond, Jr., of Virginia, issued a proclamation designating May 17, 1959, as an anniversary of the day the English common law was brought to Jamestown in 1607. Those who visited the Jamestown Exposition will recall that one of the few remaining structures built by the first settlers on Jamestown Island is the Jamestown church tower.

In connection with the celebration to be held at Williamsburg and Jamestown on Sunday, May 17, it is pertinent for us to recall the tribute paid to the Jamestown church tower some years ago by the late Honorable George C. Peery, former Governor of Virginia. I ask unanimous consent to have printed in the Appendix of the RECORD the tribute by Governor Peery.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

THE JAMESTOWN CHURCH TOWER

(By the late Honorable George C. Peery, former Governor of Virginia)

Three hundred and fifty years ago the first permanent English settlement in the United States was founded at Jamestown. Here was set up the first seat of government of the Virginia colony; here the hearthstone of the liberties of our mighty Nation was laid.

It is here that, in reality, we gaze upon the very cradle of our great Republic. Here the first Anglican Church in America was created. And it is here that we go to pay reverent homage to the memory of those great spirits of the past who, in planting the English flag on unknown shores, placed the

real cornerstone for that democratic freedom which men enjoy under the protection of the Stars and Stripes.

Human thoughts, like the mighty tides of the sea, move strongest in deep waters. And so it is, upon this hallowed spot, our souls are silenced by memories, are hushed by a realization that we stand at the birthplace of the freedom of the Western World.

This shrine of national and world interest belongs to no individual division of this great country. Jamestown, with its inspiring traditions, is the property of a whole people. It is sacred to liberty and to the Nation.

In our National Capital at Washington is lifted a monument of marble which rears its lofty crest high above the ever-growing beauty of that great city. I never view that pile of stone without a glow of patriotic pride. It stands for the strength that was Washington, and it points in its majesty and stainless beauty to the God in whom alone lies our hope and help.

There is another monument, a monument clad with the leaves of the ivy and mantled in memories of a past so distant as to antedate our National Capital on the shores of the Potomac.

And while this old brick tower at Jamestown rises to no such height as the monument at Washington, it is clothed in a glory which will outlive the marble shaft and shine through the pages of the history of future ages like a beacon of hope to all the world.

Here, through far coming years, as to a Mecca, will journey the pilgrims of the earth. All such as love freedom will visit here. For from this watchtower of time, liberty will flash its rays into the dim distance of ages yet unborn.

Public Service Record of Hon. Fred Aandahl

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. YOUNG of North Dakota. Mr. President, on April 27 the Department of the Interior bestowed a well deserved honor on a distinguished citizen of North Dakota, the Honorable Fred Aandahl. He is a former Governor and Congressman from our State and for several years has been Assistant Secretary of the Interior.

Governor Aandahl is a fine, substantial, able, and unassuming person. I know of no one who is more devoted to public service than he. Throughout most of his life he has held many public offices, always serving with great honor and distinction. The most appreciated and treasured experience that has come to me has been my close association with him during much of his public service. We in North Dakota are very proud of Fred Aandahl.

Mr. President, I ask unanimous consent to have two editorials printed in the Appendix of the RECORD—one from the Bismarck Tribune and the other from the Minot Daily News.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bismarck Tribune, May 1, 1959]

AANDAHL DESERVED THE HONOR

It was typical of Fred Aandahl that when Department of Interior officials and others gathered the other day he did not suspect that the purpose was to bestow honor upon him.

As Governor of North Dakota for three terms, and later as Congressman, Fred Aandahl demonstrated an admirable bent for going about his duties with a minimum of fanfare and self-exploitation.

As Assistant Secretary of the Interior, he has done his work efficiently and thoroughly, without seeking either the notoriety or the personal advancement which usually mark the activities of political figures.

The Interior Department is known in Washington as one of the best organized and best directed in Government, and undoubtedly Fred Aandahl's contribution has been an important factor in the writing of this record.

Aandahl was a fitting recipient of the highest award the Department can bestow, a just recognition of services which have been as distinguished in the Federal service as were those he rendered before to the State of North Dakota.

[From the Minot Daily News]

AANDAHL'S AWARD NOT SURPRISING

It must have been gratifying to Secretary of the Interior Fred A. Seaton to have succeeded in arranging a surprise award for his departmental right arm, Fred G. Aandahl, of North Dakota.

It is gratifying, though hardly surprising, to Assistant Secretary Aandahl's North Dakota friends that his work as a good and faithful servant of the United States should be rewarded with the Department's Distinguished Service Award.

We are sure that Fred Aandahl has set an example in Washington for devoted and conscientious adherence to duty.

As North Dakota's Governor for 6 years, Aandahl displayed a capacity and concern for good housekeeping in State administration. In his years as Governor he acquired a remarkably complete grasp of the details of North Dakota's multiphased water development program. With that preparation, he stepped into the Department of the Interior with an exceptionally good preparation for the work to which he was assigned.

More men of Fred Aandahl's conscientious consistency are always needed in Washington to keep the machinery of the great Government departments on an even keel.

Inflation—Who Speaks for the Consumer?

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. KEFAUVER. Mr. President, the Christian Science Monitor on April 27, printed an excellent editorial on a topic of most serious concern to us all.

With inflation creeping ever upward and driving the value of the consumer's dollar ever downward, I think this editorial is most timely when the big industries—Big Steel—stands on the brink of another round of price-wage boosts.

Let us all hope both labor and management will heed these words and put a halt to the spiral that is eating up the consumer's dollar.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO SPEAKS FOR THE CONSUMER?

Apparently nobody—or almost nobody—wants the O'Mahoney bill that would require large corporations in concentrated lines of business to give 30 days' notice of increases in prices.

Spokesmen for the steel companies, such as Roger M. Blough, chairman of the United States Steel Corp., facing wage demands in contract negotiations which affect costs, clearly do not relish the idea.

David J. McDonald, president of the United Steelworkers of America, opposed the bill in a hearing before the Kefauver Antimonopoly Subcommittee of the Senate, while asserting that steel company management could afford higher wages without higher prices.

Members of the staff of the Chamber of Commerce of the United States pointed out practical difficulties in operating a price examination measure or even defining its terms.

And the Chairman of the President's Council of Economic Advisers, Raymond J. Saulnier, added a reluctance on the part of the executive department of the Government to undertake this method of checking price rises or inflation under current circumstances.

There is much room for doubt as to whether the O'Mahoney bill, with its provision for the Federal Trade Commission to hold hearings during the 30-day waiting period, is the best approach to the problems in administered prices. There would be still greater objection to a proposal that the Government should add a further layer of control over prices quoted by corporations.

Yet Senator ESTES KEFAUVER, presiding over the present hearings, says with good reason that if inflation in the costs of living continues there will be public demand for Congress to enact something much stronger, more drastic, than price notification.

Even through a business recession which raised unemployment to 7.7 percent of the working force in the United States, the Consumer Price Index rose about 4 percent in a year. It is true, as Mr. Saulnier says, that this index now has been roughly stable for about a year—thanks to lower food prices offsetting higher costs of automobile and other transportation.

In view of the fact that the consumer and the saver have seen their dollars lose nearly 17 percent of their purchasing power in the last 10 years, is it enough that there be mere price stability (till the next boost)? Or is there not in fact a case for some rollback of prices?

The American Can Co., itself a steel-using industry, thought so back in January and has added a second reduction of prices to food canners this month. When it is reported that the steel industry can make a profit while operating at 50 percent of capacity, when one company cleared nine times as much in the first quarter of this year as in the same period last year, and when the profit of another was over 8 percent of its sales, is there not some case for a dividend to the consumer in price reduction rather than increase?

It is far better for industry and organized labor to ask themselves these questions than to have them propounded by Government. But unless they are asked and reasonably answered they will be pressed by consumers—who are also voters—and by the competition of foreign producers.

Bloodless Marine Casualties

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. WILSON. Mr. Speaker, a recent editorial in the San Diego Evening Tribune draws a striking parallel between the loss of combat-ready marines now underway to meet a strength level of 175,000 by June 30 and the losses suffered by the corps in combat.

It notes that just as in combat the corps is meeting the problems posed by casualties by deactivating units forced below acceptable strength and redistributing its manpower to bring remaining units up to strength.

It correctly pinpoints the fact that the actual reduction of the corps now underway is only part of the story. For if the considered intent of Congress had been honored the United States today would have a force-in-readiness of 200,000 combat-ready marines to serve as the first echelon of the Nation's limited war force.

Nothing which has happened in the months since Congress expressed its judgment that the Nation's security required a force of 200,000 marines has served in any way to lessen the validity of that decision.

Mr. Speaker, under leave to extend my remarks, I include this editorial, reflecting a small part of the general, nationwide concurrence with our views, for publication in the RECORD.

[From the San Diego Evening Tribune, Apr. 23, 1959]

BLOODLESS MARINE CASUALTIES

During 37 months of fighting in Korea, the U.S. Marine Corps lost 4,267 men through battle deaths.

This is about 1 percent of the 424,000 Marines who served during the Korean war.

By June 30 of this year, the Marine Corps faces the loss of 9,000 battle-trained men under the military manpower cutback ordered by the Pentagon.

These bloodless casualties are about 4½ percent of the present 200,000-man strength of the corps.

The loss of combat forces is only part of the story. The total cutback is 25,000 Marines to a corps strength of 175,000.

Earlier reductions have been absorbed by cutting back the supporting establishment and the security forces, and by holding the combat forces at an average of about 87 percent of their full personnel strength, Gen. Randolph McC. Pate, Marine Corps commandant, has told Congress.

Now, a big chunk of the cut must come out of muscle.

It's not unfair to compare the scheduled losses to actual combat casualties. The effect is the same. The Marine Corps is now following standard combat procedure when personnel strength falls below a certain percentage of effectiveness. It is reorganizing and distributing personnel from deactivated units to remaining ones in order to keep those left up to strength.

America would be properly aroused to read a headline saying the Marines had lost 9,000 men in combat.

They should be equally concerned when this historic, ever-ready elite corps loses 9,000 battle-trained men to the paper bullets issuing from the Pentagon. The weakening effect is the same.

Floyd Dominy, New U.S. Commissioner of Reclamation

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. YOUNG of North Dakota. Mr. President, the people of the United States are fortunate that the Department of Interior has been headed by several very able and outstanding men. Its vast and far-reaching operations have been conducted in such an admirable way as to win the approval and acclaim of the general public.

Recently, Mr. Floyd Dominy was appointed to fill the vacancy for the U.S. Commissioner of Reclamation. I know of no one who is more able, devoted, and dedicated to the task before him than this fine and respected gentleman. He will be a credit to the Interior Department and to all concerned.

Mr. President, John Hjelle, editor of the Bismarck Tribune, published at Bismarck, N. Dak., recently wrote an article which I believe pays a well-deserved tribute to Mr. Dominy.

I ask unanimous consent that this article written by Mr. Hjelle be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Bismarck (N. Dak.) Tribune, Apr. 17, 1959]

NORTH DAKOTA TO SEE MORE OF HIM—RECLAMATION'S CHIEF-TO-BE BLENDS FARMING WITH CAREER

(By John O. Hjelle)

WASHINGTON, D.C.—Floyd Dominy, soon to be U.S. Commissioner of Reclamation, is a country boy who wouldn't be taken out of the country even when the Government pulled him into Washington.

Dominy's name is well known already in North Dakota water development circles, for he has been with the Bureau of Reclamation for almost 13 years, most recently as Assistant and Associate Commissioner.

This reporter called on him because, with the development of Garrison diversion, Dominy will be an individual as important to North Dakota as any other in Federal circles. North Dakota will be seeing more of him, and he more of North Dakota.

Strong built, his hair tousled, Dominy grew up on a Nebraska farm, later moved into agricultural work in Wyoming.

When he came to Washington in August of 1938, he bought an abandoned farm in Virginia, 20 miles west of Washington. He built a house on it and has lived there ever since.

He's proud of a son, now attending the Military Academy at West Point, because of his accomplishments in 4–H work and as a livestock expert.

The son, Charles, was a Virginia championship livestock judge when in high school. In 1956, he was on the Virginia judging team at the international livestock show in Chicago. One year, he raised and showed the Virginia champion Angus steer.

The Dominy farm covers 380 Virginia acres—enough to support about 100 cows, says Dominy. With Charles off to school, Dominy hires one full-time man to help him do the farm work.

But Charles and his dad aren't the only farmers in the family. Daughter Ruth Ellen, 12 years old, and in the seventh grade, is an active 4–H'er, too, working with Angus calves and training her own riding horses.

Another daughter, Mrs. Jack DeBolt, lives now in Torrington, Wyo., where her husband is in the farm machinery business. There are three grandchildren.

Mrs. Dominy, the former Alice Criswell, was Floyd's high school sweetheart.

Dominy's start in agricultural work came at a time when conditions were so bad in the West that he learned a lasting lesson as to the importance of good land management and soil and water conservation practices.

He became the agricultural extension agent in Campbell County, Wyo., in February of 1934, right in the middle of the mean old dust bowl days.

He taught vocational agriculture part of 1 year, too. "All I had to do was teach all the farm classes—including farm shop—instruct kids in the 7th and 8th grade and some high school arithmetic, coach basketball, and a few other things. It was a full life," he recalls.

As county agent, he got the job of instituting drought-year emergency farm programs.

"I bought 55,000 head of drought cattle, and 200,000 head of sheep in Campbell County," he remembers. "I saw farmers lose their entire foundation herds, and get little or nothing for them. It wasn't the drought alone that hurt. Even if the farmers had gotten crops, and feed for their cattle, the things they grew could bring nothing on the market. They couldn't even get the shipping costs back."

In 1936 Dominy started the Federal range improvement program going. This included the development of stock water ponds, grazing rotation plans, and other improved land management practices. Here he made a mark that won national note.

"We did more work along these lines in Campbell County than in several States put together," he says. "We put the farmers to work and got a job done."

The young Wyoming worker caught the eye of big shots in Washington, and Dominy was invited here to work on the agricultural adjustment program of the late thirties, specializing on conservation phases.

He traveled the 17 Western States which are his special province now, and got to know them and their problems and their people.

When World War II broke out, Nelson D. Rockefeller—now Governor of New York—was made coordinator of Inter-American Affairs, Dominy joined Rockefeller's forces as assistant director of the food supply division. He worked with governmental leaders of Central and South American countries on food supply programs incidental to their war supplies programs.

"Some of those cooperative programs we started then, in 1942–43, are still going," he notes with a degree of pride.

In May of 1944, Dominy went into the Navy—but he found himself still in agricultural work, though the setting was new and so were the problems. As a member of Adm. John Hoover's staff in the Pacific, he worked with the native population to rehabilitate agricultural production as Americans recaptured islands from Japanese invaders.

On April 1, 1946, Dominy joined the Bureau of Reclamation as a land development specialist, later becoming Chief of the Branch of Cost Allocation and Repayment, then Assistant Director of the Irrigation Division, and finally Director of the Irrigation Division.

He was named Assistant Commissioner in August 1957, and Associate Commissioner in March 1958—the first ever to hold that office. He will take over as Commissioner on May 1, replacing Wilbur A. Dexheimer, another career man who will retire at age 58 after 30 years in the service.

Dominy talks like a practical man who believes in the work he is doing. He gives the appearance of one who won't be pushed

around, but who is willing to listen and to learn.

Irrigation—as a part of proper land management and resource conservation—is a part of the answer to development of the Great Plains, Dominy believes.

"In recent years," he points out, "while the Nation has been increasing in population by leaps and bounds, the Great Plains have barely held their own, populationwise. To me, that signifies that without the development and control of water resources, so as to carry over water supplies from plentiful years and thus be able to irrigate and protect the economy in the lean years, the area cannot have the stable economy it needs to hold young people at home. Youth is the greatest export of the Great Plains—youth and education."

Dominy points to North Dakota as an example.

"Outside of its limited oil production," he says, "North Dakota is pretty well limited now to its agricultural potential. Any program that will bring growth and stability to the State's agriculture is bound to be of economic significance to the long-range development and prosperity of the State."

Dominy is hopeful but cautious in what he has to say about Garrison diversion, a project which he has had a hand in developing and which he is convinced is eminently desirable.

"Garrison diversion," he says, "is a tremendous undertaking, and very expensive. It is proper that it be constructed in a partnership arrangement between the State, the wateruser, the irrigation districts, and the Federal Government, with the former repaying the money that will be expended from the Federal Treasury to build it."

He adds:

"There is no question at all in my mind but what Garrison diversion is economically feasible and engineeringly and physically feasible, and that when it is constructed it will take its place as one of the great Federal-State-local cooperative enterprises, such as the North Platte project in Nebraska, the Central Valley project in California, and many more. And anyone who has lived and works in the West, and has observed the stable economic communities of prosperous farms and business enterprises that have grown up around enterprises like this, can't help but believe it is in the national interest.

But Dominy refuses to get out on a limb when it comes to the construction timetable, which North Dakotans hope will get construction started in fiscal year 1963.

"We have to recognize," he says, "that no matter how desirable the project may be, and no matter how thoroughly we may have demonstrated its value to the Nation, we still don't have an unlimited access to the Federal Treasury. Like everything else the Government does, it has to be programed with an eye to the overall budget requirements of the times, and fitted into the overall Federal program. And some of the things that are being forced on us today are very costly."

Dominy mentioned the current efforts in the realm of outer-space exploration as an example, citing also the costs of national defense, neither of which may be put off.

All of which would seem to indicate that in Floyd Dominy, the Nebraska farm boy and Dust Bowl days Wyoming county agent, the Garrison diversion project has a good and stanch friend. It will need many such friends in high places to surmount all the hurdles that confront it before the first contract can be let and the first dirt moved for its building—perhaps 4 years hence, North Dakotans hope.

Federal Communications Bar Association Recommendations To Amend Communications Act

---

EXTENSION OF REMARKS
OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. HARRIS. Mr. Speaker, today I introduced a bill, enactment of which has been recommended by the Federal Communications Bar Association. The bill proposes to substitute for the protest procedure provided for in section 309 of the Communications Act a new pregrant procedure. The bill would further amend section 405 of the Communications Act with respect to rehearings.

The Federal Communications Bar Association submitted with the draft bill an explanatory statement describing the difficulties with the present provisions of the Communications Act relating to the protest procedure and rehearings, and setting forth the reasons for the recommendations of the Federal Communications Bar Association.

I am asking leave to have printed at this point the letter of transmittal from Mr. Leonard H. Marks, president of the Federal Communications Bar Association, and the explanatory statement of the association with regard to this legislation:

FEDERAL COMMUNICATIONS
BAR ASSOCIATION,
Washington, D.C., April 28, 1959.

Hon. OREN HARRIS,
Chairman, House Interstate and Foreign Commerce Committee, House Office Building, Washington, D.C.

DEAR CONGRESSMAN HARRIS: I am transmitting at this time the recommendation adopted by the executive committee of the Federal Communications Bar Association for amendment of sections 309 and 405 of the Communications Act of 1934. There is also attached a report explaining the basis of the recommended action.

This matter has received considerable attention by our association. The enclosures represent the views of the committee on practice and procedure, and the executive committee, and the views expressed by many of the members at the last annual meeting of the association.

In the event that a bill is introduced embodying these recommendations, the association will be glad to appear and present testimony in explanation of its position.

Sincerely,

LEONARD H. MARKS, *President.*

FEDERAL COMMUNICATIONS BAR ASSOCIATION PROPOSAL FOR AMENDMENTS TO SECTIONS 309 AND 405, COMMUNICATIONS ACT OF 1934, AS AMENDED

INTRODUCTION

For several years there has been exhaustive consideration by the Federal Communications Bar Association of possible changes in the Communications Act to modify or find a more satisfactory substitute for the so-called protest procedure embodied in section 309(c) which provides for hearings or oral arguments on the demand of parties in interest after the Federal Communications Commission has granted without a hearing an application for a construction permit for a radio facility.

At the annual meeting of the association in January 1959, the members gave strong support to the substitution of a carefully defined pregrant hearing procedure for the postgrant protest hearing procedure. Further intensive consideration of the proposed legislation has been given this matter by the association's executive committee and its practice and procedure committee. On April 14, 1959, the executive committee voted to recommend the enactment of amendments to sections 309 and 405 in the form attached.

Under the proposed amendment to section 309 the pregrant hearing procedure would be made applicable to the broadcast and common carrier services and also to certain limited categories of applications in the safety and special services. The amendment to section 405 would require the Commission to take action within a specified period of time after filing on petitions for rehearing of grants made initially without hearing.

I. DIFFICULTIES WITH PRESENT STATUTORY SCHEME WHICH OCCASIONED RECOMMENDED AMENDMENTS

Without attempting to list all of the problems inherent in the existing protest procedure, we shall briefly sumarize the principal ones.

In its present form section 309(c) can place a heavy burden on the Commission and on successful applicants by requiring unnecessary and lengthy proceedings, after grants are made, to vindicate the grants in situations where there is no substantial basis for attacking them. At the same time the protest procedure fails to give real assurance to protesting parties in interest that legitimate objections to a grant will be given timely and adequate consideration by the Commission.

The original enactment of section 309(c) as a part of the Communications Act Amendments, 1952 (the so-called McFarland Act), stemmed from a feeling of dissatisfaction with the treatment by the Commission of objections to grants. Unfortunately, the existing mandatory protest procedures leave the Commission little discretion to dispense with useless or even frivolous proceedings. While protests must be filed under oath, the factual allegations may be based upon information and belief, which unfortunately encourages the filing of ill-founded protests with allegations based not on known facts, but on suspicion or less. Protest hearings have created immeasurable delays in bringing service to the public, but have resulted in few final reversals of grants. From the protestant's point of view the protest procedure has the fatal drawback that it comes into operation after the Commission has made its determination that a grant is in the public interest. It is difficult for a protestant to meet the burden of persuading the Commission that its original grant was mistaken.

II. THE PREGRANT PROCEDURE

It is the view of the association that the inherent inadequacies of the protest procedure can best be remedied by providing for institution of a pregrant procedure which will limit hearings to instances where material and substantial questions of fact are presented, and which will require explicit and reasoned resolution by the Commission, prior to grant, of questions of law or policy

which do not warrant a hearing. The proposed pregrant procedure is more nearly consistent with normal administrative procedures. It provides a method for reducing the possibility that the Commission will act erroneously by providing for consideration of objections before rather than after the Commission acts, but eliminates the power of protestants to compel hearings or oral arguments in situations where no useful purpose would be served thereby. In short, the proposed procedure will give the Commission ample discretion to dispose summarily of frivolous objections to a grant, but will require appropriate consideration of substantial objections before it makes a grant.

The effectiveness of a pregrant procedure clearly depends upon an adequate system of notice which will permit interested parties to be apprised of the pendency of an application, and give them an opportunity to invoke the procedure. In the safety and special services the many thousands of applications handled cannot, as a practical matter, be made the subject of public notice. Moreover, as to the great majority of such authorizations, grants are taken subject to interference; and other bases for objection by interested parties are rare or nonexistent. Thus, after a careful study of the problems of the safety and special services it was decided to make subject to the proposed pregrant procedure limited categories of applications as to which legally valid objections by interested parties would appear to be most likely. These relate to authorizations which are made on a nonduplicating basis or which are entitled under the Commission's rules to protection against interference.

III. TIME LIMIT FOR ACTION ON PETITIONS FOR REHEARING UNDER SECTION 405

One of the problems which led to the original enactment of section 309(c) was the extended period of time elapsing between filing of and action upon petitions for rehearing of Commission decisions without hearing. A grant might remain in effect for a year or more without action on a petition which raises substantial questions as to its validity. It also unconscionably delays the seeking of judicial review in those situations where the filing of a petition for rehearing is a statutory prerequisite to seeking review by the courts of Commission action. In light of the proposed elimination of the postgrant hearing procedure (which has a requirement that the Commission act on protests within 30 days), the association believes this to be an appropriate time to recommend strengthening of the section 405 remedy by providing a time limit (90 days) for passing on petitions for rehearing of grants made without hearing.

IV. ANALYSIS OF PROPOSED AMENDMENTS

A. Section 309

Section 309 is proposed to be revised as follows: A new section 309(a) sets forth the terms of the pregrant procedure. Existing section 309(a) becomes section 309(b), and is modified in minor, but not in substantive, detail for purposes of consistency. Existing section 309(b) becomes section 309(c). The existing procedure for notifying applicants of the necessity for hearing and for designation of applications for hearing is left unchanged where no petition to deny an application has been filed or where the Commission questions an application on grounds not set forth in any such petition. If a meritorious petition has been filed, the case is set for hearing. Language changes are made in the new section 309(c) to integrate the pregrant procedure with the existing procedures and to avoid inconsistencies and procedural duplications. Existing section 309(c) (the postgrant protest procedure) is eliminated entirely. A new section 309(d) lists the safety and special services applications subject to the pregrant procedure. A new section 309(e) gives the Commission the power by rule to make reasonable classifications in order to effectuate section 309.

The pregrant procedure assures that interested parties receive adequate notice of applications subject to the procedure by requiring the Commission to withhold action for 30 days after public notice of acceptance of applications for filing. If an interested party files a petition to deny the application prior to grant, the Commission must dispose of the petition before making a grant. Unlike the present protest procedure, the pregrant procedure does not compel the Commission to hold automatic evidentiary hearings or oral arguments in cases where such proceedings may be futile. Moreover, the petition must contain specific allegations of fact supported by affidavit. The applicant is given an opportunity to reply.

If no substantial and material question of fact is raised, the Commission may deny the petition with a concise statement of its reasons. The holding of oral argument in such a situation is left to the Commission's discretion. If questions requiring a hearing are presented, the Commission has full authority to specify the issues and assign the burden of proof to be borne by the parties to the hearing. Thus the pregrant procedure gives the Commission reasonable control of the proceedings before it, a control lacking under the existing protest procedure. At the same time, where the Commission denies a pregrant petition, the concise statement of reasons required will furnish an adequate basis for immediate judicial review and will give interested parties the opportunity to seek judicial stay of Commission action. The Commission will not be able to deny pregrant requests for hearing without explanation.

The pre-grant procedure would apply to all applications in the broadcast and common carrier services with six classes of exceptions. The exceptions generally cover emergency authorizations, authorizations involving operation of facilities substantially in the manner for which construction previously was authorized, authorizations involving involuntary or minor changes in existing authorizations and certain broadcast authorizations of a character such that the need for prompt Commission action is felt to outweigh the need for an opportunity to file objections prior to grant.

The pre-grant procedure would not apply to the great bulk of applications in the safety and special services. Many thousands of these applications are handled each year. It is impractical to give prior public notice of their filing. In the overwhelming majority of situations there is no party in interest who may legitimately complain of such applications. Limited categories of safety and special service applications, grant of which may adversely affect rights of other licenses or applicants, would be made subject to the pre-grant procedure. The Commission would also be given specific authority by rule to make additional categories of applications in safety and special services subject to the pre-grant procedure.

B. Section 405

The right of any party in interest to petition for rehearing under section 405, regardless of what proceedings may have been had before the Commission prior to grant would continue to be available under section 405.

Two amendments are proposed to section 405. The first would correct a typographical error in the most recent reenactment of that section. The second, which involves a change of substance, would provide a cutoff date for action on petitions for rehearing of Commission grants made without hearing. Under section 405 the filing of a petition for rehearing does not require a stay of the Commission action of which complaint is made. Under these circumstances it is important for the Commission to dispose with reasonable promptness of the petition, especially in those cases in which no hearing has been held. The 90-day limit proposed is believed to be long enough so as not to place an undue burden on the Commission, but short enough to assure that a questionable authorization will not be allowed to remain in effect for a prolonged period without Commission consideration of a pending petition for rehearing.

CONCLUSION

It is believed that the amendments here proposed to sections 309 and 405 of the Communications Act will go a long way toward eliminating the unjustifiable burdens upon the Commission's processes which have existed since the enactment of section 309(c) in 1952, and will at the same time result in improving the remedies available to interested parties in cases where substantial questions are presented.

For the first time since 1952 the Commission will no longer be compelled to hold an evidentiary hearing or oral argument in situations where the allegations of the objecting parties in interest fail to raise material questions suitably supported by affidavits as to facts. At the same time, objecting parties in interest will for the first time be assured that the Commission will give adequate consideration to the objections raised before a decision to make a grant has been reached, and the Commission will be required to give reasons for its actions in denying pre-grant petitions which will permit a prompt court test of the validity of Commission decisions.

Thus under the proposed amendment to section 309, the Commission and Commission permittees will be relieved of the oppressive burdens of unnecessary hearings (which, in turn, may create inducements for financial settlements that may be contrary to the public interest). The incentive to protestants to wait until after a grant to invoke mandatory delaying procedures will be destroyed. On the other hand, objecting parties will have the benefit of having their views given full consideration by the Commission in the processing of an application before the view of the Commission has been crystallized into a decision, and will have an opportunity for prompt court review.

Finally, the amendment to section 405 eliminates a defect which has existed in that section since the original enactment of the Communications Act in 1934. For procedural reasons a petition for rehearing under section 405 is frequently required as a condition precedent to obtaining judicial review. For the Commission to have the power to delay action on the petition for an indefinite period, and at the same time to allow the questioned grant to remain in effect, is a classic example of the power to deny justice by delaying justice. This loophole in the law should be closed.

The Kennedy-Ervin Labor Reform Bill

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. SPARKMAN. Mr. President, there has been a great deal written recently about the Kennedy-Ervin labor reform bill. Most of what I have seen

concedes that, while the bill is not a perfect one, it is a step forward, and should be approved by the House of Representatives and by the President.

One of the leading newspapers in my State, the Montgomery Advertiser, contained an editorial in the May 3, 1959, issue that takes a similar point of view and makes other comments which, I believe, will be of interest to the Senate.

I ask unanimous consent that the editorial be printed in the appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KENNEDY BILL OR NOTHING

President Eisenhower's disappointment in the Kennedy labor bill is understandable. A compromise measure put together by a man fearful of antagonizing anybody before 1960, it leaves much to be desired.

But the President risks losing all if he condemns too harshly or pushes too vigorously for a tougher bill.

It is politically unrealistic to expect that the House will write into labor legislation those things which the President cites as omissions in the Senate bill—specifically, adequate provisions to deal with secondary boycotts, blackmail picketing and the jurisdictional question of "no man's land" labor cases.

That these are vitally needed provisions—particularly the first two—was vividly established by Senator McClellan's committee over a period of many months. But their incorporation into the Senate labor bill was not to be.

It would require a miracle to expect the House to do a better job than the Senate. The fact is, the Congressmen have been far less enthusiastic about any labor legislation. Last year, they ignored a bill passed overwhelmingly by the Senate. Similarly confronted this year, they will do likewise given half a chance.

The President's criticism, however justified, could well provide them with the chance they seek. Like it or not, the administration and the public should reflect that as for this year's labor legislation, it is the Senate bill, something worse, or nothing.

"Top Secret," but Should It Be?

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. HUMPHREY. Mr. President, in these days of international peril, it is imperative that a great Nation like the United States take every reasonable precaution to protect its security. It is right that certain programs of our Government be classified. The public's right to know does not mean that all our defense secrets should be revealed. On the other hand, the public does have a right to know some things which are at present withheld by the administration.

In a recent article, Senator CLINTON P. ANDERSON, chairman of the Joint Committee on Atomic Energy, points to certain inconsistencies in the area of Government secrecy, especially as it relates to our atomic energy program. He maintains that preoccupation with classification sometimes violates the public's right to basic information and sometimes slows up scientific advance.

Mr. President, I ask unanimous consent that an article entitled "'Top Secret,' But Should It Be?" by Hon. CLINTON P. ANDERSON, which appeared in the May 3, 1959, number of the New York Times Magazine, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"TOP SECRET," BUT SHOULD IT BE?

(By CLINTON P. ANDERSON)

WASHINGTON.—How secret is the color of a bird's feathers?

Is the American public entitled to the facts about fallout?

Does it make sense for defense information to be labeled "top secret" and yet released in full to the newspapers?

Why are questions about the Nation's atomic energy programs met again and again with the reply, "It's classified"?

Is the secrecy surrounding the atom justified? Or is the secret stamp perhaps being used as a convenient shield behind which to hide information which someone somewhere happens not to like or not to agree with?

Concern has been expressed in many quarters about the secrecy problem. The Atomic Energy Commission holds that secrecy is essential to national defense. The press and other segments of the public fear that unnecessary secrecy is hampering scientific progress and obscuring the defense picture.

What are the facts? Where should secrecy end and freedom of information begin?

I had scarcely warmed my chair as a new member of the Congressional Joint Committee on Atomic Energy when I ran head on into the secrecy problem.

It began with the announcement of a series of tests to be conducted in Nevada—the first tests of this size within the United States. I was invited to observe them, and was told a special party would leave from my home city, Albuquerque I flew there to await instructions, having been specifically warned in advance that I could not tell my wife where I was going or what I was going to see.

In Albuquerque, I had a full day's briefing at the Atomic Energy Commission's offices on what we would see in Nevada. I watched the assembly of one of the bombs which was to be dropped. Then I went to a hotel and waited. I was told that I would be picked up about 9 or 10 p.m. and taken to the AEC offices for another short briefing before departing for Las Vegas around midnight.

At 9 p.m. I telephoned my wife in Washington and told her I would be gone from Albuquerque for a few days and would not be able to communicate with her, that I could not tell her where I was going or why, but that I would telephone her on my return.

In an hour or two, a man in uniform called for me, told me to leave my bag in the room, escorted me downstairs to a car, and had me driven around the city streets while he explained to me that the weather in Las Vegas was unfavorable and therefore we would not be leaving Albuquerque until the next night.

The next morning, I telephoned Mrs. Anderson and told her we had not left Albuquerque, that we would be leaving one of these days although I couldn't tell her when, and that she should rest easy.

Her reply startled me. She said: "Maybe I can help you out. I'll read you a story from this morning's Washington Times Herald."

The story she read reported that the weather over the target in Nevada had made it impossible for the test group to leave Washington the previous day, but that it was expected to leave on the day in question, that it would be joined in Albuquerque by the sole representative of the Joint Committee on Atomic Energy, Senator ANDERSON, of New Mexico, and that the group would then fly to Nevada to witness the test of an atomic weapon.

That was how I learned about secrecy. I couldn't tell my wife something which she could read in her morning newspaper.

In many instances, secrecy is undeniably justified. But in other cases it takes a vivid imagination to determine any valid reason for the "restricted data" tag on information. And the situation becomes ridiculous when one has only to pick up a newspaper to learn extensive details about classified projects.

Let me cite a few more examples to illustrate the problem:

(1) Project Argus. This is the code name of the three high-altitude nuclear explosions in the South Atlantic which have been described as "the most significant scientific experiment of the age." The Argus shots, according to published reports, spread a band of radiation along the earth's magnetic field, disrupted communications, created artificial auroras, and provided data of vital importance to the national defense.

Project Argus was described in cursory fashion to the Joint Committee before it took place and again afterward. Great emphasis was placed on its defense implications and the necessity for its very existence to remain secret.

Then, last March 19, full details of Argus appeared in the New York Times. This important subject became public not through a Defense Department announcement, but through the enterprise of two Times reporters.

On April 3, 2 weeks after the appearance of the Times story, the AEC sent the Joint Committee a letter advising which portions of Argus were declassified. These included the fact that the tests were held, the dates and location, the approximate altitude of the explosions, the delivery vehicles, and the Christofilos theory of electron entrapment.

As far as the Joint Committee is concerned, all other Argus data remain classified, despite the fact that effects of the experiment have been widely discussed in the press. Between March 19 and April 3, the Joint Committee had to treat all information about Argus as classified.

When the Defense Department was asked to justify the fact that the Joint Committee was not completely informed about Argus, the answer was that premature disclosure might have stirred up diplomatic protests which would have caused cancellation of the experiment.

To me, this does not seem a proper reason for failing to comply with the law's requirements that the Joint Committee be advised in full of such matters. I think the committee is entitled to at least as much information as was obtained by the New York Times.

(2) The strontium 90 report: This report, which concerns strontium 90 production from weapons testing through 1956, was prepared by three Los Alamos scientists, George Cowan, Wright Langham, and E. C. Anderson, early in 1957. It was part of an attempt to provide a basis for determining a safe level of testing.

The report was received by the Atomic Energy Commission on October 21, 1957, and attempts began immediately to have it declassified. The report finally was declassified about 2 weeks ago, and was sent to me by Atomic Energy Commissioner Willard F. Libby with the notation that it was "somewhat out of date."

I understand that Dr. Langham and his colleagues are in the process of preparing an

updated version of their study. It will be interesting to see whether this paper, too, will hibernate for 3 years before it is turned loose.

(3) The case of the sooty terns: There reposes in the Joint Committee files a letter from the Atomic Energy Commission describing efforts to prevent the feathers of sooty terns and other dark colored birds from being scorched by radiation. This letter has borne a "secret" tag since it was written in July 1958.

Why should a bird's tail feathers be a subject of secrecy? Perhaps the AEC's reasoning is that if a scientist from another country should come across a scorched tern, he would in turn be able to deduce the level of radiation produced by a specific test and thus could decipher the secrets of our latest experiments.

So the sooty terns remain classified, scorched tail feathers or no. And the AEC wonders why the Joint Committee should be upset about secrecy.

(4) The scientist X affair: When research began into the use of nuclear propulsion for rockets, called Project Rover, Joint Committee members were prevented by a "restricted data" tag from discussing even the existence of the project on the floor of Congress.

Yet Los Alamos announced in the newspapers the hiring of "Scientist X" and released lengthy details of the work he would be doing on Project Rover. The Los Alamos announcement was billed as an attempt to recruit other promising scientists into the atomic energy program. And the Joint Committee once again found itself reading in the newspapers about matters which committee members could have gone to prison for discussing.

(5) The strange division of opinion: When Project Sherwood—controlled thermonuclear energy—was instituted, there was a good deal of dispute over whether the program should be publicized from the start in order to promote free exchange of scientific data, or whether it should be kept secret.

On June 28, 1952, the American Physical Society was holding a meeting in Denver. A number of the distinguished scientists in attendance were drawn to one side and were polled secretly on whether they thought Sherwood should be secret. The vote was 88–1 in favor of declassifying all research dealing with the use of thermonuclear forces to generate electric current.

The AEC decided that the one negative vote indicated a "division of opinion." Therefore, it ruled, Sherwood was classified. An interesting sidelight is that the AEC's classification expert, who participated in the poll, voted for nonsecrecy.

(6) Does "classified" mean "classified"? The Joint Committee last February 19 received from the Defense Department a report indicating that radioactivity in the stratosphere has a residence half-life of 2 years instead of the previously assumed time of 7 years. The report also indicated that fallout was heaviest in northern United States.

The Joint Committee felt this information was of great importance to the American people. It also felt there was no justification for the classification of confidential—restricted data on the report.

We questioned the reasons for the tag and requested an unclassified version. The Defense Department removed a portion of one sentence as containing confidential information but added, "We believe that until the results are more than preliminary, the confidential classification should remain on the letter."

After I protested strongly to Maj. Gen. Herbert Loper, retired, Assistant to the Secretary of Defense for Atomic Matters, the committee was finally notified on March 20 that the report could be made public with the deletion of the one classified sentence. And General Loper maintained during a subcommittee hearing that we had in actuality been free to release the report all the time—that the confidential classification did not necessitate its being kept secret. In addition, witnesses testified that the letter had never contained any restricted data, even in its original form, despite the restricted data tag.

As I commented in a press release at the time, "The process of making public the Argus and fall-out information is an example of how difficult it is to make available to the public the information it is entitled to have."

Attention has been called recently to another problem, that of unclassified information which fails to reach the public promptly because of a scientific proclivity for disseminating new data only through the medium of technical journals. Publishing bottlenecks result in reports containing information of vital public interest gathering dust for many months on the shelves of the prestige journals before they finally come to light.

Edward Gamarekian described the situation in the Washington Post a few weeks ago. He reported that in the United States it takes an average of 6 to 12 months for an article to reach print, while in the Soviet Union it is reported to take as little as 1 month.

One such article, which has now been released, concerns the quantity of strontium 90 concentrated in the bones of American children under 4 years of age. It indicates that the amount doubled in the 1-year period from July 1, 1957, to June 30, 1958. The article was written by Dr. J. Laurence Kulp of the Lamont Geological Observatory, and is the third report on a continuing study which he is conducting.

The Joint Committee learned of the existence of this report through a magazine article. At our specific request, a copy was finally made available to us. Apparently the AEC did not consider it of interest to the committee.

Such information is of vital interest to the American people, particularly in light of the current uproar over the hazards of fallout. The yardstick for its dissemination should be the public good, not the whim of a scientist.

Atomic energy and secrecy are virtually synonyms. The program was born in an atmosphere of utter, absolute secrecy, which at the beginning was an unquestioned necessity. The United States for a brief while was the sole possessor of the atom bomb. Had others learned its secrets in 1945, World War II might well have ended in a different manner.

Now secrecy has become a habit. The question is whether or not its use is being abused.

The law provides several pages of definitions of the types of information which can be classified. Defense information, for instance, is defined as "any information in any category determined by any Government agency authorized to classify information, as being information respecting, relating to, or affecting the national defense."

Another section defines "restricted data" thus: "All data concerning (1) design, manufacture, or utilization of atomic weapons; (2) the production of special nuclear material; or (3) the use of special nuclear material in the production of energy, but shall not include data declassified. * * *"

Armed with these statutes, those in charge of classification can justify a "secret" tag on just about anything, even sooty terns.

Because of the history of the atomic energy program, classification experts have often tended to be overconservative. Being in a "damned if you do and damned if you don't" situation, they have been inclined to play it safe whenever a question arose. No officer was ever denied promotion for saying nothing.

Under the law, all atomic energy information is born classified. The burden of proof rests on those seeking to remove the tags.

But the purpose of secrecy is to prevent our enemies from obtaining information which might help them realize their aims. Classification should not be used to keep from the public information vital to health and safety. It should not be employed to hide data which have no defense implications.

The preoccupation with secrecy in the atomic energy program not only violates the public's basic right to know, it has other, more concrete, effects. Suppression of information prevents discussion which might produce solutions to the problems at hand. It is impossible to say how many valuable scientific breakthroughs have perhaps been delayed, or even prevented, because scientists were not free to exchange information; how many Christofiloses have gone undiscovered because of secrecy. To a point, scientists are able to pursue various avenues of research independently. But often the absence of one piece prevents completion of the jigsaw puzzle.

Ignorance of a hazard, as in the case of fallout, for instance, could well prevent the discovery of methods for combating the hazard. Right now, there is a serious question about the adequacy of our systems for detecting underground nuclear explosions—a question which seems to be providing the biggest stumbling block in the current Geneva conferences. If scientists are not given access to all available information about present detection systems and their shortcomings, it will be a long time before they are able to improve the systems.

Another effect of secrecy is to prevent the formation of informed public opinion, an important force under our system of government. Aroused public opinion frequently exerts great influence on major policy decisions. And the force of misinformed public opinion could well lead to establishment of policies detrimental to the national security. In any case, the dissemination of half facts—which is now all too prevalent—can lead only to utter confusion.

The secrecy problem is not insoluble by any means. A genuine spirit of cooperation among the AEC, the Joint Committee, and the other agencies involved is the first step—and I am happy to say that this spirit is beginning to characterize the committee's relations with John McCone, the new chairman of the AEC.

Next, we must break the habit of secrecy and form new habit patterns. The burden of proof should be placed on those responsible for classification, rather than on those in quest of information. In other words, the Atomic Energy Commission should be required to provide a satisfactory justification for any tag placed on information before it is put there, and the tag should immediately be removed when it can no longer be justified. I personally would favor imposition of as severe a penalty on those placing a restricted tag on unrestricted information as is now provided for those revealing secret data.

I am hopeful that our fallout hearings this week may provide some answers. One matter which will receive close scrutiny during the hearings is the use of the present maximum permissible concentration (MPC) as a standard for determining the hazards of fallout. The maximum permissible concentration is a source of great confusion because of its implications of a line between danger and absence of danger. I think we are going to have to redefine our terms; per-

haps to think, instead, of a maximum acceptable concentration of radiation independent of actual hazard. The maximum permissible concentration and other problems of terminology are often more productive of confusion than is secrecy, and they need attention.

A solution to a portion of the secrecy problem might be for the AEC itself to publish summaries of all important unclassified reports, perhaps on a monthly basis—in other words, to establish its own technical journal. There seems to be little excuse for burying important information in publication bottlenecks. If significant reports contain no restricted information, they should be made available to the public immediately. If they cannot be published for 6 or 12 months by the present technical journals, the AEC itself should devise a means of publishing them.

We all agree, I think, that some secrecy is essential for our Nation's self-preservation. I do not feel, for example, that data on sizes of weapon yields or numbers of weapons in our stockpiles should be bandied over the garden fence.

But improper and indiscriminate use of the secret label will eventually weaken our entire security structure. Classification will come to have no meaning if it is not used with caution.

I think a new motto is in order as a guide for our atomic energy programs: "Is this secret tag really necessary?"

Immigrants Gave Us Our Strength

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, there is real reason for hope that this Congress will modify the ethnic and racial provisions of the discriminatory Immigration and Nationality Act.

Along with other Members of Congress I have consistently worked for revision of the McCarran-Walter Act. Such revision is not expected to open the country to a flood of immigrants, as opponents of revision say they believe, but it would extend the unused quotas to those peoples in southern Europe.

Harry Golden, an illustrious citizen of North Carolina, in a recent article syndicated by the Scripps-Howard Newspaper Alliance, wrote:

It may come as a surprise to many people to know that at the beginning of this century, one-half of our Nation could not go back further than one of their grandparents as a native American, and this, incidentally, was the beginning of America's tremendous intellectual vitality and expansion.

Mr. Golden was invited to address the annual student burgesses by the trustees of colonial Williamsburg. The New York Herald Tribune sponsors the student delegates from outside the United States, and colonial Williamsburg sponsors the American students. Several hundred young people from every nation in the world were addressed by the author of the best seller "Only in America," whose deep patriotism and ringing defense of America carries conviction.

The Charleston (S.C.) News and Courier wrote a lengthy editorial wanting to know why Mr. Golden was invited to speak at Williamsburg. The News and Courier said that Mr. Golden was, after all, only an immigrant from New York's garment district.

Seldom has the famed southern chivalry, graciousness, hospitality, and logic been worse betrayed by an authentic southern voice than by the Charleston News and Courier in this fit of editorial pique.

I include here for the information of my colleagues an article by Harry Golden from the Washington Daily News of May 1, 1959:

IMMIGRANTS GAVE US OUR STRENGTH
(By Harry Golden)

I am glad to see that so many Members of the 85th Congress of both major parties intend to do something about modifying the ethnic and racial provisions of the McCarran-Walter Immigration Act. Not that it is expected that any such modification would open the gates without restriction. Few people want that in these times of tension. Nor is it intended to allow a total of more immigrants per year than the law now provides. The whole idea behind this need for modification would be, perhaps, to extend the unused quotas to those peoples in the Mediterranean area and Eastern Europe who also dream of the land of promise, just as so many of us had done during the past century.

It may come as a surprise to many people to know that at the beginning of this century, one-half of our Nation could not go back further than one of their grandparents as a native American; and this, incidentally, was the beginning of America's tremendous intellectual vitality and expansion.

I hasten to add, however, that I do not mean that the immigrant was a better man than the native. On the contrary, it was precisely because he did not think himself as good as the native American that he had such a tremendous drive to make good. He had to go all out in this need to get ahead. The first thing he thought of when he got off the boat was: "When will I speak like an American?"—"When will I look like an American?" and he did not dare relax in his efforts to achieve this goal.

The early church fathers understood this principle very well. St. Augustine helped make Christianity a universal religion with two tremendous achievements. First, he married Christianity to the arts and thereby attracted most of the creative people of the civilized world; and, second, he recognized the tremendous value of the immigrant.

In those days it was impossible to go from one country to another, or from one city to another, without a body of troops to escort you for protection. St. Augustine understood, however, that a man would be able to cross all borders without danger to himself, if that man wore the black cloak of the missionary and carried a cross. It was at that moment that communication among peoples began. Without it we might still be living in darkness.

Later, on, Pope Hildebrand made it official church policy. He said that the Christian missionaries must be as different from the people to whom they preach as possible. He understood the tremendous intellectual vitality of the immigrant and his everlasting need to make good.

And all thru history we find that this principle has worked wonders for the country fortunate enough to have immigrants—because where the native can relax in the security of his familiar environment, the immigrant must keep going so that some day he, too, might become "a native." He must make good. He has no other choice.

Britain and America are good examples. When the first Elizabeth mounted the throne she opened the gates to men and women everywhere who honorably sought to make a new life for themselves. It was at that moment that England entered upon her period of Gloriana.

Each wave of immigration to our own country from 1850 to 1920 left its deposits which helped build the United States into the leading world power it is today, and descendents of the immigrants occupy some of the highest places in our society, in science, education, medicine, government, and all the arts.

President Woodrow Wilson put his finger on this basic truth after the passage of the first bill to restrict immigration to our country. The President was confronted with a document which showed that thousands of Italians had returned to the home country after having worked here for a few years, and had taken their American savings home with them. Mr. Wilson looked at this impressive list and replied: "They left us the subways and tunnels they built, didn't they?"

Necessity of Farm Support

EXTENSION OF REMARKS
OF
HON. B. EVERETT JORDAN
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. JORDAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Farm Support: Without It Comes Anarchy," which appeared in the Fayetteville Observer Sunday, April 26, 1959. This editorial, Mr. President, gives an excellent account of the importance of price supports to not only agriculture, but the Nation's entire economy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM SUPPORT: WITHOUT IT COMES ANARCHY

As we have said many times before in these columns there is no ideal solution for our farm surplus problem.

But we must take exception to the editorial idea of Life magazine that the whole farm support program "is a colossal failure" and that "the only thing to do about it is to get rid of it."

Life's statement that "today farming is big business, highly mechanized, performed mainly by large operators and enormously efficient" simply will not stand factual examination.

Nor will Life's statement stand up that "there is no more reason to give a subsidy to this successful big business than to General oMtors or any private enterprise."

Despite the fact that there are many very large farm operations in this country, the average farmer is not conducting a big business.

In net income we doubt seriously if the average farmer has as much take home pay as the average employee of General Motors.

But the average employee of General Motors is organized and the average farmer does not belong to a powerful labor union which will be his spokesman at the bargaining table.

Now we come fairly up against the question:

Is it best for all the American people to let the farmer struggle to find his own economic salvation through the law of supply and demand, laissez faire and the devil take the hindmost?

Life magazine seems to suggest that this is the best way. It says of what it calls "successful" agricultural "big business":

"When it is left to find its own way in a free market you'll get cheaper meat, bread and clothing. And the farm business will shake down to those efficient enough to survive."

But experience should teach us that efficiency in the mere production of a certain number of bushels of wheat and pounds of cotton and tobacco per acre will not guarantee survival to any farmer.

His unorganized efficiency without Government assistance does not extend to control of the total production of any given farm commodity.

But the total production of any given farm commodity in what Life magazine calls a "free market" controls the price of that commodity.

And the price controls the economic status of the farmer.

A growing season 2 weeks longer than average on a national level could ruin millions of farmers whose income depends on a strictly competitive free market.

Suppose for instance that when General Motors and all the other automobile manufacturers tooled up for the production of its 1960 line of motor cars, the number of cars produced depended on the weather—and the weather was unusually good.

General Motors would have automobiles running out of its efficient ears. So would the other manufacturers of cars.

All manufacturers would have to sell their cars at a loss and they would go broke.

But General Motors and the other automobile manufacturers can control the production of automobiles to fit the pattern of consumer demand.

So General Motors does not go broke.

We don't want to see General Motors go broke, because that would be bad for the Nation.

But it would not be a fraction as bad as all the farmers going broke.

And there are those of us today who remember when almost all the farmers did go broke.

And when they went broke they ruined almost everybody else in the country at every economic level.

Because farmers were forced to give away their cotton at 5 cents a pound, millionaires who owned yachts went into the bedrooms of their luxurious penthouses and blew out their interest counting brains.

And everybody in between the farmers and the bankers suffered.

The circulation of the newspapers fell off, church collections dropped, canned goods rusted on the shelves of the stores, and there was big business at the counters which sold fatback, meal, and molasses.

Incidence of pellagra and nutritional diseases skyrocketed. Mules pulled automobiles from which the motors had been extracted.

Farms were auctioned off under foreclosure proceedings for a fraction of their real value—and some farmers gathered with pitchforks and shotguns and chased off the auctioneers.

America, between 1929 and 1933, was perilously close to something approaching a radical revolution, which it forestalled only by the political revolution which gave it for weal or woe—the economic revolution of the New Deal.

We can reconstitute this condition in a few short years by retreating from the theory and practice of farm support.

Life magazine estimated that the "colossal failure" of "the whole farm support program" has cost the American taxpayers $18 billion over a period of 25 years, which is something less than a billion dollars a year, which we feel is something less than an exorbitant price to ask the taxpayers to pay to keep from having the whole economic rug jerked out from beneath tired and aching feet.

Just get this through your head: You can't break the farmers without breaking the Nation and a farm economy which is permitted to operate these days and times under a free market system is destined to go bankrupt.

And when it goes bankrupt the millions of ruined farmers are not going to submit to a process, suggested by Life magazine, whereunder "the farm business will shake down to those efficient enough to survive."

Our entire system of government would be shaken down and what would be established in its place might be efficient enough to survive only by the employment of police terror totalitarianism.

Now get us straight.

We are not cheering the entire farm support program. Undoubtedly there are areas in which it both sinks and stinks. Emphatically the general theory of farm support runs counter to our idea of American free enterprise.

But sometimes even free enterprise has to be curtailed and controlled in the interest of survival.

And we are absolutely certain that a sudden and immediate retreat from the theory of farm price supports would create a condition in the United States of America which would be first cousin to anarchy and which would be the finest thing that ever happened for the international Communist conspiracy.

Now there is just one other way out, and that would be for the Government deliberately to encourage the process suggested by Life magazine of shaking down the farm business to those efficient enough to survive.

This in effect would mean the establishment of gigantic corporations to administer and control the farm business of the United States like General Motors and two or three big corporations administer and control the production of automobiles in the United States.

Such corporations, however, could not be operated profitably without Federal laws forbidding anybody to go into competition with these cartels. Ford and General Motors can build an automobile more cheaply than a handful of mechanics can build one in a "jackleg" factory. But almost any farmer can grow as many pounds of tobacco on any given acre as any combination of billionaires can grow.

And when you tell the individual farmer that he cant grow tobacco in competition with a billion-dollar combine you have created a situation which is something less than freedom in these United States.

At least our current system of crop control is designed—even if it doesn't do it—to feed everybody out of the same spoon.

U.S. Arts Foundation

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. JAVITS. Mr. President, on April 7, I introduced for myself and the senior Senator from Pennsylvania [Mr. CLARK], the U.S. Arts Foundation Act, S. 1598, to establish a U.S. Arts Foundation designed to stimulate throughout the United States the study and advancement of the performing arts. The Foundation would assist and encourage productions of plays, concerts, ballets, and other performances by marshaling professional advice, compiling registers of theaters and personnel, and providing subventions to help with the difference between box office receipts and costs, both from its own appropirations and from contributions made by private sources. This U.S. Arts Foundation can enable us to look forward to the day when our Nation will be served by the best in our theater, opera, ballet, and music in all sections of the land, and the world will honor us for it. The cultural spirit of America will in this way be enabled to grow in keeping with the growth of our productive capabilities.

I ask unanimous consent that the text of a recent news broadcast by a highly regarded New York radio news analyst, Estelle N. Sternberger, discussing this bill, be printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

YOU AND THE NEWS
(By Estelle M. Sternberger)

Good afternoon, my comments today deal with the question, Should the U.S. Government support the arts? and with the sectarian religious problem in the public schools.

Over this past weekend, President Eisenhower named an advisory committee of 34, to help plan a National Cultural Center in Washington. It is interesting to note that while Congress authorized the center, it is to be built with private funds. The Advisory Committee just named by the President will cooperate with a 15-member board appointed by the President in January, headed by the real estate man, Mr. Robert W. Dowling, chairman of the American National Theater and Academy.

On the preceding Sunday of April 5, the New York Times magazine contained an article by Senator JACOB K. JAVITS on the idea of a U.S. Arts Foundation, whereby our Government would give official recognition to the arts. He indicated in that article his plan to introduce in Congress, a bill calling for the establishment of such a Foundation.

Even though we have created symphony orchestras, dance groups, and a theater that the world regards with respect, Senator JAVITS holds that the total of our artistic accomplishment is not nearly what it should be. To use his own summing up of the situation, a "few great orchestras in a few great cities, with large sections of the country foreclosed to serious performances of music, dance and theater, do not make for cultural adequacy."

This plea rang in the ears of many Americans as they anticipated the arrival of the Bolshoi Theater Ballet company from Soviet Russia that gives its premier performance tonight at New York's Metropolitan Opera House. For the 27 performances to be given at the Metropolitan and the 5 at Madison Square Garden, offering a total of 165,000 seats, the total requests for tickets has exceeded 3 million. This evidence of the American public's interest in the arts seems to confirm the observation made by the New York Senator in his Times article, that "the cultural surge in America is too big and

private funds alone cannot keep up with all the needs of the national interest. For every city," continued Senator JAVITS, "that has a theater movement, there are 20 that need one. Opera, even on a semipermanent basis, is missing from all but six or seven cities in America (even the proud Metropoitan, our leading opera house, operates only about 6 months of the year, whereas most opera houses in Europe have much longer seasons, often 11 months)."

Even the ballet renaissance in our country finds even the three big touring countries operating on a shoestring, saved only by private funds that are mobilized with considerable effort. These funds are not sufficient to give the companies a sense of security or scope.

The Senator notes our young artists and creators must fight all kinds of obstacles to make careers, and many give up the fight. He quotes a New York Times correspondent on the lack of string players in this country, pointing especially to the string congress to be held this summer in Oklahoma by the American Federation of Musicians. That correspondent emphasized that while we have almost 180 million people, only 50 children will have scholarships to the congress. In the opinion of that correspondent, we should have 5,000.

As we read Charles Poore's review in the Times, of Abram Chasins' book, "The Van Cliburn Legend," we got a sense of what it means to be an artist and became aware of the thousands of our youth who could be lifted to that same inspiring experience that has come to the Texas pianist, Van Cliburn.

Senator JAVITS hurls at us the embarrassing reminder that the majority of Americans around the country face a meager cutural fare and are blacked out of professional cultural activities for a good part of the year. He urges that we are probably the only large nation in the world that does not have a government-sponsored opera, theater, or symphony. "England and Canada have their Arts Councils. Russia supports well over 30 full-time opera houses, not to mention orchestras, theaters and dance groups. Nearly every country in Latin America pitches in to help its cultural organizations, often with results that achieve worldwide fame. Because Mexico, for example, engaged in a large-scale program of commissioning murals for its public buildings, the Mexican school of mural painting was stimulated to a point where it developed into one of the most significant contemporary artistic achievements."

Senator JAVITS reads the governmental rollcall further by noting that virtually every city in Germany has it state opera, theater, and orchestra financed by grants from the federal, state, and local governments. In France, the Opera and Opera-Comique enjoy grants the size of which would make the director of our major opera house turn cartwheels of glee down Broadway. Last year Austria spent $5,800,000 on its four state theaters in Vienna and plans a slight increase for 1959. This was larger than the sum Austria paid to its entire foreign service.

As he presents his plea for the bill he plans to introduce, Senator JAVITS observes that, "while the bill for an Arts Foundation might be considered precedent shattering in the United States, it would be taken for granted nearly everywhere else in the world." It would help, he indicates, in creating a truly national establishment of theater, music, opera, and dance. It would give assistance to both professional and amateur segments of the performing arts. It would encourage widespread training and teaching of the arts so that more young people may receive encouragement and direction in realizing to the full their artistic potential. The bill would provide for Federal assistance to private nonprofit theater, opera, symphony, dance, and other arts groups; to accredited nonprofit colleges and universities and municipally sponsored arts councils and commissions for the presentation of and instruction in the living arts.

Senator JAVITS estimates the expenditures under his bill would not exceed $5 million annually, stimulating possibly the spending of $50 million in private activity over and above present expenditures, and it would all provide careers for thousands and free our increasing leisure from boredom.

Still Need Protection

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star of May 5, 1959:

STILL NEED PROTECTION
(By C. L. Dancey)

The need for antiracket picketing laws has now been recognized by some of labor's chief exponents in Government as the U.S. Senate voted 90 to 1 to include such a provision in the Kennedy-Ives labor bill.

This, however, affects only those under U.S. jurisdiction. Unless the State legislature shows some small glimmer of courage, small businesses in Illinois will still be left high and dry at the mercy of racketeering methods.

There does not appear to be any argument left at the national level but that simple justice and fairness demands this protection for workers and employers who can be and have been subjected to coercion.

Actually, the proposed antiracket picketing bill in Illinois would strengthen labor in its legitimate purposes by giving protection against arbitrary discharge of persons desiring union organization and by providing for elections to settle organizational disputes.

It is only fair that it should also prevent unions from unfairly picketing a business establishment when it does not represent the workers of that place.

It has been dramatically proven over and over, before the McClellan committee, that such a practice is common among paper unions and other run by former Capone gangsters for purposes of pure extortion as well as to coerce employers into signing their employees, against their will, into bondage to such racket unions.

The only defense ever made for unrestricted picketing is under a claim of free speech, but nobody else enjoys a free speech prerogative to inflict economic injury on anyone for solely selfish purposes. Further, if free speech is the legal basis for picketing, then there is no excuse under the sun for mass picketing, and any legislator who stands for free speech picketing consistently ought to stand for its restrictions to a number ample to serve that purpose and that purpose alone.

Any person who stands for unrestricted picketing, regardless of representation on the one hand as free speech, and unrestricted picketing as to the number of pickets on the other enabling picket lines not only to be heard but to obstruct and physically coerce is patently a hypocrit and and a stooge to labor—or a political coward.

If there aren't enough men in our legislature to even bring this question to the floor, it will be a sad commentary on the flabbiness of the Illinois lawmakers.

Where the question has been openly investigated, openly debated and openly faced, the most flaming liberals on the national scene have faced up to the need and admitted, the justice of antiracket picketing legislation.

It remains to see if State legislators are men enough to do the same.

H.R. 2729, a Bill To Amend the Federal Trade Commission Act

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. BENTLEY. Mr. Speaker, in further reference to my bill, H.R. 2729, which would be of great benefit to small businessmen in this country, I would like to insert in the RECORD the text of the Department of Commerce's report on this bill together with comments by Mr. George J. Burger, vice president of the National Federation of Independent Business:

THE SECRETARY OF COMMERCE,
Washington, D.C., April 23, 1959.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in reply to your request of February 9, 1959, for the views of this Department with respect to H.R. 2729, a bill to amend the Federal Trade Commission Act so as to prohibit certain practices in commerce by any manufacturer or producer who distributes his product in commerce through his own retail outlets, direct to consumers and also through other retail outlets.

The Department of Commerce recommends against enactment of this bill.

If enacted, H.R. 2729 would apply to any goods in commerce. It would be an unfair method of competition under the Federal Trade Commission Act for a manufacturer, who sells his product through his own as well as other retail stores, to price his product to his own stores at a consistently lower price than that which he charges other retail stores in the same general market. When he sells direct to consumers, it would be unlawful for him to do so at a delivered price which consistently is lower than the general level charged by his own or other retail outlets to consumers in the same general market.

The purpose of the bill appears to be to equalize prices charged the consumer for the same goods by the independent retail store, by the manufacturer-owned store, and by the manufacturer when he sells direct to the consumer.

This elimination of price competition between retailers horizontally would be attempted by legally requiring the manufacturer to adjust his prices at two different levels of trade (if necessary) to conform with some general level of prices in the same general market. Presumably both the price level and the market would be determined by the manufacturer, subject, however, to the scrutiny and control of the enforcing Federal agency.

We believe that, except for the provision requiring sales to his own retail outlet at the same price charged other retailers (which provision would probably of itself have little effect), the bill is diametrically opposed to the present antitrust and business practice laws and philosophy.

The Department sees no justification particular or general, for this proposed departure from our free enterprise system, which encourages the search for and use of more efficient systems of distribution and the selection of combinations of trade outlets to meet the changing requirements of marketing methods.

For these reasons we recommend against enactment of H.R. 2729.

We have been advised by the Bureau of the Budget that it would interpose no objection to the submission of this report to your committee.

Sincerely yours,

FREDERICK H. MUELLER,
Under Secretary of Commerce.

NATIONAL FEDERATION
OF INDEPENDENT BUSINESS,
Burlingame, Calif., May 5, 1959.

Hon. ALVIN M. BENTLEY,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN BENTLEY: As I promised in my April 29 letter, I am giving you, herewith, my observations on the Department of Commerce report on H.R. 2729.

Frankly, I cannot understand the Department's reasoning, except from the standpoint that it represents a basic antagonism to the Clayton Act and its Robinson-Patman amendment, both of which aim to curb unfair price competition.

Contrary to the Department's position, H.R. 2729 does not aim to "equalize prices charged the consumer for the same goods by the independent retail store, by the manufacturer-owned store, and by the manufacturer when he sells direct to the consumer." Rather, it aims to make a first step toward eliminating unfair price competition by a manufacturer who sells in competition with his independent retailers by these means.

This being so, then the question becomes one of whether in seeking to eliminate these unfairnesses, the bill does in fact equalize prices to the extent that it, as the Department further charges, "eliminates price competition."

Now, as you know, the key word in this bill is "consistently." H.R. 2729 prohibits a manufacturer from (a) delivering his products to his factory-owned stores at prices that are "consistently" lower than those he charges competitive independently owned and operated outlets; and (b) delivering his products direct to consumer at prices that are "consistently" below those charged by his independently owned and operated retail outlets.

If a manufacturer is prohibited from delivering his products to his factory-owned stores at prices that are "consistently" lower than those he charges competitive independently owned and operated outlets, then this means he is permitted to deliver his products to his factory-owned stores, from time to time, at prices that are lower than those he charges his competitive independently owned and operated retail outlets. In short, the bill permits price flexibility, and therefore competition pricewise, at the retailer buying level. Of course, once delivered to factory-owned stores and dealers, then the problem of establishing retail prices on each and every sale is one that is handled by the managers of both type establishments. The bill leaves the managers of both type establishments free to establish their sales prices as they please.

Further, if a manufacturer is prohibited from delivering his products direct to consumer at prices that are "consistently" below those charged by his competitive independently owned and operated retail outlets, then this means he is permitted to sell direct, from time to time, at prices below those charged by his competitive independently owned and operated retail outlets. In short, price competition is permitted by the bill in this field of activity.

The foregoing being fact, then the Commerce Department's argument falls flat. The bill does permit price competition. It does not promote price fixing.

Actually, the point the Department tries to make about H.R. 2729 interfering with the "search for and use of more efficient systems of distribution" is a very curious one. I would assume the Department's concern is over the prices that consumers would be required to pay.

Let's look at it this way: if a manufacturer is able to sell consistently to his factory-owned outlets at prices below those he charges his competitive independently owned and operated outlets, then would it not seem that there might be something wrong with his entire pricing structure? Certainly, it would not seem that the factory-owned outlets are more efficient producers of greater volume than at least some of his competitive independently owned and operated retail outlets. Why, then, should not his prices be reduced to all his outlets, factory-owned and independents, too? Under the circumstances, by charging a consistently higher price to his independently owned outlets, is he not imposing a price penalty on those who buy from them?

Further, if a manufacturer is able to sell factory-direct to individual consumers, or to large buyers who take delivery on drop shipment basis, at prices consistently lower than those that his competitive independently owned and operated outlets are able to offer, then again might it not seem that there is something wrong with his pricing structure? Certainly, eliminating the element of "retailer profit" (which actually is small in all the industries that would be affected), the manufacturer's costs in selling direct should not be much smaller than those through efficient independent retailer systems. If, despite this, he is able profitably to make such factory direct sales, then perhaps his selling price to his independent dealers, the selling price which is the basis for their establishing their selling prices, is out of line, and should be lower. If this is the case, then where does the consuming public come out?

Finally, if, in fact, the Department of Commerce is not motivated by antagonism to such laws as the Robinson-Patman amendment to the Clayton Act, then possibly it is reading H.R. 2729 out of context. This bill is avowedly offered as an amendment to the Federal Trade Commission Act, which generally prohibits unfair methods of competition. In this case, we have a bill with one aim only: to specify as unfair a pricing practice which is unfair but which is presently beyond the law. The bill does not prohibit any manufacturer from operating factory-owned retail stores, or from selling direct to consumer, just so long as he does not through these consistently undersell his competitively owned and operated retail outlets. A manufacturer may experiment as he desires, so long as he is in fair price competition.

I do believe that the facts on record, before various committees of the House and Senate, show the need for this legislation. And I do hope that the members of the House Commerce Committee will see that H.R. 2729 is reported favorably.

With all best wishes.

Sincerely,

GEORGE J. BURGER,
Vice President.

New Industry Adds Half-Million-Dollar Payroll to Greater Wilkes-Barre, a Badly Distressed Economic Area

---

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record of Monday, May 4, 1959:

ONE HUNDRED NEW JOBS TO HAVE PAYS OF $500,000—SEA ISLE SPORTSWEAR WILL DEDICATE FACTORY TOMORROW

Another $500,000 payroll will be added to the economy of Greater Wilkes-Barre when the modern, $350,000 factory building of Sea Isle Sportswear, Inc., 170 Simpson Street, is dedicated tomorrow, affording initially jobs for 100 men. This marks the 28th project sponsored by Greater Wilkes-Barre Industrial Fund since it began its campaign to diversify and add industries to the area.

The official dedication will begin at the plant at 11 a.m. Officers of the company will welcome approximately 175 guests, comprising officers and members of the local fund, Committee of One Hundred, labor and industry. Seventy-five of these guests will come from New York for the occasion. A buffet lunch will be served at noon, after which visitors will be conducted through the plant which occupies 50,000 square feet of floor space, 2,000 feet of which is devoted to offices.

Sea Isle Sportswear, a New York manufacturer of children's dresses, on September 12, 1958, announced through William O. Sword, fund president, it would expand its operations by moving to Wilkes-Barre and erecting a new factory. Actually, Sea Isle has been represented here since 1955, according to Mrs. Min Matheson, district manager, ILGWU. Beginning in that year with one plant, today it has plants in Glen Lyon, Mocanaqua, and Hanover. The new plant to be dedicated tomorrow gives the company four plants.

Meeting in New York with officers of Sea Isle were Mr. Sword, Charles Weissman, and David Dubinsky, national president, ILGWU, and David Gingold, the union's vice president. At the conference, Mr. Dubinsky said: "I want to help Wilkes-Barre. We are vitally concerned with encouraging legitimate garment concerns to open shops and bring work into Wilkes-Barre and the surrounding anthracite area where there is a reservoir of skilled, willing, productive workers ready to work and who are not looking to depress labor standards or run away from unionized centers or to assist struck firms, but who are working toward proper expansion of production." At the same time, Mr. Dubinsky promised all-out cooperation insofar as the union is concerned and "whatever reasonable compromises are necessary * * * to bring work."

Ground was broken for the new Simpson Street factory November 10, 1958, by Sordoni Construction Co., general contractor. It is built upon 3¾ acres of land owned by Greater Wilkes-Barre Industrial Fund and will afford 50,000 square feet of space, 2,000 feet of which will accommodate offices. The building is a long span, steel joint building with metal deck and insulated roof. Floors are of concrete. The building is completely air conditioned with special lighting for

cutting tables. It is heated by anthracite stoker-fired heat. A paved parking lot and landscaping complete the picture.

Participating in financing arrangements is Pennsylvania Industrial Development Authority, with its $105,000. The fund's share is $70,000 with local banks taking the balance of $175,000 secured by first mortgage. First-Second National Bank & Trust Co. is trustee bank.

Manufacturing operations will begin immediately. The initial quota of 100 men as a labor force will be augmented eventually to 200 as production increases. According to Leo Friedland, company secretary, however, work produced in the Simpson Street plant will provide employment for 400–500 additional jobs in finishing plants through the area.

Sea Isle Sportswear manufactures childrens' sportswear, sizes 3–6; intermediate girls' sizes, 7–14; teen sizes, 10–16; suits, skirts, slacks, jackets, and jumpers.

The Wilkes-Barre plant will perform the following operations: stretching, cutting, packing, pressing, finishing, cleaning, examining, and draping. Other operations will be done by neighborhood dress plants, specializing in respective processes.

Officers of the company include Charles Beer, president; Leo Friedland, secretary, and Irving Friedland, treasurer. Harry Piken is general manager.

Imports of Fence, Barbed Wire, and Nails

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. MICHEL. Mr. Speaker, with the big steel companies negotiating currently with the United Steel Workers on their new contracts, comes a timely editorial written by Mr. F. F. McNaughton, publisher of the Pekin Daily Times in my congresional district. Incidentally, Keystone Steel & Wire Co., referred to in the editorial, which did not raise prices after the last round of wage increases, has its own independent union and pays some of the highest scale of wages in the industry.

The editorial follows:

THE EDITOR'S LETTER
(By McNaughton)

This is a solemn column.

Sober because it touches Pekin area pocketbooks.

Concerns jobs, too.

I'm teeing off from a piece in the U.S. News & World Report.

It says Keystone sells for $9.80 nails which Germans (working for 90 cents) can deliver in Peoria for $8.35.

In 1956, 17 percent of nails used in the United States were imported. But the Japanese have come on with a rush. They buy scrap in America; haul it all the way to Japan; make excellent nails; ship them back to Peoria to sell for $8.52. So now every third nail used in the United States is imported. Japs work for 40 cents.

Equally sad is other fact: In 1939 we exported 29,000 tons. Last year we exported only 1,530 tons.

Now take barbed wire.

Barbed wire is as American as hot dogs, telephones, ice cream cones and Coca-Cola.

We had barbed wire monopoly.

By 1955 U.S. farmers and others were buying one-third of their barbed wire from Belgium, Luxembourg, Germany, Japan, etc.

Today Americans use more foreign than homemade barbed wire.

And the other fact:

In 1947 we exported 79,000 tons of barbed wire. Last year we exported a tiny 759. Our 1958 exports were only 1 percent of our 1947 exports.

Now let's talk jobs.

In the making of fence, barbed wire, wire and nails alone last year, the loss of exports and the hike of imports caused steelworkers to lose 3,188,000 man-hours of work.

That is 1,594 full time, all-year jobs; and that in fence, wire and nails alone.

In all steel operations the loss of work was far greater.

Then multiply that by the jobs lost in factories making autos, bicycles, sewing machines, typewriters, cameras, clocks, watches, tools, huge generating plants, woolens and cottons, tires, dinnerware, steel flatware, clothespins, printing presses, tractors, in fact everything from turbines to transistor radios—and is it hard to figure why we have unemployment?

Facing the competition (and the St. Lawrence Seaway) Keystone did not raise its price for fence, barbed wire and nails when it made its adjustment with labor last July 1. Even though that touched my pocketbook personally, I say "Amen!" to Keystone's decision.

Shriners Convention at Atlantic City During Week of July 5

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. GLENN. Mr. Speaker, Atlantic City, which is the largest municipality in my district, is host to many guests and conventions during the year. Nineteen hundred and fifty-nine is a banner year for scheduled conventions and one of the largest will be the 1959 Imperial Council Session of the Nobles of the Mystic Shrine—Shriners—to be held during the week of July 5. It is expected that delegations from 56 temples with their bands and various uniformed units will come from 28 States and Canada, bringing 50,000 persons to Atlantic City for the convention. It will be a week of healthful recreation, meetings, parties, parades, regattas, marine flotillas, tournaments, and the opportunity to enjoy the many and varied forms of entertainment and gracious living for which Atlantic City is famous. And yet there will be a serious side to this great meeting because the Shrine does have its obligations and high purpose for its existence and the greatest of these is the sponsorship and maintenance of the Shriners' hospitals for crippled children.

This is a program which is close to the heart of Imperial Potentate George E. Stringfellow, a fellow Jerseyman by adoption. He was born in Culpeper County, Va., descending from a prominent line of forebearers in that great State. Mr. Stringfellow was recognized by Thomas Alva Edison, the wizard of Menlo Park, early in his career and was made the manager of Mr. Edison's manufacturing firm in the Washington office and later was made general manager of the corporation's business in New Jersey. For more than a decade he was a daily associate of Mr. Edison and he is now vice president of Thomas A. Edison Industries of the McGraw-Edison Co. and a leader in the business life of New Jersey. He has received a number of honorary degrees from colleges and has received awards for outstanding achievement in the field of citizenship, industrial statesmanship, and leadership in various organizations for the betterment and understanding of mankind. With all these honors Mr. Stringfellow has had the greatest satisfaction in leading the Shrine and being connected with the program for the aid of crippled children throughout North America. I can best summarize how George E. Stringfellow feels on this subject by quoting an address which he recently made entitled "Shriners' Hospitals for Crippled Children," and under unanimous consent, I include the text of Mr. Stringfellow's address in the Appendix of the RECORD at this point:

It was my privilege to witness the Shrine Oyster Bowl football game last October in Norfolk, Va. The game was played by the stalwart young men of the Naval Academy and the equally stalwart young men of Tulane University.

The game is one of more than 80 played each year in various sections of the country for the benefit of the Shriners hospitals for crippled children.

The Oyster Bowl game has been promoted since its inception by Khedive Temple, A.A.O.N.M.S., Norfolk, Va. Last year's game produced a net profit of more than $80,000.

Incident to that game was a huge parade of high school bands, the Shrine temple organizations of Virginia and a number of beautiful floats from the territory surrounding Norfolk. The float of Khedive Temple was devoted to the Greenville Hospital unit. Riding on that float was a little 4-year-old boy, the son of a merchant seaman.

This little boy romped and played on the float, jumping, dancing, and even running. He was happy and so were the group of Shriners who watched and guarded over him. Eighteen months before the boy was admitted to a Shrine hospital. He could only crawl. He had never been able to walk, because he was born with club feet. His feet were so malformed that if he had been able to stand upright, he would have been walking on the tops of his feet instead of the soles.

This is not an unusual case. It happens all over North America and in Hawaii, where the Shriners have established 17 hospitals with more than a thousand beds to care for children with deformities they would carry with them throughout their lives, except for these hospitals. Instead, the little boy in Norfolk and thousands of others who have been patients in Shrine hospitals, today are leading normal lives, contributing their full share to our American way of life.

These hospitals have been called the world's greatest private philanthropy. The story of these hospitals is filled with romance. It is a story of men with reverend minds and merry hearts, a faith in God, and a desire to be of service to those who cannot help themselves.

In its 1919 session, the Imperial Council of the Ancient Arabic Order, Nobles of the Mystic Shrine elected W. Freeland Kendrick as its imperial potentate. At that time, Noble Kendrick was the tax collector of

Philadelphia, and was later to become that city's most distinguished mayor.

The Kendricks were childless and as a result devoted much of their time to entertaining friendless and orphaned children who were inmates of the various homes of the city. Among these institutions was one for incurables. On one occasion, Noble and Mrs. Kendrick took four of these deformed youngsters on an automobile ride through the city's parks.

Noble Kendrick never forgot that visit to the home for incurables and he resolved that when he should become imperial potentate of the Shrine, he would endeavor to have the organization care for as many of these crippled children as possible.

About that time—1918—a new hospital was established in Atlanta, Ga., owned and operated by the Scottish Rite Masons of that city. This hospital was for crippled children of that area who could not pay for treatment or correct their deformities. This hospital was the fulfillment of a dream of Dr. Michael Hoke, an orthopedic surgeon of Atlanta and Noble Forrest Adair, the head of the Scottish Rite bodies.

Noble Adair was also one of Atlanta's Yaarab Temple reprsentatives to the imperial council which met in Portland, Oreg., in 1920, at the end of Noble Kendrick's term as Imperial Potentate.

It was at the Portland session that Noble Kendrick sponsored the movement within the shrine to build a hospital for crippled children. His resolution would probably have failed had it not been for Noble Adair who delivered an inspiring message that has become known throughout shrinedom as the "bubbles" speech. Noble Adair spoke from first hand knowledge. He had built such a hospital in Atlanta, as Noble Kendrick proposed to have the Shrine build for North America. Noble Adair had seen the twisted bodies enter the Atlanta institution and leave it straightened. He had been inspired by the happy smiles and the discarded crutches of the crippled kids. He knew what could be done and he knew Shriners needed in their lives an objective above and beyond fun and frolic.

And so it was that the imperial council approved in Portland the policy to establish hospitals. The authority to establish these hospitals was handed to a committee of seven men, headed by Noble Sam Cochran of Dallas, Tex., and I doubt that in all history there have ever been seven more dedicated.

The basic rules and regulations they established were so sound they have never been changed. For admission to the hospital, a child must be under 14 years of age, and in the opinion of the doctors, one who can be improved or cured by orthopedic help. The children must come from families unable financially to pay for their treatment. They may come from all races, be of any color and have faith under any creed.

The first hospital was opened at Shreveport, La., on September 16, 1955, the second in Honolulu on January 1, 1923, and the third in St. Paul on March 12, 1923. The last to be opened was in Mexico City on March 10, 1945.

It cost close to $6 million a year to operate these hospitals. The money is provided by the 830,000 Shriners, each of whom contribute $5 per year, from the proceeds of football games and circuses conducted by the various temples and from an endowment fund to which anyone may contribute either as gifts or bequests.

In addition to regular work of the hospitals, each hospital treats thousands of youngsters as outpatients—children who may need posthospital care, or whose difficulties may be corrected without surgery.

May I remind you again that no patient has ever paid a penny for the care received, although there are former patients without number who have contributed to the endowment fund, or who at sepcial times contribute to the welfare of the patients, such as at Christmas.

The work of these hospitals has, for Shriners, been a labor of love, a labor which is above the call of duty. Shriners have enjoyed the privilege through the years and so have hundreds of others who are not members of our fraternity, for example, the players in many of the football games.

The first of these football games was the now famous East-West all-star game in San Francisco, which has been called football's finest hour, and which originated the slogan "Strong legs run that weak legs may walk".

It is needless to go into statistics or to tell you of the many crooked bodies that have been straightened. Your own imagination can give you the picture. We invite you to visit any one of our 17 Shrine hospitals. What you see may shock you for a moment, but the shock is only momentary. Then you see the smiling faces. You will hear the laughter. Then you will know why we Shriners are so very proud to remember Nobles Kendrick, Cochran, Adair, and Dr. Hoke, and all the others who have done so much, including the present head of our 17 hospitals—past imperial potentate the Honorable Galloway Calhoun, a symbol of civic virtue and illustrious son of the Lone Star State.

Steel and Statesmanship—Congratulations to President Eisenhower

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. KEFAUVER. Mr. President, I want to congratulate the President of the United States for his remarks this week on the steel negotiations. The President very properly warned that the U.S. Government cannot simply stand by and do nothing if the steel producers and the steel union do not use good sense and wisdom in drawing up a new contract.

I have stated a number of times that both management and labor, particularly in the steel industry, must show real statesmanship in regard to wage increases and price increases, or else our economy will be plunged into much more disastrous inflation.

A very fine editorial on this subject appeared in the Washington Daily News of May 6. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STEEL AND STATESMANSHIP

Out in Indianapolis or San Francisco a retired couple may have to find cheaper quarters or move in with the children.

Up in Detroit an auto worker may lose his job.

Down in Memphis a housewife may have to leave the care of the family to strangers and find work to meet the payments.

Through the valleys, farmers may have to hunt extra jobs in town, to eke out a living.

These and similar incidents, multiplied by the hundreds of thousands, are the results of price inflation which raises living costs and threatens unemployment.

Responsibility to some extent lies with Congress and the administration. By reducing spending, balancing the budget, paying off some of the debt, they can stop wearing away the value of wages.

Meeting in New York is another kind of "congress," never elected by the people but with tremendous power over all our lives. It is composed of representatives of the big steel corporations and the big steel union, negotiating a new wage contract.

Steel is a basic industry, employing, at peak, over 600,000. Steel goes into almost everything made in America. A steel price rise would almost certainly touch off a rise in other prices—a new round of inflation. A price cut could hold the cost-of-living line, might start a trend to more reasonable general prices and put some starch back in the dollar.

President Eisenhower probably had some such things in mind when he said yesterday that "the whole public, 175 million people are involved * * * we must look to them for some good sense and some wisdom, some real business-labor statesmanship or in the long run the United States cannot stand still and do nothing."

Steel profits are zooming. Steel wages, at an average of $3.03 an hour, are 84 cents above the average in all other manufacturing.

Productivity is improving constantly yet neither companies nor union mentions the idea of giving the public some of the benefit in form of lower prices. The companies speak only of protecting present costs. Union President David J. McDonald says the companies can raise wages without raising prices. If they can do that, they can cut prices at the present wages.

These steel negotiations have too great a power over the lives and expenses of the rest of the country. The union represents a virtual monopoly in labor. The companies exhibit increasingly the symptoms of monopoly.

If they cannot conduct their affairs with due regard for the public interest then, as President Eisenhower suggests, some form of wage-price regulation is inevitable.

For their own good, for the country's good, they would be well advised to heed the advice of the President and exhibit some "business-labor statesmanship."

Wisconsin Sets New Soil and Water Conservation Record in 1958

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. WITHROW. Mr. Speaker, I just received a communication from M. F. Schweers, Madison, Wis., State conservationist for the U.S. Soil Conservation Service, to which was attached a copy of his letter to soil conservation district supervisors acknowledging their 1958 annual reports.

Another new record has been established in Wisconsin in planning and applying soil conservation practices on the land. Mr. Schweers gave credit for this

fine accomplishment to the real conservationists—the farmers and their families who make the decisions and install the conservation work on their land.

The State conservationist pointed out that the excellent relationship between the agencies has been one of the principal factors in making Wisconsin's soil and water conservation program so successful. I personally know that this situation exists through contacts I have made in my home congressional district.

I came from the district that had the first soil and water conservation project in the Nation. It is only natural that I have followed the program of the Soil Erosion Service, the Soil Conservation Service, and soil conservation districts. I am proud of what has been accomplished in Wisconsin. And, I believe that the statement by Mr. Schweers is important enough to warrant its inclusion in the CONGRESSIONAL RECORD, and I so request it:

U.S. DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION DISTRICT,
Madison, Wis., April 27, 1959.

To: Soil conservation district supervisors.

From: M. F. Schweers, State conservationist.

Subject: Acknowledgment of your 1958 soil conservation district annual reports.

At about this time each spring, I have the pleasure of reading your and the 70 other soil conservation district annual reports. As usual, I found them to be complete, interesting, and to the point.

A large number of the reports were enclosed in attractive covers. About a dozen included photographs, which brought to my mind the saying, "One picture is worth a thousand words."

Apparently a majority of the reports were distributed to soil conservation district cooperators, agency personnel, and agricultural leaders. Quite a number were sent to members of the Wisconsin congressional delegation to keep them informed on what is taking place in Wisconsin soil conservation districts, so we have been told.

Rather than acknowledge each report individually, I am doing what I have done in previous years and preparing a single summary letter to all supervisors in Wisconsin. This won't be quite as personalized as a separate communication. However, it will cover more phases of district activities.

Administrator D. A. Williams has asked me to convey his regards to you on this occasion. He too wishes that time would permit him to individually acknowledge each of your interesting and informative reports.

HIGHLIGHTS

Two points specifically mentioned in virtually every report were "excellent interagency cooperation" or "wonderful teamwork," and "satisfactory" or "outstanding accomplishments."

You praised the several agencies with which you are closely allied for their fine contributions in advancing the soil and water conservation program of your districts. They were cited for the unselfish and harmonious manner in which each carries out its assigned responsibilities. These roles are about as follows:

The State soil conservation committee provides leadership and counsel to soil conservation districts. The Agricultural Extension Service has the responsibility for educational activities. The Soil Conservation Service gives technical assistance to soil conservation district cooperators in developing and applying farm conservation plans. The Wisconsin Conservation Department provides technical help to farmers on forest management and improvement of wildlife habitat.

The Agricultural Stabilization and Conservation Service, through the agricultural conservation program, provides cost-sharing aid to farmers in order to accelerate the installation of soil and water conservation measures. The SCS fulfills specified technical responsibilities under this program. The Farmers Home Administration is a source of credit for conservation practices.

Now, a bit on accomplishments for 1958. At the State level we feel that 1958 was the best year we have had to date in terms of overall production. See the table below. Accomplishments for 1957 were the best ever in soil conservation district history. But 1958 was even better. The third column, which shows the grand total to December 31 of last year, indicates the amount of work performed during the 21 years of SCD–SCS cooperative relationships. The last column indicates the percent that 1958 is of total production. These accomplishments were made by the key conservationists—our fine farm families—with technical assistance provided in planning for and applying needed soil and water conservation measures.

SCD accomplishments

Item	Unit	1957	1958	Total to Dec. 1958	1958 as percent of total
New cooperators	Number	2,004	1,990	39,695	5
Basic conservation plans	do	1,740	1,921	23,967	8
Soil surveys	Acres	557,882	549,841	12,457,381	4
Followup on farm plans	Number	6,739	6,870		
Contour strip cropping	Acres	52,128	58,082	956,964	6
Waterways	Miles	391	412	2,868	14
Terraces	do	283	244	3,919	6

[1] No technical or cost sharing assistance is provided for in bringing new land into production.

NOTE.—In comparing 1958 accomplishments with those of 1957, note that the increases considerably offset limited decreases on some items. Of particular significance is heavy construction, including drop inlets and ponds. These practices require a considerably larger number of man days per unit of work than the others.

We were particularly pleased to note your comments concerning better program balance. Increases are being made in the engineering, forestry, and biology phases, so you state. We thoroughly agree with this analysis.

AGRICULTURAL CONSERVATION PROGRAM

Much credit for the acceleration of the heavy construction program in Wisconsin must be given to cost-sharing assistance provided by the ACP. Many of these practices would have been financially prohibitive as far as individual farmers are concerned. Furthermore, gully control and water detention are practices that have high priority insofar as public benefits are concerned. The installation of other practices was also increased because of the cost sharing program.

County ASC committees made nearly $190,000 available to the Service under the 1958 ACP–SCS 5 percent agreements. This money was used in employing additional help to take care of the ACP cost sharing referrals. Nearly 20,000 referrals were handled by the SCS in 1958.

WATERSHEDS

About 70 informal type watershed associations in Wisconsin have been organized over a period of years for the purpose of developing community interest and stimulating more rapid adoption of planned soil and water conservation practices.

Public Law 566 added impetus to the organization of watersheds for the primary purpose of watershed protection and flood prevention.

As of April 15, 1959, five Public Law 566 watershed projects had been approved for operations. During the past year the first four major structures were installed under this program. These are of the water detention type. Another work plan should be completed by May 15. Two additional watersheds have been approved for planning assistance, and three applications for planning assistance will be acted upon by the State soil conservation committee within the next several weeks.

At least another dozen watershed organizations throughout the State have their applications in the formulative stage. Thus far all applications have come from an area within the two tiers of counties bordering the Mississippi River, from Ellsworth on the north to the Wisconsin River on the south.

CONSERVATION NEEDS

"The national inventory of soil and water conservation needs is the most comprehensive fact finding job of its kind ever undertaken," according to Administrator Williams. "When completed in 1960, we shall have the first reliable measure of the size of the conservation job remaining. This inventory should supply the basic information on which soil conservation districts, the Service, and the Department can more effectively carry out all soil and water conservation objectives."

Up to April 1, 1959, 35 counties have completed inventories, except for the water phase. SCD supervisors have participated in or will enter into deliberations leading to the development of these documents.

COOPERATION

Interagency cooperation has been mentioned previously. However, a number of other groups have contributed materially to advancing the SCD movement, according to your reports.

Quite a number of county boards have appropriated funds to soil conservation districts. The amounts range from $100 to several hundred dollars, averaging somewhat over $400.

Several county boards have purchased motor patrol graders to be rented to farmers for the installation of soil and water conservation measures. You commend county highway committees and commissioners for their fine cooperation in managing this equipment for maximum efficiency. Expert contractors have also been extremely co-

operative in the construction field, many of you say.

Among other groups who have done a nice job in promoting soil and water conservation have been county bankers' associations. At least three of these organizations are now sponsoring countywide recognition dinners for outstanding SCD cooperators. Attendance at these affairs runs from 150 to 200 people.

In many of your reports you indicate that your programs would not be nearly as successful if it weren't for the excellent cooperation you are receiving through many, many newspaper articles and radio and TV broadcasts. After all, soil and water conservation should be of interest to all people because it is everybody's business.

In regard to this subject, I recall a statement by Mr. Walter R. Humphrey, editor of the Fort Worth, Tex., Press., which is quite pertinent. "Soil conservation is people—people who love the land, people who will spend their fortunes and their lives to preserve the land, people who will fight to keep it green and fertile and useful and beautiful, just as a soldier will fight to keep it free."

EDUCATION

County superintendents of schools have done a marvelous job in Wisconsin in fostering and furthering the unmatched youth training in soil and water conservation education. We are fortunate in this State in having these capable educators as SCD supervisors.

The State soil conservation committee staff, under the direction of I. O. Hembre, has done a grand job in providing needed assistance in this activity. And other agencies have also contributed to this program, your reports indicate.

I was pleased to note that quite a number of governing bodies conducted tours for county boards and county ASC committees. No doubt these activities had some effect in getting county board assistance and ACP 5-percent assignments.

MEETINGS

In reading your reports, I would judge that at least half of the SCD governing bodies of the State hold regular monthly meetings. Others meet bimonthly, while a very few meet quarterly or semiannually. We in the SCS believe that in a going district there is ample business for supervisors to get together monthly.

I would judge that about a dozen SCD governing bodies are sponsoring cooperators' banquets. Most of these involve evening functions.

According to your reports you were extremely well pleased with the State meeting held at Stevens Point last year. Some of you went so far as to say that it was the best one that has been held to date.

The 2-day workshops for supervisors sponsored by the State soil conservation committee in eastern Wisconsin were very successful and extremely well accepted, so your reports indicated.

While mentioning the State committee, I should like to elaborate a bit on its membership and accomplishments. As advisory member, I feel at liberty to express my opinion on this subject since I am not directly involved. I periodically meet with other State conservationists from the Corn Belt and annually with all of them. From what I have gleaned at these conferences, I would say that the Wisconsin State Soil Conservation Committee is second to none in the country. This can be said of both the caliber of committee members as well as their activities in carrying out the SCD program in the State. I am merely passing a bouquet to a very deserving group of men whose contributions to district affairs may not be fully appreciated.

Most of the area associations hold semiannual meetings, usually in the early summer and late fall or early winter. The June or July meetings are generally devoted to a field trip of some kind, and include a short business session. The winter conferences include the annual business meeting and the election of officers. I was particularly pleased to note in several of your reports that these meetings have stimulated greater participation in district affairs at the local level.

Several district governing bodies attended the NASCD annual conference held in Minneapolis in 1958. Those who were present were impressed with the magnitude of the convention and the sincerity, knowledge, and enthusiasm of the participating supervisors.

SPECIAL STATE ASSOCIATION ACTIVITIES

As you know, the State association has organized five committees, assigning each the leadership for a specific statewide activity. These committees are made up of supervisors and agency personnel within an administrative area. They are chairmaned by the area association president who serves as a director of the State organization.

Chairman Lawrence Johnson, Algoma, and other members of his committee spearheading the State speaking contest, are to be commended for outstanding achievements in 1958. According to your reports and information we secured from our field officers, 29 districts conducted contests during the past calendar year. According to our figures there were 18 adult, 120 senior, and 192 junior participants. I am sure that all of you who attended the 1959 meeting of supervisors in Madison were inspired while listening to the first-place winners of each of the three contests. It was encouraging to learn that most entrants made a number of informal appearances before organized groups in behalf of soil and water conservation.

The dealer-district committee, headed by Lloyd Johnson, New Richmond, got off to a nice start last year. As we understand it, several district governing bodies have taken advantage of this fine method of molding friendship and securing the support of farm equipment dealers. This should not be a difficult activity to undertake because dealers are thoroughly familiar with the program and are just waiting for invitations from supervisors. They want to help. But, they have to be invited.

O. J. Sohrweide, Alma, is chairman of the Goodyear soil conservation awards' committee. We understand that about 20 district governing bodies entered the 1957–58 contest. However, only 10 submitted their final score cards to the judging committee. The Sauk County Soil Conservation District won first place and the Portage County District second in the past year's event. Any SCD governing body that enters this contest and keeps up to date on its scoring will develop an excellent understanding of the job of a supervisor. And, a supervisor and selected cooperator from the winning district of each State get a week's free trip to Arizona as guests of the Goodyear Co. Furthermore, the outstanding conservation farmer in each district entered in the contest gets an appropriate certificate.

The Soil Stewardship Week committee, headed up by William Nugent, Endeavor, provided leadership for this activity last year. Many of your reports point out that considerable work was done by you supervisors in promoting this activity. A number of governing bodies secured soil stewardship kits from our office and purchased soil stewardship materials from the NASCD. I was particularly pleased to note that many of you personally called upon members of the clergy to acquaint them with the scope and intent of this program.

Association President Oscar Laper, Rock Springs, was chairman of the farm progress days' committee. The 1958 event was held in the vicinity of Yellowstone Lake, Lafayette County SCD. This was by far the biggest and the best one of its kind held to date in the opinion of many people. It is estimated that more than 140,000 attended the 3-day event.

OUTLOOK

Looking back, 1958 was a year of great production in soil conservation district operations. And we must give major credit to the farm families who in the final analysis are the key to what is accomplished. They make the final decisions and install the planned practices.

Looking ahead, you say you have every reason to believe that 1959 will surpass 1958. In this we hopefully concur. Maximum conservation can be achieved only when everyone and every group plays its full part in getting this important job accomplished. The SCS will continue to emphasize the importance of all-out teamwork. And we will practice what we preach. We are confident that through a united effort increased accomplishments will be made in 1959.

THANK YOU

The many courtesies and fine cooperation you have extended to all of us in the Soil Conservation Service are deeply appreciated. We close this letter with a heartfelt "thank you."

Sincerely yours,

M. F. SCHWEERS,
State Conservationist.

Decisions by World Affairs Council

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. SALTONSTALL. Mr. President, on April 10 I obtained unanimous consent to have printed in the Appendix of the RECORD a tabulation of opinion ballots on the eight topics of "Decisions, 1959," prepared by the World Affairs Council of Boston. At the time, I did not realize that tabulation had been completed on only the first four topics in this important discussion series on American foreign policy, conducted by the Council. I have just received the opinion tabulations on the last four topics, and I ask unanimous consent that they be printed in the Appendix of the RECORD. Tabulations of the opinion ballots on the first four topics appear at page A2918 of the CONGRESSIONAL RECORD of April 10 .

There being no objection, the tabulations were ordered to be printed in the RECORD, as follows:

WORLD AFFAIRS COUNCIL,
Boston, Mass.

DECISION 1959—RESULTS OF TABULATION OF OPINION BALLOTS

Decisions 1959, an 8 weeks' community discussion program on American foreign policy, has recently been concluded. Sponsored by the World Affairs Council, the decisions program provided an opportunity for Bostonians to express their opinions on foreign policy issues, and to have them forwarded to the State Department and the Massachusetts congressional delegation in Washington. The ballots from the concluding 4 weeks' topics revealed the following opinions:

Topic No. 5, "What U.S. Policies in the World Economic Revolution?"

Bostonians (77 percent) believe that a growing world economy is essential if long-term U.S. economic growth is to be assured. In this respect, it was felt that the U.S. economy can afford a larger-than-present Government investment in the economic growth of the rest of the world (65 percent).

Participants in the decisions program placed the greatest emphasis on the following proposals:

1. Expand U.S. technical assistance programs (skills and know-how) (81 percent).
2. Encourage and provide incentives for more U.S. private investment overseas (60 percent).
3. Reduce foreign grants but expand long-term, low interest loans (57 percent).
4. Channel more U.S. aid through the U.N. (57 percent).
5. Take the lead among industrialized democracies in a massive development program—economic and social—in the non-Communist underdeveloped world (47 percent).
6. Take the lead in a worldwide reduction of tariffs (47 percent).

Topic No. 6, "The New Technology: For destruction or Plenty?"

Despite rapid developments in military technology, decisions participants (53 percent) refuse to give up their rights as citizens and leave all decisions in this area to Government experts. In this respect, the nearly unanimous opinion of 98 percent agrees that there is a clear need for more information to be made available to and for more understanding by the general public of the problems and opportunities of the technological revolution. Bostonians do not want the United States to maintain unnecessary barriers against the exchange of technological information with the rest of the world (91 percent).

In addition to favoring the handling of technological problems through the U.N. International Atomic Energy Agency (90 percent), it was felt that greater efforts should be made in solution of technological problems by private industry (68 percent) and 63 percent think that the United States must continue some nuclear weapons research until an effective control system is installed. Concerning the American educational system: 70 percent think there should be increased Federal aid to public schools and universities, 34 percent think there should be public aid to private schools and universities, and 77 percent before that a greater State and community effort is necessary.

Topic No. 7, "What Kind of World Is Possible?"

Political stability in the underdeveloped world is considered to be of vital interest to the United States (61 percent), however, only 13 percent think that this stability can be achieved by the establishment of U.S.-style democratic institutions in these countries. Bostonians also feel there should be a greater U.S. understanding of foreign peoples and institutions (89 percent). Although 68 percent think that the United States should have sufficient military power to discourage aggression, 31 percent believe there should be world disarmament.

With respect to specific U.S. policies that will best service its vital interests, 84 percent favor the suggestion that we provide the kind of assistance (where it is wanted) that will help colonial peoples build stable institutions. Other policies supported by the majority are: greater efforts for strengthening the U.N. (87 percent), expand U.S. assistance to economic growth of underdeveloped world (72 percent), base colonial policy on careful appraisal of each situation (68 percent), and promote a worldwide reduction of tariffs (60 percent).

Topic No. 8, "Challenges to Diplomat and Citizen."

The following proposals are the ones Bostonians are most willing to support and, if necessary, help pay for: That the United States should place a greater emphasis on nonmilitary tools of foreign policy—economic development, cultural exchange, political cooperation, etc. (89 percent) and that the United States should make greater use of the U.N., wherever possible (95 percent). In respect to the foreign service of the United States, 75 percent feel that diplomatic pay and prerequisites should be increased to permit career, professional diplomats to serve in more posts (75 percent).

In the opinion of the decisions participants, the role of the citizen in U.S. foreign policy should be:

1. To take pains to keep himself informed on foreign policy and related problems and to take an active part in world affairs as individuals and through churches, schools, societies, and private organizations (92 percent).
2. To understand what policies are necessary and be willing to pay the price (82 percent).
3. To debate foreign policy freely at any time (76 percent).
4. To recognize that decisions sometimes have to be made, at the top, on the basis of information that cannot be made available to the general public (73 percent).

Relationship of the United States With Other Nations

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. MUSKIE. Mr. President, it is a source of encouragement to me, as we struggle with the problems involved in our relationships with the rest of the would, that thoughtful citizens are concerning themselves and expressing themselves on these same problems. They are disturbed that many people abroad misinterpret the motives behind our economic assistance programs. They are shocked that in many countries whose goodwill we seek and whose advancement we support there should be evidence of dislike and even hatred for America. It is regrettable that the impulse of many Americans, when confronted with such evidence, is to reject and oppose any further effort on the part of the United States to develop an economic climate throughout the world which is favorable to the growth of freedom. It is encouraging that other citizens, and I think a majority, choose instead to seek and suggest a means of improving our efforts.

Such a citizen is Reginald H. Sturtevant, president of the Livermore Falls Trust Co., in Maine. Mr. Sturtevant is a trustee of his alma mater, Colby College, and also a member of the Maine Governor's Advisory Committee on Education. A member of Phi Beta Kappa, he has also received the diplome of the Sorbonne. I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful plea for international understanding, entitled, "Get Understanding," recently written by Mr. Sturtevant.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GET UNDERSTANDING

(By Reginald H. Sturtevant)

Against an idea, it is said, there is no defense—except a better idea. Consciously or subconsciously, it is probably upon that assumption that rests much of our dangerous complacency in the current cold war. Convinced that, in the aggregate of ideas and ideals loosely grouped in "the American way of life," we have the best idea, we feel that it must, therefore, in the long run prevail.

Yet, an idea however good, if not presented or if incorrectly presented, can be as impotent as a missile with a faulty launching. If you have traveled recently abroad, and have talked much with common people there, it can hardly have escaped your notice that something is wrong with the presentation of the American idea, currently being conveyed principally through two channels—the American tourist and the American movie, with exceedingly unhappy results.

After driving into Paris, over the road reverently marked to commemorate the progress of the liberation army, I found it disconcerting to ride down the Seine and read, painted in black letters 5 feet high on the stone embankment, "Yankee Go Home." Priding ourselves on our benevolence in extending economic aid to our friends and allies, even to our former enemies, we find it an unpleasant surprise that it is quite generally regarded abroad as merely a form of bribery by which we hope to buy security for ourselves.

We consider ourselves a Christian nation, and it comes as a shock to find that in so many quarters this is considered a hypocritical pose adopted for preaching to others, while we, ourselves, wallow in lust, luxury, and delinquency—juvenile and adult.

Our material possessions and accomplishments, it is true, are widely envied and imitated; but how fragile a tie that is, has been demonstrated many times recently in countries, recipients of substantial economic aid, where young men in American-style dungarees have turned from operating American gas pumps and dispensing Coca-Cola to stoning our Embassies and reviling "U.S. imperialists and money-grabbers." As a rallying point for humanity, the golden eagle ranks with the golden calf. Morally and spiritually the American idea, as they understand it abroad, apparently has few real admirers. Yet, we are convinced that it is the best idea, if rightly understood.

Less than 2 years ago, a young man came from central Europe to the United States for study. He came with such preconceived anti-American ideas, such scorn for the crudeness and materialism of everything American, that one wondered why he was here. After living and studying among us less than 2 years, he has changed his attitude completely and has decided that an American is what he himself wishes to be.

His case is so typical of many foreign students that it suggests that our colleges and universities have at hand the best possible medium for presenting the American idea through a vastly expanded foreign exchange student program. It is, perhaps, too much to hope that every U.S. college student spend one of his college years in study in a foreign country; but certainly the exchanges now counted in the dozens, and centered mostly in a few cities, could be in the thousands and spread countrywide.

On a strictly exchange basis, the principal financial problem would be transportation costs. Here, perhaps, is one of the most justifiable areas for Federal aid to education. An international understanding is the most effective deterrent to war. It is a weapon

which never becomes obsolete, as do so many of those on which we now spend billions.

Increasingly we are forced to communicate with other peoples; but, as Dr. Milton Eisenhower points out, Americans are the world's worst linguists. We constitute only six percent of the world's population, yet our attitude seems to be that the language barrier should be overcome by having the other 94 percent learn English. The implication, by so many of our people that anyone too ignorant to speak English is not worth talking with, hardly is calculated to win friends.

Deeply disturbed because we are sending abroad numbers of technicians, experts, and even diplomats who cannot speak the language of the country to which they go, the U.S. Senate currently has a subcommittee studying that problem. Senator MUSKIE, of Maine, a member of that committee, believes that in the long run our language deficiency could prove to be as dangerous as a deficiency in weapons.

Certainly, if an American student expected to spend a year of study in Europe, South America, or Asia, he would take a most active and practical interest in the study of the language of the country to which he would go.

A third possible benefit can be seen in such a massive exchange of students. We are sure that foreign peoples do not see us clearly; but are we sure that we see ourselves clearly? Among our best philosophical and religious thinkers warning voices are already raised that we may be losing unwittingly the very basis of our "idea"—that bondage comes in many forms, some insidious. To understand foreign peoples and have them understand us is highly desirable; to understand ourselves is vital. To that end, one of the most desirable and salutary things is to see ourselves as others, in the keen, inquiring minds of young foreign students, see us. Our bread cast over the waters in this manner may well come back to us as the truth which again shall make us free.

Repeal of Excise Tax on Telephone Service

EXTENSION OF REMARKS
OF
HON. B. EVERETT JORDAN
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. JORDAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a resolution adopted March 5, 1959, by the North Carolina Independent Telephone Association regarding the proposed repeal of the Federal excise tax on telephone service.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE NORTH CAROLINA INDEPENDENT TELEPHONE ASSOCIATION URGING THE REPEAL OF THE FEDERAL EXCISE TAX ON TELEPHONE SERVICE (ADOPTED MARCH 5, 1959)

Whereas the Federal excise tax on telephone and other services was levied for the first time during World War I as an emergency measure and was repealed a few years after the war ended; and

Whereas the Federal excise tax was revived as an emergency measure during the depression of 1932; and

Whereas during World War II Federal excise taxes were placed on public utility and transportation services for the dual purpose of providing additional revenue and discouraging unnecessary use of such services; and

Whereas Congress has acted to remove a substantial portion of this discriminatory tax burden on public utility and transportation services by elimination of excise taxes on the use of electrical energy and the shipment of goods and property; and

Whereas the tax on telephone service was reduced by congressional action to the present rate of 10 percent; and

Whereas, today, nearly 14 years after the end of World War II, the excise tax on communication services, introduced as a temporary tax, is still in effect; and

Whereas telephone service is the only one of the four essential household utilities subject to Federal excise tax; and

Whereas the national situation that prevails today is not the same as it was when the tax was imposed; and

Whereas there is no need to discourage the use of telephone service in order to make circuits available for essential defense calls; and

Whereas the telephone today is no longer a luxury but is a necessity in the home as well as in business: Now, therefore, be it

Resolved, That the North Carolina Independent Telephone Association is of the opinion that the discriminatory excise tax on communication services is not in the public interest, that this tax should not continue to be levied by the Federal Government; and

Resolved further, That any similar tax on communications should not be levied by the individual States against the users of this essential service as a means of financing specific programs which bear no relation to the service taxed; and

Resolved further, That Congress is hereby petitioned to terminate the discriminatory excise tax on communication services at the earliest possible date.

W. S. BEDDINGFIELD,
President.
HYLTON WRIGHT,
Secretary.

Salute to Clare Boothe Luce

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. BARRY. Mr. Speaker, Mr. J. Spencer Gray, editor and publisher of the Herald of Westchester, whom I regard with respect and admiration, has published an editorial in the April 30 edition of his paper, prior to Mrs. Clare Boothe Luce's withdrawal of her name as Ambassador to Brazil.

Because I feel that Mr. Gray's editorial says what the preponderance of the American people feel, I want to put it on record as a salute to Mrs. Luce and also as an expression of my deep regret for the loss—to Brazil and to us—of her brilliant services and her penchant for making friends for the United States all over the world.

Mr. Gray's editorial is headed "An Open Letter to Mrs. Clare Boothe Luce" and reads as follows:

AN OPEN LETTER TO MRS CLARE BOOTHE LUCE
(By J. Spencer Gray, editor and publisher, the Herald of Westchester)

DEAR CLARE: A great patriot like yourself once coined a wonderfully descriptive phrase—"These are the times that try men's souls." Those were to the words of Tom Paine, in whose honor and memory today still stands a homestead at 983 North Avenue in New Rochelle, N.Y.

These past few weeks must have been as trying an experience as you have ever had. Against the glaring and searing spotlight of worldwide publicity, you responded with characteristic zeal when the Chief Executive of our Nation called upon you for help.

Day after long day, you graciously and silently stood by and suffered the piercing shafts hurled at you.

When you responded with one brief paragraph, the rapacious wolves cried out all the more loudly. They bared their fangs and shrieked that your usefulness had come to an end.

Some of our best friends—including your esteemed husband—counseled you to step down. With all due respect to that great colleague and fellow editor, we urge you not to yield one iota before the slings and the slanders. Stay in their fighting, Clare, and all of the Americas—North, Central and South—will be behind you.

"These are the times that try men's souls," said Tom Paine, "but he who stands it now deserves the love and thanks of all his countrymen." And it will be not just the love and thanks of your countrymen, Clare, but our many good and dear friends in Brazil and our many good and dear friends throughout Latin America.

During the past few days I've had ample opportunity to sample the thinking of many of your Westchester neighbors, just across the Connecticut line from your Ridgefield home. Permit me to assure you that your neighbors in Westchester are with you, and so too, your neighbors in Connecticut.

I'm sure their thinking mirrors perfectly the sentiments of people throughout all of the Americas. You don't have to be told, Clare, that the U.S.A. is confronted today with the most perilous international crisis in its history—never before has the need for stronger ties with our present friends, and the need for making new friends, been more urgent.

Unfortunately, people with the skill and talent for diplomacy—masters in the art of making friends for Uncle Sam—are very rare indeed. You, Clare, are one of a very few truly skillful emissaries. You have proved yourself with rare distinction. Your exemplary service in Italy was a new kind of ambassadorship—a kind that carried with it great warmth, deep understanding and sincere friendship. The genuine affection demonstrated to you by the good people of Italy was dramatic proof of this.

You can do the same kind of job in Brazil, Clare, and we desperately need you to do it. My correspondents in Latin America—and they are knowledgeable—tell me they can't recall any ambassadorial nomination in modern history that has evoked such a genuinely warm response.

If you were to withdraw now, it would lead to deep disappointment and indignation in the people who have been waiting expectantly for you to embark on the new phase of your brilliant career.

Your resignation now, after winning overwhelming confidence by the Senate, would be a severe blow to our foreign relations and a setback to our Foreign Service. And there's still another reason that your withdrawal would be damaging and depressing to all of us:

Throughout the Nation, at all levels of government, there's a crying need for capable, conscientious people to serve on boards

and commissions and in countless other positions that all add up to making democracy work.

Most of these good people are the inevitable targets of the same kind of ordeal to which you have been subjected. They too, are frequently selected as the whipping boys and girls. But, they continue patiently and ceaselessly to serve their communities, because the voice of conscience tells them they've got to serve.

For you to remain at your post, despite the shouting and the pressure and the vitriol, will be a burning example to all these thousands of good people—an example of courage and dedication which will lend new strength to all of them. They're looking for you for inspiration.

Don't let them down, Clare.

Don't let down so many of the good people of the Americas.

They need you.

Good luck in your new assignment—away from home. * * * And

vaya Vd con Dios.

Better Balance Between Industry and Agriculture

EXTENSION OF REMARKS

OF

HON. B. EVERETT JORDAN

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. JORDAN. Mr. President, for many years North Carolina has been considered in many ways the leading State of the South. On repeated occasions North Carolina has pointed the way toward an economic revolution in the South to bring about a better balance between industry and agriculture, and thereby create a new era of development and progress.

In the May 4, 1959, issue of Time magazine the leadership North Carolina is offering in this and other areas was the subject of a penetrating and revealing article, and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NORTH CAROLINA: THE SOUTH'S NEW LEADER

North Carolina, observed historian Arnold Toynbee in 1939, enjoys a springlike burgeoning of life because, unlike other Deep South States, it is not "a country living under a spell." The most important new fact about the U.S. South in the spring of 1959: burgeoning North Carolina, too busy in pursuit of 20th century economic development to be inhibited by diehard last stands against school integration, has quietly taken over the mantle of Southern leadership that Virginia wore so long, so proudly.

Springlike Tarheel vigor was at work last week from Kitty Hawk to Cherokee, from missile plant to church pulpit, reshaping a landscape once principally adorned by loblolly pine, flue-cured tobacco and two-room farm shacks. Near Laurinburg, Presbyterians broke ground for a new college, a few weeks behind the Methodist groundbreaking for a college at Rocky Mount and 3 years behind the brandnew $19 million campus of Baptist-affiliated Wake Forest College in Winston-Salem. All were additions to Dixie's best college complex, fed by Dixie's best public school system. In the center of the Piedmont, engineers mapped sites for nuclear, chemical, and industrial research labs in a new, 4,000-acre Research Triangle. East of Charlotte's booming suburbs, Alcoa let $40 million worth of contracts to expand its aluminum plant. Over the South's best highway net, semitrailers snorted day and night to serve a State economy so vigorous that it kept right on growing through the late recession.

UP FROM SEGREGATION

In the solid granite capitol in Raleigh, white-haired Gov. Luther Hartwell Hodges, 61, businessman turned politician, totted up some headline statistics that proved the vigor behind his fondest dream: from January to March, industry built some $25 million worth of new plants in North Carolina to add 5,600 new jobs (up 40 percent over 1958), paying $16 million a year (up 46 percent) to the state's payrolls. Showing its heels to its industry-hungry neighbors, North Carolina would almost certainly better its 1958 total of $253 million in new-plant investment, tops for the South.[1]

Behind the thriving economy lay an even greater achievement: a state of mind and spirit that recognized long ago that good schools, expanding culture and economic development were too vital to be stopped short by a fight over integration. Like all Southern States, North Carolina met its toughest test after the Supreme Court's 1954 decision. But guided by able leadership, it did not panic. Instead it plotted minimum but legal compliance, went on to more important business—and in so doing soon put the crisis in reasonable perspective. Part of the credit was due to Governor Hodges and his sharp eye for business; part of it was due to the special heritage of the State that produced both Hodges and the kind of climate that he could operate in.

STATEWIDE CAMPUS

Next to the last colony into the Union, North Carolina lacked good seaports for the cotton-slave boom that swept Virginia and South Carolina. "A vale of humility," the State was called, "between two mountains of conceit." In the Civil War it lost more soldiers than any other Confederate State; later it suffered its share of corrupt reconstruction government until 1901. Heading the new leaders that year: "Education Governor" Charles B. Aycock, whose fiery crusade for schools got a new one built every day for 10 years, gave education a permanent claim on a lion's share of State spending (76 percent of the 1959 budget).

Spreading to adults, Aycock's education drive produced the South's first great college extension service at the University of North Carolina in Chapel Hill. Its regular faculty members roamed far and wide, by World War I came near their dream of using the whole State for a campus. Sample of their work: roadplanning "institutes" at Chapel Hill (1914–19) kicked off the South's first big, well-planned highway system; statewide high school debates focused on the need for good school libraries, got them going; extension service teachers organized part-time refresher courses for country doctors, inspired three medical schools (North Carolina University, Duke and Wake Forest); a community drama bureau set up three permanent historical dramas, e.g. "The Lost Colony," on Roanoke Island, which yearly lure thousands of tourists for a night's pageantry. The community music bureau whipped up such interest that the North Carolina Symphony annually barnstorms the whole State; the Institute of Government became the adviser to every level of government.

Less obvious but more pervasive was the university's effect upon the State's business community, dominated by Chapel Hill alumni. Under the watchful eye of a benign oligarchy (R. J. Reynolds Tobacco Co., Wachovia Bank & Trust Co., Duke Power Co., and the textile aristocracy), North Carolina has been developed with uncommon imagination. Business leaders have endowed well-paid professorial chairs, set up string-free foundations, protected professors back at the alma mater from the political censorship common to State-supported southern schools.

BUSINESS GOVERNOR

Chapel Hill beckoned early to Luther Hodges, born March 9, 1898, eighth among nine children of a poor tenant farmer who gave up and moved into the textile-mill town of Spray (1950 population: 5,500). Though Luther quit seventh grade to work in the mill (50 cents a day), he later saved $62.50, at 17 went off to work his way through Chapel Hill (class of 1919). After college, he resolved to go back home and make his mark in the mills, in 17 years worked his way up to production manager of Marshall Field & Co.'s textile empire.

The university had infected Hodges with an urge for public service. He took war leave to head the Office of Price Adiminstration's Textile Division, spent two postwar hitches (1948, 1950–51) supervising U.S. aid in Germany. In 1952, urged by a business friend, he surprised Tarheel politicians by jumping in, almost unknown, to win the Lieutenant Governor's race. He held office only 2 years before the Supreme Court handed down its desegregation decision, and soon after, incumbent Gov. William B. Umstead died of a heart attack. Suddenly the tenant farmer's son stood amidst the biggest crisis since Appomattox.

NO MASSIVE RESISTANCE

Working with legislative advisory commissions, new Governor Hodges sent to Chapel Hill for a bright young lawyer to spend full time on the complex school crisis. Result: clear understanding that the Court had not ordered immediate mass integration, as many a southerner feared, or left the States free to interpose their authority between the courts and specific schools, as Virginia's massive resisters began to preach. Hodges, himself a segregationist, pleaded with Negro leaders to maintain voluntary separatism of the races. But, never putting segregation before education, he pushed through laws (1955–56) which allowed local boards to accept Negro applicants, but gave local voters the ultimate escape-valve choice of locking their schools rather than accept court-ordered integration—a choice he was pretty sure they would not take.

Under these laws, without court pressure, three cities (Winston-Salem, Charlotte, Greensboro) integrated the Deep South's first 11 Negro pupils in the fall of 1957.

The integration crisis faced (though far from finished), Hodges could focus State effort on the grim economic problem brought on by the sharp cut in farm employment. Watching over the Nation's biggest farm population, Hodges knew that industrialization was an urgent necessity. But before he joined the platoon of southern Governors wooing Yankee companies, Businessman Hodges spent 3 years getting his State in shape.

BUSINESS OF GOVERNMENT

A new source of risk capital, Hodges knew, was needed to help Tarheels start new small enterprises of their own. He launched a privately financed Business Development Corporation, personally headed a campaign that sold $1 million worth of $10 shares (he bought $5,000 worth) for a kitty to back small business. Though Business Develop-

[1] Comparable 1938 figures from other States: Louisiana $197,242,387, Georgia $156,484,500, Virginia $152 million, South Carolina $122,625,000, Tennessee, 100 million, Florida $100 million (estimated), Alabama $49,101,500, Mississippi $38,688,000, Arkansas $25,400,000 (cut after Little Rock from $131,100,000 in 1956, $44,900,000 in 1957).

ment Corporation's fund represented only a small stick of capital, Hodges gave it leverage by signing up banks and loan associations to participate in Business Development Corporation risks. Run by a board of prominent citizens, Business Development Corporation took part in small loans totaling $5 million, created 8,000 new jobs, helped build a climate of confident risk-taking.

To get rid of a barrier to out-of-State corporations, Hodges took a long political risk in backing a bill to kill discriminatory corporate tax, lured in enough new plants to cut an anticipated $7 million loss to $2 million (Time, Oct. 20). Planning for industry's long-run research needs, he talked the business oligarchy into financing the nonprofit Research Triangle equidistant from the 900 scientists at Chapel Hill, Duke University and North Carolina State College. Hodges persuaded local capitalists to kick in $1,590,000 to buy the land, build and run the first labs for three years. While engineers last week rushed along the plans, three private companies had research staffs in Raleigh and Durham, waiting for Triangle space.

Equally vigorous at the regular business of the State, Hodges, tightened up cumbersome administrative machinery, started economy measures which in the current biennium, he estimates, will save about $13.5 million. One result: he sent this year's legislature a balanced budget, no proposals for new taxes. Although barred by law from succeeding himself, since he won his own term in 1956, Hodges refused to act like a lame duck. Out of 10 study commissions, he sent the legislature proposals for such basic reforms as abolition of the justices of the peace, a rewrite of the State's 1868 constitution, a zoning and planning law to cope with the onrush of urbanization.

DEVELOP THE BEST

Hodges' continued popularity stands as a remarkable phenomenon for a man who has made many hard decisions, a few of them bad, and stepped on many a political toe.[2] New enemies, finding hot-eyed support among the diehard segregationist minority, have begun to organize in the legislature against his programs.

But Luther Hodges, who will step down at the end of next year, can survey both his enemies and his State with considerable equanimity. When the future historians and educators put their heads together to find the South's most striking example of leadership during the segregation crisis, they will look long and hard before they surpass the business Governor. Hodges had the good sense to develop the best instead of the worst instincts of his State by turning its eyes toward the future rather than living under a spell of the past.

[2] One recent setback to the good-business climate: Henderson's Harriet-Henderson Cotton Mills tangled with the Textile Workers Union of America in a strife-ridden, five-month strike that Hodges tried to mediate, only to see the agreement blown apart last week by company intransigence and a new outburst of union-led riots.

Judicial Appointments in the Absence of the Senate

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. PROXMIRE. Mr. President, the discerning mind of Arthur Krock was on display in the New York Times this morning dissecting the issue of recess Supreme Court appointments discussed so competently Tuesday by the junior Senator from Michigan [Mr. HART].

Mr. Krock's comments are not only wise as always. They emphasize the constructive solutions to this difficult problem offered by Mr. BRICKFIELD and Mr. LOEB of the Library of Congress.

I ask unanimous consent, Mr. President, that this column be printed in the Appendix of the RECORD following these remarks.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

JUDICIAL APPOINTMENTS IN THE ABSENCE OF THE SENATE

(By Arthur Krock)

WASHINGTON, May 6.—In the Senate debate that preceded the vote which confirmed the President's recess appointment last fall of Potter Stewart to the Supreme Court, in whose decisions, however, he has been participating as an unconfirmed judge, this administration's practice of creating such a dubious situation was critically reviewed. The prevailing judgment was expressed as follows by Senator HART of Michigan:

"Interim appointments to the Court are most unfortunate and should be avoided except in the most extreme cases. Certainly the participation of such an appointee in Court work prior to Senate confirmation is unwise."

The unwisdom, of course, is implicit in the fact that the Senate may terminate a recess appointment by rejection, or simply by not acting on it before adjournment. As the event demonstrated, there was never any probability the Senate would reject Justice Stewart or the other two Members of the Court to whom the President gave recess appointments: Chief Justice Warren and Justice Brennan. But there is always a possibility of rejection by either the positive or negative method. And if an unconfirmed judge has been participating in the work of the Court, the mental shadow of this possibility could impair the sense of total emancipation from worry over the effects of his decisions in the political community that life tenure for judges was intended to bestow.

And if ultimately he was rejected, his part in controversial decisions, particularly when he had been one of the five that made the opinions binding, would revive the public and legal controversy such rulings evoke.

A 5-TO-4 RULING

This week there was such a decision by a majority that included Justice Stewart and would have been a minority without him. It was the 5-to-4 holding, by Justice Frankfurt for the Court, that health inspectors may enter a private home without a warrant to search for sanitation conditions (suspected in this instance of violating a Baltimore city ordinance). The central issue was the fourth amendment, which forbids "unreasonable searches and seizures" by Federal officials and has been established by the Court as applicable to State and local officials as well.

The deep nature of the controversy among the Justices was revealed in this comment by Justice Douglas, writing for himself and three others: "The decision * * * greatly dilutes the right of privacy which every homeowner had the right to believe was part of our American heritage." And this protest was strengthened by the facts that a search warrant was readily available to the health officer, and that the householder lives in a community where, like others in the United States, there are police records that would justify the fear of admitting strangers into private houses, even in daylight, the time this inspector demanded admittance.

PROPOSED SOLUTION

Justice Stewart's confirmation removed from this particular decision the liability of its having been made possible by a Member of the Court whose brief tenure, and by recess appointment, the Senate had constitutionally terminated. But this liability is always present in decisions by unconfirmed judges. And that properly was concerning Senator Hart and others in a debate on a level worthy of the issue.

Hart realized, he said, that abstention by an unconfirmed Supreme Court appointee "may cause difficulties when the Court is evenly divided on many crucial cases," on undermanned for a crushing workload. He conceded this as a comprehensible reason for the President's recess appointments in the three instances. But he argued for a sounder practice in which this consideration would be obviated. So far as the Supreme Court is concerned several excellent suggestions to this purpose have been made to Chairman Celler of the House Judiciary Committee by Cyril F. Brickfield of his staff and Louis Loeb of the Library of Congress.

Among these suggestions are: special Senate sessions; Senate rules revisions to provide for committee action during recess, committee disapproval being tantamount to rejection; and a subsequent time limit for Senate action if the committee has approved the recess appointment. Meanwhile, the recess appointee would be barred from participation in the work of the Court.

Pageant Magazine Describes Career of Senator Gale McGee

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. NEUBERGER. Mr. President, a very vivid and informative article about the duties and activities of a freshman Member of the U.S. Senate was published in the May 1959 issue of Pageant magazine. The subject of this profile, written by Mr. Al Toffler, is our popular and able new colleague from Wyoming, Senator GALE MCGEE. This article demonstrates not only the routine of a new Member of the Senate, but many of the difficulties involved in adjusting to the turmoil and hurly-burly of life here in Washington.

I ask unanimous consent that the Pageant article about the eminent junior Senator from Wyoming [Mr. MCGEE], entitled "A Freshman's Washington Merry-Go-Round," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FRESHMAN'S WASHINGTON MERRY-GO-ROUND

When the American voter cast his ballot last fall, he wrought a major change in the political fashion of the waning 1950's. The Democrats elected a bumper crop of 15 new U.S. Senators. But the national excitement was not confined to party labels. It concerned, even more, the formation of a "fresh" new Senate, young men whose promise lay ahead of them.

Among the Democratic "class of 1958," the average age is under 50—a striking 10 years younger than the average age in the Senate. Politically, many of these men are identified with Democratic liberalism. Moreover,

several are firmly fixed in the public eye as "eggheads"—educators, journalists and lawyers with a concern for "ideas."

What impact men like these will have on the upper Chamber of Congress still remains to be seen. In the meantime, each, like his Republican counterpart, is currently rounding out a period of dramatic individual adjustment to the fact of membership in the U.S. Senate. What follows is not so much the story of a freshman Democrat as it is the story of a new young Senator—GALE MCGEE, of Wyoming—and how he took his place in our highest legislative body.

At 5 a.m. last November 5, 43-year-old Prof. GALE MCGEE tossed sleeplessly in a Laramie, Wyo., hotel room. Hours before, he had fled his nearly home to escape the insane ringing of his telephone. After more than 20 years of teaching history, MCGEE was actually making it.

Shortly after 5, the hotel phone jangled MCGEE out of bed. From the office of the Wyoming Daily Eagle in Cheyenne, 50 miles away, he heard the tired voice of Joe Davis, his campaign manager: "You're in, GALE. Go to sleep."

At that moment Democrat MCGEE held a slim 14-vote lead over Republican Frank A. Barrett, incumbent U.S. Senator from Wyoming. As morning broke, the lead widened and MCGEE's victory was confirmed. Educator MCGEE became Freshman Senator MCGEE. He has been getting a hectic new education ever since.

For a new Senator, the weeks between election day and the opening of Congress are excitingly crammed with new faces, new demands, new challenges.

For MCGEE, in many ways typical of the other freshmen who trooped to Washington after last year's election, his introduction to office was a deluge of telegrams, phone calls and letters which poured into his Wyoming office.

"Within 24 hours," he recalls, "we received hundreds. The letters kept coming. It was the beginning of an avalanche."

The mail was a colorful mixture—from solid citizens and from crackpots, from people who had sound ideas as to legislation, and from individuals with personal problems they hoped the new Senator would solve for them. From lobbyists and from persons with pet ideas, hobby horses which they hoped to induce MCGEE to ride.

But the initial elation and shock of election to the Senate is quickly followed by pressing human problems. As with others newly elected to Congress all over the Nation, MCGEE had now to uproot his family from their home; find a new home in Washington; and settle into it before Congress opened in January. With MCGEE there was also the problem of shifting three of his children to new schools. (His fourth child is less than a year old.) In addition, the whole family budget had to be reorganized.

MCGEE, a trim 5 feet 11 inches, with a shock of brown hair, alert brown eyes, and a deep pool of nervous energy, had been a "full" professor of history at the University of Wyoming until last summer. "As 'full' as $7,300 a year makes you," he quips. Actually, he used to boost his salary to between $8,000 and $9,000 by teaching during the summers. But, because he took leave of absence to campaign, by the time election day rolled around it had been 5 months since the MCGEES had seen a paycheck.

Thus they were wholly unprepared for their first house-hunting experience in Washington about 2 weeks after election. They met a real estate agent at 10 a.m. For nearly 2 hours, she took them from one mansion to another. They ranged from $50,000 to $90,000 in price. Each one, she explained, had been vacated by a Republican.

"So I told the real estate agent," MCGEE recalls, "that (1) we are Democrats and (2) I had been a professor."

With the state of the MCGEE exchequer thus made plain, the rest was simple. The very next house turned out to be suitable. A seven-room Dutch colonial brick house with white trim and a big backyard for the four kids. It cost $27,250.

"I had to borrow the downpayment," MCGEE confesses. "It's probably the first time that a Senator came here so broke."

The MCGEES plunged further into "deficit spending" when they shelled out $1,176 to ship their furniture, $625 to transport the family.

The day after finding a house, MCGEE went to his office in room 262, Old Senate Building. He faced, again, a desk piled high with mail.

Once again the letters expressed both the interests and the idiosyncrasies of Americans. Some were addressed to "Nigger-lover, Commie-crat, Socialist-elect, pawn of the oil millionaires."

Many were "constituent requests." One mother wanted MCGEE to "remove" a master sergeant who was bothering her serviceman son. Another writer wanted MCGEE to get his uncle out of a mental institution. All were insistent.

He would return again to his mail—and again, and again. But today was to be a day of getting acquainted. Senator JOSEPH C. O'MAHONEY, his Wyoming colleague, arrived to take him on a tour of the Senate buildings. Their first stop was the office of Felton "Skeeter" Johnston. As Secretary of the Senate, "Skeeter" is the man who makes the Senate gears mesh. It was "Skeeter" who reluctantly gave MCGEE the bad news that he couldn't get an advance on his senatorial salary. His first paycheck would be handed to him on the last Friday in January.

Sence then, MCGEE has received a gross pay of $1,875 a month ($22,500 a year), minus a big tax bite, a 7½ percent deduction for civil service retirement, and a chunk for the group insurance available to Senators. MCGEE estimates he takes home around $15,000 a year. His monthly check is automatically deposited for him, at his request, in a Washington bank.

"Skeeter" explained to MCGEE the privileges that go with Senate membership. For example, a Senator pays no postage. His envelopes bear, in place of a stamp, a facsimile of his signature—known as a frank. He gets a special allowance for airmail and special-delivery postage; another for long-distance telephoning; and still another for rental of an office in his home State. He also gets 20 cents a mile for use of his car and partial expenses for two Wyoming trips each year.

The biggest allowance is a lump sum doled out to each Senator for staff. Exactly how much each Senator gets is a secret, but the amount is based on the size of the State the Senator serves. Within this limit, MCGEE may do as he wishes. He can pay low salaries and have a large staff or pay high salaries and have a small staff. A wealthy Senator may supplement his staff at his own expense. In other words, how a Senator allots his payroll is his own business.

There are other privileges of office. For instance, MCGEE gets free haircuts in the Senate barbershop. Three doctors are on duty 24 hours a day to look after the health of the Senators while they are on Capitol Hill. (MCGEE appreciates this service. He is diabetic.)

The title "Senator" is, in MCGEE's words, "a magic charm." At the stores where he and Loraine shop the information that he is a Senator cuts short the usual credit inquisition. The power of this magic was brought home to MCGEE on New Year's Eve, when the oil heater in his new house ran dry. "It was 10:30 at night. The house began to get cold. But by midnight we had oil. On New Year's Eve," he says, "that's magic."

Along with the privileges, however, go the responsibilities of a nerve-racking and physically tiring job. On the very day he was sworn into office MCGEE was needled in a nationally syndicated column. He saw himself called "a friend-forgetter and a chin puller-in." The columnist felt that MCGEE was already "in the pocket" of LYNDON JOHNSON, Senate majority leader—even prior to the first session.

Part of a Senator's job is being polite to newsmen, no matter what time of day or night they show up and no matter what they may have written the day before. At the beginning of a new Congress, reporters stalk the freshmen. Unless the new legislators are carefully available, however, they may find themselves having to stalk the newspapermen. So they make themselves ever-accessible. Even a 2-minute ride on the Senate subway is often combined with an on-the-run interview.

Similarly, there are social pressures. Some Senators thrive on the rubber chicken circuit. But even if, secretly, they detest the dinner-and-cocktail rounds, freshmen know, or are soon taught, that to refuse is often to offend. And men who depend on votes will do much to avoid giving offense. From the moment of election, MCGEE, a handsome energetic man with an expressive face and an easily provoked smile, has been besieged with invitations.

Where the freshman goes, his wife goes. From the day MCGEE began his campaign, Loraine has been part of his political life. In Washington this has called for an overhaul of her wardrobe. MCGEE reluctantly spent several Saturdays in Connecticut Avenue dress shops. For budget reasons, they stuck to necessities.

Another chore was shopping for a staff. A Senator needs loyalty in his aids as much as competence. MCGEE insisted that each of his staff be a resident of Wyoming, cleared for party loyalty by the Democratic Party in the State. Once the staff was assembled, MCGEE began setting up shop. His office was bare when he called his first staff meeting. Sitting on desk tops, the group listened as MCGEE outlined the work.

Like most Senators, MCGEE has an "AA" or administrative assistant, as well as a legislative expert, a research man, a press relations man, and clerical help. Including a lawyer and secretary in Laramie, MCGEE's staff totals 10.

The Senate, like a club, is a place where who you know counts. For the freshman, constantly reminded of his junior status by the workings of the seniority system, the friendship of an oldtimer is invaluable. MCGEE was lucky. Senator O'MAHONEY, with nearly a quarter century of service in the Senate, ushered him through the long ornate corridors, introduced him to other Members, took him, one quiet evening before Congress convened to the deserted floor of the Senate Chamber. There he showed MCGEE the seat that was to be his.

O'MAHONEY also took MCGEE to the presidential suite of the Mayflower Hotel where the freshman was introduced to a former Member of the Senate, Harry S. Truman. "If you're like the rest of us," Truman told MCGEE, "for the first 6 weeks you'll walk around asking yourself, 'How did I get here?' After that, you'll walk around asking yourself, 'How did the rest of them get here?'"

MCGEE also met with Senate Majority Leader LYNDON JOHNSON in JOHNSON's plush new office, where so many photos are snapped that the majority leader has had a rheostat installed so he can reach behind his desk and control the room lighting. JOHN-

SON is the man who calls the all-important shots on committee assignments. After first conferring with O'MAHONEY, MCGEE asked JOHNSON for a seat on the powerful Appropriations Committee. He got it.

Asked when he first really felt himself a part of the Senate, MCGEE tells of the night he was first called upon to preside over the chamber in the absence of Vice President NIXON. This is an onerous chore shared by the newer Senators. MCGEE was the first of the present freshman class to be tapped for the job by Jessop "Jay" McDonell, one of JOHNSON'S assistants.

MCGEE was supposed to sit from 4:30 p.m. until about 6. Instead, he found himself stuck in the chair throughout a 5½-hour filibuster by Senator WAYNE MORSE—"a sitter-buster," as MCGEE recalls.

That night, as he left the chamber at 10:30, he was met by a group of lobbyists in the marble hall near the elevators. "If you don't vote our way on such-and-such a bill," MCGEE was warned, "you'll be sorry. We have ways, you know * * *."

After that, MCGEE says, he knew he was really a Member of the U.S. Senate.

Results of Opinion Poll—21st District of of California

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. HIESTAND. Mr. Speaker, early this year I sent out my seventh annual questionnaire to the voters of the district I represent. Response this year was greater than ever before, indicating a healthy interest in national affairs. Along with the replies, I received several thousand letters from thoughtful citizens, expressing opinion or asking questions regarding legislation.

My colleagues will recognize the specific questions relating to specific bills or issues facing us at this session of Congress. Perhaps they will be interested in knowing how a representative cross-section of the 800,000 citizens of the 21st District of California feel about these issues:

	Percent yes	Percent no	Percent not sure
1. Shall we spend Federal money for municipal projects such as slum clearance, water supply, sewage disposal, etc.?	23	69	8
2. Should Congress spend Federal tax money to assist specific areas of the country suffering chronic unemployment?	36	50	14
3. Generally, do you favor Federal aid to education?	40	55	5
4. Should Congress continue farm price supports?	10	83	7
5. Shall we continue foreign economic aid?	47	38	15
6. Should foreign military aid be continued?	58	26	16
7. Is balancing the Federal budget important to you?	81	12	7
8. Should cooperatives be taxed the same as other businesses?	82	8	10
9. Should small business have more tax relief?	71	17	12
10. Should Red China be admitted to the U.N.?	14	76	10
11. Should we make an all-out effort to surpass the U.S.S.R. in the exploration of outer space, regardless of cost?	33	50	10
12. Do you favor stiff legislation requiring the secret ballot and control by the membership, in the internal affairs of unions?	95	3	2
13. Should labor unions have to comply with our antimonopoly laws?	90	6	4
14. Do you want Congress to revise the Taft-Hartley law so as to outlaw State right-to-work laws?	20	70	10

Senator Dodd's Principles

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. IRWIN. Mr. Speaker, I would like to call the attention of the Congress to an editorial which appeared in the Stamford, Conn., Advocate on Tuesday, April 28, concerning my esteemed colleague, Senator THOMAS DODD.

The opinions expressed in the editorial, I feel, should be placed before the entire Congress through introduction of it into the RECORD:

[From the Stamford Advocate, Tuesday, Apr. 28, 1959]

SENATOR DODD'S PRINCIPLES

It is difficult for a freshman Senator to stand out from his fellows. He does not have position of influence on important committees, and tradition expects him to be a follower rather than a leader. This makes it noteworthy that Connecticut's TOM DODD emerges in his first session as a man of principle.

At the very outset he shocked some of his followers by voting for support of Senate traditions. That this made radical change in the filibuster rules impossible meant nothing to Senator DODD. He stood for responsible leadership.

When the Berlin situation first became critical, Senator DODD showed his knowledge of Communist methods by standing solidly in back of the administration policy of firmness and nonappeasement. Again, when fringe Senator MORSE indulged in a slaphappy attack on Mrs. Luce, Senator DODD increased his standing by jumping to the lady's support. In all of these instances, Senator DODD could have taken an easy course, and remained quiet. As a freshman Senator, his silence could not have been criticized. Apparently something called principle made him speak up.

This same devotion to principle led him to stand up for the McClellan amendment to the Kennedy "milk toast" labor bill. Senator DODD was counted as one of those "in the union leadership pocket." Union contribution to his campaign fund was heavy, and indirect contributions reached large sums. It took courage to vote to give union members the same rights in union affairs that other citizens have guaranteed by the Constitution. It took even greater courage to propose that union leadership give written notice of union elections to the membership, and, finally, to offer a bill putting the burden of throwing a local union into an international trusteeship on the international union, instead of making the local prove it was competent. Labor barons control international elections by control of locals in trusteeship. Yet Senator DODD proposed these amendments to the labor bill.

His amendments, according to Senator DODD, were resisted by union barons "mad with power." He told labor leaders, "I am on your side, but you had better change your philosophy. This isn't a private empire or a private club."

It is a certainty that those who think America is a private empire on which to prey, will attempt to punish Senator DODD. In this direct proportion, Senator DODD deserves the confidence and respect of the people he represents.

Address by the Honorable Carmine G. De Sapio

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the text of an address by the Honorable Carmine G. De Sapio before the New Democratic Club in New York City on April 27, 1959:

TEXT OF ADDRESS BY CARMINE G. DE SAPIO AT THE NEW DEMOCRATIC CLUB, APRIL 27, 1959.

Since the last time I had the opportunity to visit with you here at the New Democratic Club, the political scene—in our city and throughout New York State—has undergone some striking transformations. Some of these changes—or perhaps I might more accurately refer to them as developments, rather than as changes—some of these developments have been politically healthy and invigorating. Others have been more symptomatic of a kind of uncertainty and disillusionment which both puzzles and disturbs the citizens of many of our communities. As always, in politics, the manner in which any individual is affected by change depends, to a very great extent, upon the place which he or she occupies in the range of political philosophy.

Here in New York City—with the exception of a few isolated localities which have been successfully gerrymandered by the Republican legislators in Albany—we have a very great tradition of political liberalism. This tradition has been forged by our own Democratic Party out of the materials of civic need, public awareness, and political action, over a period of many decades, with the assistance of an overwhelming majority of the citizenry—and in accordance with a concept of social and political justice which recognizes that meaningful progress can spring only from a cohesive and dynamic spirit of cooperation.

Ours—our party's—is a tradition—call it a way of political life, if you will—that has attracted and enthused the people of our city and that has brought them into the ranks of active political workers, in ever-increasing numbers. This is a manifestation of healthy political change. It is good for our

party. It is good for the people whom we represent. And it is good for the development of flexible, responsive government. And perhaps the greatest and most significant reason for this phenomenon—for this development which has greatly accelerated during the past decade—is that we consistently have sought to broaden both the base of our activities and the philosophy which provides the motivating force for everything that we do. For in thus providing a comfortable and effective spectrum for the reception and display of a wide range of political shadings, we have succeeded, too, in embracing and in nourishing a full and varied sense of political responsibility.

Unlike our opponents in the Republican Party, we Democrats have learned—and the lesson has been an extraordinarily valuable one—that it is possible for men and women, who sometimes hold widely differing views, to work together toward the same political goals. Indeed, sometimes—as we have seen—it may be more difficult to determine what those goals are than it is to provide the means for their achievement. For the language of politics frequently offers a number of stumbling blocks to complete understanding.

Take the word "reform," for example. To some people—and to Republicans in particular—reform obviously connotes merely the opposite of what we Democrats happen to be doing at the moment, or what we have done in the recent past. The illustration which leaps immediately to mind is that of Governor Rockefeller's so-called tax reform program. To the Republican Governor and to the Republican-controlled State legislature, tax reform obviously has meant finding some way to ease the burdens of the rich by shifting them onto the poor and those of moderate means. Yet, to many of the people who helped to elect Rockefeller last November—and that number includes both so-called independent voters and some who, for reasons best known to themselves and vociferously regretted in recent weeks, bolted the Democratic Party to give their support to the Republican candidate—to the people, tax reform signifies something very different indeed.

To some people within our own party, reform has another meaning with which most thoughtful students of politics also will take issue. To these people, reform means, simply, change, any change. Evidently, the theory behind this concept of reform is that no matter how constructively things are being run it's a good idea to break the pattern every so often, even though that may mean a disruption of the steady course of progress.

Today, many Americans—and, again, their ranks include both independents and some Democrats—who voted for Dwight Eisenhower, bitterly regret their past subscription to that interpretation of reform. There is a third concept of reform, one which is based upon the desirability of meaningful change, and which derives its validity from its potential acceleration of progress and improvement. This is the kind of reform which we, here in New York County, consistently have fought for, both within the structure of the county Democratic organization and in the wider arena of city and State government.

Reform—as we understand and practice it—does not require as a condition for its achievement the scrapping of the established order. It does not demand, for its effectiveness, the abolition of tradition as a necessary element of progress. Nor does it presuppose that reckless experimentation can be justified as an excuse for change. On the other hand, reform—the kind of reform in which we believe, which we have initiated and which we have achieved in the conduct of our partisan affairs—this kind of reform does not by any means preclude a careful inquiry into the facts of political life or a sincere and genuine effort to make our party a more efficient and effective instrument of the will of the people.

My friends, I submit to you—in rebuttal to the claims of those who seem to have espoused the cause of reform, whether good or bad, for its own sake—that the New York County Democratic organization is wedded to a policy of reform which has made ours the most widely representative unit of its kind in New York City, in New York State, and, perhaps, in our entire Nation.

During the past decade—and in the course of our efforts to effect constructive change—we concluded that the numerical size of our county committee made it too heavy and too inflexible a unit. Accordingly, and not without difficulty, we instituted an important reform. We provided for the reduction of the size of the county committee, and we have thereby made it more reflective of and more responsive to the wishes of the enrolled Democrats of our county.

We realized—as many politicians still refuse to do—that the political rights of women lagged far behind their advancement in the social and economic areas of contemporary society. And, in conformity with this realization, we instituted another important reform. We provided equal representation for women within the structure of our party organization and we therefore have broadened the base of participation in the determination of party policy.

Even though, at the time, it seemed to many old-fashioned politicians that we were inviting internal strife and dissension, we—in the New York County Democratic organization—reached the inescapable conclusion that the people whom we were privileged to represent should have the right to choose their district leaders by direct election. And amid loud cries of anguish from some quarters, we instituted that reform which has proved to be a vitalizing and democratizing element in the selection of responsible policymakers.

Because we became aware of a significant degree of popular opposition to certain undemocratic features of our election laws, we pioneered still another unique political innovation when we worked to simplify the procedures to enable independent candidates to be placed on the ballot.

At a time when it had by no means become fashionable to do so, we encouraged wider participation in our party affairs by the various racial and nationality groups which contributed to the support and advancement of our political ideals. And we have proven by deeds—rather than by mere words—that the need for effective minority representation in our partisan councils and in Government is a problem which we are prepared and able to solve.

Beyond the sphere of purely partisan affairs, our organization has campaigned for—and won—many important political reforms.

In the past, the full force of our organizational strength was marshalled behind the drive to establish a system of permanent personal registration in New York. This year, for the first time, voting machines will be used in the local primary elections. Here again, our political organization was a major factor in documenting the desirability of constructive change.

Today, we are organizing a campaign designed to give the vote to 18-year-olds. We will fight for this innovation until we have secured it, not because it may prove to give us a valuable political advantage, but because we believe that these young people are—and ought to be recognized—as responsible citizens of our communities.

We are a party of reform and progress. And our organization is composed of men and women who believe that it is their duty, through active participation in the affairs of our organization, to work for the continued liberalization of politics.

We may disagree on matters of organizational structure. We may dispute among ourselves on matters of internal procedure and policy. We may sometimes quarrel over individual points of reference in the interpretation of political philosophy. But far more important than any disagreements which temporarily may impair or impede our progress is the common allegiance to our Democratic Party which all of us share.

All of us realize, too, I believe, that perhaps the saddest of all political phenomena today is the unaffiliated or—to use a term which seems somehow to be interpreted more kindly—the independent voter.

Who is the independent voter? In some political and intellectual circles, he has been glorified as the pivotal citizen upon whom politicians and office-seekers must ultimately depend for support. He has been described as the political conscience of America. He has been praised for his refusal to adhere to any set pattern of standards and principles.

Now these are all very complimentary things to say about anyone. And I say to you, my friends, that it would be very wonderful, very inspiring and very gratifying indeed, if these compliments—such as they are—gave an accurate picture of the so-called independent voter. Unfortunately, they do not.

To be sure, there are some eligible voters in every community who adopt a spirit of political independence from the highest possible motives and who, from their searching personal inquiry into the issues and problems of the day, base their own opinions and acts of citizenship on validly gained conclusions.

But a great many people who have accepted the standard definition of the independent voter as descriptive of their own political habits and behavior * * * have done so from a posture of political apathy and from a sluggish spirit of indolent citizenship.

And these—in many instances—not the alert or informed minority, are the so-called independents who decide elections on the basis of personalities and promises, rather than on the basis of experience and performance.

Certainly, no independent voter who deserves the accolades which have been so prodigally bestowed by incautious commentators cast his ballot for the head of the national administration in Washington in 1956. Assuredly, no voter who was motivated by the results of a vigorous and searching study of the most recent gubernatorial campaign in this State went to his polling place last November 4 and cast his vote for the present Governor of New York. Yet, we are told by the analysts, it was the independent voter who elected both Dwight Eisenhower and Nelson Rockefeller. Clearly, then, there is some great disparity between the public image of the independent voter and the real thing.

Let me ask the question again. Who is the independent voter? By and large, he is the man—or the woman—who actively rejects the responsibilities of citizenship, of political duty, and of participating in the strengthening of two-party politics as we know and revere it in America today. These are the people who actively contribute to their own partial disenfranchisement through their conscious failure to belong to—or to work for—a political party. These are the people who, quite candidly, have little or no voice in the selection of candidates for public office, because they make no effort to do so. These are the people who exercise little or no influence in the control of partisan affairs, because they cannot be bothered to make the necessary effort. And

these are also the people who—almost invariably—make the loudest outcries against all of their fellow citizens who engage actively in politics for the simple reason that it requires little or no effort, time or energy to engage in destructive criticism. These are the people who evidently expect politics to run itself without benefit of politicians and, certainly, without any help from themselves.

These are the people who, unwittingly and yet without hesitation, do themselves and our entire system of popular democracy an enormous and very dangerous disservice by refusing to accept the fundamental structure of our traditional and—yes—our very great political system. These, my friends, are the people who constitute the greatest single threat to the maintenance, the improvement, and perhaps the very survival of two-party politics in New York and wherever else in America they may be permitted or encouraged to flourish.

Just a step behind them are their near-colleagues, the people who, when registering as voters, capriciously indicate a partisan affiliation on the enrollment blank, without giving any thought to the significance of their haphazard choices and, certainly, without the slightest intention of giving force or direction to them by assuming an active role in party affairs.

But we do not have the right to take the independent voters entirely to task. For we in politics are not blameless. We confuse them. We befuddle them. We create doubts and fears in their minds which lead them to shun and avoid politics as they would a plague. And in so doing we do an irreparable disservice to our system of government and to our American heritage.

What is the independent voter to think when one party characterizes its political structure as an organization and alludes to the other party as a machine?

What is the independent voter to think when one party boasts of its statesmanlike leaders but characterizes its counterpart opponents as nefarious bosses?

What is the independent voter to think when the income and contributions of one party are for the legitimate purpose of defraying campaign expenses while the opposition invariably collects graft?

What is the independent voter to think when one party calls its workers volunteers and calls its opponent's supporters ward heelers and hacks?

My good friends, these semantics, this name-calling, this callous disregard for propriety, for decency, for ethics, and, yes, for political morality is undermining our political structure and when practiced within our own party gives more aid, more comfort, and more help to the cause of republicanism than anything else we can do.

Ours is a profound challenge. It is simply this. Let us get back to fighting republicanism and the vicious system of special privilege which it represents.

Let us build our party so that we can continue to achieve better housing, better education, better security, and better understanding for the people of our community.

I think it was Disraeli who said it is far easier to be critical than to be correct. But remember, if you will, that the Democratic Party—particularly in our county—is made up of men and women from the Lower East Side, from Harlem, from Washington Heights, from Greenwich Village, from Park Avenue, and from Yorkville—in short, from all walks of life. And unless our party represents all of these people and works for all of these people and has as its leaders those who stem from, those who were born of, and those who understand with their hearts as well as with their intellects the dreams, prayers, and the aspirations of all of these people—unless our party is this—it has no reason for being.

There are no supermen in the Democratic Party. There are no bosses in the Democratic Party whether elected or self-proclaimed. We are an organization of men and women who believe that our strength and our success can derive only from the people and that our leadership is forfeit the moment we fail honorably to represent the people.

There is no one in this room who would challenge the political integrity, the social conscience or the liberal dedication of Senator Herbert Lehman, of Mrs. Eleanor Roosevelt, and of Secretary Finletter. Neither they nor I are an issue in this discussion. For no person is above the party and no individual, no matter how he may otherwise fancy himself, is indispensable to our party. The only issue is: Shall we continue to grow and progress and build our party for the realization of a better city, a better State, and a better Nation through the heritage, the philosophy, and the program of the Democratic Party or shall we bicker among ourselves as to who should have the distinction of being vilified by our opponents with the characterization: Boss.

I say to you that this—and only this—is the problem.

And unless we do something about it, unless we accept the responsibility, the obligation—the duty—to work together toward the goal of instilling in our fellow citizens a sense of partisan spirit and participation that will enable them to be—in the fullest and most meaningful sense—our fellow Democrats, unless we do this, then let us not be surprised when, within our own life spans, we witness the collapse of politics as we know it in America.

This is the great challenge which confronts us—as Democrats, as politicians, and as Americans.

Instead of bickering among ourselves, let us concentrate all of our efforts upon the much more valid and much more important job of explaining our beliefs to the people—so that they may fully understand our position on all of the great issues of the day—so that they may be attracted into our ranks, and thus eliminate the elements of uncertainty and impulse which the unaffiliated voters necessarily inject into politics and government.

Let us subscribe to change where change is desirable, where it provides the opportunity for improvement, and let us seek to banish chance from politics.

Let us work in the days ahead to enroll every eligible liberal-thinking citizen of New York in our organization, for, in so doing, we will inevitably achieve greater unity, greater strength, better politics, and better government.

Dear Mr. Congressman

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. GLENN. Mr. Speaker, I have a very fine and widely read weekly newspaper in my district, the Pleasantville Press. Its editor, John A. Hinman, is a man who is not only dedicated to living up to the high standards of journalism, but is also active in all community projects and, when deserved, he can be a severe critic as well as a giver of just praise to us in Government service. This is borne out by a recent editorial which was published in his newspaper. Under unanimous consent, I include the editorial in the Appendix of the RECORD:

DEAR MR. CONGRESSMAN

Do you know your Congressman?

Have you written him lately?

Indications are that more and more people in this Nation are writing their Congressmen. Why? Some are more than concerned as to inflation and its damage to the family's income or the senior citizen's pension. Many are urging a balanced budget—holding the line on expenditures.

Others, while for the honest laboring man, are writing that stronger legislation is needed to end the rackets in labor brought on by a few of the top brass.

If you don't know the names of your two U.S. Senators and your Congressman—you should. Your U.S. Senators are CLIFFORD P. CASE and HARRISON A. WILLIAMS. They may be addressed at the Senate Office Building, Washington, D.C. This district's Congressman is MILTON W. GLENN. Write him care of House Office Building, Washington, D.C.

If you disagree, write them. If they do something you like, laud them. But write them—that's how they can know what's in the minds of those back home. And that's what counts.

South Dakota National Guard Has Proud Record

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McGOVERN. Mr. Speaker, Sunday, May 3, in an impressive parade and ceremony, the National Guard Association of the United States dedicated its new headquarters building in Washington, D.C. Giving the dedicatory address was a former National Guardsman and former President of the United States, Harry S. Truman.

With a consecutive history that dates back to the North Regiment of Massachusetts in 1636, America's citizen-soldiers have taken part in every war in which the Nation has been involved. In the words of the National Guardsman this new building "is a symbol of a will, a determination, and a pride born of accomplishment and performance, and of a spirit that will carry the National Guard from the minuteman's musket to the modern man's missiles."

We in South Dakota are proud of our guardsmen. Their is a proud history that dates back before statehood to Territorial days and the Indian wars. Units from the South Dakota Guard were the first troops into both the European and Asiatic theaters of war following the outbreak of World War II and distinguished themselves in battle action in both theaters. The South Dakota National Guard was one of the few called to active duty during the Korean conflict.

Sunday the battalion colors and battle streamers of the South Dakota Guard were carried by a chosen delegation of guardsmen representing their many comrades both living and dead who

volunteered their services in peace and war to serve our Nation.

Under unanimous consent I include in the RECORD the names of those men and their units.

Brig. Gen. Homer Jensen, adjutant general of South Dakota; Maj. John J. Steele, assistant adjutant general; Capt. Donald Holliday, 109th Engineer Battalion, Rapid City, S. Dak.; Capt. Douglas Wilson, 175th Fighter Squadron, Sioux Falls, S. Dak.; WO Richard V. Walker, State Headquarters and Headquarters Detachment, Rapid City, S. Dak.; M. Sgt. Malcolm D. Calhoun, Company A, 109th Engineer Battalion, Lead, S. Dak.; M. Sgt. Richard L. Christy, Headquarters Company, 109th Engineer Group, Rapid City, S. Dak.; M. Sgt. John C. Fleishacker, Headquarters Battery, 147th F.A. Group, Pierre, S. Dak.; M. Sgt. Kervyn I. Hagen, Battery A, 643rd F.A. Battalion, Sisseton, S. Dak.; M. Sgt. Wallace F. Hale, H&S Company, 109th Engineer Battalion, Sturgis, S. Dak.; M. Sgt. Harold E. Halsey, Company B, 137th Engineer Battalion, Springfield, S. Dak.; M. Sgt. W. W. Holgate, 114th Camron, Sioux Falls, S. Dak.; M. Sgt. Frank M. Hill, State Headquarters and Headquarters Detachment, Rapid City, S. Dak.; M. Sgt. Lyle Kenyon, 114th Camron, Sioux Falls, S. Dak.; M. Sgt. Verlyn B. Kickland, 200th Engineer Company, Chamberlain, S. Dak.; M. Sgt. Donald E. Loudner, 665th Ordnance Company, Mitchell, S. Dak.; M. Sgt. Clarence G. Lindahl, 740th Transportation Company, Milbank, S. Dak.; M. Sgt. Virgil G. Martin, Headquarters Battery, 128th AAA Battalion, Rapid City, S. Dak.; M. Sgt. Stanley M. Peterson, Headquarters Battery, 147th F.A. Battalion, Sioux Falls, S. Dak.; M. Sgt. William Walker, 147th Field Artillery Group, Pierre, S. Dak.; M. Sgt. George A. White, Headquarters Battery, 642d F.A. Battalion, Redfield, S. Dak.; SFC James H. Cooley, Company B, 109th Engineer Battalion, Hot Springs, S. Dak.; SFC Darwin E. Roti, Company A, 153d Engineer Battalion, Woonsocket, S. Dak.; SFC Wayne R. Uptagrafft, Headquarters Battery, 260th F.A. Battalion, Mitchell, S. Dak.; Sgt. John F. Doyle, H&S Company, 211th Engineer Battalion, Lemmon, S. Dak.; Sgt. Edward A. Herrick, Company B, 154th Engineer Battalion, Brookings, S. Dak.; A2C Jerry Kettwig, 114th Camron, Sioux Falls, S. Dak.

Sensible Proposal on Foreign Operations

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I include an editorial of timely and provocative interest.

Appearing in the Wall Street Journal of April 29, this article is recommended for those who are concerned over the scope and effectiveness of the U.S. foreign aid program:

One thing that makes U.S. foreign aid such a difficult issue to debate is that almost anything you say about it is true.

The U.S. aid program has done sensible things, and it has done foolish things. It has spent money efficiently, and it has spent wastefully. Among its administrators are men energetic and levelheaded, and men who are boondoggiers and dunderheads. It has been a boon to foreign countries, and it has been a bane to them. It has made us friends abroad, and it has lost them. It has thus advanced the interests of the United States, and it has done those interests injury.

We have lately had a close look at U.S. foreign aid ourselves, in places as varied as the advanced nations of Europe and the so-called backward nations of southeast Asia, and it would not be difficult to marshal evidence for any of these views.

This explains, we think, why it has been possible for reasonable men to argue that our present gigantic aid program must be preserved intact. Or to argue that all foreign aid is sheer nonsense better abandoned altogether.

Yet it seems to us that the truth is neither the one nor the other. And it also seems to us that the task of finding it begins with the separation of the general question of whether there is a point in any foreign aid and the question whether the U.S. foreign aid program as presently conceived and executed is a sensible one.

Foreign aid is not necessarily condemned by condemning the present program. Nor, conversely, is the present program—$5 billion a year in some 70 countries—justified simply by justifying some uses for foreign aid.

For what they may contribute to the present debate, we will set down our own views. They are:

First, that there are circumstances today in which realism suggests that the United States can use foreign aid, economic or military, to promote its own best interests.

Second, that the present foreign aid program has lost touch with those realities and should be abandoned.

And third, that to find a foreign aid program manageable in size and reasonable in concept it will first be necessary to abolish the International Cooperation Administration, in fact as well as in name.

Foreign aid is one of the oldest, and at times one of the most useful, instruments of foreign policy.

Its origins probably reach further back into history than history records, but it was certainly used extensively by the Romans in their day, by the British, French, and other European powers, by the Russians in the days of the czars and the Chinese in the days of the emperors. In every case the purpose and the objective has been straightforward: One country, by giving aid to another country, hoped to create or to preserve a state of affairs favorable to itself and saw some reasonable prospect that the aid would accomplish its purpose.

Today there are places in the world where this practical principle may apply to the United States. At least it is plain that without U.S. aid, military and economic, there would now be no such country as the Republic of Korea.

The critic of all foreign aid can argue whether the price paid was worth the gain. He would be hard put to argue that the aid in these cases did not have clear objectives against a measurable danger and a reasonable prospect of accomplishment—that is, that the aid could be disciplined by practical judgments.

It was on this principle that our foreign aid program was started and that, at the time of Greece and Turkey, it was supported by this newspaper.

But today our foreign aid program is something else again. From the premise that some foreign aid can be useful our Government has jumped to the conclusion that almost all foreign aid is justifiable. Foreign aid has ceased to be a precision tool of foreign policy and has become instead a program of uplift in all parts of the world. It is in this change that it has become unhinged from reason.

We no longer limit ourselves to giving some help, say, to Thailand that will strengthen its Government or its people in resisting the military and diplomatic threats of Red China. Even in extending self-interest to generosity we are not content with some modest aid that might attain some modest improvement in the Thai economy. We undertake to reshape the whole country, its agriculture, its industry, its public works, its schools, and even its customs and way of living.

In short, we no longer discipline ourselves in giving aid by hard, practical judgments on the point of danger, or on what we hope to accomplish or whether there is a reasonable prospect of accomplishing it. This gives our foreign aid program unattainable objectives, limitless costs, and accounts for practically all of its troubles.

Those troubles—the foolish spending, the waste, the graft, the irritation of the recipients with their benefactors—hardly need to be chronicled here. The point is that these are symptoms, not the real malady. The fundamental difficulty is in the concept of the foreign aid program, which makes all these things inevitable and buries what good there might be in foreign aid under an avalanche of errors.

The way back, it seems to us, must begin with a new sense of proportion on foreign aid, both as to the times and places where we will give aid and the manner in which we will give it.

This means abandoning the idea that the U.S. Treasury is a cornucopia for any country just because it is undeveloped, or backward or in financial troubles or "could use" some U.S. dollars. There's hardly any country in the non-Communist world that wouldn't fit such a loose standard; hardly any, in fact, that doesn't fit it now, and it is patently ridiculous for the United States to undertake to support some 70 countries.

It means, even when we do decide to aid some country, that we use some precision in what kind of aid we give for what purposes. Military aid to Korea, with a Red army across the border, is one thing; military aid to a South American country is something else again.

It means an insistence that the country can profitably use such aid as we do give and that it is willing to do its part.

And this means in practically every case that we turn from grants to loans, from the sweeping general program to consideration of specific projects, from sending hordes of American planners to sending a few technical advisers to help a country carry out its own plans in its own way, if we decide the plans are worth our helping at all.

We do not suppose that these will be easy decisions to make; in fact, the decisions will be harder than under the type of program we now have where many decisions are avoided by embracing nearly every kind of foreign aid almost any place.

But we are convinced that a program approached in this way will cost a fraction of what it now costs the U.S. taxpayer, that it will gain us flexibility in our foreign policy, and that in this fashion we may have a foreign aid program that works to our own best interest instead of being, as it now too often is in too many places, a monstrous liability.

We are also now convinced that this is an impractical hope unless we first abolish the ICA.

This seems to us a prerequisite for two reasons. First, what is needed here is a completely new beginning which would replace the whole concept on which ICA is based. Secondly, under the concept of foreign aid we are now discussing an organization like ICA would be unnecessary.

Once we turn from grants to loans, from U.S. planned projects to indigenous projects, from limitless to limited objectives, there will no longer be a need for a vast bureaucracy with swarms of overseas missions to

replan the economy of these foreign countries.

And once we restore foreign aid to its role as an instrument of foreign policy, rather than as a program for "uplift," there is not even need for a vast administrative machinery in Washington. The direction of it, and the primary policy decisions, could be made where other foreign policy is directed, in the State Department, with such military aid as may be necessary still handled by the Defense Department.

We recognize that even with this approach there will be some multiplication of offices. But it will help to correct what we are now persuaded was the fundamental error, the creation of a special organization to dispense foreign aid.

This is, indeed, the nub of the matter. An organization whose sole function is to give foreign aid is bound to proliferate plans and programs for spending because it has no other way to justify its existence. This is what has happened. A mission is sent to country X to "see what we can do for them" and by that process of bureaucratic cellular growth there sprout divisions to help on education, on roads, on public health, or whatever. These need other divisions for housekeeping and soon the whole needs an office manager, a manager to manage the car pool and the secretary pool, a manager to manage personnel living facilities and so on ad infinitum.

And it is simply not realistic to ask the education division, for example, to re-think itself out of existence. Or the mission as a whole to replan its program around a concept that will in effect liquidate its reason for being.

Ours is, perhaps, a drastic proposal. But we think too much of the debate on foreign aid has been on an all-or-nothing basis. The public is being asked to endorse all of what we are doing now, in exactly the way we are now doing it, or to abolish foreign aid altogether. Faced with that choice, it is very difficult to make any kind of reasonable case for continuing the foreign aid program at all.

Yet what we really need is a reappraisal of what foreign aid can do to serve our best interests—and what it cannot do—as an instrument of foreign policy. And we are not likely to succeed in that until we are willing to scrap the present setup and make a fresh beginning.

B'nai B'rith Salute

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. KOWALSKI. Mr. Speaker, I call attention of the House to the fact that perhaps the greatest airborne convention in history will take place later this month when more than 1,300 persons will travel by air to Jerusalem to attend the triennial convention of B'nai B'rith. More than 1,000 of these delegates and participants will fly from the United States.

I am proud of the fact that 14 constituents of mine, representing the B'nai B'rith organizations of Connecticut, will take part in this historic expedition. In this group will be Commissioner Sol Bernstein and Morris Winikoff, of Waterbury; Herbert D. Setlow and Benjamin Lavietes, of New Haven; Mr. and Mrs. Samuel Kellin, of Hartford; Mr. and Mrs. Irving Rubinstein, Jack R. Nowitz, and Mr. and Mrs. Philip Kaplan, of Bridgeport; Sol Robinson and Ted C. Gorman, of Danbury; and Miss Fannie Resnick, of Durham.

All of us who are familiar with the great work which B'nai B'rith has done to combat intolerance will join in wishing this great organization a most successful convention. And we wish it well in its continuing campaign to quench the fires of bigotry, discrimination, and racial hatred whenever they blaze. We are proud of this 116-year-old organization, the oldest and largest of the Jewish service organizations.

Why the Kremlin Will Not Disarm

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 7, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed into the Appendix of the RECORD the text of a very interesting article on disarmament by Mr. CHESTER BOWLES, Representative from Connecticut, former Governor of that great State, and former Ambassador to India from the United States. The article appeared in the magazine section of the New York Times of April 19, 1959.

Mr. BOWLES discusses the reasons why it would be in the interest of the Soviet Union to enter into disarmament agreements with the United States and other nations. He also suggests the factors which, nevertheless, make it difficult for the Kremlin leaders to take precisely those steps which it is in their interest to take.

In view of the timeliness and the importance of the disarmament question, this analysis of "Why the Kremlin Will Not Disarm," should be of value to every Member of Congress, the administration, and the public as well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY THE KREMLIN WILL NOT DISARM
(By CHESTER BOWLES)

WASHINGTON.—Negotiations on suspension of nuclear-bomb tests have been resumed at Geneva. Within a month, the Foreign Ministers Conference will convene in the same city. Presumably, it will be followed by a summit meeting.

All three conferences will be watched intently for any sign of a possible break in the nearly 15-year deadlock on disarmament. Discouraged and facing an apparent impasse, the world wonders whether anything effective can still be done to escape from the vicious circle of the arms race.

Clearly, an agreement on a test suspension alone would not reduce armaments. It could, however, be an invaluable precedent for further advances if agreement were reached on a control system. Yet the Soviet Union has insisted on a veto power over every operating phase of the complex control system needed to supervise a nuclear test ban. The Kremlin knows that no American Government could agree to such a veto. On its face, then, the Soviet position suggests that the Russian leaders do not want a workable agreement.

Why do they not press for a sweeping disarmament program? There are two potent reasons why they should do so: First, the Soviet Union could divert military expenditures to consumer production with immediate advantage at home and abroad. Second, according to Kremlin dogma, the capitalist West is largely dependent on its armament industries for continued prosperity.

As for the first reason, something like 22 percent of the Soviet Union's productive energies is now allocated to the military. With a gross national product of about $190 billion, this is equivalent to some $40 billion annually. A general disarmament agreement would enable the Kremlin planners to divert most of this vast sum to other activities that would enormously strengthen the Soviet position.

Inside the Soviet Union, massive attacks could be launched on the grave housing shortage. Within 10 or 15 years, urban and rural slums could be wiped out in much of the country.

The production of Soviet automobiles and other consumer goods could be expanded rapidly. Showplaces could be created to awe and impress foreign visitors with the accomplishments of communism.

Simultaneously, the Kremlin could launch a heavily subsidized export offensive to undercut the trading position of the capitalist powers in the underdeveloped continents and, indeed, in Europe itself. Typewriters, automobiles, trucks, and other equipment could be priced to undersell American, British, French, and German goods by 30, 40, or 50 percent. Communism, Mr. Khrushchev never ceases to tell us, would surely win any headon test in peaceful competition.

As for the second reason for Russia to press for disarmament, the Communists assert that as American armament industries closed down, unemployment would rise, and purchasing power would dry up. Rapidly spreading depression would lead to bankruptcies, privation and bitter political differences which would hasten the collapse of capitalism and the coming of the Communist triumph.

Although this Marxist analysis greatly overstates our problem, even the most confirmed of us capitalists must agree that a major reduction in armament spending would create substantial difficulties for American industry.

True, if Congress cut taxes drastically, billions of dollars could be diverted from Government armament purchases to the bank accounts of consumers and businessmen, most of whom would spend their windfalls on immediate family purchases or for job-creating expansion.

Substantial sums could also be appropriated to meet the needs of the neglected areas of domestic national interest—housing, roads, urban renewal, hospitals, schools, and many others. In addition, we could sharply expand our now inadequate economic aid programs to Asia, Africa, and Latin America and thereby lay the basis for an expanding export trade.

Yet the current political atmosphere in the United States makes it questionable whether these decisive steps would, in fact, be taken with the necessary swiftness. And even if they were, many months of difficult adjustment would have to pass before their effects were felt. In the meantime, our

Soviet competitors—with the speed available only to a totalitarian system—would be opening up new markets, pushing us out of old ones and impressing millions of visitors from all over the world with the physical accomplishments of communism.

On both these counts the Soviet Union appears to have every reason to work for a broad disarmament pact. The Russian leaders have issued broadsides, waved banners and released peace doves. Yet, on the negotiating level, they have failed consistently to come up with positive, workable proposals. Why?

The first answer is given by a group, consisting largely of professional military men (but by no means representing a cross-section of military opinion), that takes a narrow and cataclysmic view. Their argument holds that the Soviet refusal to come to grips with the disarmament issue is proof that the single, unalterable objective of the Soviet Union is to dominate the world by force.

Lenin, they remind us, put it coldly and clearly: "The prolonged existence of the Soviet Republic side by side with imperialist states is unthinkable. One or the other must triumph in the end. And before that end supervenes, a series of frightful collisions between the Soviet Republic and the bourgeois states is inevitable."

Once the Kremlin decides that it has a decisive advantage it will order an attack. Negotiations, in the meantime, are designed solely to soften us for the kill.

At the other extreme lies a group that gives a second answer. Idealistic to the point of being utopian, these people expect the best from all mankind, even from those who set Soviet policy. Sensitive to our genuine shortcomings, they find the answer to the disarmament impasse in the defects of American policy. The Kremlin has not accepted disarmament, they hold, because we have not tried hard enough.

I suspect, however, that the real explanation is far more complicated. The forces at work on disarmament policy within the Soviet Union are necessarily matters of guesswork, but war and peace may ultimately hang on the outcome of these guesses. I am convinced that an explanation of present Soviet behavior must also include these factors:

1. A genuine fear among the Soviet leaders of the very forces which they themselves have brought into being—a resurgent, armed Germany; NATO, and the worldwide American nuclear base system.

2. Their 650 million dynamic, land-hungry Chinese neighbors who seem likely sooner or later to bid for leadership of the Communist movement.

3. The extent to which the Soviet leaders themselves are victims of the Russian tradition of secrecy, and the relative advantages secrecy genuinely gives them in an armaments race with our more open society.

4. Policy hesitations and conflicting pressures—differences, for instances, within the Communist Party and between it and the armed forces—which may limit the Kremlin's freedom of action as similar differences limit our Government's.

Finally, I would add my personal guess that one of the primary factors that may be causing the Kremlin second thoughts about disarmament can be summed up in the one word "Hungary." Following the relaxation in tensions after the Big Four meeting in Geneva in 1955, a sense of possibility spread throughout the Communist empire, erupting in the upheaval in Poland and the revolt in Hungary.

As the Kremlin saw the raw temper of the suppressed people in Eastern Europe so furiously expressed, it must have been profoundly shaken by the possibility that in a more relaxed and disarming world its empire would disintegrate.

For the Soviet leaders, therefore, any genuine moderation of the cold war must be a terrifying thing, something that any totalitarian state would approach with supreme hesitation, for it would mean the abandonment of the unifying fears that have helped to hold the Soviet Union together, and the opening of the secret state.

Under the circumstances, what ought we to do? The answer is difficult. Since our estimates of Soviet intentions can be based only on guesswork, we must be prepared for any eventuality. To accomplish this, it seems to me, our policy must be threefold:

1. We must prepare for the worst—that Russia is determined not only to dominate the world but to do it by force.

As long as the Soviet Union refuses to negotiate a meaningful disarmament agreement, authoritative studies like the Gaither Committee and Rockefeller Brothers reports provide a persuasive case for an immediate strengthening of the American military position. They particularly emphasize the need for expanded ground forces, capable of fighting localized wars in any part of the world, with air transport that could bring troops swiftly into action.

In addition, Senator STUART SYMINGTON and others have convincingly underscored the need for a sharp acceleration in the development and production of missiles, in the light of dramatic new Soviet accomplishments in this field.

There are two reasons why the administration and Congress should consider these proposals. On the one hand, we are helpless to do otherwise. Those observers who assert that Soviet reluctance seriously to consider disarmament is proof that the Kremlin plans a war at a time and place of its own choosing may, in fact, be correct. In the absence of better evidence to the contrary, we cannot afford to take chances.

On the other hand, if Soviet reluctance to disarm is based on a wider variety of factors, there is an outside chance that our decision to match the Kremlin missile for missile might help to persuade the Russian leaders that the race has become too expensive and too dangerous, and that a major relaxation of the arms competition would be in their interest.

2. At the same time, we must call the Russians' bluff by demonstrating convincingly to the world that a step-up in our military programing is no more than a logical response to an impasse created by the Kremlin—that we are willing and anxious to negotiate large-scale disarmament.

This suggests the need for an immediate and searching reexamination of the uncertainties in our position. It is common knowledge that there are deep divisions within the administration on what we should do. Although the State Department recently has appeared anxious for genuine negotiations, the Pentagon and the Atomic Energy Commission have been allowed to snipe at this policy in public and to undercut it behind the scenes.

The White House could do much to persuade skeptics of our sincerity, both at home and abroad, by affirming its own vigorous support of our official position at Geneva, and by cracking down on those members of its administration who oppose it.

The Geneva negotiations, moreover, relate to only one small aspect of the arms race. Where would we be if the Soviet Union should suddenly follow the logic of taking an affirmative interest in arms control, and confront us with workable proposals to accomplish what we have said we wanted all along—that is, broad-scale disarmament affecting all weapons and strictly limiting military manpower?

If our Government has a clear, dependable, negotiable policy in regard to such disarmament, no one knows what it is. The fact that the Soviet Union is unlikely to present such proposals does not excuse our own failure to think through the admittedly difficult requirements and to develop a realistic, balanced peace program that we can press steadily and constructively before the world.

To what extent, for instance, has a rampant military technology modified the positions which Harold Stassen took at London in 1957? Is every element in our far-flung base system as important now as it was before the creation of the intercontinental ballistic missiles and nucelar submarines? The political, as well as budgetary, price which we are paying for many of these bases is high. Political pressures for us Yankees to go home are mounting in Morocco and even in Spain. They are certain to grow in Okinawa and elsewhere.

A realistic approach to disarmament must also consider the position of the swaggering Chinese Communist Government in Peiping. Let us refuse official recognition if we will, but let us not assume that we can substantially and permanently ease the danger of nuclear war while disregarding the presence on this planet of 650 million militant Chinese.

3. Finally, we must prepare for the best—the possibility of eventual Russian willingness to disarm.

This will call for a frank appraisal of the effect that any relaxation of the armament race might have on our own economy. It requires the hardest kind of study.

Such a survey might be undertaken by the Joint Economic Committee of the Congress, or by an agency or committee expressly set up for the purpose. Teams of economic experts might be drawn from industry, the labor movement and our universities.

The study should consider, region by region, the extent of unemployment that would result from a cut in arms production, the nature and magnitude of corporate and personal tax reductions that would be made possible, and the anticipated impact of these tax reductions on corporate investment and consumer buying. It should explore the extent to which expanded urban development, housing, hospital, school and roadbuilding programs and oversea investment programs could take up the slack, and the amount and type of unemployment compensation that would be required for the transition period.

Many Americans will recoil in dismay from an open discussion of the economic consequences of disarmament. But, Karl Marx to the contrary, I believe that their fears are grossly inflated. Although I do not suggest that the transition would be an easy one, I believe it could be made much more smoothly than many people think.

In 1945, as a member of the War Production Board, I participated in planning our economic transition from war to peace. Within 18 months, we switched some 45 percent of American industry from wartime production to that of peace, and absorbed nearly 10 million men from our armed services into our civilian economy.

To be sure, we had the advantage then of a heavy backlog of war-accumulated demands for housing, schools, and consumer durables. But today the percentage of our economy devoted to defense production is only one-fifth of what it was in 1945. As for our backlog of unfilled needs, every mayor, city planner, educator, highway engineer, hospital superintendent, and sociologist knows that they are enormous.

Once we decide the military and political steps that we are prepared to take to lessen the present danger of war, and consider frankly the economic implications of this program within our own society, our position before the world will be unassailable.

To what extent, if at all, the Kremlin would be swayed by a new American initiative

and a comprehensive American peace policy that considered the military, political, and economic aspects, no man can say. But this is a fast-moving age, and one of infinite possibilities. Changes within the Soviet Union have been considerable since Stalin's death. The creation of a sound, practical, imaginative American position on which we are prepared to stand is a national responsibility we cannot ignore or postpone.

At best, policymaking in our revolutionary century involves a delicate balancing of risks. Although there is no sure, no safe course, the policy of doing nothing as the arms race mounts in intensity may be the most dangerous of all.

The great powers are now caught up in an awesome, tragic circle. To break out requires both vision and vigor. But the price of running the arms race to its ultimate end is almost certain oblivion. Next time, there will be not one Rome, but two Carthages.

Public Roads Program

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. MADDEN. Mr. Speaker, the $31 billion Federal highway construction program is now over 3 years old. By reason of delay and indifference in our executive department, it has made slow progress and is now in danger of stagnation on account of lack of funds.

I include an editorial from the Gary (Ind.) Post-Tribune of May 5, 1959, as follows:

KEEP ROAD PROGRAM GOING

The House Public Works Committee is tackling this week the thorny problem of what to do about the Federal Highway Trust Fund. Unless more money is put into the fund, there won't be any cash for allotment to the States in fiscal 1961. That will mean a serious slowdown in the road construction program that is just getting up full speed.

The problem is a double one. The first part involves the amendment to the highway act sponsored by Senator HARRY F. BYRD, Democrat, of Virginia, which limits road spending to whatever is in the trust fund. Congress suspended operation of the amendment for fiscal 1959 and 1960 as an antirecession measure.

Allotments for fiscal 1961 ordinarily would be made this July, so the States will know how to plan their construction work. But unless some action again is taken to lift the ceiling set by the Byrd amendment, there won't be any money to allocate.

The interstate program should not be slowed. To interrupt what the States are now doing would be a serious blow to all road planning. It would leave many projects in a partly completed status. It is unthinkable that Congress will let that happen. So the Byrd amendment likely will be set aside again.

The next question is where Congress will find the extra cash needed to make the full 1961 allotments. President Eisenhower has asked another penny increase in the Federal gasoline tax. There is much opposition in Congress to doing that; a number of Governors, including Indiana's Harold W. Handley, are protesting such a move.

Motorists already are paying heavily for highway purposes. But all the money they pay in taxes doesn't go for roads. Until it is all used for that purpose, and the total is then found to be inadequate, they should not be asked to pay more.

The excise taxes on cars and trucks now stay in the Treasury's general fund. So one proposal for rescuing the construction program is to assign these to the trust fund. Representative JOSEPH W. BARR, Democrat, of Indiana, has introduced a bill to do it. It would add an estimated $1.5 billion a year and probably suffice to keep the program going for the present—at least until Congress has worked out long-term financing.

From the standpoint of highways, this is a reasonable solution. It would utilize money taken from the motorists; it would stop a major diversion of highway money to other purposes.

It would leave the general fund short $1.5 billion, of course. It would mean either deficit financing to that extent—or else an equivalent trimming down by Congress on its spending otherwise. If it makes an intelligent search for it, Congress can find that much water in the domestic spending requests.

How Reciprocal Is Reciprocal Trade?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting address on reciprocal trade which was given by Mr. Richard I. Goodrich, president of the Boston Wool Trade Association, on the occasion of the World Trade Day in Boston, April 16, 1959:

HOW RECIPROCAL IS RECIPROCAL TRADE?

In any discussion of foreign trade, we must take into consideration the affect of such trade on our own American industries. While reciprocal is much desired—nevertheless oftentimes it is not reciprocal from industry's point of view.

There are those who advocate an ever-increasing free-trade policy for the United States. Unfortunately, the economic experience of many of these advocates is more theoretical than practical. There is one very important factor the proponents of this theory overlook—that is the great disparity between the wage rates paid by American industry and those paid in foreign countries for similar work.

I am familiar with the problems of the woolen and worsted industry of the United States and the impact on this industry by imports from foreign countries. It is a fact that our domestic woolen and worsted mills manufacture as fine and as beautiful fabrics as can be made anywhere in the world. However, the factor which makes our mills less competitive with other countries is this great disparity between wages here and abroad. This difference in wages varies from about 15 cents an hour paid the Japanese textile worker to 35 to 50 cents an hour paid on the continent and in Great Britain, to our own average of about $1.65 an hour.

One might compare this situation to a group of runners of equal ability in a race in which one has to give substantial handicaps to the others. It is perfectly obvious that, running his best, he cannot overcome the handicaps against runners of equal ability.

The textile industry has a high ratio of labor to total cost, which gives a distinct advantage to any country having a low wage scale.

The economy of the United States is based upon a high wage scale; the highest in the world. If this standard is to be maintained and our workers to have full employment, we must protect our industries from excessive imports from low-wage scale countries.

Naturally, we do not wish to deprive any country of a market for their exportable products, but if we are to maintain a strong American industry, we must avoid an excess of these imports. The best way to do this is with country-by-country quotas—and these quotas applied against categories of products.

Japan, the lowest wage-scale country in this picture is equipped with the finest textile machinery obtainable and can produce as fine and as well-made fabrics as produced in our country. One element—wage rates, is heavily weighted in their favor—and if there were no restrictions they could flood this country with desirable and salable fabrics at extremely low prices. Therefore, the only protection is a quantity quota based on various categories of fabrics.

It is ironic that Great Britain, with about a 50 cent an hour wage scale, is complaining that Japan, with a 15 cent an hour wage scale, is taking over a large part of Great Britain's share of the American textile market. Where does this leave the American mills with $1.65 per hour wage scale?

The great foreign trade done by this country in days gone by is used as an example of American initiative and self-reliance. We must bear in mind that at that time our country was undeveloped, our manufacturing capacity was not capable of filling the demands of the people, and many things imported were not produced in this country. Today we have adequate manufacturing capacity for most of our requirements * * * many imports, therefore, are at the expense of our domestic products.

What is true of the textile industry is also being experienced by the steel, automobile, watch, bicycle, sewing machine, leather, and other industries. In a recent article, Edson B. Smith comments that up to within a year, or two, a foreign-made automobile was a curiosity. Last year some 375,000 of them were sold in the United States, and this year it is probable that at least 10 percent of the cars sold in this country will be of foreign manufacture.

The steel industry is also feeling the effect of this situation. While steel imports measured in dollars do not amount to much today relative to all the steel produced in the United States—the recent trend is that increasing amounts are coming into the country. There are many kinds of steel which can be bought in Germany, for example, and delivered to inland points in this country at prices below the cost of manufacture in these centers. There are very few articles of commerce today which cannot be produced more cheaply elsewhere in the world than in the United States.

Many successful business concerns make a survey from time to time to determine:

1. The internal position, effectiveness and efficiency of their operation.

2. If they are successfully meeting competition in their own industry.

3. The position of their industry in the national economy—and whether it is expanding or contracting.

Domestic industry is protected by the tariff act of 1930. At that time there was no great disparity between wage levels in

the United States and other countries throughout the world—at least not nearly as great a difference as exists today.

It is my suggestion that the Tariff Commission make a survey of the entire tariff structure, based on the economic realities of today. For American industry to be protected by a tariff put into effect nearly 30 years ago is completely unrealistic.

Since that time the world has gone through a Second World War, with the resultant upheavals in the economies of all the countries of the world. The entire world economic structure has been changed by American economy and military aid programs, costing billions of dollars of the taxpayers' money. We are spending our vast resources so that others of the free world may become economically sound and thus resist the onslaught of communistic pressure. To ask American industry to suffer from excessive competition from these same countries is inflicting a burden beyond their ability to carry for long.

It is my suggestion that since there is such a great disparity in wage rates between countries competing for our markets against our domestic mills, that the tariff be readjustde to take into consideration this disparity in wage rates. This would be a fair and equitable basis for assessing tariffs on imported products—and would enable our mills and workers to compete on a fair basis with the rest of the free world.

In recent years, Congress has turned over to the President more and more tariffmaking powers and privileges. The renewal of the reciprocal trade agreement of 1958 has given the President more power than ever before over the fixing of tariffs and the conduct of foreign trade.

Congress should reassure its authority, under the Constitution, to regulate foreign trade and to fix tariffs and duties. The Tariff Commission has also alocated to the President tariff matters which, properly, should be determined by the Commission itself.

Another unfair competitive practice faced by American industry in the matter of internal grants, or bounties, paid to an industry in a foreign country—which enables that industry to export products at below production costs and below competitive prices, thereby damaging the economy of the country to which these exports are made.

Section 303 of the Tariff Act of 1930 clearly states that if a grant, or bounty, by any means is paid to an industry in a foreign country, then a countervailing duty shall be assessed to the same amount of that product exported to this country. A case in point is the countervailing duty recently removed by the Treasury Department from wool tops manufactured in Uruguay for export to the United States. This, despite the fact that it was clearly demonstrated that a grant, or bounty, was being paid to he Uruguayan wool top manufacturers. It was also brought out that a grant, or bounty, was being paid on canned meats on which no countervailing duty has yet been assessed. This action by the Treasury Department could prove very damaging to the American industries concerned—and they should have the protection of the countervailing duty provided by law.

We are extremely sympathetic to the attempt of the Uruguayan government to industrialize its country—but there must be other legal means under the point 4 program to help this country without jeopardizing the condition of a domestic industry which is already suffering from severe foreign competition. On the other hand, this same country—and many others throughout the world—have very strict import control policies.

Imports of commodities and manufactured products are either barred altogether, or are closely controlled by import licenses, systems of multiple exchange rates, refusing of dollar credits and even restrictive lists of countries with whom an importer is permitted to trade—all designed to protect the industries and commodities of these countries from competition from other nations.

In the face of this, the foreign trade policy of the United States appears most liberal.

Mr. Khrushchev has stated that an economic war is being waged between communism and the free world, and it is his avowed intention to won this war. The United States, through its program of economic and military aid—paid for by American industry and American taxpayers—is carrying a heavy burden throughout the free world in order to circumvent this intention on the part of the Communists. In order to do this, we must maintain a strong internal economy.

The other day I asked a textile manufacturer what would happen to him if he posted a notice on his mill door saying that all of his present help were to be discharged at the end of the week, as he was importing an equal number of Japanese workers to operate his mill, and was paying them the same wages they received in Japan. He answered that not only the workers in his plant, but the bankers and businessmen of his town would probably string him up to the nearest telephone pole—and rightly so. This is in effect what is going on with the excessive importation of Japanese textiles, as every yard of cloth, every ton of steel and every foreign car imported represents hours of foreign labor employed and hours of domestic labor lost.

It is an often disregarded fact that adequate, realistic tariffs protect the jobs and wage scale of the American worker as well as the industries.

As I have said before, we should not bar any free country from the right to trade in the United States—as a healthy foreign trade is one of the best ways to maintain friendly relations with another country. However, this trade should not be so excessive as to be a detriment to American industry. Proper protection must be given American industry to prevent an excessive amount of destructive imports, from industry's point of view, from coming into the country. It is only by keeping American industry strong and ever growing that we can possibly hope to win the economic war so openly being waged by the Communist world.

An Inspiring Teacher

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 4, 1959, which comments on the passing of Marion Augusta Sturdevant, who was a member of the faculty of the Wilkes-Barre public schools and Wyoming Seminary for 40 years.

AN INSPIRING TEACHER

During her 40 years as a member of the faculty of Wilkes-Barre public schools and subsequently on the staff of Wyoming Seminary, Marion Augusta Sturdevant was held in high esteem as a teacher and counselor. Her service to several generations of pupils was far reaching. Her influence was deep and lasting in the educational world. Her service to the community was impressive and will be long remembered with appreciation and gratitude.

It would be difficult to find any area in Wilkes-Barre without former pupils of Miss Sturdevant and an attending conviction that she was an inspiring member of the faculties on which she served. She was a teacher par excellence.

When Miss Sturdevant was admitted to General Hospital last week it was a former pupil, Dr. Harold Harris, who had sent her there. The two policemen, Chester Klosowski and Joseph Zelinski, who lifted her into the waiting ambulance, are also former pupils. So it was with the girl who checked her into the hospital, and the occupant of the room next to hers. And so it was also throughout her daily living. Near her always were those to whom she had imparted learning.

Israel and Its Offer of Opportunity

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. LOSER. Mr. Speaker, it gives me a great deal of pleasure to place in the RECORD two very fine articles on Israel written by the eminent editor of the Nashville Tennessean, Mr. Coleman Harwell, during his recent trip to that country.

These articles on the conditions in Israel and the opportunities offered by that country will interest all Members of Congress. They follow:

CAN ISRAEL STAND ON ITS OWN FEET?

(By Coleman A. Harwell)

TEL AVIV, ISRAEL.—There was a popular advertising slogan a few years ago saying, "Even your best friends won't tell you."

That obviously does not apply in foreign relations. Especially in money matters.

Israel is without doubt one of America's best friends. You see and hear that on every hand. But when word reached here a few days ago via Israel News Service from Washington that U.S. grants-in-aid (gifts) to Israel were expected to be cut this year, a howl went up.

All the newspapers here and in Jerusalem protested. Their editorials varied, but all stressed the U.S. aid going their neighbor Arab States.

MIGHTILY RILED

A pleasing aspect was that most papers noted with gratitude the great assistance of the overall U.S. aid program and the trend now to loans in place of gifts, which some welcomed as a good sign. It was the Arab aid that riled them mightily.

A fairly typical comment follows:

"The State Department has an original method of bestowing compliments on Israel * * * It claims that Israel is strong and its army is among the best in the Middle East and therefore needs no additional arms. At the same time the State Department does not save arms from the Arab countries, which are filling their stores from all sides, both from the West and the East * * *

"We are grateful to the U.S. Government for the generous aid it has extended us * * * On the other hand, we insist the United States make no attempt to sacrifice Israel's vital interests, entertaining the illusion this is the way to appease the Arabs.

"Washington's stand at the time of the Sinai campaign * * * its refusal to supply arms to Israel while imploring the Arabs to receive arms; its approach in the U.N. to our complaints against the Arabs; its indifference to Nasser's violation of international law by refusing our ships passage through the Suez canal * * * All cannot be made good even if the United States decides, under pressure of public opinion, to continue the aid to Israel another year or two."—From Herut, spokesman for the conservative Herut (Party.)

Another editorial which gave a contrasting viewpoint appeared in Haboker, spokesman for the general Zionist organization. It thus may represent an external as well as internal view.

It said:

"Mr. Dulles said (3 years ago) that it was difficult for him to resist the constant Arab pressure * * * He took the first step by reducing the grant to Israel from $70 million to $15 million, and set it at $7.5 million for the current year (1959). It seems that Mr. Dulles' assistants have completely given in to the Arab pressure * * * Thus, the stoppage of the grant to Israel should be regarded as a purely political act, and it certainly constitutes a part of the U.S. appeasement policy toward the Arabs.

"Nevertheless, from an economic standpoint, one should not unduly regret the termination of the U.S. grant because all the foreign assistance and grants so lavishly extended have merely distorted the real picture of our situation, encouraged us to live beyond our means and to run our economy at the expense of others.

"The sooner we stand on our own feet, the sooner we shall make really satisfactory progress. If the termination of the U.S. grant-in-aid can remind us of this fact, its effect will have been positive indeed."

This reasonable analysis may reflect an American viewpoint to some extent but it also reflects an Israeli attitude often met. Those sharing this view know that Israel will always be a question mark until she stands on her own feet. They are confident that, with her delicious citrus, her potash and phosphate, alert tourism, increasing industry and development of the vast Negev (Moses wilderness), she can be independent.

U.S. EXPLANATION

It was gratifying to note the reception given by the Israeli press to an analysis of U.S. aid released by U.S. Information Service the day after these complaints. It was given solid news play. It contained these facts:

Grants-in-aid, from which Israel received big gifts earlier, have been steadily decreasing in favor of loans and assistance of technical experts. Now agricultural loans are a big item. In this, the United States sells food to the Israeli Government which pays with its own money in Israel. Then the United States loans this money for projects in Israel on very liberal terms. Thus Israel benefits doubly.

Assistance to Israel for 1959 and aid of all kind since it started in 1949 follow:

[In millions of dollars]

	For 1959	Total since 1949
Grants-in-aid	7.5	248.7
Mutual security (military)	None	42.5
Development loans	5.0	20.0
Agricultural loans	38.3	130.9
Export-Import Bank loans	None	[1] 152.9
Technical co-op aid	1.6	12.9
Total	52.4	614.2

[1] Israel has made substantial repayments on this.

It is thus apparent that U.S. aid does continue but on an increasingly business basis. This seems to me to make sense. We're better off making reasonable decisions, giving aid where essential, loans when justified, and relying on logic to prevail in the end.

ISRAEL TODAY OFFERS DARING OPPORTUNITY

(By Coleman Harwell)

TEL AVIV, ISRAEL.—Why should a brilliant young man with two college degrees go into the desert and train horses?

His family, who expected him to turn to a profession in the city, are disappointed. But they are proud of him, too.

Why wouldn't a young man in a land of pioneers be inspired by the example of his nation's chief official who is one of its great heroes? Every weekend and holiday when he can do so, determined bushy-haired David Ben-Gurion, Prime Minister of Israel, goes to a primitive settlement in the Negev and serves as a shepherd.

IT'S NO STUNT

This is no stunt. This is Ben-Gurion's home and his way of life. He is confident that his kibbutz (communal village) will help make this southern area bloom when irrigation reaches it. This is expected in 1961.

The Negev is the wilderness in which Moses and the children of Israel wandered for 40 years. It seems more desolate now than in the pages of the Bible. But Ben-Gurion has confidence, and the young man raising horses in his kibbutz is confident. So are the people in the far south city of Elat who say that irrigation added to the beaches of the Red Sea will combine to make Elat a great winter resort, and also a great port with trade flowing in from Africa and many other places.

When you see what has already been done in this land you hesitate to doubt any claims made for it. We visited a kibbutz near Nazareth. It is one of the most prosperous ones, mainly agricultural.

Eighty-five thousand of Israel's two million people live in such communities. They have played an important role in the country's development, but the modern cities and towns are attracting the majority of young people and newcomers today. There is a challenge and opportunity everywhere.

MEETING NICE PEOPLE

Notes on the go: Best part of traveling is always people, especially homefolks. First, in Greece, Dwight Freshley and wife. He's Vanderbilt speech professor on leave; has Fulbright fellowship to teach in American-financed Athens College * * * Here in Tel Aviv, Joseph Macpherson, Jr., Vandy M.A. in literature, teaching U.S. history and English at French College des Freres and Tabeetha School. His pupils (in U.S. history) include children of diplomats from Communist countries. He'll return home after summer European tour.

At Rotary in Larissa, in central Greece, first man I met was Ithan Papaioannon, agricultural extension man who attended Rotary in Nashville, Clarksville, Hopkinsville and Knoxville on 1957 tour * * * Dmitri Papaefstrotion, American Express Athens manager, among first people we met at press reception in Athens. Sent regards to the Ralph Owens, Nashville, and especially daughter Melinda, who visited there last summer * * * At Jerusalem Rotary sat next to physicist who visited Oak Ridge; at Tel Aviv Rotary sat next to man who spoke in Nashville on behalf of Israeli freedom army in 1949, sent regards to Mortimer May.

Pride stirred on visit to handsome, modern Zionist of America Building here on seeing names of Nashvillians Mortimer May and Joseph Werthan on appreciation plaque * * * At Tel Aviv Rotary met ex-president of Nazareth Club, Rev. Dwight L. Baker, who heads Southern Baptist Mission of 70 Arabs. Lives there with wife, four children. Sends regards to Dr. James L. Sullivan, at Nashville headquarters, who visited here 2 years ago * * * Participating in our seminar on legal problems of journalism at Tel Aviv University was District Judge Michael Harpazi, who sent regards to sister, Mrs. Gustav Dobrin, 160 Kenner Avenue, Nashville.

FRIENDS AND FOES

Israel is making an apparently smart move to do business, win friends in Africa. Has a ship leased to new Ghanda nation; is shipping manufactured products there and to other lands encircling Arabs in Dark Continent.

Meanwhile, hope continues—though not strong—that Arabs will one day soon make peace with Israel. What an economic boom that would be. America should do everything possible to push this. The results would be of tremendous value.

Organization and Operation of the Small Business Administration

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

ORGANIZATION AND OPERATION OF THE SMALL BUSINESS ADMINISTRATION

Representative JOE L. EVINS, Democrat of Tennessee, chairman, Subcommittee No. 1, House Small Business Committee, announced today that hearings on the operations of the Small Business Administration will be held in room 304, House Office Building, Washington, D.C. The hearings will begin at 10 a.m. on Monday, May 11 and continue through May 13.

Hon. Wendell B. Barnes, Administrator of the Small Business Administration, will appear at 10 a.m. on Monday. Other SBA officials will testify subsequently during the hearings. The subcommittee also will receive testimony from representatives of companies that have formed or attempted to form small business investment companies. In addition, witnesses representing small business concerns that have sought financial assistance from the agency will be heard.

Representative EVINS stated that all of the operations and activities of the Small Business Administration will be reviewed during these hearings. Although emphasis will be placed upon the Small Business Investment Act of 1958, the subcommittee will inquire into the loan policies of the financial assistance programs as well as the procurement and technical assistance activities of the agency.

Representative EVINS added: "We have had called to our attention considerable criticism of certain aspects of the loan programs of SBA—criticisms concerning collateral requirements, concerning premature discouragement of applicants, and criticism concerning the refusal to make loans to certain classes of small business that need help under the act but, because of administration rulings or limitations appearing in the act itself, the help is not forthcoming. For instance, in the latter field it appears that producers of poultry, eggs, hogs, milk, etc., generally are not eligible for SBA loans; neither can they obtain financial assistance from the Farmers Home Administration, the Production Credit Association or other lending institutions because of the commercial aspects of their operations or for other rea-

sons. The subcommittee expects to go into these matters fully.

"On the other hand," Representative EVINS commented, "we have heard favorable reports concerning the activities of the Small Business Administration and these point out that the agency has been of great help to the small business community. The hearings are for the purpose of studying, with the cooperation of the Small Business Administration, various problems which have developed under the acts. The subcommittee is entering into these hearings with an intense desire to be of the greatest benefit possible to the small business economy of the Nation."

Other members of the subcommittee are the Honorable JAMES ROOSEVELT, Democrat, of California; Hon. CHARLES H. BROWN, Democrat, of Missouri; Hon. ARCH A. MOORE, JR., Republican, of West Virginia; and Hon. WILLIAM H. AVERY, Republican of Kansas.

List of witnesses tentatively scheduled to appear before Subcommittee No. 1 of the House Select Committee on Small Business at the hearings scheduled for May 11, 12, and 13:

Monday, May 11, 1959: Hon. Wendell B. Barnes, Administrator, Small Business Administration; Mr. Duncan H. Read, Deputy Administrator for the Industrial Division, Small Business Administration; Mr. Ralph Farnum, Acting Director of Investment Division, Small Business Administration; Mr. Hugh M. Fraser, president, The Citizens and Southern Small Business Investment Co., Atlanta, Ga.

Tuesday, May 12, 1959: Mr. Thomas Grant, Jr., president, National Association of Small Business Investment Companies; Mr. Thomas Graham, the Bankers Bond, Inc., Louisville, Ky.; Mr. Howard D. Williams, past president, Smaller Business Association of New England, Inc., North Grafton, Mass.; Mr. Alan K. Ruvelson, president, First Midwest Small Business Investment Co., Minneapolis, Minn. Open: SBA officials on call for Tuesday afternoon, if necessary. Also Mr. Kinne and Mr. Lilly, who are scheduled for Wednesday, will most probably be available for Tuesday afternoon if needed.

Wednesday, May 13, 1959 (10 a.m.): Hon. Edward H. Gadsby; Hon. Albert C. Kelly, Deputy Administrator, Finance Division of SBA, Small Business Administration; Mr. Gary E. Lilly, Des Moines, Iowa; Hon. Donald A. Hipkins, Deputy Administrator for Procurement and Technical Assistance, Small Business Administration; Dr. Milford L. White, Office of Management and Research, Assistance, Small Business Administration; Mr. Richard Kinne, industrial director, Missouri Resources and Development Commission, Jefferson City, Mo.

Stopping the "Anti-Benson" Bill

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. NELSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the follow editorial from the Christian Science Monitor dated Saturday, May 2, 1959, and editorial from the Cincinnati Enquirer dated May 5, 1959, dealing with the Presidential veto of the rural electrification bill:

[From the Christian Science Monitor, May 2, 1959]

STOPPING THE "ANTI-BENSON" BILL

By the narrow margin of four votes the House refused to go along with the Senate and has upheld the President's 138th veto, only four of which have even been challenged in a congressional vote.

Considered in isolation, this bill to restore the loan-making authority of the Rural Electrification Administration to its independent status of 20 years ago might not seem so likely to provoke a presidential veto as some other measures he protested but signed. His disapproval can hardly have been merely on economy grounds. In his veto message he points with some pride to the fact that the REA in the last 6 years has loaned almost half as much money as it did in the previous 17½.

That the bill violated sound administrative practice in taking not just an agency but one selected function of an agency out of the direct line of authority and responsibility from the top to the bottom of a department, is a good reason for a veto. But in this instance it does not provide the whole explanation.

The Department within which the REA lies is the Department of Agriculture. And its head is Ezra Taft Benson whose policies have been under fire from the farm bloc ever since the change in administrations in 1953, and whom President Eisenhower has sturdily supported throughout. This bill conspicuously was intended to do more than simply move the REA position on the organizational chart.

These factors, it seems evident, explain not only the President's risking an overriding but also the diligence of both parties in Congress to rally every vote and to hold party lines.

Keeping the President's remarkable 6-year record unbroken is dramatic and interesting. Maintaining sound organizational practice and upholding Mr. Benson's general approach to the farm problem is, in our judgment, gratifying.

[From the Cincinnati Enquirer, May 5, 1959]

VETOES AND THE BUDGET

The President has preserved intact his 6-year record of never having had a veto overridden by Congress. That's a significant achievement for a Republican President who will probably have to veto many more bills, passed by an overwhelmingly Democratic Congress in his drive for a balanced budget.

True, the measure on which the House Democrats failed by four votes to override had nothing to do with spending or the budget. It was a partisan move to deprive Agriculture Secretary Ezra Taft Benson of his power to pass on rural electrification and telephone loans. Yet it was important for several reasons.

Secretary Benson is regarded as fair game not only by Democrats in both Houses but by a number of farmstate Republicans as well. The effort to override the veto caused a big ballot—426 votes. But when the showdown came, only 6 Republicans voted against the President, while 142 stood with him. On the other side of the House, 274 Democrats voted to override, but the 4 who sided with the administration were enough to sustain the veto.

In other words, when the showdown came Republican Party discipline in the House proved stronger than Democratic. In the weeks and months ahead, with a shower of spending measures in the congressional hopper and with fears of more inflation sweeping like a prairie wind over the land, the President will need that discipline—and the prestige of having behind him a 6-year total of 138 sustained vetoes.

Independent Bankers' Credo for 1959

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. MULTER. Mr. Speaker, there was published in the American Banker of April 29, 1959, a credo for 1959 on behalf of more than 10,000 American independent banks.

I believe that few, if any, of our colleagues will dissent from the general principles enunciated in this fine statement. Obviously not all of us will agree with the methods by which laudable ends are sought.

For instance, their desire to attain equality of taxation is a fine and important goal to be sought. I hope that most of our colleagues will agree with me that you do not attain equality or equity by perpetuating inequity. I believe that the way to attack the inequity created by double taxation of earnings is to fight for the removal of the double taxation, not to imbed that bad principle in our law by urging double taxation of earnings on those who are now free from it.

What the independent bankers and so many others refer to as tax exemption of mutuals and cooperatives is not tax exemption but merely single taxation on earnings. That sound principle is what these people should stand and fight for. Our democratic way of life should not countenance taxing earnings before distribution and taxing them again upon distribution.

If the small business man of our country is the backbone of our free enterprise economy, then the independent banker is the backbone of our dual banking system. The Congress must be ever alert to maintaining that status.

I commend to the attention of our colleagues their credo, which follows:

INDEPENDENT BANKERS CREDO FOR 1959

As representatives of America's more than 10,000 independent banks:

We believe in the principle of independence, our most precious American heritage.

Independence of the Nation.

Independence of the State and of the community, within their proper spheres and in our American tradition of States' rights and home rule.

Independence of the individual within the law, to stand up for and to speak what he believes.

And in banking: We believe in the independent bank, an American institution, dedicated to the financial independence of its customers and their community

For these principles we stand together with all other independent bankers. We know that eternal vigilance is ever the price of liberty and in union there is strength. We view with alarm trends, which conflict with
